My 28, 47, 30, 50, 26, 51, 57 betrayed the Roman citadel to the Sabines.
My 27, 47, 50, 10, 32, 53 was an American general.
My 22, 80, 10, 33, 14, 70, 75, 67 was a celebrated hero, the son of Jupiter and Alcmene.
My 34, 47, 19, 24, 23, 41, 65, 62, 74 was the shepherd by whom Romulus and Remus were brought up.
My 40, 47, 33, 57 is the goddess of Report.
My 43, 39, 76, 65, 44, 47, 53, 74 was one of the captors of Major Andre.
My 45, 25, 47, 75, 69, 67 was one of the seven wise men of Greece.
My 50, 46, 57, 31, 61, 24 was the name of an island on which was a tower, esteemed one of the seven wonders of the world.
My 55, 54, 7, 35, 52, 74, 66, 61, 11, 76, 75, 74 was a celebrated Athenian general in the Persian war.
My 59, 60, 75, 84, 64, 81 was the wife of Peleus and mother of Achilles.
My 63, 61, 65, 77, 75 was an English general who was killed in 1759.
My 63, 19, 70, 9 was an English officer who took a prominent part in the American Revolution.
My 71, 63, 75, 67, 7, 14, 24 was one of the most celebrated heroes of antiquity.
My 73, 72, 2, 53, 7, 19, 24 was a king of Arcadia and priest of Apollo.
My 82, 26, 51, 73, 61, 49 was a giant who was slain by Hercules, and whose oxen were driven into Greece.
My whole may be found in the eighteenth psalm.

ANSWERS TO ENIGMAS, &c., IN No. 514.

Answer to Biblical Enigma:—A soft answer turneth away wrath; but grievous words stir up anger.
Answer to Riddle:—Philadelphia.
Answer to Arithmetical Problem:—8 miles square, or 5,760 acres.

Answer to Illustrated Riddle:

Harper's Ferry Armory raid excels all Kansas doings.

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATED
Agricultural, Literary and Family Weekly,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three copies one year, for \$5; Six, for \$10; and one free to club agent, for \$10; Ten, and one free, for \$15; Fifteen, and one free, for \$20; Twenty, and one free, for \$25—with an extra free copy for every Ten Subscribers for \$25. Club papers sent to distant Post-offices, if desired. As we pre-pay American postage on papers sent to distant Post-offices, our Canadian agents and friends must the British Provinces, our Canadian agents and friends must add 12 1/2 cents per copy to the club rates of the RURAL.—The lowest price of copies sent to Europe, &c., is only \$2.50—including postage.
ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any condition.
THE POSTAGE ON THE RURAL is only 3 1/2 cents per quarter to any part of this State, and 6 1/2 cents for any other State, if paid quarterly in advance at the post-office where received.

With an Able Corps of Assistants and Contributors.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y. For Terms and other particulars, see last page.

THE GREAT CROPS OF THE COUNTRY.

The Census Returns reveal strange and important facts, and we occasionally look over these large volumes of apparently dry figures with interest and profit. They teach us facts—sometimes facts which at first we can hardly credit, but which must be so, for figures tell the truth. Should we ask which are the three greatest crops of the country, the answer in most cases would unhesitatingly be, wheat, corn and cotton, and yet figures show the hay crop to be more important than either wheat or cotton. The product of corn at the time the last census was taken, was 1,412,000 bushels, which at 50 cents per bushel would be \$706,000. The hay crop is stated at 1,100,000 tons, which at \$10 per ton is \$11,000,000. The wheat raised was 100,001,902 bushels, which at the estimate price of \$1 per bushel would give the same number of dollars. Ohio is the greatest producer of corn, but Kentucky, Illinois, Indiana and Tennessee are nearly equal. New York, Pennsylvania and Ohio are the greatest producers of hay. New York, Pennsylvania, Ohio, Virginia, Illinois and Indiana are first on the list as producers of wheat.

Fourth in order, we have the cotton, of which 2,445,779 bales are reported, which at \$80 per bale gives a value of \$195,662,320. Oats, 140,478,170 bushels worth, at 40 cents, \$56,191,268. Potatoes, 108,880,590, at 38 cents, \$41,385,624. The cotton, of course, is grown exclusively in the Southern States, Alabama being the greatest producer, and Georgia and Mississippi and South Carolina following in order. New York and Pennsylvania each produce more oats than any other two States. Illinois and Virginia are about equal. New York produces nearly as many potatoes as any other three States; and Georgia and Pennsylvania next.

We have now given the statement, furnished us by the Census, of the products of our six largest crops and their estimated value. The sugar crop is far less than we supposed, being only sixteen millions. We have often felt disposed to quarrel with these figures, considering that sugar has ceased to be a luxury, and is now a necessity in almost every family, but, of course, this we are not prepared to do, and must wait patiently for the next Census. The tobacco crop exceeds that of sugar by more than three millions of dollars. Tobacco to the value of about a million and a half is grown in Northern States. Sugar to the value of twenty to thirty millions is annually imported.

But, in all the curious facts shown by figures, there is nothing more curious or interesting than the average products of the great crops per acre, as shown by the following table:

ACTUAL CROPS PER ACRE ON THE AVERAGE.			
STATES.	Wheat bush.	Oats bush.	Corn bush.

Only think of the farmers of sterile Connecticut beating those of the fat prairies of Illinois at their

own game, growing Indian corn; and the farmers of Massachusetts and Vermont producing 170 bushels of potatoes to the acre, and those of rocky New Hampshire over 200, while we of New York obtain only 100, and Pennsylvania only 75 bushels, while Texas carries off the palm, and averages 250. This difference, we think, is not to be accounted for by soil or climate. There must be difference in the men, in the system of cultivation; for in some cases where nature seems to be the most propitious, the product is the least. We leave these figures, without further remark, to the contemplation of our friends, hoping that all will feel a noble pride in having their State give a report of which they will have no reason to be ashamed, when the next Census shall be taken, in 1860.

At one end of the trellis is seen a strong post, around which wires are fastened. To keep the post upright it must be braced, but the bracing is not shown. At the other end little portions of wire are shown, designated by figs. 1 and 2. The portions of the vine lying along (2) and sustained in place by it are called arms. Those shoots fastened towards the tops to the wires (1) are called the courses (cordons); and on 4 are seen properly loaded with fruit, but represented without the leaves, for when the leaves are in place, very little of the fruit is visible. The figure indicates the standards from which the arms are taken. The one nearest to the post and the fifth furnish arms for the upper courses. The third and the seventh for second courses from the top. The fourth and eighth for the remaining courses, which completes the system, which, when loaded with fruit, will all be like the one designated by 4. In our horticultural page will be found a full description of this system of pruning and training the vine.

own game, growing Indian corn; and the farmers of Massachusetts and Vermont producing 170 bushels of potatoes to the acre, and those of rocky New Hampshire over 200, while we of New York obtain only 100, and Pennsylvania only 75 bushels, while Texas carries off the palm, and averages 250. This difference, we think, is not to be accounted for by soil or climate. There must be difference in the men, in the system of cultivation; for in some cases where nature seems to be the most propitious, the product is the least. We leave these figures, without further remark, to the contemplation of our friends, hoping that all will feel a noble pride in having their State give a report of which they will have no reason to be ashamed, when the next Census shall be taken, in 1860.

JOHN JOHNSTON ON WINTERING SHEEP.

Mr. JOHNSTON says in the RURAL of Nov. 5th, "If every farmer would feed each of his sheep one bushel of corn, or 60 pounds of oats, buckwheat or barley, (whichever he found cheapest) during winter, with good straw, even, for fodder, they would pay him better for the grain, by far, than if he were to carry it to market and sell it for cash. But if he would feed each sheep 90 pounds of corn, or other grain, they would still pay him better for the grain—they would yield him double the wool to what they did when he fed 'no grain—they would raise him double the number, and much better lambs."

That assurance was given about election time, when experience has taught mankind that a certain tinge of vagueness and uncertainty attaches to human affairs. I have some Merino ewes which have sheared six pounds of wool, and brought from one to two lambs, without being fed any grain. Am I to understand that feeding them "90 pounds of corn" this coming winter, will make them shear twelve pounds of wool, each, and raise from two to four lambs apiece? I endorse most heartily the opinion that frequently it will pay to feed sheep 60 pounds, and even 90 pounds, of grain each during the winter; but I am of opinion that no universal rule can be adopted as to the amount of grain which it is expedient to feed.

An abundance of good, sweet, nutritious grass will put sheep in good order in the summer time, and the best of hay and the best of care will keep well-formed, hearty, middle-aged sheep in good condition through the winter. I have seen sheep wintered on hay alone (with plenty of water) that were as fat as it is profitable, in my judgment, to have sheep. I believe there is such a thing as breeding animals too fat. My father was in the habit of selecting choice portions of white clover, red clover, and fine upland timothy, which he cut

early and cured carefully for his sheep. He fed rather abundantly, and made the big colts and steers eat the "orts" or leavings; he claimed that he could keep his sheep in good order in this way, and he did it. It was not uncommon for his half blood Merino wethers to have twenty-five pounds tallow the fall after they were three years old, fattened on grass. He insisted that "good pastures are indispensable to good farming"—that whoever neglected to get their stock in good order on pasture, had missed a golden opportunity. I have known cattle gain in winter on hay; but, in general, if stock is poor in the fall, particularly sheep, it requires grain to keep them along and make any improvement. I admit—I assert—I insist—nay, I insist with emphasis, that stock of any kind pays better if kept well than if kept poor; but there is one thing which Mr. JOHNSTON did not say in his excellent communication above referred to, which should never be lost sight of:—Every art and every science should be exhausted in getting animals up in good condition before grain is resorted to.

Mr. PAGE, of Wyoming, drives fat horses—Mr. PAGE does not feed grain—Mr. PAGE considers horses that eat a good deal of grain, on the highway of ruin. He buys a horse accustomed to a forced and artificial life, viz.—a half bushel of oats per day; he puts the horse aforesaid on grass (Graham) diet; the horse grows poor—"you thought he would?" you miserable!—after two months he grows fat, and Mr. PAGE, in his quiet way, will explain to you that you can do a good fair day's work every day with your team, and feed no grain, if you will be right and regular in your management, and so add five to ten years to their life.

You buy a buck of Messrs. Block, Cox & Co., of Vt.; you have prudent notions; you feed him only two quarts of grain per day. Firstly, he grows poor. Secondly, he dies.

I am bad in that department, but I believe Naturalists do not put our farm stock generally into the class of *granivorous* animals, (feeding on grain,) but in the department of *graminivorous*, (living on grass.) I don't care a snap for the naturalists—what did I call them?—any way, I know, and every body may know, that the sheep and goats that for ages climbed the rugged hillsides, the bulls and bison that roam the western wilds or the eastern plains, the horses of the desert or the prairie, must through long centuries have descended from ancestors that had no regular supplies of grain to draw upon, and from the necessities of the case their constitutions, their habits, their very natures must have been formed from and adapted to the *herbage they lived upon*. We innovate at our peril. The best anybody can do is to look and learn. Observe the order of Nature. If young animals of any kind can be made to grow on

fresh, sweet, nutritious grass and hay, with the addition of apples, roots, &c., with little or no grain, it seems better for their subsequent health and longevity than if they are early accustomed to the "stimulus" of grain. It often, very often happens, that stock is left through neglect, in the hurrying season of haying and harvesting, in pastures so short that they go back irreparably, and the same thing or worse is suffered to occur when animals remain in fields covered with frosts and early snows, but utterly stripped of vegetation, just before "foddering begins." In this way they frequently go back in three weeks more than they can be made to gain in six weeks by the largest amount of grain that could be given to them. The moral of all this is, that stock should be kept up, without grain if you can, with grain if you must!

It is proper that I should add, that whatever objections may be made to feeding store animals, and particularly young animals, largely on grain, the objection does not apply to stock intended for slaughter within a year. Sheep or cattle to be butchered the coming summer will produce more and better meat if they are liberally fed on meal the coming winter, and very likely they may be sold in an early market, where they will bring a third more than if kept till fall to fatten on grass. The subject is so large, every way, that I will continue it in a subsequent number.—H. T. W.

SAVING FODDER.

EDS. RURAL NEW-YORKER:—I would like to say a few words to my brother farmers who read your paper, as their name is "legion," in regard to the necessity of using every means in their power, in order to keep their stock in good condition the coming winter, as cheaply as possible. There is a real scarcity of hay and fodder in nearly all parts of the Empire State, and the question—"what shall we feed, and how?"—has to be met full in the face, and any facts throwing light on the matter are seasonable.

There is a great deal of coarse fodder saved this year, and by a judicious manner of feeding, stock may be wintered as well as upon good hay.—When a boy, the writer had a pair of steers, two years old, that he wanted to fatten and sell for beef. As we were short of hay, we experimented until we ascertained the following facts. Cows, two-year-olds, and three-year-olds, will keep in the same condition, neither gaining nor losing, if fed two quarts of corn meal, or its equivalent, per day, with cut straw. I fattened my steers, and my father fattened some also, giving them all the cut straw they would eat, and three quarts of meal each, per diem. The cut straw was wet, and the meal was thoroughly mixed with it before feeding. Oxen, and heavier steers, would probably need

more meal to fatten them. We fed, last winter, a flock of sheep, after the plan pursued by JOHN JOHNSTON, Esq., of Geneva. We gave them all the good, bright, wheat straw they would eat, three times a day, and one bushel of corn to the 100 sheep daily. Lambs cannot be kept in this way as so much grain will be apt to make them scour; at least, such is our experience in the matter.

With the exception of sheep, all stock can be wintered more economically on meal, than on whole grain, fed in connection with hay or straw. According to the experiments of CASSIUS M. CLAY, and others, cooked meal is worth, for hogs, three times as much as whole grain. In all the experiments that I have seen, meal is worth double that of unground grain for cattle or hogs, and, perhaps, horses. In case a farmer has fodder and grain to buy, or even if he has the needed quantity of grain, the fact that by grinding it he can save one-half, should not be lost sight of, for an instant. Any man who feeds fifty bushels, or more, annually, can ill afford to do without a farm mill, or a cooking apparatus,—but the mill being the most convenient of the two, is the one most to be recommended. I have a Leavitt's "Young America" will, but would like to exchange it for one, that is not a cob mill. It does not pay, for me at least, to grind and feed cobs when I can get bran for \$16 per ton at our mills. There was a mill at the American Institute Fair, New York, and at our State Fair, at Albany, which I have seen tried elsewhere, that would suit me far better than any other I have seen. It does not grind the grain, but breaks it—fine too, an important requisite.—I believe it was called "Sanford's" mill, made by R. L. HOWARD, of Buffalo. I have forgotten the price, but as it is a simple mill, I presume it is cheap. After any farmer has used a mill one year, he would not care to be without. The saving in grain soon pays for it, and a good mill will last a life time, except the grinders, and they can be replaced in "Young America" for three dollars; and I presume the "Sanford mill," can be rejuvenated equally cheap.

If sheep are the principal stock, I do not believe it would pay to grind the corn for them, as they never void corn undigested. An acquaintance tried feeding two flocks of wethers one winter, and the flock fed on whole corn gained as fast, apparently, as those fed on meal—the same number of bushels being fed to each flock. To feed sheep profitably, and to winter them cheaply, the best way is to feed them their hay or straw in racks, under good, tight sheds. After careful experiment, I can safely affirm that sheep fed under good sheds, will not consume more than two-thirds as much fodder as when fed in racks out of doors.—It requires less food to keep up the animal heat in warm sheds, than when the sheep are out of doors, and in the latter case, if any hay gets the least

rain, or wet upon it, the sheep will not eat it, even to avoid starvation. Enough fodder can be saved in one winter to pay for good stables for either cattle or sheep, and the animals look so much better, too, that I wonder any farmer would be so extravagant as to feed good hay or straw to either cattle or sheep out of doors, exposed to storms, and to certain loss in flesh.

To recapitulate. If you have not hay enough, or have only coarse fodder, feed abundance of grain, well ground, i. e., ground fine, make your stables and sheds tight, and enough of them, and my word for it, hay will be cheaper next spring than now. D. A. A. NICHOLS.

Westfield, N. Y., 1859.

A WORD FOR DOMESTIC ANIMALS.

"I wish my cattle had a better shelter," is the cry of the humane but improvident farmer, as each winter he sees those poor, patient servants of his standing in the open air, suffering from storms of wind, rain and snow, or shivering in the cold comfort of the leeward side of barn or stack; and pity for their dependent, shelterless condition moves him to resolve that next summer he will set about providing warm, substantial barns and sheds for them. But, when summer comes again, the immediate, pressing need of such conveniences has passed away; and, occupied with things that must be done now, the owner's good resolution is half forgotten till the sight of his animals exposed to the severities of another winter brings it once more to mind. If the season when the want of comfortable housing for cattle is most imperatively felt were also the time for supplying that want, doubtless few farms would be without a suitable provision of this kind; but, unfortunately for the poor creatures most interested, the building of shelters for stock is one of the things that cannot be done the moment they are needed; and so the race of well-intentioned but procrastinating farmers continually put off the execution of their benevolent resolves.

The motive of gain, though more generally effective than any other, is not the only nor the worthiest one that can be urged in favor of careful and considerate treatment of domestic animals. Pleas for shelter for these out-door servants of man have, hitherto, been made up, principally, of appeals to the selfishness of their masters. The less quantity of food his cattle would require, and the greater amount of work they would be able to perform, the larger supply of wool his sheep would yield, and the less hay and grain they would consume—such are the reasons commonly employed to induce the owner of domestic animals to provide them comfortable shelter. Now and then, the comparative helplessness of the brute creation, their position of dependence on man, their sensibility to cold, hunger, &c., &c., are brought forward to make up a claim on the compassionate nature of the lord of the lower animals. The economists' argument is as good as anything purely selfish can be; the plea of the sentimentalist would sound better if we did not remember what we have been told, that in their natural state, horses, cattle, sheep, &c., managed to take tolerable care of themselves, and that man reduced them to subjection and dependence.

The question whether the owners of farm stock shall provide comfortable shelter for their animals is not properly one of self-interest merely, nor of self-interest joined with the compassion due from a being of high capabilities to one of lower endowments; it is, and should be treated, partly, at least, as a question of justice. The proper relation between servant and served is based on the principle of mutual benefit. We should be ashamed to deprive the humblest creatures of liberty and compel their services, unless, in return, we care for them better than they could care for themselves. What they receive from us in the way of food and shelter should not be regarded as so much unavoidably subtracted from the profits of their labor, their fleece, or their carcass; nor bestowed grudgingly as a sort of alms, but cheerfully paid as rightful wages. It is as much their due as if they were capable of bargaining for it, and withdrawing their services in case of breach of contract by the other party. It is time the relation between man and the brute creation were considered in another than coldly economical point of view; let us have a plea for the right usage of domestic animals addressed to the pockets, the sympathies, and the consciences of their owners. A.

South Livonia, N. Y., 1859.

ABOUT BUTTER AND CHEESE.

EDS. RURAL NEW-YORKER:—In the RURAL of Nov. 5th, we noticed an article headed Butter and Cheese, and the question, What has become of them? This question is a very important one, not only to your State, (N. Y.), but to all of the Northern ones, both East and West. That article says—"There would seem to be a general falling off in the dairy product of this State, (meaning N. Y., I presume,) judging from the present prices of butter and cheese." The article also gives figures of the prices of both those commodities for one month, (October) of each year, for ten years—viz: from 1850 to 1859, inclusive. During the first five years, butter averaged 15½ cents per pound, and cheese 8½ cents per pound. During the next five years we find an increase of nearly twenty-five per cent., which is surely a profitable investment for farmers. But even at these prices we can hardly find either for sale.

In this State, (Michigan,) at our market, (Kalamazoo,) we can scarcely find a pound of butter at any price, at this date (Nov. 18th,) for sale,—and when we do find it, have to pay from 18 to 22 cents. Now, we claim this ought not and need not be. Admitting Michigan to be a grain, rather than a dairy country, still there can be butter and cheese enough produced for all home consumption, and some exported at far less figures than those above. The failure is just here: farmers are too slack about this matter, and leave it rather to circumstances than systematic calculation. In traveling through the State in almost any direction, we will see cattle of all kinds (cows included,) standing out beside a straw-stack or fence, shivering in a cold November storm, with

nothing to eat except what they can pick themselves from said straw-stack, and giving, when milked, from 1 to 3 quarts per milking. This, we say, is the condition (except in isolated cases,) of cows in this State. This is one of the causes, and a very prominent one, of a deficiency in butter and cheese. Another is want of good stock,—but few farmers taking the pains to improve their stock by breeding from thorough-breds. If farmers would only wake up to the necessity of a reformation in this department, they would find they could make more money, and make it easier, by judicious management, at butter ranging from 12 to 15, and cheese from 6 to 8 cents per pound, by making more of it, to say nothing about the advantage accruing to their stock in good looks and better condition.

More on this subject at a subsequent date, if this is not consigned to the dark drawer. Kalamazoo, Mich., 1859. YOUNG FARMER.

THE DAIRY vs. GRAIN GROWING ON THE PRAIRIES.

GRAIN-GROWING upon the prairies seems now to have reached its maximum, so far as economical production by labor-saving machinery is to aid it. The plow and the reaper find naught to obstruct their progress or hinder their labor. When the price is fair it is indeed a fertile source of wealth, but at all times its market is to be sought thousands of miles away, and when low prices rule the cost of carriage consumes much of the product.

Not so with the dairy—especially the cheese dairy. The home demand exceeds the supply, and orders have now to be drawn upon the States of Ohio and New York to supply the deficit. And this too in a land where pasturage is unlimited in frequent localities, and forage of all kinds is abundant and easily supplied. At the present day the capital to be invested in grain growing is nearly or quite as large as that for dairying, but owing to past success all eyes have been turned toward the production of grain, and the business of dairying is lost sight of.

Every farmer who uses machinery must own it himself, or pay others for owning and working it, which amounts to the same thing, and here is opened an expenditure for reapers and drills and cultivators equaling the cost of quite a herd of cows. Then, the hardest work of the season comes when his neighbors are pushed to the last extremity and thousands of acres of grain are becoming over-ripened, causing "bidding up on wages" by those who wish to hire help. All these are items against the growing of grain.

The dairy has to be provided with suitable and convenient buildings for the manufacture of butter or cheese. These at the West are among the chief obstructions to opening this business upon the prairie, and have doubtless hindered many from investing in it. But the moderate price of lumber at the present date does much toward removing this hindrance. When buildings are once constructed the cost of keeping a cow for the round year is much less than at the East. Where the range is ample no interest has to be paid, either upon the land furnishing summer range or winter forage. The cost of securing hay is certainly less than at the East, while of help suited to butter and cheese making, it may be a trifle greater.

The advantages of dairying over grain-growing are, while their natural facilities are equal, the market for the dairy is found in the neighborhood at high prices, while the other has to seek a market and be governed by the fluctuations of commerce and trade. W. H. GARDNER.

Amboy, Lee Co., Ill., 1859.

A PROLIFIC SHEEP.

EDS. RURAL NEW-YORKER:—I noticed an article in the RURAL of Oct. 29th, speaking of a profitable flock of sheep owned by J. MAXVEL, Dover, Md. I will speak of a profitable sheep. I have a small flock of South Downs, from which I give you an account of the product of one ewe, raised from one of my imported ewes. She was 4 years old last May. When one year old she raised a buck lamb; when two years old two ewe lambs; when three years old two buck lambs; when four years old two ewe lambs—in all seven lambs. I weighed this day her pair of two year old ewes—one weighed 181 pounds, the other 172 lbs. Her last spring lambs came in May; one weighed 100 lbs., the other 90 lbs. The three bucks I have disposed of, which would of course weigh at same ages as much or more. The weight of the mother when in same condition is about 190 lbs. The whole estimated present weight of the ewe and her product would be fully 1,200 lbs., from the ewe lambs of four years ago last May.

I have others as large, but none as prolific. I feed no grain or roots to my sheep—only corn stalks and hay in winter. "Who can beat it?" They are beautiful, as well as large.

RALPH H. AVERY.
Wampsville, Madison Co., N. Y., Nov., 1859.

DO BEES SELECT A HOME BEFORE SWARMING?—*Facts in the Affirmative.*—A tree was cut down, and a cavity found in it, with bees at work cleaning it out—showing a large amount of labor had been done, to make it a comfortable dwelling. Next day, while men were at work on the fallen tree a swarm of bees came, rested on an adjoining tree, and began to make comb on the underside of a limb.

ANOTHER.—A young swarm has been known to go directly into an empty hive standing near without going through the usual form of swarming. The question is still open, do they always select a home before swarming? What Bees go out to hunt the new home, Queen, Drones, or Workers?—S., Centralia, Ill., 1859.

BEANS FOR FATTENING HOGS.—I think it is not generally understood that beans may be used for fattening hogs. I have had some experience in the matter, and I think there is nothing that will fatten faster than beans. They must be boiled soft and well mashed, then put into a tub or barrel and let sour. Care should be taken in feeding at first so as not to cloy them, as they make very hearty feed. Try it, you who have beans that are not merchantable.—A. C., Le Roy, N. Y., 1859.

HORIZONTAL WELLS.

WELLS, as opposed to living fountains of earth-drawn water, are generally reported against.—Everybody seems to love the enduring, volunteer fountain, whether found in forest or prairie—among rocks, or gurgling forth from the soil. Poets sing of these fountains and barbarians worship them—western emigrants shout "Eureka!" at their discovery, and there they rest. The world of animate nature slakes its daily thirst with waters self drawn. Man and only man seeks water in the earth.

If fountains are to be chosen, why not, in hilly and mountainous regions, have all our wells fountains, by digging them horizontally into the hillsides? Mining after coal in Pennsylvania, and gold in California has clearly illustrated the fact, that wells may be dug into hillsides or banks, or bluffs, as well level or horizontally as down perpendicularly; so that every unlucky thing falling into the water becomes a portion of the contents of the well. Very many of the dairy farm houses in the Empire State may be supplied with water from the hill by means of the artificial fountains we are describing. Also dry pastures may have such wells, and the water gathered in a trough as naturally as if it had always flowed there.

Much dangerous and severe labor may also be saved in drawing the dirt by windlass from the well. Water so very troublesome in common wells, has not to be bailed in the horizontal, as it takes care of itself. The certainty of discovery or cutting off veins of water is greater with the horizontal well than the perpendicular, if it starts in near the base of a hill or anywhere as much below the surface as a common shaft would be likely to be sunk.

How much labor and cost in bringing springs in logs or pipes from distant fields, and in the end only having secured semi-cold water of not half the value for the dairy it had at its source, might have been saved by a trial of the horizontal well. The California Farmer indorses their efficiency, and urges farmers to construct them wherever practicable. The construction is simple and hardly need be described. When the location is chosen, let it be so that the course of the well may rise a few inches as it progresses, that the water, instead of running in, may run out. If it should be sandy or gravelly and the arch incline to fall, plank must be used to support it. The labor can be performed in a wet time or in winter, as the water runs away from instead of into the work. The dirt is easily removed with a wheel-barrow. The stoning may be with an arch in dimensions sufficient for the entrance of a man or only a drain or gutter to conduct the water. J. S.

Hornby, Steuben Co., N. Y., 1859.

SHEET-IRON EAVES CONDUCTORS.

Tin eave conductors are expensive in first cost, and soon rust and become unsightly. Their cost hinders many from providing their houses with these necessary fixtures of a dwelling well fitted to be a home. To a considerable extent this expense may be obviated by using the better sort of sheet-iron in place of tin. Iron may be soldered as well as tin and form the gutters as well as round conductors. To enable iron to withstand, without rusting, the effects of the weather, it should be well painted with oil and lead, or gas tar, put on while the iron is a little warmed. Many buildings now needing these conductors, may have them if the owners will but hear the experience of others.

Any ingenious person having the use of tools can make a set of eave gutters answering well the purpose designed, and if there are no elbows—the conductors or spouts also. But as iron is not as readily soldered as tin, we subjoin the modus operandi, for the benefit of whom it may concern.

Bright iron edges can be soldered, but it is better to apply either sal-ammoniac or chloride of zinc to the edges to be soldered. A few pennies worth of sal-ammoniac will be sufficient. Wet this and rub it upon the brightened iron; then sprinkle on rosin and the soldering is as easy as if of tin. Instead of sal-ammoniac, chloride of zinc may be used, which can be prepared as follows:—Put into a phial or bottle a handful of bits of zinc—old sheet zinc, cleaned, will do—and pouring upon it half a gill or a gill of muriatic acid (hydrochloric acid,) with three or four times as much water. The cork should be left out until effervescence ceases. In a few hours it will be fit for use, and iron wet with it will solder as readily as if sal-ammoniac was used. It should be put on with a stick.

We think there is less apology for farmers not providing cisterns with the cost reduced to that of iron, as above given. Well painted they will be more durable than tin. AQUA FONTANIA.
Leland, Nov., 1859.

MAKING CHEESE FROM A FEW COWS.

EDS. RURAL NEW-YORKER:—Not witnessing any reply to your correspondent on this subject, and believing that few make the trial, I will venture to give you my mode, which I have found satisfactory and successful. Having commenced a few years since, ignorant of many of the practical duties of a farmer's wife, while seeking for information I chanced to find in an agricultural paper an account of a visit by a gentleman to some of the dairies in Cheshire, England, in which he describes a small, self-acting press, from which I gathered sufficient information to order one made. It is simply a tin can, 26 inches in circumference, 8 inches deep, pierced full of small holes, the corner to be fastened by a hinge on both sides, and hook over on the outside. I use no other apparatus, except two wooden followers to fit inside when the curd does not fill the hoop. From five cows, I make each day a cheese weighing ten pounds, after supplying my family with milk. If you have not milk sufficient to fill the press at once, prepare what you have, and put in the followers placing a small weight (a stone weighing 8 or 8 pounds is sufficient, or a dish of cold water will do as well,) upon them, and if you wish to make the full size prepare another curd and add after scaring off the first. In either case it should be turned over two or three times, and gently pressed down into the opposite cover. In this way, and with very little trouble, I have successfully supplied my family with good cheese for the past seven years. A FARMER'S WIFE.
Hartland, Nig. Co., N. Y., 1859.

Rural Spirit of the Press.

About Winter Barley.

In a letter to the Branch County (Mich.) Republican, Mr. JAS. CLARK, a well known and prominent farmer, thus writes of winter barley:—"The barley has been grown in this vicinity for the last three years, and is, consequently, no longer an experiment. With us it has done well in every instance where it has had any chance. The general yield is from twenty to twenty-four bushels to the acre. Judging from what we have seen of the grain, it is capable of yielding eighty bushels per acre. During the past season it has been raised by the side of spring barley, and has produced four bushels to one of the spring variety. Mr. AMOS CULVER of this place (Quincy,) has raised during the past season, sixty bushels per acre on oat stubble once plowed, or one hundred and eighty bushels on three acres, and on land that has been cropped for eight years in succession."

We think it has decided advantages over spring barley, viz:—1st, It may be sown after farmers get through with their hurry in sowing their winter wheat. 2d, It may be harvested before wheat is ripe. 3d, It has no black or false heads. 4th, It yields two to one, at least. 5th, The insect will not hurt it in the fall, and it is so early that the weevil will not hurt it.

We are in hopes this barley will prove a substitute for the wheat crop, if we should be obliged to give up the cultivation of that grain in consequence of the insects and weevil, which at present threaten its destruction in Michigan. This variety of barley should be sown some time between the 15th of September and the 1st of November, requiring about two bushels of seed per acre. It will ripen ten days earlier than wheat, and leaves the ground in good condition for that grain.

Raising Stock.

It is choice cows, sheep, horses and mules, says the Field and Fireside, that yield the greatest returns to skillful husbandmen. The production of scrubs, or mean stock of any kind, is rather a mean business, in a pecuniary point of view.—Raise superior animals on rich perennial grasses, if you seek a good income from your farm in stock husbandry. Such animals may obtain part of their living from unimproved old fields, particularly sheep; but they want good clover and peas hay in the winter, or hay made from the English grasses. The most prominent error in stock growing is the attempt to rear fine hogs, cattle and sheep on scanty and defective food. Some want a good deal of meat, milk, or wool, from little or nothing. They ask nature to make them rich, while they lie in the shade in summer, and sit by the fire in winter, and leave their poor animals to nearly or quite perish from neglect.

Increasing the Weight of Wool.

THE Battle Creek (Mich.) Jeffersonian thus describes a method adopted by some New England farmers to improve the aggregate weight of the fleeces of their sheep. "They noted the weight of fleeces of each sheep in the flock; opposite was set the number of the sheep, a corresponding number having been branded upon the animal itself at the time of taking its last clip. This course had been pursued for some years, and its results were apparent in a wool crop, brought up from an average of four pounds to over five, and a corresponding increase in size and quality of sheep. The practice had been to slaughter, and otherwise dispose of all animals ranking lowest in weight of fleece, and to improve upon the quality of the remainder by judicious crossing. The crop of this flock was disposed of at 48 cents per pound, while we were there, a buck's fleece bringing the snug sum of \$5."

Preserving Butter.

A PATENT has been secured by W. CLARK, of London, Eng., for the following method of preserving butter:—"The butter is first well beaten in the usual manner after churning, then placed between linen cloths and submitted to severe pressure for removing whey and water. It is now completely enveloped or covered with clean white paper, which is coated on both sides with a preparation of the white of eggs, in which fifteen grains of salt is used for each egg. This prepared paper is first dried, then heated before a fire, or with a hot iron, just prior to wrapping it round the butter. It is stated that the butter may be kept perfectly sweet without any salt for two months, when thus treated, if placed in a cool, dry cellar. The submitting of butter to pressure, as described, is a good plan, and farmers can easily practice it with a small cheese-press."

Hints for the Farmer.

THE whitewashing of cattle and horse stalls, as well as the inside of hog cotes and henneries, not only renders them more healthy, but prevents the animals and fowls from being invested with troublesome and filthy vermin. Keep your stables and barns well littered. Leaves from the woods are excellent and absorb the liquid manure well, besides of themselves they make good manure. Nothing that will make good manure should be wasted, but carefully saved. Never undertake to fat an animal until you have first made it comfortable in bed and board. If you wonder why other people's cattle are gentle, try the discipline of kind treatment on yours, and you will soon learn the secret.

Charcoal for Fattening Animals.

THE Valley Farmer advocates the use of finely powdered charcoal mixed with the food of fattening animals, especially hogs, once or twice a week. It says that it serves as a medicine, and is also extremely fattening, either in itself or by rendering the food more available by strengthening and stimulating the digestive powers. We can not believe that it is, in itself, nutritious.

Linseed Cake for Heifers.

C. S. FLINT, in his new and valuable work, Milk Cows and Dairy Farming, says that heifers fed with a little linseed cake, in addition to their other fodder, for three months before calving, acquire a larger development of milk vessels, and yield more milk afterward, than others fed as usual. He thinks cotton-seed cake would answer equally well.

Agricultural Miscellany.

THE RURAL PROGRESSING.—Notwithstanding the complaints of "hard times" in some sections of the country, we are daily receiving the most gratifying and substantial evidence that the Eleventh Volume of the RURAL will have a far larger circulation than the present. From the highly complimentary letters and handsome remittances reaching us from all parts of the Union, Canada, &c., we are confident no journal in the land has more ardent friends, and we shall endeavor to make the RURAL continuously worthy of such large and wide appreciation. Among the encouraging letters received by the last mail, were two which attracted attention—one from South Carolina and the other from Taunton, Mass.—the former volunteering aid in support of the RURAL, and the other containing \$4 for two years in advance. Though the same mail brought us letters from several States and the Canadas, we look upon the two cited as the most gratifying—showing, as they do, that the RURAL is regarded as an "institution" both North and South.

"STOP MY PAPER!"—Under date of "Yadkinville, N. C., Nov. 15th, 1859," a subscriber writes us in this chivalrous wise:—"I see in your last paper a long advertisement for the New York Tribune, a lying, hell-fired, sectional concern. You can stop my paper immediately. I can't patronize no paper that advises for the Tribune."

—While receiving new subscribers from all parts of the Union, (the Carolinas not excepted,) and encouraged with the prospect of adding from twenty to thirty thousand to our present circulation within the ensuing three months, such a logical, peremptory and (so far as one whole subscription is concerned) perfectly annihilating epistle as the above is a stunner—a strong dose of hydropathy for this chill weather! Our truth-loving, patriotic friend ought to have considered our "feetlarks," and not "gone and went and done it"—crushing our fond hopes, and blasting our bright prospects in such a summary and overwhelming manner, regardless of the destructive consequences to the future weal of (not only the RURAL, but) that portion of the people of this great "Universal Yankee Nation" who subscribe to the somewhat obsolete dogmas of the Declaration of Independence, and think the "rights guaranteed by the Constitution" (including free speech to our friend, and a free press to us,) are not altogether mythical! However, we submit to the great pecuniary loss, and severe shock to our personal dignity and prospects, with becoming humility—as we have aforesaid to similar dispensations of wrath from both Northern and Southern fanatics. Meantime, and perhaps for some time longer, we shall continue to edit and publish the RURAL New-Yorker in such manner as seemeth to us right and proper—furnishing the paper at \$2 per annum in advance, and inserting such advertisements (from the North, South, East and West,) as we consider legitimate, at our usual rates! As the present is a good time to "stop my paper," we are thus particular in giving our platform, so that people who "can't patronize no paper" that don't square exactly with their notions may govern themselves accordingly.

SMALL FARMS IN WESTERN NEW YORK are in demand. We frequently receive private letters inquiring for such farms, which create mingled feelings of pleasure and regret—pleasure that we live in a region so desirable, and regret that we are unable to respond satisfactorily. As samples of these inquiries, we quote from two letters of recent date. A prominent gentleman residing between Ulster and Albany, wants what many have in this section, but what can be rarely purchased. He writes:—"I am looking for a small place (say about 50 acres,) near a railroad station, (half mile or less,) in a good fruit country; tip-top land well set out with various kinds of fruit; well watered, sufficiently timbered; first rate buildings; in a healthy climate, good society, and near churches and good schools. Do you know of such a place near Rochester or in Western New York? I apprehend places like one I want are seldom advertised for sale, and thinking it probable that, from your extensive knowledge of the country and its inhabitants, you might know of some place that would suit me, I have ventured to trouble you. If you know of a place that fits the above description, or comes very near it, and will have the goodness to let me know I will come and see it. Please let me know all the particulars you may be possessed of (as to price, terms of payment, &c.) in regard to any place you may think will suit. Whatever trouble or expense you may be to in the matter, I will cheerfully recompense you for, as, having been for forty years a resident of this snowy, cold and almost fruitless country, I am anxious to quit for a better." [If any one has such a place to dispose of, we will, on notification, cheerfully advise our correspondent.]

A subscriber in Oniogo Co.—Mr. W. J. ATKINS of Cherry Valley—writes us as follows:—"Permit me to inquire through your valuable RURAL where I can obtain a cheap grain and dairy farm in Western New York. One with comfortable buildings, and as level as may be, preferred. Any such information will be thankfully received," &c.

GIVE THE PRICES.—If those who advertise farms, implements, &c., would state the prices, it would save trouble and expense of correspondence, and otherwise facilitate trade. Many people would readily purchase an article if the price were named, but would never write for information. We occasionally receive complaints from distant subscribers on this subject, and have heretofore requested our advertising friends to "reform it altogether." A letter just received from a subscriber in St. Clair Co., Mich., says:—"I am not a little surprised, after your giving the word of caution, to see so many new implements advertised in your paper and no price attached to them. How are we, who live 500 or 1,000 miles from the place where an article is made, over to learn the price, and how does the vender know how many would buy if they only knew the price? Without this no man expects to buy. I have been in hopes of finding in the RURAL, as I take no other agricultural paper, a straw cutter, the price of which might correspond with my means; and now I rather supposed I had found the one, but no price is given."

KANSAS WHEAT AND AG. FAIR.—The local of the Rochester Express (who has spent a year or two in Kansas) says, in a late number:—"A gentleman recently returned from Kansas, yesterday exhibited to us a sample of winter wheat, grown in the vicinity of Lawrence. It is a very white, plump seed, and the specimen shown us was from a crop yielding thirty bushels to the acre, and weighing sixty-five pounds to the bushel. The past season has been very profitable to Kansas farmers. The first Agricultural Fair ever held in the Territory, at Lawrence, on the 6th and 7th of Sept. A. R. came off at Lawrence, were represented, and the Society is now organized upon a permanent basis."

GOOD COWS.—In a recent letter Mr. JOSEPH R. DEWEY, of Canaanville, N. Y., writes:—"The two last weeks of June past, my wife made from two cows fifty-two pounds of good butter, and we used what milk and cream was wanted in a family of four persons. One cow is native, and one half Durham."

HORTICULTURAL.

PRUNING AND TRAINING THE VINE—No. I.

On the first page of this number will be found an engraving showing a system of pruning and training the vine, called the *Thomery* system, from the name of the village near Paris where it has been practiced for more than a century, with results that have given it a world-wide celebrity. This system was designed for foreign grapes, which bear and in fact require closer pruning than our natives, for the production of good fruit. The object sought is to cover an entire trellis, of any required dimensions, uniformly with wood and fruit, in such a way as to produce the greatest amount of the best quality, for a great number of years—in fact, indefinitely, without injury to the vine. At Thomery the vines are trained to trellises screened by walls, only about eight feet in height, but we have seen in some of the cities of Europe the entire front of tall city buildings covered with vines by the same system of training, and for this purpose it might be well adopted in this country. Our barns may be covered with vines, by simply protecting the trunks, and the branches be entirely out of the reach of cattle, and the fruit secure from the poultry. For covering the fronts of buildings in cities it is admirably adapted. Dr. Grant, of whom we obtained engravings and descriptions, says:—"I have, during the past twelve years, on the south side of my dwelling, trained vines that have borne profusely, and ripened their fruit nearly or quite two weeks earlier than those in the garden, not more than one hundred feet distant. The house is on the line of the street, and the border occupies the entire walk, twelve feet in width. Before planting, the ground was trenched three feet deep, and abundantly enriched with stable manure and wood ashes thoroughly mingled with the soil or rather gravel. Flagg was laid, and it has received no enrichment since, nor has any apparently been needed. The lower fruit-bearing courses are about twelve feet above the walk to avoid depredation. Aside from the great quantity of superior fruit yielded, we have been indebted to our vines for a most beautiful and delightfully cooling shade, for which, I think, no vine can excel the grape. The best situation for the vine is often overlooked."

The direct end to be aimed at we will suppose to be the covering a trellis, like that represented in the plate, with bearing-wood that will produce a crop of fruit like that shown at 4, (see plate), on first page. By this system, instead of allowing a vine to bear at different elevations, the bearing-wood is confined to the same elevation, which is a great advantage, for it is difficult to make vines produce good bearing wood through a great perpendicular height.

FIGURE 5.

At one end of the trellis (see first page) is a strong post, around which wires are fastened. To keep the post upright it must be braced, but the bracing is not shown. At the other end little portions of wire are shown, designated by figs. 1 and 2. The portions of the vine lying along (2) and sustained in place by it are called arms. Those shoots fastened towards the tops to the wires (1) are called the courses, (cordons,) and on 4 are seen properly loaded with fruit, but represented without the leaves, for when the leaves are in place, very little of the fruit is visible. The figure 3 indicates the standards from which the arms are taken. The one nearest to the post and the fifth furnish arms for the lower courses. The second and the sixth furnish arms for the upper courses. The third and the seventh for second courses from the top. The fourth and eighth for the remaining courses, which completes the system, which, when loaded with fruit, will all be like the one designated by 4.

It will be observed that the shoots upon the arms which constitute the courses are alternately in pairs and single. In pruning, to make single

ones grow pairs or two shoots from one spur, cut above the first good bud, and that will give two shoots, one, and the bearing-one, from the well-developed bud, and the other from a bud scarcely visible on the vine, and too small to be shown in the engraving. The shoot from the latter will not be certain to bear fruit; at its base will be formed a bud that will fruit, and then the shoots will be established.

To prune the double shoots, cut the upper one off by cutting the spur just above the origin of the lower shoot, and then cut the lower shoot at two buds, by these means the spurs will always remain short. This plan is perfectly adapted to renewal yearly, biennially, or triennially, as may be found expedient, or to suit the views of the proprietor. To renew yearly, double shoots should be always grown, and the one from the upper bud only suffered to produce the fruit. To renew biennially, or triennially, grow alternately as shown in plate, and the method of proceeding is too obvious to require explanation. By recurring to fig. 5, the manner of cutting will be apparent.

Whatever system is pursued in training the vine must be commenced early, when the vine is young. It is almost impossible to bring an old vine into any desired form. The first season only one shoot should be suffered to grow, and that should be trained to an upright stake set into the ground at the time of planting. The tying should be so frequently done as to keep the shoot always upright. If suffered to bend over, the strength will go to the formation of secondary shoots that spring out in the axils of the leaves, at the junction of the footstalk of the leaf with the main shoot, and are called laterals. (See Fig. 1, at s, s.) These laterals should be all taken off at one leaf (see s) as soon as they have made a length of three leaves, as the strength that goes into them is taken from the leaves of the main shoot while they give back but little to the formation of root or to the general strength of the plant.

At the time for pruning, which we will suppose the month of February for the present, this shoot should be cut back to the lowest well-developed bud, which will be near the ground, and the same course of tying and removing laterals pursued as directed the previous year. If the vine is a very strong one, it will show bloom for three bunches of fruit, which may be suppressed or suffered to go on to maturity according to the strength of the vine. If the vine is of the strongest character, and of prolific habit, fruit may be had the first season and two shoots grown the second season, as will be hereafter shown; but a strong one must be grown before attempting to grow two. A, figure 1, is a vine of one upright shoot, as a strong vine should be at the end of the second season; s, s, is a lateral springing from the axil of a leaf that has been twice pinched at one leaf each time, first at s, and second at s'. Every bud on the shoot had a "lateral" that received similar treatment, or perhaps that required pinching a third time. a, b, c, d, e, are the points at which it may be cut to fit for the Thomery system, as on first page; x and x are two shoots at the end of the third season, whose treatment has been the same as was that of A during the second season. x, x, represents the same shoots laid down for arms, four feet long each way from the standard; on the left but a portion of the arm is shown from deficiency of size of plate. On the left below, two shoots, one double and one single, of the lower course are shown, by dotted lines growing out of arm x, x. In like manner, arms might have been taken at b, c, d, or e, as indicated by the faint lines showing where shoots might have been, instead of at a.

For a single system only one pair of arms are taken from one vine; at the height of b, another pair are taken from another vine, and so on, as at c, and d, and e. The shoots spring from one bud on each side, and all of the other buds are rubbed off. If a double system is required, so that the standards may not be inconveniently near to each other, two sets of arms are taken; we may suppose one set at d, and another at e, or if desirable at a much greater height; but if at a greater elevation than at e, another year will be required for the preparation of the cane for a standard. It may be remarked that the long growth of one year is called a shoot. If it is for the next season, cut short—that is, the length to one or two buds—it

is called a spur; if the length of a foot or more, it is called a cane. After the second year the cane becomes a standard. (See plate on first page where the standards support the arms at different elevations, and the arms support the "cordons," or courses, on which the fruit is borne.) Figs. 2 and 3 are elegant methods of growing vines on stakes, and suitable for the garden. Fig. 4 is the German method of making bows, and is suitable for vineyard or garden, and Fig. 5 is a short spur and renewal plan, well adapted for gardens. At the stage shown in the plate, it is supposed to be fourteen years old. H, below, marks the third or perhaps the fourth year; and at H, above, each succeeding year is marked, adding a spur and two shoots on each side yearly, or rather each year adding a shoot on each side, and at the same time converting the previous year's shoots into spurs, each bearing two shoots. Every shoot is supposed to bear three bunches of grapes, and every shoot alternately by pruning becomes a spur, bearing two shoots, and every spur is alternately renewed, so that it may be called a biennial short spur renewal system. For the garden this is quite ornamental, and in skillful hands will work admirably; but is far less simple than that shown on first page, and if for want of care or skill the lower spurs be lost, the loss may be considered final.

FIG. 3.

FIG. 4.

All systems suppose one upright shoot to be provided, as at A, to start from at the beginning of the third season, except in case of layers of remarkable vigor, when the course of training may be commenced at the beginning of second season.

COLORS PLATES OF FRUITS AND FLOWERS.—D. M. Dewey, of this city has for several years been engaged in getting up colored plates of Fruits and Flowers, for the use of nurserymen and their agents. These plates are used to show the size, color, &c., of the different varieties of fruits, to those who wish to buy trees, for the purpose of aiding them in making their selections. A bad representation of a fruit, like a bad portrait, is worthless, indeed worse than worthless, a poor caricature, either deceiving or disgusting those to whom they are exhibited, according to their knowledge of what a true representation would be. Most of the colored plates given in horticultural journals in this country, or sold at the bookstores, are but miserable daubs, got up to sell, and though often solicited we have never been able conscientiously to say a word in their favor. To-day, Mr. Dewey exhibited to us a large collection got up for a nurseryman in Missouri, with which we were pleased, for they exhibited a marked improvement. Some of the plates were very good. Mr. D., has now over three hundred different varieties, with which he can supply those who may wish to purchase. We are glad to notice an improvement in this department, where it was so much needed.

About half the matter prepared and in type for this department we are compelled to omit, for want of room.

Inquiries and Answers.

ALTHEA FREEZING, &c.—Will you please inform me how I shall preserve my altheas from freezing down every winter? What kind of cans is best to preserve fruit? Can fruit, such as strawberries, be preserved in a fresh state, or must they be cooked?—JENNIE, *Lysander, N. Y.*, 1859.

PRUNING late in the summer so as to check their growth, and ripen the wood, would perhaps effect the object. The only objection to this is, that the Althea blossoms late in the season. Immediately after the flowers begin to fall, prune up your plants pretty close, removing a good portion of the present season's growth. Covering with a few evergreen bushes, such as the Arbor Vita, would afford abundant protection, and these may be so arranged as to look well in the garden. The double white variety is the most tender. The single varieties are generally more hardy, and not less beautiful. Almost any of the jars or cans that can be readily sealed so as to exclude the air are good for preserving fruit, which must be heated to nearly the boiling point, and sealed when hot. Strawberries are somewhat difficult to preserve, as though they keep without "working," they are apt to lose their flavor.

APPLE AND CHERRY GRAFTS.—Will you please state, through the columns of the *RURAL*, when is the best time for cutting grafts of the apple, pear, plum and cherry, and how they should be preserved till set? Also, will cuttings of grape vines grow if cut in the fall, and how should they be treated till spring?—S. Otis, *N. Y.*, 1859.

Grafts and cuttings may be cut at any leisure time during the winter. Preserve them in dry sand in the cellar, or they may be buried in any dry, sandy situation.

SEASON FOR PLANTING EVERGREEN HEDGES.—(S. M., *Niles, Mich.*)—The autumn will answer, if the best winter is favorable, but for several winters past fall planted evergreens have suffered terribly by the cold, dry winds, causing in many cases total destruction. Late spring planting, in our opinion, is the best.

APPLE ROOTS FOR GRAFTING—GRAFTING PAPER.—(J. W. S., *Little Valley, N. Y.*)—The roots of old trees are not used by nurserymen. Obtain young seedlings, which can be had cheap of almost any nurseryman. A thin Manila paper is used for grafting paper. The grafting wax is heated and put on with a brush. When cold the paper is cut into strips fit for use.

ROSE CULTURE, &c.—(M. M., *York.*)—The new roses are raised from seed, principally by French Florists. *Phlox Drummondii* is an annual, it is not worth while to try and keep it longer, than possible in the garden. The perennial *Phloxes* you can obtain in the spring of nurserymen, and *Drummondii*, if sown early in a warm situation, will be in flower late in June. *Parsons on the Rose* can be obtained at the bookstores for 75 cents. C. M. Saxon, N. Y., is publisher.

SOMMER BONCHRESTIAN PEAR.—(G. W. B., *Lakeville, N. Y.*)—Is a very old variety, and is the common summer pear of Europe. The fruit is large, well-shaped, though irregular; skin yellow, with an orange blush on the sunny side; flesh yellow, coarse, very juicy and sweet, but with no flavor. Ripe here about first of September, sometimes a little earlier. Liable to crack in some localities.

HOW TO KEEP ONION "SETS."—We have kept our onion seed, or sets, (as they are called here,) by simply putting them in a box, covering with straw and dirt, as we do our potatoes. They come out in good condition, if put up dry and taken out early in the Spring, as they are liable to sprout if left in the ground late.—C. G., *Parke Co., Ind.*, 1859.

ALLEN COUNTY (IND.) HORT. SOCIETY.—Officers for the ensuing year:
President—J. D. G. NELSON.
Vice-Presidents—Thomas Covington, M. W. Huxford.
Treasurer—O. W. Jeffords.
Secretary—H. O. Grey.
This Society was organized the present season. Weekly meetings are held for the purpose of discussing Horticultural matters.

DWARF PROLIFIC OKRA.—Some six years ago, a lady friend sent us a few seeds of the dwarf okra, since which we have cultivated no other variety, and we are quite sure any one trying it will never plant any other kind. It grows only from two to three feet high, bears an immense long pod, and fruits from the ground to the end of each limb. We are surprised so little is known of it South. We sent a few seeds of it, a few years ago, to Messrs. J. M. Thorburn & Co., New York, and this season received an order from them to raise five bushels of seed expressly for them. The advantage of the Dwarf Okra over the common kind is in the small quantity of wood fibre or stalk, and the great proportion of pods or fruit. Roasted okra seeds make a good substitute for coffee, and where the dwarf kind is cultivated expressly for seed, thirty or forty bushels may be raised from one acre.—*Cotton Planter*.

LOVE OF GARDENING AMONG THE POOR.—The lower classes in our great cities, (says the *Leisure Hour*), have more affection for the garden and its floral produce than the class immediately above them. Perhaps the money-making habit is not favorable to the cultivation of simple tastes and the love of (in a pecuniary sense) the unprofitably beautiful. However that may be, we know it is a fact that in many a trading house of no mean pretensions, the in-door garden is confined to the basement floor, and the flowers and greenery which are ignored and banished from the parlor and the drawing-room, will take refuge in the kitchen. The conservatory may be stored with old boxes and packing-cases, but Betty has a box of fragrant Mignonette in the scullery window, and a bouncing Geranium outside the sill of her bed-room.

WASHING FLANNELS, &c.

Eds. RURAL NEW-YORKER.—I noticed an inquiry in relation to washing flannels, and as an answer, I send the following:—Make a hot soda with good soft soap, put in the flannels and let them lie a few minutes, then wash thoroughly with the hands.—Have ready some boiling water, (soft is best), dissolve a little bluing, or indigo, and pour on it sufficient of the hot water to cover the goods, put them in and let them remain until cool enough to wring. Dry in the air, and iron when slightly damp. Iron on the right side. I have followed this mode for years, and it has never failed to make them appear like new, even when almost entirely worn out.

BOILING BEEFSTEAK.—Bruise till very tender, then put over a good bed of coals for a few minutes. When cooked a little, take it off, dredge slightly with flour, and butter will finish the working, then add half a cup of cold coffee to the gravy, and you will find a gravy good enough for any of your "leige lords."

CREAM COOKIES.—One cup of sugar; 1 of thick sour milk; 1 teaspoon saleratus; mix very soft and bake in a quick oven.

I would also like to know through your columns how to color woolen goods a dark blue, (that will not fade,) also how to color brown or drab? St. Joseph, Mich., 1859. M. E. STERLING.

DYEING HATS AND FEATHERS.

To Dye Straw Bonnets Blacks.—Suppose there are two bonnets to dye, one leghorn and one straw. Put an ounce sulphate of iron into a vessel with two gallons of water; make the liquor boil; then put in the bonnets, and let them boil for one hour. Then take out the bonnets, and hang them on a peg to dry. When dry, rinse them in cold water. This part of the process of dyeing is called mordanting, the liquor being termed the mordant. After the bonnets are thus mordanted, the mordant must be poured out of the boiling vessel, and two gallons of clean water made to boil in its place; into that liquor put half a pound of gall nuts—broken—and half a pound of logwood, together with the bonnets, and allow the whole again to boil for one hour. Then take them out of the hot liquor, and hang them to dry as before, when they will be of dusky brown-black color. Chip bonnets, as a rule, do not require so long a time as straw, because the chip takes the dye easier. The final process is to size or stiffen the bonnets, and put them into shape. This operation requires two ounces of best glue, put into two quarts of cold water overnight, and next day completely dissolved by boiling. When the glue is melted, strain the liquor—then called size—into an earthen vessel. Into this put the bonnets one at a time, till thoroughly soaked. When the bonnets are taken out of the liquor all superfluous size must be sponged off. They are then brought into shape as they gradually dry, or they may be dried on a block. After this sizing process the color of the dye is improved, and becomes black as jet.

To Clean and Re-Dip Black Feathers.—Feathers that have become rusty in color may thus be restored:—First, well wash the feathers in soap and water, using the best mottled soap, and the water scalding hot for the purpose; then thoroughly rinse in clean water and dry them. Next, take half an ounce of logwood, and boil in a quart of water. When scalding hot, put in the feathers, and there let them remain till the liquor is cold, after which rinse them in cold, clean water, and put them to dry. Finally, rub or brush over the feathers the smallest portion of oil, which simple operation brings out the glistening jet appearance in a remarkable manner. If you draw a long strip of paper between the thumb and a blunt pen-knife blade, the paper will curl up. Feathers may be treated in the same way, using only such tender care as may be expected to be required in "touching a feather."—*Scientific American*.

MISS MARTINEAU ON COOKERY.

WHAT is to be done, for cooking does not come by nature, nor even ordering a table by observation? The art must be learnt, like other arts, by proper instruction. We want, and we must have, schools of domestic management, now that every home is not such a school. Mothers can at least teach their daughters to know one sort of meat from another, and one joint from another, and in a rougher or more thorough way, what to order in the everyday way and for guests. Thus much, then, every girl should know, from childhood upward. A little practice of observation in the markets would soon teach a willing learner to distinguish prime articles from inferior kinds, and to know what fish, fowl, and fruits are in season every month in the year. We have seen ladies buying pork under a sweltering summer sun, and inquiring for geese in January to July, and taking up with skinny rabbits in May, and letting the season of mackerel, herrings, salmon, and all manner of fish pass over unused.—*Once a Week*.

BOILING POTATOES.—The Irish method of boiling potatoes, for obvious reasons, ought to be as good as any. Here is the practice adopted by many of that ilk, and not a few besides:—Clean wash the potatoes and leave the skin on; then bring the water to a boil and throw them in. As soon as boiled soft enough for a fork to be easily thrust through them, dash some cold water into the pot, let the potatoes remain two minutes, and then pour off the water. This done, half remove the pot lid, and let the potatoes remain over a slow fire till the steam is evaporated; then peel and set them on the table in an open dish. Potatoes of a good kind thus cooked, will always be sweet, dry, and mealy. A covered dish is bad for potatoes, as it keeps the steam in, and makes them soft and watery.—*Conn. Homestead*.

Written for Moore's Rural New-Yorker.
LINES TO ONE AFAR.

SOFTLY moonbeams fall around me,
And the stars that gem the sky
Seem to lend their sweetest beauty
From their regal thrones on high;
Gentle zephyrs, pure and balmy,
Wander in the leafy tree,
And the soul-subduing stillness
Fondly brings kind thoughts of thee.

Thou hast left the hearts that love thee,
And art roaming far away,
Won by the delusive glimmer
Of some bright and golden ray.
Comes there now the olden memory
Of that sad, yet kind farewell,
And the glance which spoke more plainly
Than the lip, or pen, can tell.

Beaming, hopeful, glad and brilliant,
Smiling through thy falling tears,
Hope was spreading his broad pinions,
Which to gild thy coming years.
May he build no airy castle,
Which shall doom thee to despair;
Urge thee onward, ever weaving
For thy youthful feet a snare.

May thy heart know naught of sorrow,
But remain as pure as now;
Truthful, trusting, kind and loving,
When bright laurels deck thy brow.
We have met and we have parted,
And forever it may be,
But my heart will fondly cherish
Many loving thoughts of thee.

South Danby, N. Y., 1859. MARY A. B.

Written for Moore's Rural New-Yorker.
THE GARDEN ON THE ROCK.

BEAUTIFUL was that cluster of roses I held in my hand,—the centre one fully unfolded in all its delicate loveliness, the shining dewdrops clinging to its leaves, as if loth to quit such sweet company. Surrounding the perfect blossom clustered a coronal of buds, the soft blush of their closed petals smiling through the mossy covering which the grateful angel once bestowed upon the hospitable rose. I seated myself on the old flat rock beneath the birches, which was the favorite termination of my morning walks. How peaceful was the scene around me—ever new, ever charming to my partial eye. To my right lay a fertile meadow, in which the mowers were laying low the balmy clover, its fragrance mingling with that of the roses I held in my hands. The little stream wound with a graceful curve around the rock forming my seat, and wandered on with pleasant, murmuring sound, towards the old mill, the walls of which I could just distinguish between the maple-crowned hills which rose in the east,—the robins and orioles darted lightly through the air, giving out, ever and anon, sweet snatches of song,—such songs as always lead me to think of "harp of gold," and the "better land."

Thus I sat, drinking in the inspiration of the scene, when the faint perfume stealing up from my neglected roses recalled my attention to them. They had been given me by a poor woman, whose cottage I had passed in my morning walk. Glancing across the stream to her garden, from which she had culled this floral gem for me, I thought that the little story connected with it might prove a salutary lesson to many, who, surrounded by difficulties, are ready to faint by the wayside, leaving the cherished purposes of their hearts unaccomplished.

Mrs. C. was poor, and she had not only the ills of extreme poverty to contend with, but that, also, which is far more bitter to the sensitive heart,—the disgrace of an idle, dissolute husband, who, though never absolutely abusive, was such an intolerable idler, that nothing but the fierce call of his depraved appetite induced him to perform a day's labor,—for strong drink would he work and for nothing else. His poor wife,—whom he had solemnly promised to "cherish and protect,"—and a sorry time of it; procuring food for the family, and coarse but whole attire for herself and three little ones, occupied nearly all her hours. The house in which she lived had been deeded to herself and children by her father before his death, so that she was certain of a humble shelter through her life,—this one comfort alone was secure from the insatiable clutch of the dram-seller. It was situated on a small, low point of land, round which flowed the little stream, and in spring and fall was always inundated. Her longing eyes often rested upon it, with the unspoken wish that it lay above high-water-mark, and thought what a nice garden she then might have. With her the wish was destined to be fulfilled,—she was patient, courageous, and, with all her hard lot, hopeful.

All through the long days she toiled at the wash-board or the ironing table, and when her little ones had lisped the evening prayer her Christian heart had taught them, and her idle husband was sleeping the heavy sleep of the drunkard, she stole out to the hard task which she had assigned to herself for the coming year. First she gathered stones which the thrifty farmer had drawn from his meadow and thrown down by the stream, and built the foundation, placing the large ones at the bottom, wedging with smaller ones, and closely packing with gravel which she scooped from the bed of the stream. Very hard work it was for her poor, tired hands; very slow and toilsome to gather the soil which was placed in sufficient depth to make her garden productive, but after months of patient toil she had the satisfaction of finding herself in possession of "a garden spot" above the washing of the spring and autumn floods. Many a comfortable meal did she gather for herself and little ones from that "garden on the rock;" but precious as every inch was to her, the sweet love of the beautiful,—which neither poverty nor disgrace nor toil could blight in her heart,—prompted her to devote a little

corner to the lingering remains of a once Eden bloom,—the smiling stars of earth, the fragrant flowers.

Those roses are still in my possession,—withered and brown they are, yet, as I open the time-stained envelope which holds them, a faint perfume, like the sweet voice of the olden time, steals up from them, and whispers a lesson of courage and hope. When weary with the battle of life,—when my hands would fain fold themselves from the seemingly fruitless toil, and the sad soul faints for the "hope deferred," I look on those withered remains of beauty, and my heart feels encouraged and my hands nerved anew for the conflict. Oh, thou who art sitting sadly down by the rocky wayside, bitterly weeping that there is naught of joy for thee here,—who art looking into thine own heart and finding it turned, by the coldness of the world and worldly friends, to an almost pulseless stone, think of that poor mother's "garden on the rock" and take courage. Patiently gather the rich soil of daily duties cheerfully performed,—plant therein the seeds of heavenly love and trust,—water them with penitential tears, and thou shalt yet gather the reward of thy labor in plants which shall bud in promise, bloom in beauty, and crown the ripper years of life with the rich fruits of honor and usefulness. Thus mayest thou obtain for thine own self a "Garden on the Rock," which shall raise its fruitful front high above the desoling waves of adversity,—thus mayest thou have a slight foretaste of the precious fruits, hanging forever rich, forever fair, on the tree of Everlasting Life, which grow in the Garden of our Lord. East Henrietta, N. Y., 1859. E. S. T.

THE HEROISM OF COMMON LIFE.

GRACE GREENWOOD is a "hero worshiper" of a rather uncommon type, and in her search after heroic men and women, has sought for examples where, perhaps, few would expect to find them. That she has a just and Catholic idea of what real heroism is, we think it will be proven by the following extract from the Boston lecture:

"The heroism of private life, the slow, unchronicled martyrdoms of the heart, who shall remember? Greater than any knightly dragon-slayer of old is the man who overcomes an unholy passion, sets his foot upon it, and stands serene and strong in virtue. Grandeur than Zenobia is the woman who struggles with a love that would wrong another or degrade her own soul, and conquers. The young man, ardent and tender, who turns from the dear love of woman, and buries deep in his heart the sweet instinct of paternity, to devote himself to the care and support of aged parents or an unfortunate sister, and whose life is a long sacrifice, in manly cheerfulness and majestic complaint, is a hero of the rarest type—the type Charles Lamb. I have known but two such. The young woman who resolutely stays with father and mother in the old home, while brothers and sisters go forth to happy homes of their own, who cheerfully lays upon the altar of filial duty that costliest of human sacrifices, the joy of loving and being loved—she is a heroine. I have known many such. The husband who goes home from weary routine and the perplexing cares of business with a cheerful smile and a loving word to his invalid wife; who brings not against her the grievous sin of a long sickness, and reproaches her not for the cost and discomfort thereof; who sees in her languid eye something dearer than girlish laughter, in the sad face and faded cheeks that blossom into smiles and even blushes at his coming, something lovelier than the old time-spring roses—he is a hero. I think I know one such.

The wife who bears her part in the burden of life—even though it be the larger part—bravely, cheerily, never dreaming that she is a heroine, much less a martyr; who bears with the faults of a husband not altogether congenial with loving patience and a large charity, and with a noble decision hiding them from the world—who makes no confidants and asks no confidence, who refrains from brooding over short comings in sympathy and sentiment, and from seeking for perilous 'affinities'; who does not build high tragedy sorrows on the inevitable, nor feel an earthquake in every family jar; who sees her husband united with herself indissolubly and eternally in their children—she, the wife in every truth, in the inward as in the outward, is a heroine, though of rather an unfashionable type."

CHILDISH DAYS.

DAYS of illimitable faith! were they indeed mine! How glad am I to have known them! Not all that we resign, do we regret to have possessed. Very singular and very pleasing to me is the remembrance of that simple piety of childhood, of that prayer which was said so punctually, night and morning, kneeling by the bedside. What did I think of, guiltless then of metaphysics,—what image did I bring before my mind as I repeated my learnt petition with scrupulous fidelity? Did I see some venerable form bending down to listen? Did He cease to look and listen when I had said it all? Half prayer, half lesson, how difficult it is now to summon it back again! But this I know, that the bedside where I knelt to this morning and evening devotion, became sacred to me as an altar. I smile as I recall the innocent superstition that grew up in me, that the prayer must be said kneeling just there. If, some cold winter's night, I had crept into the bed, thinking to repeat the petition from the warm nest itself—it would not do!—it was felt in this court of conscience to be "an insufficient performance;" there was no sleep to be had till I had risen, and bed-gowned as I was, knelt at the accustomed place, and said it all over again from the beginning to the end. To this day I never see the little clean white bed in which a child is to sleep, but I see also the figure of a child kneeling in prayer at its side. And I, for the moment am that child. No high altar, in the most sumptuous church in Christendom, could prompt my knee to bend like that snow white coverlet, tucked in for a child's slumber.—Thorndale.

PARADISE is always where love dwells.—Jean Paul Richter.

WINTER'S SONG.

BY GEO. A. HAMILTON.

Here is Winter, bright and gay,
Asking for a cheerful lay—
That the scenes of Winter time,
Be rehearsed in measured rhyme;
Cheerily on each season glides,
Now 'tis snow,
Chocks aglow,
Time of bells and sleighs and rides!

Here is Winter, earth is bright,
Mantled in a robe of white—
Bracing air, clear and cold,
Quickening pulse of young and old;
Now bring out the pleasure sleigh,
Fast or slow,
Echo, ho!
Jingle go the bells to-day!

Winter comes with joyful token
Of each cheerful heart out-spoken—
Christmas, with its merry gladness,
New Years, with more hope than sadness;
Let the bells ring out their chime,
Heart and voice
Again rejoice,
Welcome still the Winter time.

Winter comes with cares and joys,
Labor, study, books and toys;
Winter evenings, what a treasure!
Home a scene of social pleasure,
Or out in the moon's fair light,
Horse and sleigh,
Then away,
Jingle go the bells to-night!

Here is Winter—don't forget
There are poor and needy yet;
To the sorrowing still be kind,
Think of those by pain confined;
Winter comes most bleak and drear
To the needy,
Help the needy!
Not forget them with a tear.

Winter, too, with leisure hours,
Arms the soul with higher powers—
Time for reading, time for thought,
Hours with our improvement fraught—
Thus glides round each busy year,
Calm and storm,
Cold and warm,
And eternity is here.

South Butler, N. Y., 1859.

Written for Moore's Rural New-Yorker.
COWLEY AND MILTON.

COWLEY'S "Complaint" displays not only his ingenuity as a writer, but also considerable of his character as a man. While we admire his tact in the production of this poem, we cannot help being surprised at the circumstances that gave rise to it. It is in fact, a *dunning letter* to His Majesty CHARLES II., who, it seems, had neglected to reward the poet according to the expectations he had raised. The King was under obligations to him, and Cowley had reason to expect a share in his favors. Not only was he the most popular poet in England at the time of which we write, but he was a zealous advocate of loyalty, and while yet at college connected himself with the old cavalier party. He accompanied the queen to France, when she was obliged to leave England on account of the civil war, and it was chiefly through his instrumentality that a correspondence was kept up between the King and his wife. His nights as well as days were sometimes occupied with their letters. So we are told in a brief account of his life in a collection of the "British Poets." No doubt he thought he should reap some reward for his exertions, but it seems CHARLES forgot all about the poet in the crowd of applicants for Kingly favor. COWLEY, however, determined to refresh his memory. Hence the "Complaint."

He represents himself as encountering the muse, who begins at once to reproach him for so long neglecting the lyre, and wandering "unto courts and cities."

"Art thou returned at last said she,
To this forsaken place and me?
Thou prodigal! who didst so loosely waste
Of all thy youthful years the good estate:
Art thou return'd here, to repeat too late,
And gather husks of learning up at last,
Now the rich harvest-time of life is past,
And winter marches on so fast?"

She passes from reproaches to taunting him with the little reward he had received for his toils.

"Go, renegade! cast up thy account,
And see to what amount
Thy foolish gains by quitting me;
The sale of knowledge, fame and liberty,
The fruits of thy unlearned apostasy.
Thou thought'st, if once the public storm were past,
All thy remaining life would sunshine
Behold! The public storm is spent at last,
The sovereigns lost at sea no more,
And thou, with all the noble company,
Art got at last to shore.
But whilst thy fellow voyagers I see
All march'd up to possess the promise'd land,
Thou still alone, alas! dost gaping stand
Upon the naked beach, upon the barren sand."

After she concludes her reproaches, he undertakes to excuse himself, and defend his royal master. In the closing verse he turns her taunts against the Muse, herself, thus:

"Teach me not, then, O thou fallacious muse,
The court and better king to accuse.
The heaven under which I live if fair,
The fertile soil will a full harvest bear;
Thine, thine is all the barrenness; if thou
Makest me sit still and sing when I should plow."

"Kings have long hands, they say; and though I be
So distant, they may reach at length to me.
However, of all princes, thou
Shouldst not reproach rewards for being small or slow;
Thou! who rewarded but with popular breath,
And that, too, after death."

The poem displays considerable genius and wit. Whether it had any effect on the King is uncertain.

tain. We are told, however, that through the influence of some of his nobleman Cowley obtained a lease of a farm at Chertrey, by which his income was raised to about three hundred pounds per annum. It was here that he died.

It is said the fame of Cowley is dying away.—At the time of his death, he was preferred to MILTON,—now a comparison between the two is hardly to be thought of. The fame of the author of "Paradise Lost" has been of slow growth, but it promises to endure. Even a short glimpse, either at their productions or their memories, shows that the two men were very unlike. MILTON was a firm supporter of the rights of the people. He was a man of principle. Whichever way the popular tide might turn, it never could move MILTON from his adherence to right. Cowley was a flaming royalist, and a flatterer of the King. Whether principle or policy governed him in his zeal for his party, the reader must judge for himself. At one time he wrote a comedy which was construed by the cavaliers into a satire on them. This would seem to indicate that his principles were movable, to say the least.

But there is also a great difference in the spirit of their writings. In reading MILTON we feel that the author was raised above the belittling concerns of self, and inspired with the greatness of his theme. We cannot say this of COWLEY. The opening lines in his poem entitled "The Motto," explain the tone of his poetical writings, better than a page of analysing and describing would do it.

"What shall I do to be forever known,
And make the age to come my own?"

"Yet I must on. What sound 'st strikes mine ear?
Sure I fame's trumpet hear."

This poem, taken together, is pleasing, especially the closing lines,

"Tell me ye mighty Three! what shall I do
To be like one of you?"

But you have climb'd the mountain top, there sit
On the calm flourishing head of it,
And, whilst with wearied steps we upward go,
See us and clouds below."

What a different spirit breathes in these lines from that of MILTON'S Invocation at the beginning of "Paradise Lost."

"What in me is dark
Illumine; what is low, raise and support,
That, to the height of this great argument,
I may assert eternal Providence
And justify the ways of God to man."

Dignity and humility mingle in these lines.—They manifest a forgetfulness of self, and a mind raised above the mere thought of securing fame. Men should not be too anxious to erect monuments to self. They live to the most purpose who seek to make their works worthy to endure, regardless of the smiles or frowns of the world. Enduring fame is rarely bestowed on those who are the most intent on gaining it. The goddess of fame may smile upon them for a time, but she soon wears off their want of manliness and spurns them from her presence. MINERVA OSBORN.
Butler, Milwaukee Co., Wis., 1859.

* Aristotle, Cicero and Virgil.

JACK FROST.

There is a mellow ring in this "elegant extract," which befits the mellow days of Autumn: "Mr. Jack Frost does but kiss the chaste face of Nature, and behold! how she blushes in the maple, the woodbine, and oak, and turns all manner of colors in the beech, the linden, the chestnut, and the elm. How beautiful she looks in her heightened color! But her brilliant complexion is, alas! but a hectic—an evidence of frailty—a precursor of speedy decay. Consumption imparts this glorious and exquisite loveliness to her countenance, but the expression is not of this world; it is celestial, the ushering in of the indescribable future.

"The beauty of the world is most ravishing, when first touched by the magical finger of the frost, which is at once the death-stroke of the foliage, and a cause of its dying-dolphin splendors. Thus the sun sheds a lustre over creation, filling the universe with a flood of light and beauty, as if to indemnify mankind for the privations of both during the approaching night. So Nature dresses herself in her wonderful beauty, as a parting pledge of her love, and as a memorial for us to take and to cherish during the sombre days of the coming winter, when no flowers can blossom, no verdure quicken."—Selected.

PARTIES.—The system of giving parties is too expensive, and when the thing is pushed beyond the power of the purse, it becomes a social evil of the greatest magnitude. No man or woman seems to be legalized in society unless a cool thousand or two is spent every season in giving the *beau monde* one of those eternal and never-to-be-forgotten squeezes. The law must be remedied—it must be blown up—it must be reformed. It has ruined its thousands and ten thousands. How many husbands have to race about, day after day, week after week, to meet the polite invitations which the banks issue, and much of this hurry and trouble is in consequence of the very expensive system we have referred to, of giving dinner parties, soirees, &c., &c. It has swelled the list of bankrupts—ruined the hopes of wives—driven the deserving upon a merciless world—and filled families with misery.

IF, AND ITS PROGENY.—If every man was honest, we need not lock our doors. If everybody would just mind his own business, there would be much more business done. If we would only talk less of other people, other people would see fewer numb-skulls. If you charge your servants with lying, they will soon become liars, if they are not so already. If students would read less and think more, there would be a larger number of great men in every community. If girls now-a-days, did not become women at thirteen, men would have better wives.

With every child we love, we see deeper into life, as with every added lens we pierce further into the sky.

Written for Moore's Rural New-Yorker.
AMBITION'S DREAM.

BY J. W. DAEHER.

ONE day when June was on the hills,
And Summer in the vale was smiling,
When loudly sang the silver rills,
And bird and flower the day beguiling;
Down through the window shutter fell
A golden sunbeam, soft and still,
It threw its mellow radiance o'er,
And trembled on the parlor floor.

A little prattler, on whose brow
But four sweet springs were gently sleeping,
Came dashing in his wildness now,
Near when the golden ray was creeping.
He paused a moment, while his eye
Which imaged forth the azure sky,
Kindled with new delight to meet
The golden picture at his feet.

As quick as thought, his dimpled hand
Amid the mellow that was feeling,
He did not fully understand
The wealth and beauty there revealing;
But thought, beneath his pinafore,
To hide this precious golden store,
And in his little heart to feel
The conscious pride he should conceal.

Once, thrice, he grasped, then to his eyes
He raised the fancied glowing treasure,
And when he missed the golden prize,
His grief and sadness knew no measure;
And till his eyes were sealed in sleep,
He did not cease to sigh and weep,
That such a treasure, bright and new,
Should vanish rudely from his view.

This is Ambition's dream I said;
A sunbeam o'er our path is straying,
We chase the phantom, still ahead,
Amid the clouds and shadows playing,
Nor till the damp, deep sleep of death
Hath chilled the ardor of life's breath,
Can we persuade our singular sense
To seek the Sure Inheritance.
Niagara Falls, N. Y., 1859.

PREACH BY THE LIFE.

LET your daily life be an unuttered yet perpetual pleading with man for God. Let men feel, in contact with you, the grandeur of that religion to whose claims they will not listen, and the glory of that Savior whose name you may not name. Let the sacredness of God's slighted law be proclaimed by your uniform sacrifice of inclination to duty, by your repression of every unkind word, your scorn of every undue or base advantage, your stern and uncompromising resistance to the temptation of appetite and sense. Preach the preciousness of time by your husbanding of its rapid hours, and your crowding of its days with duties. Though eternity, with its fast approaching realities, be a forbidden topic to the ear, constrain the unwilling mind to think of it by a spectacle of a life well ordered with perpetual reference to hopes and destinies beyond the grave. Though no warning against an unspiritual, no exhortation to a holy life, might be tolerated, let your own pure, earnest, unworshipful character and bearing be to the careless soul a perpetual atmosphere of spirituality haunting and hovering round it. And be assured, the moral influence of such a life cannot be lost. Like the seed which winds waft into hidden glades and forest depths, were no sower's hand could reach to scatter it, the subtle germ of Christ's truth will be borne on the secret atmosphere of a holy life, into hearts which no preacher's voice could penetrate. Were the tongue of men and of angels to fail, there is an eloquence in living goodness which will often prove persuasive. For it is an inoffensive, unpretending, unobtrusive eloquence; it is the eloquence of the soft sunshine when it expands the close shut-leaves and blossoms—a rude hand would but tear and crush them; it is the eloquence of the summer heat when it basks upon the thick-ribbed ice—blows would break it; but beneath that softest, gentlest, yet most potent influence, the hard impenetrable masses melt away.—Rev. John Caird.

ETERNITY.—When I attempt to think of the ocean, its moments of calm and of storm, of sunshine and of darkness, of peace and of vengeful fury, I feel that I have an idea of it, though it must of necessity be a very faint one, yet 'tis such a one that I can lay my finger on. But when I attempt to define eternity, "the life-time of the Almighty," to limit it by the meagre views of my comprehension, I dash to sea in a frail bark and am tossed about, my chart is struck from my hand, my compass from its box, my rudder from the stern, and I feel that all effort to resume command over the vessel is vain—why then do I boldly dare danger and invite distrust? nay it is idle; let me then bow in contentment to the present, and leave the future in the Hand that ordereth all things well.—MSS. of John Lewis, Jr.

FEELING FOR THE PILLARS.—When Luther was at Coburg, he wrote to a friend, "I was lately looking out of my window at night, and I saw the stars in the heavens, and God's great beautiful arch over my head, but I could not see any pillars on which the great builder had fixed his arch; and yet the heavens fell not, and the great arch stood firmly. There are some who are always feeling for the pillars, and longing to touch them, they stand trembling and fearing lest the heavens should fall. If they could only grasp the pillars, then the heavens would stand fast." Thus Luther illustrated the faith of his own soul, and wished to inspire others with the same strong confidence.

MERCIES.—Were there but a single mercy apportioned to each moment of our lives, the sum would rise very high; but how is our arithmetic confounded when every minute has more mercies than we can distinctly number!—Rowe.

Spice from New Books.

Preservation of Character.

An observing man is never without sources of amusement, and it is certain that among these sources the unconscious devices resorted to for the creation and preservation of character, in the eye of the world, deserve a prominent place. We meet in every town men who feel that they have filled up the measure of their character, and have nothing further to do in life but to bear that character, like a full vessel, to their graves, without spilling a drop. They walk the streets as if they were bearing it upon their heads. They bow to their acquaintances with the consciousness of their precious burden constantly uppermost. They refrain from all complication with the stirring questions of the times through fear of a fatal jostle. They speak guardedly, as if a word might jar their priceless vase from the poise of continence. There is nothing so important to them as what they are pleased to consider their character; consequently, that is always to be consulted before any course of action can be determined upon. All questions of morality and reform, all matters of public or political interest, all personal associations, are considered primarily with reference to this character. If they prove to be consistent with it, and seem calculated to reveal something more of its glory, they are entered upon, or adopted, otherwise, they are discarded.

When a man arrives at a point where the preservation of his character becomes the prime object of his life, he may be considered a harmless man, but one upon whom no further dependence can be placed in carrying on the work of the world. As a member of society, he becomes strictly ornamental. We point to him as one of the ripe fruits of our civilization. We make him President of Conventions and Benevolent Associations. We introduce strangers to him that they may be impressed. We chronicle his arrival at the hotels. We burn incense before him, because we know it will please him, and because we know that he rather expects it. Small children regard him in respectful silence as he passes. He becomes one of our institutions, like a City Hall or an old church. We always know where to find him, as we do a well-established town-line. But one thing we never do; we never go to him in an emergency that demands risk and self-sacrifice, because we know that those things are not in his line. His character is the first thing, and that is to be taken care of. When we want any thing of this kind done, we go to men who have no character, or, having one, are not uncomfortably conscious of it. —"Gold Foil," by THOMAS TITCOMB.

Domestic Life in Turkey.

ALL Turkish residences are divided into two parts, one of which is occupied by the lords of the household, and the other is the department for the harem. If the house belongs to a man of wealth, each of these divisions is sub-divided into numerous apartments, and the building is consequently of great extent. The windows of the apartments occupied by the harem are closely latticed by fine strips of wood painted white, which give a very neat and pretty effect to the building. These *jealousies*, as they might properly be called, answer the purpose for which they are designed, protecting the inmates from the gaze of all without, while they are sufficiently open to enable those within to see without inconvenience whatever passes around them. Turkish women are by no means confined to a life of solitude or imprisonment, and they would be scarcely tempted to exchange the perfect freedom and exemption from the austere duties of life, which is their share of happiness, for all the advantages that might be gained from intellectual pursuits, or a different form of society. They roam in parties when they please and where they please, if it be not far from home, accompanied by slaves and various attendants. Their highest enjoyment is in passing the bright sunny days of their long summers under the broad-spreading plane trees that are to be found beside every stream. At such places they may be always seen in little groups upon the grass, the great diversity of brilliant colors, and the white *yashmac* or veil that covers the head as well as the face, enlivening the pictorial parterre.

One might suppose that Turkish women studied the *tout ensemble*, since their parties consist of persons dressed in as opposite colors as possible, green, pink, blue and purple. The dress worn in the street is never partly colored, but entirely of some one tint. The little children who are ever of the party, and for whom, by the way, Turkish women have great fondness, are either by their side or strolling about, led by the hand of some mother or attendant. Boys and girls wear the same dress, and are the most comical-looking urchins possible. They can scarcely waddle about, so enveloped are they in fex and turban, one or two long, loose jackets, and bag trousers confined by a large shawl wound round the waist. Even they partake of the imperturbable gravity of their seniors to such an extent that, during our long residence in the East, we never saw nor heard a child cry, or laugh, or evince any emotion. —"Tent and Harem," by CAROLINE PAINE.

Thackeray on Washington.

It will be remembered that, at the commencement of Mr. Thackeray's "Virginians," the patriotism of many American citizens was shocked with the familiarity of the author on account of his persistency in designating the Commander-in-Chief of the Continental Army as Mr. Washington; also, later in the story, where the American Chief is made to accept a challenge for a duel, how many authorities were quoted, and what a mass of matter was collected and printed to show that Washington never practically recognized the duellist's "code of honor." The following extract from the "Virginians" in the October number of Harper's Magazine, we think will show the author's real sentiments towards the memory of Washington, and is one of the most beautiful tributes to the virtues of that great man which ever emanated from a British pen. The author says, speaking through one of his principal characters, Sir George Warrington:

"But it was ordained by heaven, for the good,

Sprightly and Cheerful.

1. If fortune with a smiling face Strews roses on our way, When shall we stoop to pick them up? To-day, my love, to-day.

2. If those who've wrong'd us own their fault, And kindly pity pray, When shall we listen and forgive? To-day, my love, to-day.

3. If those to whom we owe a debt Are harm'd un-less we pay, When shall we struggle to be just? To-day, my love, to-day.

4. If Love estrang'd should once again Her genial smile display, When shall we kiss her proffer'd lips? To-day, my love, to-day.

5. For virtuous acts and harm-less joys, The minutes will not stay, We've always time to welcome them To-day, my love, to-day.

But should she frown with face of care, And talk of coming sor-row, When shall we grieve, if grieve we must? To-morrow, love, to-morrow.

But if stern Justice urge re-buke, And warmth from Mem'ry borrow, When shall we chide, if chide we dare? To-morrow, love, to-morrow.

But if our debtor fail our hope, And plead his ruin thorough, When shall we weigh his breach of faith? To-morrow, love, to-morrow.

But if she would in-dulge re-gret, Or dwell with bygone sor-row, When shall we weep, if weep we must? To-morrow, love, to-morrow.

But care, re-sentment, an-gry words, And un-a-vailing sor-row Come far too soon, if they 'ap-pear To-morrow, love, to-morrow.

as we can now have no doubt, of both Empires, that the great Western Republic should separate from us; and the gallant soldiers who fought on her side, their indomitable and heroic Chief above all, had the glory of facing and overcoming, not only veteran soldiers amply provided and insured to war, but wretchedness, cold, hunger, dissension, treason within their own camp, where all must have gone to rack, but for the pure, unquenchable flame of patriotism that was forever burning in the breast of the heroic leader. What a constancy, what a magnanimity, what a surprising persistency against fortune! Washington before the enemy was no better nor braver than hundreds who fought with him or against him; but Washington, the Chief of a nation in arms, doing battle with distracted parties; calm in the midst of conspiracy; serene against the open foe before him, and the darker enemies at his back; Washington, inspiring order and spirit into troops hungry and in rags; stung by ingratitude, but betraying no anger, and ever ready to forgive; in defeat invincible, magnanimous in conquest, and never so sublime as on that day when he laid down his victorious sword and sought his noble retirement—here indeed is a character to admire and revere; a life without a stain, a fame without a flaw."

A Sketch of Garibaldi.

DWIGHT, in his "Life of Garibaldi," portrays the "Hero of Italy" thus:—He has a broad and round forehead; a straight and almost perpendicular nose, not too small, but of a delicate form; heavy brown moustaches and beard, which conceal the lower part of his face; a full round chest; free and athletic movements, notwithstanding ill-health and rheumatism which disables his right arm; a full dark eye, steady, penetrating, and pensive, but mild and friendly; an easy, natural, frank, and unassuming carriage, with a courteous nod and a ready grasp of the hand, as a recognition of one introduced by his friend, Foresti. Such was Garibaldi, as he appeared at the first glance, and before he had time to speak. His first words were uttered in a tone corresponding with the courtesy of his movements and the glance of his eye; while the freedom of his utterance, and the propriety and beauty of his language, drew all my attention from his form and features, to the sentiments he expressed and facts he has mentioned.

CURE FOR FITS.

For a Fit of Passion.—Walk out in the open air; you may speak your mind to the winds with out hurting any one, or proclaiming yourself a simpleton.

For a Fit of Idleness.—Count the ticking of a clock; do this for one hour, and you will be glad to pull off your coat the next and work like a negro.

For a Fit of Extravagance and Folly.—Go to the workhouse, or speak with the inmates of a jail, and you will be convinced—

Who makes his bed of briar and thorn, Must be content to lie forlorn.

For a Fit of Ambition.—Go into the churchyard, and read the gravestones; they will tell you the end of ambition. The grave will soon be your bed-chamber—the earth your pillow; corruption your father, and the worm your mother and sister.

For a Fit of Despondency.—Look on the good things which God has given you in this world, and to those which He has promised to His followers in the next. He who goes into his garden to look for cobwebs and spiders, no doubt will find them; while He who looks for a flower may return into his house with one blooming in his bosom.

For all Fits of Doubt, Perplexity, and Fear.—Whether they respect the body or the mind—whether they are a load to the shoulders, the head, or the heart—the following is a radical cure, which may be relied on. I had it from the Great Physician:—"Cast thy burden on the Lord, and He will sustain thee."

For a Fit of Repining.—Look about for the halt and the blind, and visit the bed-ridden, and the afflicted and deranged, and they will make you ashamed of complaining of your lighter afflictions.

A REMARKABLE FACT IN ASTRONOMY.

THE following extract is from a report of one of Professor Mitchell's Lectures on Astronomy, in the Philadelphia Press:

A very remarkable fact was here related by the lecturer, who said that he had not long since met, in the city of St. Louis, a man of great scientific attainments, who for forty years had been engaged in Egypt in deciphering the hieroglyphics of the ancients. This gentleman had stated to him that he had lately unraveled the inscriptions upon the coffin of a mummy, now in the London Museum, and that by the aid of previous observations, he had discovered the key to all the astronomical knowledge of the Egyptians. The zodiac, with the exact positions of the planets, was delineated on this coffin, and the date to which they pointed was the autumnal equinox in the year 1722 before Christ, or nearly thirty-six hundred years ago. Professor Mitchell employed his assistants to ascertain the exact position of the heavenly bodies belonging to our solar system on the equinox of that year, (1722 B. C.), and send him a correct diagram of them, without having communicated his object in doing so. In compliance with this, the calculations were made, and to his astonishment, on comparing the result with the statements of his scientific friend already referred to, it was

found that, on the 7th of October, 1722 B. C., the moon and planets had occupied the exact points in the heavens marked upon the coffin in the London Museum.

TWO STREAMS.

FROM the same Alpine mountains flow two rivers; the same rain and melted snow feed them, but each of these rivers follows the course it has traced. The one flows to the south, towards the sun; it crosses all the towns where the Greeks and Romans successively planted the germs of civilization, the traditions of their genius, and those melodious languages spoken by the greatest poets and the greatest authors that ever honored humanity. The other river flows toward the north; it traverses the vast forests of the Germanic tribes, from whom descended the Angles, the Saxons, and perhaps the Normans; it waters cold, cloudy, industrious and resolute countries. One is called the Rhone, the other the Rhine. The one, by turns a rivulet and a torrent, now flows, now precipitates itself, through a country filled with poetry and its contrasts, beneath a blue sky toward an azure lake—that glorious sea which, from the commencement of ages, has seen developed on its banks all the destinies of humanity. The other, majestic and calm, bears constantly on its surface steam vessels, and, reflecting the light on its long banks, shows the various buildings elevated by modern industry; it flows into that sea, or rather canal, the junction between the ocean and the Baltic, the separation of the ancient world from the modern, where perhaps some day may be decided the future destinies of humanity.—M. Loise.

CHASTE LANGUAGE.

OUR good old English tongue is susceptible of great variations. It will utter in sweet sentences, smooth and soft as flowing honey, the holiest feelings of tenderness and affection, or it will grate harsh discord or thunder maledictions. It will do whatever it is asked to do. It is a pliable instrument ready to serve many purposes. From some lips it is beautiful and musical, charming the ear and delighting the soul. From others it is rough, coarse, discordant. It expresses what is in the speaker or writer.

Good language is ever a beautiful thing. Who does not love to hear it? It indicates a gentleman, a lady, a scholar, a friend. It is evidence of refinement, taste, good manners, culture, judgment, good breeding. It has a happy influence, is ever the proper vehicle of good thoughts and proper feelings.

It is said that at one period of Athenian history the ear and taste of the people of Athens were so cultivated that a public speaker would be hissed by the common people for a coarse expression or an ungrammatical sentence. This perhaps is a fastidious refinement; but pure and proper language is ever delightful, and ought always to be used. For home use, for friendship, for business, for social life—how admirable is chaste language. A grammar, a dictionary, a proper attention to the cultivation of one's every-day speech, will soon give one correct and agreeable habits of conversation. Try it, all bad talkers.—Valley Farmer.

APOLOGIZING.—A very desperate habit—one that is rarely cured. Apology is only egotism wrong side out. Nine times out of ten, the first thing a man's companion knows of his short-coming is from his apology. It is mighty presumptuous on your part to suppose your small failures of so much consequence that you must make a talk about them.

The Young Ruralist.

OUT WEST TWELVE YEARS AGO.

EDS. RURAL NEW-YORKER:—Having seen an article in the last number of the Ruralist, headed "Our Society Out West," I will give my young fellow Ruralists an idea of our society in what was once termed the woods. About the year 1847 a few intelligent, honest families, left their happy firesides to brave the storms and privations of a woodman's life, destined for the land of Indians and other "wild animals." Finally, after traversing fifteen hundred miles, fifty miles west of the shores of Lake Michigan, they "drove their stakes" and commenced their slow and tardy road to fortune. No sooner would their cabins be erected, than an unwelcome visitor, for such he might be on account of his hideous, savage-like features, would pop in for the purpose of obtaining *kush-ig-on* (bread) after receiving it, with a *boo-shoo*, (good day,) mount his little wild pony and bound away whooping and yelling with joy. In a few months there were families enough to form a settlement, and then how happy they were. No cares, no strife, no contentions,—all was harmony. Fashion had not stopped in their ranks and interfered with their dress and customs. Each one wore the dress he saw fit, whether it was broadcloth or buckskin. And their "social gatherings," how they did enjoy those evening chats, at each other's cabins nearly every evening in the winter season—an ox team and an old sled their mode of conveyance. Cares and anxieties were strangers to them; doctors were unneeded and lawyers uncalled for. They had public worship at some particular house, where they worshipped with one accord—no distinction of sect or denomination—all was unity, brotherhood. At their town meetings and elections no political strife was manifested. But oh! the change in these few years! Instead of "going to town" with "Buck and Bright," it is now "going to the city" with their 240 "Flora Temples" and "Wild Fires," and fancy carriages. And then Fashion, with her Shanghai coats, tight pants and beavers, silks and crinoline, came crowding in. Social parties, almost unknown, divided into religious denominations, each having its own ministers and place of worship; lawyers receive a better compensation than the farmer; doctors have good practice, and at town meetings and elections all is contention and strife—two or three different parties contending for victory. Is such really progress and improvement in every sense of the term? OSCAR BERRY.

Fond du Lac, Wis., 1859.

THE BOY FARMERS.—A Maine paper tells a good story of two boys, one thirteen, and the other eleven, who on account of the sickness of their father were left to work the farm. They thoroughly plowed and cross-plowed three acres of rather rough ground, which they then sowed, and then harrowed it three times over. They also assisted in clearing one acre of new land, which was sown with wheat. It grew well, especially that first sown, but at harvest the father being still sick, there was none to gather the grain but these two little lads. Having neither strength nor skill to use the cradle, they grasped the sickle with resolute hand, and reaping what they could each day, persevered until the whole four acres were thus harvested by them alone. The produce of this crop would command in market \$135, and they did a good deal of work on the farm beside. This shows what boys can do if they really set about it, and make work of work, and play of play—not trying to do both at once.

CONTENTS OF THIS NUMBER.

AGRICULTURAL.	
The Great Crops of the Country.	289
Thomery System of Pruning and Training the Vine.	290
(Illustrated.)	290
John Johnston on Wintering Sheep.	291

ROCHESTER, N. Y., DECEMBER 3, 1890.

DOMESTIC NEWS.

Matters at Washington.

In consequence of the recent occurrences on the frontier, the suggestion has been made to the Liberal Government of Mexico, from a distinguished quarter, that immediate steps be taken with a view of entering into an agreement or treaty with the Government of the United States for the punishment of such outlaws as Cortinas and his men. The main feature of the agreement being to treat offences committed on either side of the Rio Grande as against the peace of both Republics. The parties to be tried and punished according to the laws of the country in which they may be arrested.

The Secretary of War on the 25th ult., received the following dispatch from Lieut. Gen. Scott, dated Straits of Foca, and sent by way of Leavenworth:—"Two days ago I dispatched from Fort Townsend a communication to Gov. Douglass, proposing a temporary adjustment of the existing difficulties, on the basis suggested by the President in his instructions to me. There has been no answer yet, but there is no doubt the proposition will be accepted. Everything is tranquil in these islands."

The number of members of Congress in the city is daily increasing. The organization of the House of Representatives is with them the prominent topic of conversation and concern.

The Treasurer's statement shows that the receipts for the week ending on Monday week were \$366,000. The amount of the drafts paid was \$798,000, and drafts issued \$1,260,000. The amount subject to draft is \$5,287,000. The increase over the sum on hand last week is nearly \$98,000.

Personal and Political.

A Salt Lake City paper nominates Gen. Sam Houston as the Mormon candidate for the Presidency in 1890.

SENATOR SUMNER is about to resign his seat in the United States Senate, and, it is said, will marry and reside in England.

Hon. FENNER FERGUSON, formerly Chief Justice of Nebraska, and delegate to Congress from that Territory, died of paralysis on the 11th ult. The Nebraska Republican says:—"It is a remarkable fact that of the eight original appointees to office in Nebraska by President Pierce, not one of them is now in office, and only four of them are now living. Only two of them (Gen. Eastabrook and A. R. Gilmore, Esq.) now reside in the Territory. Gov. Bur, the first Governor, died at Bellevue soon after reaching the Territory. Marshal Doyle died suddenly from a fall down a flight of steps in the Exchange Bank in the winter of 55-56. Secretary Cumming died a year and a half ago in this city, and now Judge Ferguson is added to the list of the dead."

The celebrated trapper and guide, Kit Carson, one of the noblest of our brave frontiersmen, died recently at Taos, in New Mexico. He was a native of Madison Co., Ky., and would have completed his fiftieth year had he lived to the 24th of December next. While he was yet an infant, his parents removed to the Territory of Missouri, in which wild region his youthful manhood

were spent. As the borders of civilization were enlarged, he gradually withdrew farther and farther from the settlements, preferring the haunts of the Indian to the abodes of the white race. About seventeen years since he fell in with Col. Fremont. His services as a guide to that explorer, and others of his class, have won for him a national reputation. In 1847 he was sent to Washington as bearer of dispatches, and received an appointment of Lieutenant in the rifle corps of the United States Army. Six years later he drove 6,500 sheep to California, for the successful execution of which difficult undertaking he was rewarded with the post of Indian Agent at Taos, the place of his death.

JEFFERSON CO., in this State, has the honor of having furnished several of the Western States with Governors. We believe that Gov. Matteson, of Ill., Gov. Farwell, of Wis., Gov. Wood, of O., and the present Governor, (late U. S. Senator) Pettit, of Nebraska, were all natives of that county. Oneida may also put in a claim for similar honors, since Judge Miller and Hon. Norman Todd, both from Oneida Co., in this State, are named at the same time as candidates for the gubernatorial nomination in Illinois.

The returns are now nearly complete from Wisconsin. The majorities foot up as follows:—Randall, (Rep.) 14,799, Hobart (Dem.) 11,008, showing a majority for Randall in the State of 3,796. Only four Counties remain to be heard from, and their vote is too small to materially vary the result.

The Newark Advertiser gives the official vote of New Jersey at the recent election, as follows:—Olden, (Opp.) 53,367, Wright, (Dem.) 51,738. Olden's majority, 1,629.

The St. Paul Minnesotian publishes full returns of the recent election, from all the Counties. They show a Republican majority of 3,353 for Governor Ramsey.

The contestants for seats in Congress are unusually numerous, as is shown by the following list, prepared by the N. Y. Tribune:

RETURNED.	CONTESTED BY.
Daniel E. Stickle, of N. Y.	Amer J. Williamson.
W. C. Anderson, Ky.	James S. Chapman.
J. Morrison Harris, Md.	William P. Preston.
Henry Winter Davis, do.	William G. Harrison.
Geo. B. Cooper, Mich.	William A. Howard.
J. Richard Barrett, Mo.	Francis P. Blair, Jr.
Lansing Stout, Oregon.	David Logan.
E. Estabrook, Nebraska.	Samuel G. Dally.
Miguel A. Otero, N. Mex.	Henry M. Watts.

Taking the difficult question of organization, and the settlement of these claims, together with all the other sources of difficulty, we may anticipate a stormy session of Congress.

The official vote of New York gives the following result—the vote of each candidate, and the majority, as taken from the returns at the Secretary of State's office, by the Albany Argus:

DEMOCRAT.	REPUBLICAN.	MAJ.
Jones.....252,594	Leavenworth 251,093	1,498
Church.....227,202	Dennison.....275,439	48,437

News Paragraphs.

The city of Brooklyn proposes to lay out a chain of five magnificent parks, connected by a broad macadamized avenue, forming, when completed, a drive of twelve miles, which will challenge the world for its equal in magnificence.

The Pittsfield (Mass.) Sun states "that A. W. Richardson & Co., of North Adams, took one hundred and sixty-two pounds of sand from a bale of wool they purchased last week for fifteen cents per pound."

The Board of Underwriters of New Orleans have offered a reward of three thousand dollars for every apprehension and conviction of an incendiary during the next twelve months.

The Massachusetts House of Representatives has abolished the provision of law authorizing flogging in the State Prison. Mr. Goodwin, of Lowell, who is chairman of the Board of Inspectors of the Prison, stated that not a blow had been inflicted there for nearly three years.

GEORGE BOWEN, a resident of Hummelstown, Pa., having a very large wart on one of his hands, was induced to cut it out, and apply arsenic to destroy the roots. He did so on Monday, and died from the effects on the Wednesday following.

A young lady passed through Cincinnati last week on her way to St. Louis, whither she had been forwarded by express. She was from Paris, and being ignorant of our language, her friends had placed her in charge of an express messenger. The "way bill" was made out in due form and the charges paid as per tariff. The messenger declared that he never took such good care of "freight" before, considering it extra, we presume.

GENERAL THOMAS THUMB, who, although barely knee-high to a grasshopper, made a large fortune for P. T. Barnum and a snug one for himself, is reported to be about to unite himself in wedlock with a lady of youth and beauty. The authorities differ about her height, and it is variously stated as three feet six, and six feet three.

The Massachusetts Senate has adopted an amendment to the law, which removes the disability to receive the testimony of atheists in courts of law. The amendment provides that "every person not a believer in any religion shall be required to testify truly under pains and penalties of perjury." To this, an amendment was adopted as follows: "And the evidence of such person's disbelief in the existence of God may be received to affect credibility as a witness." The latter clause of the amendment was adopted by a vote of 10 to 7. The vote upon the amendment, as amended, was 13 to 18, and it was adopted by the casting vote of the President.

The amount of grain afloat upon the upper lakes for Oswego, up to the latest advices, is 400,000 bushels wheat, 135,000 bushels corn, and 55,000 bushels barley. This does not include the quantity to come from Canada.

A portion of the bridge across White river, opposite West Hartford, Vt., from the pier to the

abutment on the village side of the river, was broken down last week by a drove of cattle while crossing it, and 16 head of cattle fell with the bridge, from 15 to 20 feet, upon the rocks below, without killing one or even breaking a limb.

The following eight states have no iron works:—Mississippi, Louisiana, Florida, Texas, Iowa, Minnesota, California and Oregon. There are in the United States 1,545 works, 332 furnaces, 488 forges, and 225 rolling mills, which produce annually about 850,000 tons of iron, the value of which, in an ordinary year, is fifty millions of dollars.

It is rumored that the failure of John A. Washington, with a half a million of liabilities, including the Mt. Vernon estate, will prevent him from transferring the property with a good title.

A TAVERN keeper named Prangley, living in the town of Williams, near London, C. W., on the Grand Trunk Railway, has been indicted for manslaughter, because a man was sold liquor where with he got drunk, and going home, fell off a railroad bridge and was drowned. The man Prangley, while he owned the tavern and the liquor, was some thirty miles distant at the time the liquor was sold.

A PATENT medicine agent named Carr, committed suicide a few days since, in Ohio, by poisoning himself with arsenic. He might have accomplished his intention, quite as well by taking his own compound.

THE CANADIAN SEAT OF GOVERNMENT.—The Seat of Government for Canada seems to be established at Ottawa City, beyond peradventure, at last, as a contract has been awarded for the erection of the Parliamentary and Departmental Buildings. It is taken by Mr. McGreevy, of Quebec, at the sum of \$518,000, which amount will be largely increased as the buildings approach completion. The appropriation made originally was \$300,000, and this contract is lower than was anticipated.

OUR ADOPTED CITIZENS.—Apropos of the Harper's Ferry outbreak, the Winchester Virginian says:—"It is worthy of remark, that, though the Abolitionists had been a whole year plotting the insurrection at Harper's Ferry, they were unable to enlist a single foreign-born citizen in their ranks; not one was found among them to share their treason against their race and nation. An Irishman (the keeper of the bridge) was the first to offer them resistance—an Irishman was the second man they killed, while he had his rifle drawn to shoot—and the last man they killed was a young and gallant Irishman (the marine)."

WHAT JOHN MITCHELL EXPECTS.—John Mitchell writes a second letter of his series from Paris to the Irishman, counselling the "nationalists" of Ireland "to be prepared." He expects ere long to see Gibraltar, as the key of the Mediterranean, and San Juan, as the key of the Columbian Archipelago, wrested from "the swindler and usurper of nations," England; then he adds, on behalf of his brother "Celts":—"Happy if we can but prepare ourselves to rise to our own feet, and stand erect upon our own soil, when the felonious gripe is loosened from our throats."

A RARE CASE.—A person who was recently allowed a pension on account of a disability incurred in the naval service, and supposed to be of a permanent character, has informed the Pension Office that he is happily restored to health, and therefore relinquishes his claim to the beneficence of the government. A similar instance has not occurred for many years.

From the Pacific Side.

THE Overland Mail of Oct. 31st arrived at Saint Louis on the 22d ult. There was unusual agitation of Railroad projects in California, and strong appeals were being made to capitalists for aid. The overland emigration by the Central Route, it is stated by competent parties, will reach 30,000, and but little sickness has occurred, and the gold and silver discoveries in Washoe Valley and Walker River have created a great demand for laborers.

Dates from Portland, Oregon, are to Oct. 27th, and from Victoria to the 27th. A special correspondent of the Alta California, who accompanied Gen. Scott on his trip to the Northwest, says that the General arrived at Port Townsend on the 25th, and would immediately establish his headquarters on board the U. S. steamer Massachusetts.

Commissioner Campbell, expected overland from Colville, had been directed to join the Commission at San Juan. No plan of action has yet been decided upon by General Scott.

The Overland Express brought dispatches from the British Consul at San Francisco to Lord Lyons, at Washington; and also a communication, franked by Gen. Scott, and addressed to the Commanding officer at Fort Leavenworth, stating that the British have withdrawn all their forces from San Juan, with the exception of the steamer Satellite.

Advices from Arizona state that Capt. Ewell had left Fort Buchanan for Sonora, under orders from the Secretary of War, to call on Governor Peschiera and protest in the name of the United States Government, against the expulsion of Captain Storie's party and of other American citizens from that State.

It is said that Peschiera has recently expressed a strong desire for the formation of Emigration Colonies in the United States, for the purpose of inducing a general emigration into Sonora.

The Baltic, from Aspinwall the 18th, arrived at New York, Nov. 27. She brought six hundred and fifty passengers, and upwards of \$1,700,000 in treasure. The Baltic brings over as freight one hundred cases silk worm eggs from China, for Italy and the South of France.

The Governor has ordered an election for Dec. 10th, to fill the vacancy in the State Senate. This will be an exciting election, as it involves the question whether the Legislature shall grant the right to construct bulkheads to protect the harbor of San Francisco, a project involving an expenditure of \$5,000,000.

An association has been formed at San Francisco, with the intention of embracing the whole State, for the purpose of excluding the Chinamen from all employment except the lowest kind.

FOREIGN NEWS.

GREAT BRITAIN.—Sir G. C. Lewis, at the Lord Mayor's banquet, said that no final proposition had yet been made to England for a Congress. When one should be received the Ministry would deliberate on its acceptance on the understanding that the Italians are not to be coerced.

Two war steamers and four gun-boats had left England for China.

Capt. Petrie, of the steamship City of Washington, had been formally presented with a gold chronometer and chain from the President of the United States, for services rendered to the crew of the ship Grey Oak, of New York.

FRANCE.—The three treaties were finally signed at Zurich on the 10th, and the Plenipotentiaries departed on the 12th. It was said that Austria had consented to take 102,000,000 francs from France, instead of 104,000,000 previously demanded.

The Moniteur, in announcing the signing of the treaties, says that France and Austria agreed to promote the meeting of a Congress.

A circular by Count Walewski announces that France has demanded from Sardinia, 60,000,000 francs for the expenses of the late war. The circular also says that the French government has received assurances that the Pope was only waiting for an opportune moment to make public certain reforms by which the government of the clergy would be replaced by a government generally composed of the laity, which would give to the country better guarantees for the administration of justice and for the control of the public finances, by means of an Assembly elected by the people.

The cholera among the French troops, in Africa, is said to be abating.

The Bank of France had lost nearly 19,000,000 francs in cases during the month.

ITALY.—Tuscany has followed the example of the other States of Central Italy, and conferred the Regency upon the Prince of Carignan.

The King of Sardinia, under the pressure of France, refused to grant Carignan permission to accept the Regency.

SPAIN.—The affair between Spain and Morocco was unchanged, though it was reported that the Sultan had empowered his brother to grant the demands of Spain.

COMMERCIAL.—Breadstuffs.—Liverpool breadstuffs market firm and all qualities slightly higher. Richardson, Spence & Co. quote flour quiet and holders demanding an advance of 1s. Wheat firm and 4s 6d 3/4 higher. Corn buoyant and advanced 1s 1/2 per quarter. Liverpool provision market dull. Pork quiet, but firmer for common. Bacon steady and new wanted. Lard steady 5 7/8 to 5 9/8.

Clippings from Foreign Journals.

An association of the members of the clergy in England have published an address in which they pledge themselves to a total abstinence from the use of intoxicating liquors as a beverage. The Rev. Dr. Close, Dean of Carlisle, heads the list.

The annual demand for postage stamps in Great Britain is 500,000,000. This would require 1,000,000 to be manufactured each working day.

The Emperor Napoleon has recently ordered the appropriation of twenty-eight thousand dollars for the thorough repair of Longwood House, and the tomb of the Emperor Napoleon I, at St. Helena, as well as the domain called the Vale of Napoleon. Since the French Government came into possession of this territory, they have always kept a resident Commandant at Longwood.

The English Home Government and the East India Government bind themselves to connect, with telegraph, the Indian peninsula with the island of Singapore, while the Dutch Government agrees to carry out the connection to the south-east point of the island of Java, which belongs to Holland.

The cable for the telegraph from Aden to Kurrachee has been dispatched from Liverpool, and was expected to be laid by the middle of January, when communication between London and Calcutta will be complete. The length of the new shipment is 1,800 knots, and electricians report it in a high state of perfection.

THE GREAT EASTERN.—It is decided that the new mammoth is not exempt from the ills that ordinary ships are heir to. The directors having decided that the vessel should go to Southampton, she left Holyhead harbor on the 3d inst. In steaming clear of the Welch coast she put out far enough to sea, to give those on board a taste of life on the ocean wave. It was supposed that the steamer would ride upon the waves without rolling or pitching like ordinary vessels, but this anticipation was doomed to disappointment. The chairs and tables began to be unsteady, to reel to and fro like a drunken man, and be at their wit's end. The crockery followed, and cups, saucers and dishes rushed furiously to destruction against the pantry walls, and were dashed to pieces like a potter's vessel. About five o'clock a giant wave came surging on towards the bows, and struck the Great Eastern with a loud boom, sending its green waters in a heavy clump clear over the forward bulwarks, and drenching the men on deck. It was also proved by this trial trip that the Great Eastern will require three hundred tons of coal a day to make her go at the rate of fifteen and a half knots an hour. So, on the whole, it may be questioned whether her gigantic size is not, after all, the chief and only merit of the mammoth steamer.

WRECK OF THE INDIAN.—The iron steamer Indian, from Liverpool, struck a sea ledge near Marie Joseph, on Monday, the 21st inst. She had 188 passengers, a crew of 190, 800 tons of cargo and some specie. Half an hour after striking she parted amidships. One boat was capsized and several persons drowned. Another was stove alongside. Two more boats, with part of the passengers and crew, drifted to sea and have not since been heard of. The schooner Alexander, Capt. Shellnut, was first to render assistance, and arrived at Halifax the 24th inst., with 24 persons on board. The number of lives lost is not yet known. The schooner Lutes ran close among the breakers and became herself a total wreck. Crew saved.

The News Condenser.

—Snow fell in Mississippi Nov. 13th.

—There are 230 students in Antioch College, 85 of whom are females.

—Quails are appearing in great numbers in some of the towns of Illinois.

—The underground railroad brought 36 negroes to Detroit Friday week.

—There are now nineteen steam fire engines in the city of Philadelphia.

—London and Calcutta are to be connected by telegraph in January, 1891.

—The good people of Baltimore are just now holding business prayer meetings!

—The Canadians are discussing the subject of supporting schools by direct taxation.

—The suspension bridge over the Scioto River fell on Saturday week, killing two men.

—The supervisors of San Francisco, Cal., are providing for a system of city railroads.

—It is estimated that the British nation spends annually about \$2,000,000 for perfumery.

—Volcanized India rubber is found to be the best material for the manufacture of stoves.

—There is now in operation in the U. S. one mile of railway to every thousand inhabitants.

—There is a German woman in Milwaukee, 50 years of age, who is the mother of 24 children.

—"Doesticks" Thompson, is said to be an applicant for a passage in Prof. Lowe's great balloon.

—The "bear tax" of Vermont, last year, was \$500. The State pays a premium for bear scalps.

—On the Northumberland coast in England, there was a heavy frost and snow on the 22d of Oct.

—Burnham, a Massachusetts Malice Law liquor agent, has been indicted for selling adulterated liquor.

—The yellow fever is disappearing in New Orleans, in consequence of the recent frost in that region.

—The Russ pavement, in New York city, is being taken up. Cause—horses cannot stand well upon it.

—One cent damages is the result of a libel suit against the Cincinnati Times, after six years litigation.

—The State of Maine will export from the port of Bangor alone, 100,000 bushels of potatoes the present fall.

—A committee has reported the north pier of the Chicago harbor liable to be washed away by the first gale.

—In Canada, a scamp named Corbett goes three years to the penitentiary for throwing a stone at the cars.

—The stock is all taken for a telegraph line between Pensacola and Mobile, and is to be completed in ninety days.

—A large number of prosecutions has been commenced in New York city, for violation of the Excise Law.

—The Brandon (Mia.) Republican proposes that no persons shall travel in Southern States without passports.

—The artesian well at Columbus, Ohio, is suspended at a depth of 2,340 feet—the deepest bore on earth, and no water!

—The merchants and capitalists of great Britain are estimated to own about nine hundred ocean steamers.

—The city of Detroit is about to erect a new City Hall, at a cost of \$250,000, and a Workhouse at a cost of \$50,000.

—The house in which John Huss, the great reformer, was born, at Husice, in Bohemia, was recently destroyed by fire.

—The steamer Nile was burned near Montgomery, Ala., a few nights since, and 500 bales of cotton were destroyed.

—The Stamford Mercury in England has been published without interruption for one hundred and sixty-four years.

—Margaret Dixon, a young seamstress, recently died at Cincinnati from the prick of a needle in the palm of her left hand.

—One hundred and fifteen workmen were discharged from employment at the Norfolk Navy Yard Saturday evening week.

—Lombardy, birthplace of pawnbrokers, is now herself in pawn. Austria has advanced ten millions, English, upon her.

—Joe Smith, son of the Mormon prophet, remains at Nauvoo, a respected Justice of the Peace. He refuses to go to Utah.

—The State Prison of New Jersey contains three hundred and fifty prisoners, a greater number than at any previous time.

—The Central Park in New York proves very attractive. On any fair day not less than 5,000 visitors throng its walks and drives.

—Washington Territory is 600 miles long, 290 broad and contains 128,032 square miles. It is now principally valued for its lumber.

—Fires in the forests of Virginia have spread a distance of 20 miles. At one time some 2,000 acres of timber land were on fire.

—An innocent negro was shot and killed a few nights since, in Somerset Co., Md., during a panic caused by a false report of insurrection.

—Three thousand Inebriates have applied for admission into the N. Y. State Inebriate Asylum. Among the number are 30 clergymen.

—The Burlington stove manufacturers have constructed an oven with over fifty feet of baking surface for the Connecticut State Hotel.

—The railroad along the Welland Canal has conveyed from Port Colborne to Lake Ontario, during the season, 600,000 bushels of wheat.

—A Cincinnati paper estimates that between \$2,000,000 and \$3,000,000 are invested in that city in the business of manufacturing carriages.

—A citizens' gas-light company has been organized in Brooklyn, all the stock taken, and contracts made for building works, laying pipe, etc.

—Southern Legislatures are everywhere called upon by the plantation press to make stringent laws against Northern peddlers and traveling agents.

—The amount of wheat accumulating on the Upper Mississippi for the steamboats to take down the river before navigation closes, is immensely large.

—Horatio Stone, the sculptor, has matured and modelled his design of a statue of Thomas H. Benton, as he often appeared before the American people.

—A Connecticut school-mistress having a troublesome big boy to manage, sat down on him. She is a large woman, and "crushed out" his insubordination.

—Four new churches are in process of erection in Trenton, N. J., by the Presbyterians, Episcopalians, Baptists and Methodists, at a cost of over \$100,000.

Markets, Commerce, &c.

ROCHESTER, Nov. 29. — Flour from spring or fall wheat without alteration in rates. Buckwheat is looking up a little, the range being \$2.50 to \$3.00.

GRAIN.—Not much change in wheat—a slight advance is noted, but the market is not firm at the start. Corn dropping, and a decline of 5 cents on the bushel noted. Rye is a little better in rates, but the demand is limited. Barley falling off on lower grades—choice is as last quoted. Winter holders are making an advance. Buckwheat stiffer and in demand.

MEATS.—But little pork in market this morning, and buyers are offering considerably lower figures than were current last week—the range seems to be \$4.50 to \$5.00. Beef is also declining in rates, the extremes of the market ranging from \$3.00 to \$3.50.

It is falling off, and we note a better supply in market to day than for many months.

All other matters are as last quoted.

Rochester Wholesale Prices.

RELICS OF THE LOST.

"A LARON boat; within her were two human skeletons . . . a small Bible interlined in many places, with numerous references written in the margin."
[Captain McClintock's Journal.]

Our stout hearts brave the ice-winds bleak,
Our keen eyes scan the endless snow;
All signs of life of those we seek
Has passed and perished long ago.

O, flash of hope! O, joyous thrill!
Onward with throbbing hearts we haste,
For, looming through the ice-fog chill,
A lonely boat is on the waste!

Sad recompense of all our toil,
Wrung from the iron realms of frost,
A mournful, but a precious spoil,—
A reliquary of the lost.

Here lie the arms, the sail, the oar,
Dank with the storms of winters ten,
And by their unexhausted store
The bones that once were stalwart men.

Their last dark record none may learn;
Whether in feebleness and pain,
Heart-sick they watched for the return
Of those who never came again;

Or if, amid the stillness drear,
They felt the drowsy death-chill creep,
Then stretched them on their snowy bier,
And slumbered to their last long sleep!

He only knows, whose Word of Hope
Was with them in the closing strife,
And taught their spirits how to cope
With agony that wins to life—

He only knows, whose Word of Might
Watched by them in their slow decay—
Sure pledge that Death's long, polar night
Should brighten into endless day;

And when the sun with face unveiled
Was circling through the Summer sky,
With silent words of promise hailed
The symbol of Eternity.

Welcome, dear relic! witness rare!
Faithful as if an angel wrote;
Though Death had set his signet there,
The Lord of life was in the boat.

[Once a Week.]

Written for Moore's Rural New-Yorker.

HIDDEN LOVE.

Chapter I.

My mother had never loved me. Since my dear father's death, I had been almost alone in the world, and sometimes, in the bitterness of my heart, I had wished to die—yet there was much in the world to live for, and I would live to make others happy. Why it was she did not love me I never knew. I often thought it was because I was not handsome, like my cold, proud-hearted sister,—self was the shrine at which she worshipped,—the idol she adored. I remember once, when I had been ill—very ill—how I had lain quietly in the deep silence and solitude of my chamber, and wished I might go and be with my dear father in heaven; for he had loved me, oh! so tenderly—had clasped me in his arms before he died, and asked God to protect his poor, forsaken child—the memory of his parting kiss, how sweet it lingers—but I wander. I remember that I thought then I would soon get well, had I only some one to love me; but ah, no one came so close to my little room and whispered, "how is ELA this morning?" or placed a loving hand upon my aching head. I had nearly recovered, when, one morning, summoning all the strength I could command, I had gone softly to my mother's room. She was dressed for an evening party, and looked so lovely in her glorious pride, that I thought on such a joyous occasion she must at least be happy, and her heart filled with love. Mistaken thought! In the warmth of my affection I rushed in, and throwing my arms around her exclaimed, "Oh, mother, do you love me?" In an instant the pleasant smile was gone, and with a frown she replied—"ELA, ELA," what are you doing here? you are always troubling me with some foolish question—go immediately to your room." I shrank from her presence, feeling as if the fountain of love had forever ceased to flow in my heart, and again sought the quiet of my own little room. Here I threw myself down in the abandonment of sorrow—the fountain of tears was loosed. I wept till I could weep no more, and, sobbing, fell asleep. From that day I was a changed being. I asked no more if she loved me—coldness took the place of all affection—but none knew the deep well of love which was bubbling up in my heart,—none knew how my soul yearned for some one on which to lavish all its tenderness—its sympathy—its love.

Chapter II.

The years rolled on, bringing their changes. I was no longer a child, and with this thought came one that I would no longer be treated as I had been. I would forsake that home which had been anything but pleasant to me, and would seek that kindness from the cold and cruel world which had been denied me by my haughty mother and sister. My father had a sister residing in the village of N—, and I determined to go and live with her. I obtained a cold assent to my proposal from my mother, but as this was all I expected, I was not disappointed or discouraged. One fine morning I hastily collected what few things I possessed, and started on my journey. I arrived safely at my aunt's house, who received me very affectionately, and I felt that she loved me for my father's sake, though I thought I would try to get her to love me for my own. After a few days, at my request, she obtained a situation for me as a teacher in the village school. Here I was satisfied, for I now felt that I would endeavor to win the hearts of my scholars,—well I knew how pure and genuine are the affections of childhood. In time my object

was secured, and I was happy, though sometimes a shadow would cross the sunshine of my heart when I thought of my mother—who she should have been my best earthly friend was still a stranger to the affectionate heart her own coldness had chilled. The village was usually a quiet one, and not much excitement occurred to disturb the peaceful harmony with which it was invested. But it was not always to be thus. One morning the intelligence came that a wealthy brother of Squire RAYMOND had come home from the East Indies, and was coming to visit him. The Squire thought nothing except a grand party could give sufficient honor to such a distinguished visitor. All the village was now in agitation, for a party at the Squire's was considered to be a grand affair. What rendered the excitement more intense was the fact that Pency RAYMOND was young, and still unmarried. Great preparations had been going forward, invitations had been sent, and a brilliant time was expected. I had not looked for one, although Squire RAYMOND had been a good friend, still I did not think he would remember me in the time of rejoicing. But I was in error—for one bright morning, just before going to school, Aunt MARY perceived the Squire's "boy" making great haste towards our house, and in a little time he had left an invitation for Miss ELA WARRINGTON,—so the note said,—to the Squire's on the succeeding evening. I had resolved not to go, but Aunt MARY plead so hard that my resolution began to waver. She remarked I "had been too much reserved"—she wanted me to enjoy myself—there was to be a great deal of singing, and I was very fond of music," so I thought I would go and enjoy that, at least.

Chapter III.

The great evening came at last. I had gone early and saw the guests entering, all with smiles and happy faces,—how many had happy hearts!—God knew—I did not. Soon they gathered in little clusters around the room, and the cheerful laugh and witty remark was heard ever and anon, as the numbers rapidly increased. Unobserved, I had obtained a seat near one of the bay windows, and entered into conversation with a sweet little girl who sat near me. Presently the hum of many voices ceased, the door opened, and Pency RAYMOND entered. I did not raise my eyes at first, but when I did, what a form and face did I behold! From that moment I felt that I loved him—but what hope was mine! Here was wealth, beauty and fashion all assembled to do him honor, and my heart ached once more from the offering it would make of its affection. He was tall and commanding in person, his eyes were gray, shaded by long, heavy lashes, out of which beamed the very soul of tenderness my heart so long had sought. Once only did those eyes meet mine, and then with deep emotion I turned away to answer some question of the little prattler beside me. Well did I conceal my agitation—for when the introduction took place, I betrayed not the slightest feeling. Late in the evening, the little child had wearily thrown herself on an ottoman, and with her head resting upon me, had fallen asleep. A large number had collected around the piano to listen to the singing. Not wishing to disturb the little sleeper I had retained my position, and had listened to a number of songs with much pleasure. At length a sweet voice fell upon my ear. A young lady was singing some simple melody, of which I could hear, at times, the words, "sweet mother." How those words brought back the past, the tears came unbidden, but I forced them back, and, turning away, I gazed far out in the still night upon the surrounding darkness. I had not looked there long, before I heard some one beside me inquire "how is it you do not join in the singing, Miss WARRINGTON?" I turned and beheld Pency. At first I could not speak—smiled and muttered an excuse about the sleeping child. Perceiving my embarrassment, his gentle manner reassured me, and I soon conversed with ease. We discoursed a long time, until the envious eyes of others warned me that I was perhaps treading on forbidden ground—that there were some who thought I was monopolizing more than my share of the conversation of the honored visitor. The visitors were rapidly diminishing, and consigning my self-imposed charge to her friends, I arose to depart—not, however, until I had given Pency consent to accompany me home. I loved him then, but he knew it not,—that was a great secret hidden deep in my heart.

Chapter IV.

Several weeks passed, and I daily went to my little school with a cheerful heart—for I was happy. But that happiness was too bright to last. From the night of the party, Pency had shown me a great deal of attention—had visited me many times—but only to increase the jealousy of those more wealthy than myself. KATE LAWTON, the belle of the village, seeing her many attractions slighted, had circulated a report that I was maneuvering to gain Pency's affections. Instantly my pride was roused, and I then thought I would see him no more. One night, after school was dismissed, I hastened home to tell my aunt that I was going to visit one of my pupils who was ill, so that she would not be alarmed at my absence. It was a lovely day, but my thoughts were rather sorrowful, and before I was aware I had arrived at the place of my destination. I found the mother of the child to be a highly educated lady, and had entered into conversation with her until I had remained much longer than I intended. I was just preparing to depart, when I heard approaching footsteps. I looked and Pency was standing before me. My first impulse was to receive him kindly as I had always done, but when I remembered my resolution I turned very coldly and said, "good evening, Mr. RAYMOND, I did not expect to see you here." He did not appear to notice my manner, but spoke very pleasantly and asked if I was ready to go. I told him I believed I was. He informed me he had called at my aunt's to see me, and when he found where I had gone, he thought I would not be absent long, and had started to meet me. I was very silent and reserved, though my heart yearned to speak to him as I had done. I thought it would be an easy matter to stifle my affection—but alas! I little knew my own heart. When we arrived at home he said he had noticed my manner, and

inquired the cause of it—but pride revolted at a confession, and I would give no explanation. He said he had something to tell me, but as I was in no mood to hear it, he would bid me simply, "good night," and I was alone—I thought alone, forever! Several weeks passed, and I saw or heard nothing from him. Rumors began to be circulated that he had gone to New York, and rumor proved to be correct,—he had gone, too, without bidding me "good bye." Bitterly then did I regret my conduct, but it was too late. I thought of the many pleasant hours I had spent with him. I thought and judged, from my own experience, that it was a cruel world, with here and there a few hours' happiness, and the rest dimmed with sorrow's tears. Now and then some thought would awaken its buried melodies, and then, in the sadness of its desolation, would yield the sweetest music, because most bruised and broken, even as the flowers, when crushed to the earth, yield their purest fragrance. I had been sitting one evening more sad than usual, when I was told that some one wanted to see me. I needed not to be told who it was, for well I knew 'twas he in whom my soul most delighted,—even Pency. I met him kindly then—for time and absence had changed me. Long and freely we conversed. I told him all, and though he chided me, it was so very gently that I knew I was forgiven. He told me of the affection he had cherished for me—asked me for my heart and hand, and the love I had so long concealed from him was at once revealed. A few short weeks sufficed to make all the preparations, and we were married, quietly, for such had been my request. We had not been long united, when I received a letter from my sister stating that she was married, and that my mother was dead—died without knowing the value of wasted affection—without knowing the worth of that love which would have been so freely given. This thought sometimes sweeps like a shadow across the sunlight of my path, but the angel of love has awakened new melodies, filling my heart with pleasant thoughts of bliss and happiness. No dark cloud obscures the beams of my present joys, but calmly, peacefully, with my chosen one, I wait the summons which shall call me to a land of love,—its name is Heaven. LIDA J. LEADBEATER. Dexter, C. W., 1859.

SALMAGUNDI.

To dream gloriously, you must act gloriously while awake.

A WOMAN who wants a charitable heart, wants a pure heart.

No house is big enough for two wits to live in together.

REVERENCE and Love are the opposite poles of the mind.

Common conversation is the best mirror of a person's mind and heart.

He is a first-rate collector who can, upon all occasions, collect his wits.

Most people seem to think that advice, like physic, to do good must be disagreeable.

THERE is thought to be very little use in a man's meaning well, if he cannot express his meaning by his acts.

A SNEAKER is my slave as long as I keep it under; a secret is my master the moment it escapes from me.

FAITH is the key that unlocks Paradise and lets a flood of joy into the soul. Faith appropriates all to itself.—Thomas Brooks.

WHEN God teaches thy reins as well as thy brains, thy heart as well as thy head, these lessons are all in love.—Thomas Brooks.

THE human heart, like a feather bed, must be roughly handled, well shaken, and exposed to a variety of turns, to prevent its becoming hard.

At an evening party, a gentleman carving a chicken asked a lady what part she preferred. "I will take a foot handle," she said.

I HAD rather never receive kindness than never bestow one; not to return a benefit is the greater sin, but not to confer it is the earlier.—Seneca.

ONE always receiving, never giving, is like the pool, in which whatever flows remains, whatever remains corrupts.

"I REALLY believe, husband, that you and your fellows will eat up everything we have got."

"Oh, no we shan't, wife; we mean to drink a part of it."

How it comes that people who write "prize odes" are never heard of afterwards? Who will answer? We insert the above for two reasons—first, because it is pertinent; and second, because it is impertinent.

You must sometimes feel with your friend, before you can possibly think for him. There is more need of keeping this in mind, the greater you know the difference to be between your friend's nature than your own.—Fruits of Leisure.

GOD loves to lade the wings of prayer with the choicest and choicest blessings. Many Christians have found, by experience, praying times to be sealing times. They have found prayer to be a shelter to their souls, a sacrifice to God, a sweet savor to Christ, a scourge to Satan, and an inlet to assurance.

A SOUL weak in grace has as much interest in the Lord as the strongest saint has, though he has not the skill to improve that interest. And is not this a singular comfort and support? Verily, were there no more to bear up a poor, weak saint from fainting under all his sins, and sorrows, and sufferings, yet this alone might do it.—Thomas Brooks.

A MORMON is a living paradox. He says grace before a cotillion, swears in his sermons, selects his texts indifferently from the Bible, the books of Mormon, an almanac, or the President's Message, and is perpetually quarreling for the sake of peace. His religion is a joke, and he makes the best story-teller a chief of the quorum. He assumes dignities, but has not the slightest respect for them; and the effect of his piety is to put him on a level with the greatest reprobate of the time. In short, he is the Latter-Day Saint; or, in other words, the last one you would think of calling a Saint.

Wit and Humor.

A CHRISTMAS TALE.

WHILE the last century was flourishing, there dwelt, in what is now a famous city not a mile from Boston, an opulent widow lady, who once afforded a queer illustration of that cold compound of incompatibles, called "human nature."

It was a Christmas Eve of one of those old-fashioned winters which were so bitter cold. The old lady put on an extra shawl; and as she hugged her shivering frame, she said to her faithful negro servant:

"It's a terrible cold night, Scip. I am afraid my poor neighbor, widow Green, must be suffering. Take the wheelbarrow, Scip. Fill it full of wood. Pile on a good load; and tell the poor woman to keep herself warm and comfortable. But before you go, Scip, put some more wood on the fire, and make me a nice mug of flip."

These last orders were duly obeyed; and the old lady was thoroughly warmed, both inside and out. And now the trusty Scipio was about to depart on his errand of mercy, when his considerate mistress interposed again.

"Stop, Scip. You need not go now. The weather has moderated."

A BUNCOMBE FENCE.—Lawyer.—"Now, Mr. A—, was the fence alluded to a good, strong fence?"

Uncle Will—"Yes, sir."

Lawyer—"Well, what sort of a fence was it?"

Uncle Will (holding in)—"It was a Buncombe fence, sir."

Lawyer (thinking he had cornered the old gent)—"Now, Squire, will you oblige the court by giving your definition of a Buncombe fence?"

Uncle Will—"A Buncombe fence, sir, is a fence that is built strong, horse high, and pig tight!"

Uncle Will was dismissed from the stand, and retired with flying colors.

Mrs. PARTINGTON makes Shakespeare say: "Sweet are the uses of advertisements." It's so—if he didn't say it.

MONOMANIAC.—A Mr. Mono, in St. Louis, has just married his seventh wife.

ARITHMETICAL PROBLEM.

B AND C purchased 1,200 acres of land at \$1 per acre, each paying \$600. Some time after, C, on viewing it, offers to take a certain square piece at \$1 75 per acre, to the amount of his advance, to which B consents. How many acres will each have, what is the length of each side of C's lot, and what does B's part cost him per acre? J. J. W.

Harmony, Chant. Co., N. Y., 1859.

ANSWERS TO ENIGMAS, &c., IN No. 516.

Answer to Miscellaneous Enigma:—Keep cool.
Answer to Illustrated Riddle:—

Flora Temple recently made the fastest time on record.

Answer to Geometrical Problem:—From centre to centre of the smaller circles is just six inches—consequently, a 6 inch square may be drawn, and the diagonal of this square (8.485 plus inches), plus six inches, the diameter of the greater circle, equals 14.485 plus.

Publisher's Notices.

TERMS OF THE RURAL FOR 1860.

REDUCTION OF CLUB RATES:

Single Copy, One Year, - - -	\$3
Three Copies, " " " " "	\$5
Six " " " " " " " " "	\$10
Ten " " " " " " " " "	\$15
Fifteen " " " " " " " " "	\$21
Twenty " " " " " " " " "	\$25

And any additional number at the latter rate—only \$1.25 per copy!—with an extra free copy for every Ten Subscribers over Twenty. Club papers sent to different post-offices, if desired.

As we pre-pay American postage on papers sent abroad, Canada subscribers should add 12½ cts. per copy to above club rates.

Subscriptions can commence with the Volume or any Number. No deviation from our Terms.

EXTRA INDUCEMENTS

TO AGENTS AND ALL WHO FORM CLUBS EARLY.

In addition to the free copies offered according to our Terms, we will give to each of the ONE HUNDRED PERSONS sending the first list of THIRTY or more Yearly Subscribers to the RURAL after this date (remitting payment at our club rate—\$1 25 per copy), a bound volume of the RURAL for either 1859 or 1858, price \$3, or \$3 in A. G. Books, post-paid.

To each of the ONE HUNDRED PERSONS sending the first list of TEN or FIFTEEN Yearly Subscribers as above, remitting payment according to our terms, we will give either another extra copy of the RURAL, or \$1 50 in A. G. Books, post-paid, or a Gross of the Washington Medallion Pens, post-paid, as preferred.

Still More Liberal!—In addition to any extra copies or Gratuites to which persons may be entitled from the above offers, we will give an unbound but perfect Copy of the Tenth Volume of the RURAL (for 1859) to EVERY ONE who remits (previous to Christmas Day, 1859), either \$5 for 3 copies, \$10 for 6, \$15 for 10, \$21 for 15, or \$25 for 20 copies. Finally, in addition to what is above offered, we will give to each of the TWENTY PERSONS remitting payment for the first list of SEVENTY-FIVE or more Yearly Subscribers after this date, a Copy of WEBSTER'S UNABRIDGED DICTIONARY—New Pictorial Edition, containing 1,500 Illustrations.—[Crown Quarto—1,700 pages.]

NOTICE AND REQUEST.

HAVING concluded to mail the Eleventh Volume of the RURAL NEW-YORKER by a new Patent Machine Process, it becomes important to receive a great portion of the list of Subscribers for 1860 at the earliest possible moment. To secure this result,—and also as an inducement for the friends of the RURAL to make early efforts to INCREASE its circulation,—we offer above (and in a circular mailed to Local Club Agents, &c.) some extra inducements for clubbing. The new system of mailing by printing is regarded as a vast improvement in both accuracy and speed, and we trust every Club Agent, or person disposed to act as such, will aid us in successfully inaugurating it by sending in lists as early and fast as convenient. And if our friends generally will renew their subscriptions at an early day, they will greatly facilitate the accomplishment of our object. It will require considerable time, labor and expense to adopt the new system, but when once in operation we think every subscriber will regard the change as a decided manifestation of "Progress and Improvement."

PUBLISHER'S SPECIAL NOTICES.

THE RURAL SNOW-BILL for 1860—pronounced a fine specimen of the Typographic Art—is now being printed and will soon be sent (post-paid) to all our agents. We shall be glad to send copies of the bill, specimen, etc., to all persons disposed to aid in circulating the RURAL, for which kind service liberal inducements are offered.

VOLUNTARY AGENTS FOR THE RURAL.—Any and every Subscriber, Post-Master or reader is requested to act as voluntary agent for the RURAL, by forming clubs or otherwise. Note is time for its friends to manifest their interest in the paper and the cause it advocates, either by obtaining new subscribers, or inducing others to act in its behalf. If any lose or wear out numbers in showing the paper, that's the best way to get subscribers,—we will duplicate them in order to make their files complete for binding.

ASSOCIATED EFFORT leads to success in canvassing for periodicals, as well as in other enterprises. For instance, if you are forming (or wish to form) a club for the RURAL, New-Yorker, and cannot fill it up in your own neighborhood, get some person or persons a few miles distant to join with or assist you—adding their names to those you may procure, and sending all together. Please think of this, and act upon the suggestion if convenient.

SPECIMENS FREE.—We always take pleasure in sending specimens free of charge. Reader, if you have any friends, near or distant, that you think would subscribe for the RURAL, or act as agents, please give us their addresses and we will send them specimens, &c. No matter how many names—"the more the merrier."

NO TRAVELING AGENTS are employed by us, as we wish to give the whole field to local agents and those who form clubs. And beside, we wish it distinctly understood that all persons traveling through the country, professing to hold certificates from us, ARE IMPOSTORS.

ANY person who remits pay for a club of 6, 10 or 15 at the specified rates for such club, and adds a sufficient number within one month thereafter, can avail himself of the advantage of the price of large club, and retain the amount overpaid.

THE RURAL is published strictly upon the CASH SYSTEM—copies are never mailed to individual subscribers until paid for, (or ordered by a responsible agent,) and always discontinued when the subscription term expires.

ANY person so disposed can act as local agent for the RURAL, and those who volunteer in the good cause will receive gratuities, and their kindness be appreciated.

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, In Advance:—Two Dollars a Year—\$1 for six months. For Club Terms, &c., see above.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any condition.

THE POSTAGE OF THE RURAL is only 3½ cents per quarter to any part of the State, and 6½ cents to any other State, if paid quarterly in advance at the post-office where received.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

FARM HEDGES.

We do not know that there is anything to create a special interest at this time on the subject of hedges for fencing—no new plant that any one is anxious to sell at a high price—no new book that the enterprising publisher is very willing to dispose of for the especial enlightenment of farmers—yet within the few past weeks we have received more articles and inquiries on the subject of hedging than for a year or two previous. Perhaps the growing scarcity of timber, its great cost, and the difficulty of procuring proper material in some localities, at almost any cost, has made the conviction pretty general this autumn, that something must be done to provide a substitute, and the sooner the better.

We have long considered this question one of importance, and have not failed to give the readers of the RURAL all the information possible on the subject. For many years we hoped that the Osage Orange would prove just the plant needed to make a good hedge, and that it would succeed in almost all sections of our country, nor do we yet despair. But, of late, we have heard repeated complaints of injury by severe winters, of hedges of several years' growth, being nearly destroyed. There may be some local causes for this, so we wait for further information, and we hope our readers at the West, where the winters are the most trying, will give us their experience. If the Osage Orange is too tender—if it suffers seriously one winter in ten, it is unfit for a hedge plant, and no more money or labor should be expended upon it—it must be abandoned. Then we are thrown back to where we were twelve years ago, when the Osage Orange was first introduced, not having made the least progress, only to prove that another plant is unfit for a hedge. But, we hope better things, and while on this subject we will remark that many attempts at hedge growing, in fact most that we have seen, are only a farce, as much so as to go into an old meadow with a hoe, chop holes in the sod, plant corn, leave it and expect a crop. Sometimes, the planting is done pretty well, but after that the hedge receives no care or culture. We never knew an Osage Orange hedge to suffer in the winter that had been twice pruned the previous summer, the last time the latter part of August. This late pruning checks growth, and causes the wood to ripen early. Perhaps an annual pruning in the latter part of summer would accomplish the same object.

We hear much of the ease of making a hedge in the mild, moist climate of England, but we can assure our readers that with such care as we generally give to our hedges, a good hedge could never be made in England. There the hedge is cultivated more thoroughly than we cultivate our corn, while the pruning is regular and systematic, and such, at every stage, as experience has found the best. On this point we have the following inquiry, and our remarks, which were intended as merely introductory, have extended far beyond our original design.

HEDGES AND DITCHES.—If I understand the way in which the much talked of hedges of England, which are regarded as models, are planted, it is this: a ditch is dug three or four feet deep and two or three feet across on the outside or roadside of the hedge. Then the plants are set on a bank, part of the earth thrown out of the ditch being used in forming it. By this course a low hedge will answer, for cattle would find it hard to

climb a hedge with such a ditch between it and them. Could not a similar plan be adopted here with advantage?—H. L. Onondaga Co., N. Y., 1859.

Hedges in England are generally grown as our correspondent supposes, with a ditch on the outside, particularly on wet or stiff land. The form of the ditch may be easily seen by the engraving below.

ENGLISH PLAN OF GROWING HEDGE, WITH DITCH.

These ditches, when kept in order, make excellent water-courses, and are often used to carry the waste water from the field drains, while they keep the road dry at all seasons. With such ditches, too, it is difficult for stray cattle in the road to approach the hedge, and, therefore, in a field not used for pasturage, a hedge fence may be left unprotected when quite young. It has been contended that the system of ditching would not answer for this country, on account of our hot, dry summers; that the plants would suffer from drouth on account of the drainage of the water, and the extra surface exposed. We would, however, like to have the experiment fully and fairly tried. We have seen the Osage Orange hedge suffering from excessive moisture in the spring, where we were satisfied ditching, according to the English plan, would be of the greatest advantage.

HARDINESS OF THE OSAGE ORANGE

By the following, from a correspondent in Illinois, it will be seen that the Osage Orange is not yet a failure at the West. Late summer pruning, too, is practiced. This is of the utmost importance, where the winters are severe, and cannot be too highly recommended.

Masses. EDS.—Seeing an article in your paper of Oct. 29th from the pen of Wm. B. Rice in relation to hedge-growing, in which he says, after six years' experience, he found his hedge in a more hopeless condition than ever, and consequently concludes that the Osage plant for hedge purposes in that latitude is a hoax. W. M. BEAUCHAMP, of Skaneateles, seems to coincide in that opinion. Being a lover of, and an advocate of the Osage hedge, I feel it my duty to add a mite of practical knowledge in its favor. I have had five years' experience in cultivating the Osage plant, and have succeeded very well in forming a strong and beautiful barrier. I labored three years of the five under the same difficulty experienced by Mr. Rice, and came very near forming the same opinion of the plant, but I observed that the plant made such rapid progress and continued to grow so late in the fall it was very tender when cold weather set in, and, as a matter of course, could not withstand the winter, and I came to the conclusion that the growth must be checked in advance of the cold weather to give the wood time to mature. This I tried, and it has proved effectual. I find the time to trim the Osage to be from the 25th August to the 15th of September. One clipping a year is sufficient under good cultivation. When the hedge is properly matured stock down to grass, and it will take care of itself with occasional trimming. I shall be pleased to have Wm. B. Rice and others try the experiment and report through the RURAL. There is not the least doubt in my mind in regard to the Osage doing well in New York, with proper treatment. I spent over forty years of my life in that State, and have some little knowledge of the climate.

Peru, Ill., Nov., 1859.

S. W. WOOLLEY.

THE NEWCASTLE THORN, HAWTHORN, &c.

Here we give the experience of an old and skillful gardener with both the Newcastle Thorn (Cockspur,) and the Hawthorn.

EDS. RURAL NEW-YORKER.—There seems to be a difference of opinion about the English White Thorn, and with your permission I will give my experience in hedge growing. I have now under my care more than four hundred rods of hedges. Some are doing well, others not so well, and the White Thorn is becoming a total failure. In the spring of 1842, I planted a hedge of two thousand plants of Newcastle Thorn, (recommended by the late Mr. Downing.) I have given it every attention, not letting a weed interfere with its growth; it is pruned every year, and yet it is not what I would call a good hedge—not as good as hedges of seven or eight years' growth, that I have seen in the old country. In 1847 I planted a hedge of

English White Thorn, about forty rods in length, and gave it the same treatment as the former one, and the land is the same, and for the first five years it grew as fine as any hedge could do, but soon after the borers attacked it—and now nearly one-fourth of the plants are killed by that insect; in some places for three or four yards, every plant is dead, and although the hedge of Newcastle Thorn is along side of it, the borer as yet has not attacked a plant.

I planted a hedge some fourteen years since, of White Thorn, Beech and Privet, alternately, and for a number of years it was admired by every one that saw it, but the last five or six years the White Thorn is going to decay, and in a few years more there will not be a plant left; the borer, aphid and bark louse are doing their work. I have planted over eight thousand White Thorn at different times the last fourteen years, and in no instance have they succeeded well after the first four or five years, and it cannot be said that I do not know how to treat them, as I had over twenty years' experience in a country where the White Thorn was grown to perfection, and our regular sales of that article was from two to three hundred thousand a year, and a small establishment at that.

I have more success with the Privet as a hedge-plant than any other I have tried. I have over two hundred rods of Privet hedge, varying from ten to fourteen years, and in every instance it is healthy and a good fence, but it is scarcely formidable enough for a farm, though it is fine for a nursery, garden or door yard. When I commenced this article I thought to have laid before your readers the utility of hedges, as a protection to our fruits, but will leave it to another time, as you like short articles.

Troy, N. Y., Nov., 1859.

BEAUCHAMP'S DEFENCE OF THE HAWTHORN.

MR. BEAUCHAMP, in the communication below, which we have been compelled to curtail a little, for want of room, it will be seen criticises a few remarks made by us upon a former communication, and gives a very good description of English hedges. Mr. B. seems to think our failure with the Hawthorn is entirely on account of bad treatment. In this respect we are much at fault.

MESSRS. EDITORS.—Previous to 1820, very few hedges were newly planted in England for a period of twenty or more years. The plan was to allow them to grow for years, and then cut down and convert into firewood—the greater breadth the more substantial the fence. Hedges seldom occupied in those days less than ten feet in width, often twice that space. They were often composed of every imaginable shrub, Hawthorn, Black Thorn, Sloe, Sweet-brier, Dog-rose, Honeysuckle, Hazel, Dog-wood, Alder, Willow, Dwarf Maple, Privet, &c. This latter plant, at one time, was in great esteem, as considered of great service in obliterating defects in the Hawthorn. After some years it was found that the Privet killed the Hawthorn, and yet many English emigrants will assert that a good hedge cannot be made without such a mixture. The hedges growing, planted previous to 1820, were many of them of CHARLES the First's time, and some even earlier. Since railroads became of greater notoriety than in days of yore, a complete revolution has been effected in the planting and management of the Hawthorn hedges in England. They are not entrusted to every-day laborers, but to men of experimental knowledge. It is a distinct branch from common nursery work. I spent 1848 in England, and was surprised at the appearance in hedges, and the improvement in their cultivation. On soils that, at a previous period, were thought entirely unfit for a hedge, I found flourishing hedges. In 1836 I visited England, and I passed over large tracts where, for miles, a Hawthorn was unknown—either dykes, embankments, or stone walls, were the fences used, and dried cow-dung the only fuel,—yet England is a great coal country, and no doubt the inhabitants that were then strangers to coal have now a knowledge of that mineral, and have been benefited by its use.

Once more, you say truly that the Hawthorn is the only good protective hedge in England, and why? because experience has taught them remedies for defects and diseases, that were formerly incurable,—formerly if a thin place was found, stakes, boards, &c., were brought into requisition to strengthen it, which only made a bad matter worse. That the tenant farmer is generally competent to manage a hedge, is also true; that the farm-laborer is, too, I cannot concede. He may be capable of doing what he is told, and perform his part with efficiency where strength is wanted,—but no tenant or laborer would undertake to plant or manage a hedge in an untried location without advice from persons of experience. I can assure you that I have seen scores of miles of the finest soil under cultivation, that never had a Hawthorn hedge to enclose it. I have seen scores of hedges

of Maple, (a dwarf kind,) the Hazel, the Box, the Holly, the Laurel, &c., and in bleak situations the Black Thorn and Sloe. The Horn Bean, too, is often used for the same purpose. The great variety of plants used for fences in England, may be termed legion. I cannot enumerate all, but the Hawthorn has the pre-eminence, and I think no other kind is used where strength and durability is required.

There is a hedge in this township, an excellent type of the old hedges in England, composed of almost all the varieties of plants that will bush, with here and there a piece of dead wood thrust in to stop a gap.

W. M. BEAUCHAMP.

Skaneateles, N. Y., 1859.

The old hedges of England are broad as described by our correspondent, and composed of a mixed mass of plants, in which the bramble is generally quite prominent. The Sloe and the Black Thorn is the same plant. As fast as these old hedges are grubbed up and new ones planted, the Hawthorn is always substituted. Still, there were many fine Hawthorn hedges planted long before 1820. In 1832 we saw magnificent Quick hedges; one in particular, eight feet in height, and as true as a wall, which the proprietor informed us had been planted thirty years. Coal, doubtless, will come into more general use, as the facilities for transportation increase, but we could not but rejoice at the ease with which the English laboring poor in the country provided themselves with their winter's fuel. A few days labor of the father, early in the fall, added to what the boys and girls could do during the summer, and half a day with "master's oxen and cart," and abundance of fuel is procured, to keep the family warm and comfortable during the coldest winter. Turf and cow-dung, in abundance, with a choice log procured and carefully saved for a "Christmas Log," is all that the laborer desires, and is no mean fuel.

BARBERRY FOR HEDGING.

E. C. FROST, the well known nurseryman of Havana, Schuyler county, discards the old, and at least, partially tried plants, and recommends the Barberrry. All that our correspondent can say of its thick growth, its pretty yellow flowers, its lively foliage and its beautiful crimson berries, we cheerfully admit. With a very little pruning it will make a good thick bottom, and a fine screen; but we fear it will not prove sufficiently strong for an outside fence.

EDS. RURAL NEW-YORKER.—This subject having been brought before the public in several of the late numbers of the RURAL, I am induced to send you this. It is an important subject, as some material must be found for line fences or our whole system of farming must be changed, and soiling adopted in place of grazing.

From observation and experience I have come to the conclusion that our farms will never be fenced with the Osage Orange or English Hawthorn. I will recommend a plant, and risk the opinion that it will answer a good purpose.

The BARBERRY (*Berberis vulgaris*) I believe is the best material yet grown in our latitude. In a good soil it grows from eight to ten feet high—needs no trimming or training—forms, by its natural growth, a dense, well-shaped hedge—is not injured by the mice or borers, as nothing will eat its bitter bark and wood—is not injured by the cold—is so thick and close at the bottom that neither pigs or cats can get through it—never sprouts except from the stool of the plant—and is armed with thorns large enough to prevent cattle from eating or injuring it.

The surface of the hedge is uniform, and covered with leaves within eighteen inches of the ground, bears a fine yellow flower in May, and has red berries, which, if not picked, remain during winter. The berries make fine tarts, jellies, pickles and candies, and when dried are a good substitute for tamarinds in cases of fever. I have a specimen which I believe will satisfy any that the above opinion is well founded, and invite any who feel sufficient interest on that subject, to inspect it. For an ornamental hedge, too, I can imagine nothing superior.

E. C. FROST.

Havana, N. Y., Nov., 1859.

We have now, we think, brought this question pretty effectually to the notice of our readers, and have devoted more space to it than we generally give to one subject; still, we have not done more than its importance demands. The time is coming when our fields and gardens will be fenced with living plants, and we may as well think about the question and compare notes, to see what progress we are making. That there should be a great difference of opinion in regard to the various plants and plans of growing recommended—that some should succeed and others fail—is neither surprising nor discouraging. This must be expected in the present state of hedge-culture in our country, but out of this mass of somewhat chaotic

experience light will be evolved that will direct us in the sure path to success.

The first lesson we have to learn, is to cease to be in a hurry—to be willing to wait four or five years while a hedge is making, perhaps, two or

SPECIMEN OF A WELL-GROWN HEDGE.

three feet in height, and while we are securing a good, permanent, thick base, which is the foundation of every good hedge. The engraving above shows a good hedge, with a base that a hedge-grower might be proud of.

GROWING TIMOTHY SEED ON THE PRAIRIE.

EDS. RURAL NEW-YORKER.—This is a great, increasing, and remunerative branch of Western agriculture. As yet no such weeds are known here as mar the meadows and pasture lands of Eastern hillsides. The soil is well adapted to the growth of Timothy, and it is cheaply and easily harvested with a two-horse reaper and threshed with a machine. Mr. B. grew, the past season, six hundred bushels on 80 acres, which cost him, in harvesting, but fourteen dollars besides his labor. The product frequently reaches in cash value fifteen dollars per acre. Hence it will be readily seen that this is a remunerative crop. But, as at the East, only a few crops are grown before the yield of grass becomes finer and the product of seed much less.

To grow Timothy seed we prefer rather damp land, and should seed in the spring with wheat, barley, or oats, or the ground may be, and sometimes is, cropped with corn and seeded after the crop is through being cultivated. We would not seed as thick for raising seed as for pasture, or meadow, and think one peck of seed per acre a plenty. The roller has a good effect upon newly-seeded prairie, and facilitates the use of machinery afterward in harvesting. The first three crops after seeding usually pay well, and three years is long enough for land to lie in grass in a well-managed rotation.

In view of the facts mentioned in this article, in regard to the purity of Western seed, we would recommend Eastern consumers to see to it that they buy prairie-grown seed—seed grown where we have never yet seen a daisy, nor a thistle, or any weed which has proved itself noxious in Eastern meadows.

Land on which Timothy seed is to be grown successfully, should not be cropped with wheat and oats too severely, or it may not catch well, even when yet producing good crops. It is necessary to secure the crop before it has become fully ripened, as showers and heavy winds are liable to waste it by shelling. We have known instances where half of a large crop was thus beaten off in an hour. The proper time for securing is when the seeds in the top of the head have ripened—binding in small bundles and setting up immediately after the reaper—it will perfect its seed as well as early cut wheat. We have seen seed grown among wheat at the East, and cut so green that nearly all the hull, or outside, was rubbed off in passing through the machine, leaving the naked flesh of the seed which grow well. There is no danger of injury to the seed, therefore, from this cause, although we would not cut as green as above spoken of. After it has stood for a little time in uncropped shocks, it should be secured, either by threshing or stacking, and carefully covering the top of the stack so water cannot get in to destroy it. Few departments of Western husbandry have proven more profitable than growing Timothy seed.

Temperance Hill, Lee Co., Ill., 1859.

J. S.

EXPERIENCE WITH LIGHTNING RODS.

EDS. RURAL NEW-YORKER.—Several years before the advent of the Chinese sugar cane in this locality, a good many persons were seized with a mania for lightning rods. Disinterested gentlemen, with but slight pretensions to scientific knowledge, came along frequently to urge upon the attention of landlords the protection which they afforded to buildings, and, by your leave, sir, to put them on your dwellings, barns and out-houses at such price per foot! With a little

insulated wire on the ridge, having numerous upright pointers, and one end plunged deep in the ground, what could the "bolts of Jove" do towards hitting a building thus guarded? They would never undertake it, or if they did, this cute contrivance of man would give them such an angular slant as they little dreamed of, and send them, hissing and chopfallen, into the bowels of the earth! The argument was so conclusive that the writer went into it, or rather, the humbug went into him, to the amount of two or three hundred feet.

A little while after, a rod that ran down the gable end of the barn got severed in train some six feet from the ground, and it would have been instantly repaired but for the opportune suggestion of a friend, that the electric current was sprightly, and could jump that short distance with all ease. So I let it go. When the rods were put up, I objected to more than three up right pointers, believing that number would be sufficient to "draw," but the gentleman having the job claimed that each spire of the height used would only "protect" a radius of six or seven feet, and hence, that at least five were necessary, the ridge being sixty-six feet in length. And the five went up. Efforts have from time to time been made to keep the whole string "on guard," but they frequently get out of the perpendicular. While I write, two of them lie horizontally with their tips south, which political friends consider ominous, but which they ought not to so long as three of them—the larger half—continue to point heavenward. There is trouble also with the rod which runs along the ridge. The little bone or horn "insulators," not being good to stand the weather, have crumbled and worked loose from the iron fastenings, so that the metal of mysterious power to convey the subtle fluid when properly adjusted, lies along loosely on the roof. At the first thought, it seemed to me that this position was not entirely safe for the building; but reasoning that if the little rod had force enough to draw down the lightning from the clouds, it would also have the requisite ability to hold on to it in spite of the shingles, (unless, indeed, wood had greater attractive power than had hitherto been ascribed to it,) I concluded to make no serious efforts to keep the insulation perfect.

The whole thing, on both barn and house, may go to the Onondaga advertiser of sorghum sirup for a few, a very few, gallons of a good article of his own growth and manufacture in this year 1859, he to do the exchanging. And thereafter, for security against lightning, I shall only trust the God of Storms, whose bolts are neither hurled by chance, nor thwarted by any Heaven-defying three-eights wire, but always and certainly accomplish the exact purposes which His wisdom designed.

W. B. P.

Pittsburgh, N. Y., 1859.

ERADICATING MILKWEED.

EDS. RURAL NEW-YORKER:—Sometime since I saw an inquiry in your paper concerning the best manner of eradicating the "milkweed," by which name, the inquirer probably means the "*Asclepias Cornuti*," of LINNÆUS. I have seen this pest killed in two ways. One of my neighbors put a large flock of sheep in a field overrun by it, and kept them there all summer. There were about twice as many sheep as the pasture would support, and to avoid being starved, the sheep ate the milkweed as fast as it appeared. The same treatment was pursued the next summer, and there has been no milkweed there since. This method nearly killed the sheep also. The most profitable way of killing milkweed, is to plow deeply and have a boy, (or boys,) follow the plow closely to pick up every root; putting them into a basket carried on one arm. When the basket is full, the roots can be thrown out into the corner of the fence, or any place where they will not get covered by soil. The creeping "rhizomes," or root stems of this plant, are so tenacious of life that they will only multiply by plowing and cultivation, unless they are entirely removed from the soil. A neighbor of mine eradicated the milkweed from a field of ten acres, in three or four times plowing, and carrying off the roots in the above manner.

The surest way is not to let the enemy get a foothold. It is a worse weed than Canada thistle, and, like that, its sole use seems to be to point out the absence of good farming.

Westfield, N. Y., 1859.

D. A. A. NICHOLS.

SPECIAL PLACES FOR WINTERING BEES.

EDS. RURAL NEW-YORKER:—It is presumed the bees are snugly put in winter quarters before this. The main object is to have them so wintered that the stocks will be strong and healthy in the spring. In order to accomplish this they must have suitable warmth, dryness, and sufficient upward ventilation to carry off the vapor arising from the bees. If bees are kept in a dark room, or cellar, which is neither too warm nor too cold, they remain almost dormant and consume much less of their winter stores than they would if exposed to atmospheric changes, or disturbed in any way. In order to bring about the full benefit of a special depository you should give the bees that are kept in a cellar or dark room, a very little ventilation at the bottom of the hive. If the hives have holes through the top, for a passage into the surplus honey boxes or chamber, leave them open so that the vapor can pass off freely. In common box hives bore from two to four inch and a quarter holes through the top, near the sides of the hive, and leave them open. If put in a chamber or garret where they would be somewhat exposed to the light and the atmospheric changes of winter, give them a little air at the bottom, and place the honey boxes on the top of hive so that the vapor or dampness arising from the bees can pass off freely into them. If a box hive, bore holes, as above stated, and place a box over the top seven inches deep and large enough to cover the holes. If the room or garret is not too cold, you can nail screen wire over the holes and leave the boxes off.

If the air becomes, from any cause, too dry where the bees are kept, water must be given them as they cannot raise their broods without it. They

commence their brood usually in January, in strong stocks, and water is indispensable to keep them and their brood healthy. From the first of January till the time they are placed in the open air you can give them water by injecting it with a quill, or small syringe, through the holes in the top of the hive in small quantities at a time—or place it in a sponge or shallow vessel where they can have access to it without being chilled. One strong healthy stock in the spring will yield more profit in honey than half a dozen weak ones. I am persuaded by what is known of the habits of the honey bees, that they can be more successfully wintered in the open air, in hives rightly constructed and protected against the cold and the north and west winds—and that bees continue more healthy and vigorous than when placed in special depositories. Such has been my experience.

E. KINER.

Henrietta, N. Y., Dec., 1859.

FACTS ABOUT POTATOES.

A GOOD YIELD.—For the benefit of those who believe in using a large quantity of seed, please publish the following: I planted a half bushel of large sized potatoes, last spring, on dry sod, broken deep. I cut them in pieces, one eye to a piece, and two pieces to a hill, making seven hundred and twenty-four hills. Some hills missing when dug. I obtained from the whole, fifty-three bushels, good measure. From ninety-seven of the hills, separate from the rest, I obtained eleven bushels.—C. G., Parks Co., Ind., Nov. 1859.

WILL POTATOES MIX IN THE HILL?—My experience is that they will. I am a farmer, and I grow twenty-one different varieties of potatoes. I was awarded the first premium for the greatest variety of table potatoes by the Livingston County Agricultural Society, the present year. It causes a great deal of care and trouble to keep each variety separate from the others, it being necessary to plant them side by side, and stick a stake, with the number and name written on the stake. I find by continuing to plant the different varieties side by side the finer varieties degenerate, or partake more or less of the flavor and color of the coarser varieties. To fully convince myself that potatoes would mix in the hill, last Spring I planted two hills of potatoes, and put a set of the Blue Mercer, and the Long Pink Eye in each hill. On digging them this fall, I found one potato in each, one half of which was Blue Mercer, the other half Long Pink Eye. The potatoes were of good size, and the division run lengthwise of the potato. I shall experiment further on these two potatoes.—F. KALLOO, South Leon, Nov. 1859.

In experimenting on this point it is best to plant varieties as different as possible in form, color, and other characteristics. Then, be sure that there are none self-planted, that the potatoes which appear different are really attached to the same stalk, and that the difference is really such as distinguish different varieties. There is always a good deal of difference in specimens of the same sort which are doubtless pure.

THE WHITE MESHANOCK.—I notice in the columns of your valuable paper, that K., of Niagara Co., wishes for a description of the White Meshanock potato, and for his benefit, I would describe to him through your paper the only genuine White Meshanock potato, and the one that has been the favorite of my family for many years. It is very early, has small tops, resembling those of the Clouded Meshanock, is of a long, round form, smooth surface, prominent eyes, extending to about the general surface, and an average-sized one has from eighteen to twenty-four eyes, is perfectly white both inside and out, whether cooked or not, and when cooked is of a mealy nature, and if baked the most desirable potato I ever saw; when boiled is very tender and quite likely to crack or fall to pieces. It is probably as liable to rot as any other kind, still in our country it seldom ever fails. They yield well, and in our market are eagerly sought for, and generally sell from six to twelve cents per bushel more than any other kind raised in our country.—W. S. CURTIS, Fairwater, Green Lake Co., Wis.

RURAL LETTER FROM IOWA.

EDS. RURAL NEW-YORKER:—I believe those who write to you about their crops, tell of wondrous achievements in agriculture, but I suppose there is a corner somewhere for a letter from the farmer's wife who can only tell the story of the majority of farmers,—medium crops.

To-day in Iowa is a fine sunny day, such an one as we did not expect to see after the cold of last Sunday; the weather has been very favorable for securing fall crops. I think I never knew so pleasant a November. The wheat on our farm yielded nineteen bushels to the acre. Just after harvest it was 50 cts. per bushel,—that is, it is said, will just barely pay expenses,—it is now 74 cents per bushel. There was a report in one of the city papers, from every county in the State, giving the proceeds of the wheat crop, and proving that it will not pay to raise it in this State. Oats were 30 bushels to the acre, and corn sixty, some acres as high as eighty or ninety—it is selling at 20 and 25 cents per bushel. Many farmers say that the most profit may be realized by feeding the corn to hogs instead of selling it.

Butter and cheese-making cannot be made as profitable here as in the East where they have tame grass, and where the cows are fed vegetables in fall and winter. From what I hear I should think that cows in the West do not give as many quarts of milk as they do in the East. I know the same amount of butter cannot be made from the same number of cows. During the summer it ranged from 8 to 10 and 12 cents per pound. Very little, if any, is packed for sending away, and such quantities are brought to the market that it is very cheap—now it is 15 cents. Some people are of the opinion that as good butter cannot be made here, where the cows eat wild grasses. I am sure we have made as good butter as I ever tasted, but we have not the conveniences in the way of spring-houses, and cool, proper cellars, such as are found in older States. I think, however, that more dif-

ference is made in the butter by the cleanliness of pans, pails, cream-pots, churns, &c., than in any thing else, for I fancy that when I wash every dish myself that the butter is a great deal sweeter.—Then, the working of the butter may be done in such a way as almost to spoil it, making it greasy—there is a right way, which we can hardly explain, but if any beginners would like to witness, we can give an example, and that, Mr. Editor, is said to be better than precept. There is one advantage, however, it costs very little to keep cows as they run upon the prairies during the summer.

I wonder if Iowa can ever become a fruit-growing State, some say it never can, because fruit trees need the protection of timber—that a timbered country is the best. I do not think sufficient attention is paid to getting out orchards, as but few fix upon a permanent location,—the idea of selling out at a bargain is too much in mind.—Time passes on, the ordinary crops of corn and potatoes are attended to, and all the little adornments and comforts of a beautiful farm which make the home so pleasant and desirable are neglected. We do not realize that every tree planted, every improvement made, adds to the value of the farm in dollars and cents. How many exclaim—"It takes so long for an orchard to produce fruit." What of it? Does it not look beautiful while growing?—can we not enjoy noting the growth of the trees, and shall we not plant, that the ripe, luscious fruit shall crown the board on our children's wedding day?

LUELLE MORRIS.

Tulip Hill, Nov., 1859.

SAVING FODDER.—FARM MILLS.

SOME useful hints about saving fodder, from a farmer in Chautauque county, are published in this week's number of the RURAL NEW-YORKER. He speaks of the Sanford Mill, which I have christened by the name of the "People's Mill," and am now manufacturing of different sizes and capacities, as "not grinding but breaking the grain, but at the same time making fine meal." This is not precisely the operation, because it both crushes and grinds the grain, on a new principle, with less power, with great rapidity, and does not grind all the life out of the meal.

I make this correction, for fear a wrong impression should be made upon the public mind. I intend that the People's Mill shall deserve its name. Having pioneered the way for cutting grass, by the manufacture and sale of many thousand of KETCHUM'S Mowing Machines, I have now added to my list of manufactures, this People's Mill, the adoption of which and general use among farmers, will add more to the wealth of the country than any agricultural implement ever invented, except the plow. Farmers now feed in fattening one hog, from 60 to 75 bushels of corn in the ear, but if they would shell and grind the same quantity of corn and feed the meal dry in a trough where it could not be wasted, it would fatten three hogs instead of one, and make 1,200 pounds of pork of much better quality, instead of 400 pounds of inferior quality. Here would be saved more than the cost of the largest size of the "People's Mill," which is only \$40. These facts have been demonstrated by actual experiment. The same astonishing results would follow, in feeding stock of all kinds.

R. L. HOWARD.

Buffalo, Dec. 8, 1859.

REMARKS.—The above is a "first rate notice," or advertisement, and hardly admissible; yet, as it is in reply to a correspondent—a correction—and from one entitled to respect from his position and efforts in an important branch of improvement, we insert, even at the risk of establishing a bad precedent.

Inquiries and Answers.

BEST SPRING WHEAT.—Will some of your correspondents name the best variety of spring wheat, and the best time for sowing, in order to escape the mildew, and also the rust, on our hills in Madison county?—L. G. D., Morrisville, N. Y., 1859.

CHEESE.—Inquiries.—Although the time for making cheese has gone by for the current year, still the keeping safely during the winter is no inconsiderable item. While my hand is in, let me ask a few questions about the whole subject of cheeseology. What is the most approved method of preparing, salting and using ronnets? What quantity of salt should be used in making, say twenty cheeses? What is the practice of cheese-makers who make double curds? In rubbing cheese during the curing process, is any other ingredient used than butter? Finally, what is the most approved way of keeping cheese over winter? Being green in the cheese line, I will be infinitely obliged to some old hand if he or she will respond through the farmers' *cadre mecum*, the RURAL NEW-YORKER.—FREDERICK, Marshall, Mich., 1859.

A CHEAP ROOT CUTTER.—T. S., of Orleans Co., in the RURAL of Nov. 26th, wishes "a simple and cheap Root Cutter which farmers can make themselves." Please tell him to make an old fashioned Cabbage Cutter, and he has it. It is simply a plank with a knife fixed across diagonally, (an old scythe will make half a dozen,) leaving an opening much like that for a plane iron, for the slices to fall through. Then, make a square box as large as the width of your plank, letting two of the sides go below far enough to fasten cleats on, under your bed piece, so that the box will slide back and forth, *at a follower*, with a handle, into your box, and the thing is done. Two knives, the edges in opposite directions, will work faster.—A. S. C., Pittsford, N. Y., Dec., 1859.

WOOD ASHES FOR THE PEA-BUG.—If it would be of use to any one, I would say that a sure cure for the pea-bug will be found in wood ashes. Wet the seed, then put in ashes enough to dry sufficiently for sowing, and your crop will be free from them, as I have proved more than once.—L. G. DEAN, Morrisville, N. Y., 1859.

ERRATA.—In your issue of Dec. 8d, you make me say (what probably I wrote) "you buy a buck of Messrs. Block, Corn & Co. of Vt." That is not the name of the firm. It should be Block, Corn & Co. Block, Head & Co. bought the buck, and live farther West.—N. T. Z.

Rural Spirit of the Press.

Foot-Rot in Sheep.

Foot-rot is essentially an inflammation of the softer parts of the foot, about the horny covering of the hoof, which is contagious; so if it once appears and is not checked, the whole flock is generally injured. The disease may be known by the following symptoms:—The animal limps, walking as if the feet were painful; the hoofs are hot, and the skin adjoining swells with symptoms of fever, ordinarily being alternately hot and cold by spells. The inflammation is partly in the cleft of the foot, partly in the toes under the hoof, and partly under the edge and thin part of the hoof. The appetite fails as soon as the fever appears. If the fever abates and the appetite returns, it will go well with the sheep, unless the decay of the bones (caries) sets in, which symptom attends the most malignant form of the foot-rot. On the second or third day following the appearance of the disease, the hoofs and adjoining parts lose their reddish color, and become at first whitish and then pearly color, the skin in the cleft of the foot meantime being redder, more like the natural color. Then follows a watery discharge of exceedingly offensive odor, the skin separating from the parts beneath, and the foot becoming more painful as the lameness increases. The inflammation continues to increase, and extends farther under the hoof and deeper into the flesh, and affects more extensively both parts of the foot, on both sides. The cleft becomes gradually deeper by the dividing of the flesh; the tender flesh that unites the hoof to the bones of the toes softens, and results in the hoof falling off entirely in about three or four weeks.

Remedy.—As soon as the true malignant rot is discovered in the flesh, the diseased sheep must be separated from the healthy ones, and the stables must be cleaned. The best remedy for this disease that I have found is butter of antimony, (*butyrum antimonii*, or *chloride of antimony*), and spirits of hartshorn. The spirits of turpentine and blue vitriol mixed together are also very good. The animal must be turned upon his rump, that the feet may be thoroughly examined, and all the dead parts cut away with a sharp knife down to the living part; if it bleeds a little, that does no harm. The foot must then be smeared with the mixture of turpentine and blue vitriol. It is sometimes well to bind up the foot in a linen bandage. The animal must not be allowed to go in any soft or dirty place, but should be kept on dry straw litter. Every fourth day they must be carefully examined, one by one, and the remedy again applied, as long as is necessary. If this is strictly adhered to, in the course of a month the flock will be entirely sound again, the appetite will return, and the animal in a short time be in good condition.—CARL HEYNE, in N. Y. State Ag. Transactions.

White-Skinned Fowls.

A MARKED preference is shown by many poultry dealers for yellow-legged and yellow-skinned fowls, a preference easily traced back to their customers, as dealers generally buy most largely that which sells most readily. Wilson Flagg says, in the *New England Farmer*, that some years ago he heard a Frenchman remark that this supposed better quality was a mistaken idea—that the reverse was true. "In France," he added, "the yellow-legged chickens are considered unfit to be raised. Their flesh is dry and stringy, compared with that of the blue, black and white-legged fowls, whose flesh is by far the most tender and juicy."

Mr. Flagg says that he has taken considerable pains to test the above remark, and has found them to be correct. "The yellow-skinned fowls have commonly either green or yellow legs; those with black, blue or white legs have a white skin." There are some exceptions, but they are not numerous. "I raise," he adds, "a great many chickens every year for my own table, calculating to supply it weekly with one pair from July to February. They are all raised and fed in the same way, yet the yellow-legged individuals have almost always been found inferior to others with white skins. The last are most tender, delicate and agreeable."

Mangold Wurtzel.

In a recent lecture before the Farmers' Club of London, (England,) a Mr. BURNER made some statements respecting the raising of mangold wurtzel, from which it appears that fifty-five tons per acre of this root have been obtained, at a cost of \$86 for various manures. In the month of November the tops are hauled out into the cow pasture, and serve to increase the milk considerably; the pigs revel for a month in the article, and the sheep turned out to the field to finish the crop, so that nothing is lost. Mr. B. estimates their value for feeding purposes, when compared with other crops, as follows:—1st, potatoes; 2d, parsnips; 3d, carrots; 4th, mangold wurtzel; 5th, Swedish turnips. They are preferred after having been stored through the winter, as when fed just after digging they are liable to scour animals fed on them. An ox fed on mangolds gained sixty-five and a half pounds of flesh per ton, while the same animal gained only forty-eight and a half pounds per ton, fed on turnips.

Feeding Sheep.

There is no season of the year when sheep are more liable to lose nearly all they have gained than in November and December, and if they do, there is an end to the hopes of a crop of wool; for the want of food has the effect of stopping the growth of the wool, and the moment the growth is stopped, the end of the fibre is completed, a change takes place, it becomes dead, in a manner analogous to the stem of ripe fruit, and a renewal of good feed after these months, and after the growth of the wool has been once stopped, only prepares the skin to send forth a new growth that pushes off the old fleece, and causes it to be lost before shearing time. So says the *Michigan Farmer*.

Brine Poisonous to Animals.

The *Kentucky Turf Register* says a gentleman at Lawrenceport, Indiana, recently emptied brine from a pork barrel into the yard. A number of hogs, and also one horse, partook of it. The result was that the horse and seven hogs died in less than six hours after the barrel was emptied.

Agricultural Miscellany.

RURAL MATTERS IN THE METROPOLIS.—New York city is not great agriculturally, yet comprises some institutions designed to advance the interests of our Rural Population. Several of these we have had the pleasure of visiting within the past ten days—such as the Ag. Book Publishing House of BAXTON, BARNER & Co., the offices of the *American Agriculturist* and *The Horticulturist*, the rooms of the American Institute, &c. We found Messrs. BAXTON & Co. amiable and smiling—indices of what we cordially wish them, prosperity and happiness; while our friend JUDG and his associates were apparently "enjoying the same blessing," and we presume as deservedly. We rejoice in the success of all honest and sincere laborers in the cause of Rural Improvement, wherever located, and regret that any should exhibit a spirit of envy or jealousy toward those whose best energies are directed to the accomplishment of laudable objects. Surely the field of effort embraces "ample room and verge enough" for all wise and devoted laborers, and instead of one depreciating the efforts of another, each should nobly strive to excel in his sphere, and present a record worthy of emulation by his peers and contemporaries. Of the "institutions" and managers alluded to we would say more did time and space permit, for our interviews, though comparatively brief, were pleasant and instructive. We must, however, defer or omit extended remarks. During our sojourn in Gotham, we also had the pleasure of meeting Col. JOHNSON, Secretary of the State Ag. Society, Mr. QUINCY, the Bee Cultivist, Messrs. ROBINSON and OLCOFF of the Tribune, Mr. MEAD of The Horticulturist, Mr. L. E. BEECHER of Georgia, and other prominent promoters of Rural Improvement.

A CANADIAN PLOWING MATCH.—The award of Premiums made at the Annual Plowing Match of the Branch Ag. Society gave rise to a spirit of emulation between the towns of Seneca and Oneida, (Seneca securing seven of the prizes—Oneida four,) and in order to settle the vexed question of superiority, a contest was instituted between their respective representatives. Five were chosen on a side, and on Tuesday, Nov. 20th, the trial was made. "Owing to the frozen state of the ground," remarks the *Haldimand Tribune*, "plowing could not be commenced until late, consequently it was almost nightfall when it was concluded. The judges being unable to examine the whole of the work sufficiently before darkness set in, put off a decision until the following day. The whole of the plowing was executed in a masterly manner, and so nearly equal was it, that every one predicted that the judges would have a most difficult task in assigning the preference. On Wednesday morning the judges having chosen an umpire, visited the ground, and, after inspecting the plowing, awarded the premium to the Seneca plowman." An excellent mode in which to settle "disputed points"—will not our Societies adopt it, and thus put fault-finders "on their muscle?"

A MOVE IN THE RIGHT DIRECTION.—In compliance with a wish expressed in a late issue of the RURAL, we have received the following from a Town Ag. Society in Niagara Co.:—"As you desire to have the doings of Agricultural Societies and Clubs furnished you for publication, we will state that, at a meeting of the Wilson Ag. Society, it was resolved to hold meetings once in two weeks, at the district school-house in the village of Wilson, or such other place as the Society shall select, for addresses, essays and discussions on Rural subjects during the winter. The next meeting will be on the evening of the 12th inst., at which time the Secretary is to deliver an address, after which the question 'What crops can be most advantageously grown in an orchard?' is to be discussed by the members—farmers' club fashion.—E. S. HOLMES, Secretary." How many of the farmers comprising the RURAL's parish will do likewise?

LADIES AND AGRICULTURE.—There is a great deal of mock modesty in this world. Some people make such pretensions to refinement that they cannot bear the sight of a matchless bull or a model cow, without exclamations of wonder. We don't believe in such modesty as this. God gave man dominion over the lower orders of creation, undoubtedly, with the expectation that he should see and know them, and whoever ignores this fact, ignores a fundamental law of creation. There is nothing unwomanly in the idea that a lady is able to "converse wisely and wittily" with a gentleman on agricultural topics. Ladies ought to be posted on the subjects which deeply interest their fathers, husbands, brothers and beaux. Every woman should have an intelligent sympathy with her husband's calling and render him all necessary co-operation. Reading agricultural books is full as beautiful to the mind of either sex as reading novels, and walking in the fields full as profitable as shopping for exercise. So saith the Springfield Republican, very sensibly.

BARLEY AND OATS IN MAINE.—The *Maine Farmer* states that "Mr. HENRY N. JOHNSON, of Vassalboro, raised, the past season, on two acres and five rods, from five bushels sowing, one hundred bushels of barley; and on one acre, from three bushels sowing, seventy bushels of oats." An opportunity is afforded for farmers living nearer sunset to "enlarge upon the subject," and the editor of the *Farmer*, in his interrogatory,—"Can the West come up to this?"—cordially invites competition.

ARABIAN HORSES FOR NEW YORK.—We learn that Ex-Gov. SEWARD was presented in Alexandria with three superb Arabian horses, which will be shipped to this country. Two of them will be presented to the N. Y. State Agricultural Society. The State Ag. Journal expresses the hope "that those horses will arrive safely, and, if placed in charge of the Society, they will be in a situation where the farmers of the State will have the benefit of them."

MANUFACTURE OF STEAM PLOWS.—The *Scientific Artisan* (Cincinnati, O.) says that MILES GREENWOOD & Co., of that city, have obtained the right of Mr. FAWCETT to build his plows, and it is the intention of Mr. GREENWOOD to have one of these machines at work on his farm early next spring, and to exhibit all its points in great perfection. Several improvements have been suggested, which will doubtless be adopted.

FINE STOCK FOR TEXAS.—During the past week, Maj. W. W. LELAND, formerly of the Metropolitan Hotel, New York, started for his immense stock farm, consisting of 17,000 acres, in Western Texas. He took with him some fine Saxony sheep, raised by Mr. HULL, of New Lebanon, which took the premium at the State Fair, at Albany, also a mammoth Jack and full blood Morgan stallion.

MAD. E. G. EASTMAN, late Secretary of the Agricultural Bureau of Tennessee and editor of the Nashville Union and American, died on the 23d ult. The Nashville papers contain resolutions of the State Bureau which eulogize the ability and virtues of the deceased in the highest terms. His funeral procession is said to have been the largest ever witnessed in Nashville.

HORTICULTURAL.

AMERICAN GRAPE CULTURE.

That before many years we shall rival the finest vine growing districts of Europe in the quality, variety and hardiness of our grapes, is our faith. In quality we are certainly making rapid advance. The Diana, Delaware and Rebecca, make a near approach to the very best European varieties. The Isabella has been known and cultivated but about forty years, and the Catawba even a less time. Previous to that time we had only the Frost, or Fox grapes. Now, some of our nurserymen's catalogues contain names and descriptions of from twenty to fifty or more varieties, and we notice one with over two hundred. Not five per cent. of these, perhaps, will prove worthy of general culture, or even of a place in the garden or vineyard; yet with the Diana for general culture, the hardy Hartford Prolific, for cold sections, and others we might name of a somewhat similar character, and the good opinions we entertain of the Delaware and others, we have done enough the past ten years to satisfy the most sanguine, and to encourage all to future effort in the production of hardy grapes of excellent quality.

Hundreds of persons are engaged in the production of seedlings, but we must not neglect the careful trial of those already produced. It will not do to cry humbug and condemn every new thing indiscriminately, as some seem disposed to do, insisting that the Isabella is good enough, for this would put an end to all progress; nor should we neglect our old sorts, and believe everything with a new name to be an improvement. The only safe way is to follow the scripture rule, "try all things and hold fast to that which is good."

In our issue of November 19th, we gave the opinion of Mr. MECHAN, editor of the *Gardener's Monthly*, that the Delaware was a native grape, and that it could be found growing on the banks of the Delaware river, where Mr. M. thought he had seen it years ago, but this was only an opinion without proof, and it seems strange that if Mr. M. saw such a fine grape growing wild that he should pass it by instead of introducing it to the notice of the public. The November number of the *Monthly* also contains the following communication:

PLEASANT VALLEY, Bucks Co., Pa.

MR. THOMAS MECHAN—Dear Sir: You will remember that when I was at your place, you gave me a bunch of the Delaware Grape to taste. You will remember that I remarked that I thought we had the same grape growing about us in abundance. The public has been humbugged long enough, and I think it no more than just to make its true character known. I believe the history of the Delaware Grape is, that Mr. Prevost, a gentleman living at Frenchtown, N. J., received some grape vines from Italy, and this is a supposed seedling from those grapes. We have had this wonderful grape growing in our neighborhood at least thirty years, long before we had the Catawba and Isabella. Mrs. Derr, an old German lady, first got them at Mr. Prevost's at least thirty years ago, and introduced them in our neighborhood. I have two large vines growing in my garden as thick as an arm, which were planted about eighteen years ago, and never bore scarcely anything until last year, when I had about half a crop. I always thought, from the quality of the grape, and from its being a poor bearer, that it did not deserve a place in my nursery.

Not long since there was a nurseryman, I think, from Jacksonville, N. Y., trying to sell fruit trees. When he found out that we had the Delaware Grape, he was for buying all the young vines he could get. If any person wants cuttings, I could supply him with a cart load for merely the price of cutting.

Yours truly, CHARLES B. ORT.

We have not the least idea that the unproductive vine of Mr. Orr is a Delaware. Our experience is that it is remarkably productive, rivaling the Clinton in this respect. To this communication of Mr. O. we have received the following reply:

ENS. RURAL NEW-YORKER.—In the *Gardener's Monthly* for November, appeared a communication signed CHARLES B. ORT, Pleasant Valley, Bucks Co., Pa., which is a little extraordinary in its character, and is possibly designed to accomplish some extraordinary end, but what that end may be is not to me apparent from the communication.

That Mr. Orr is no humbug is sufficiently manifest from his implied hatred of humbuggery, and it is equally clear that some ulterior motives animate him. He is also, at least, in part, endorsed by the editor who has had some indefinite dream of something for some indefinite period, haunting him.

Now, in all matters on which an editor has no certain knowledge even after discovery of things that never have been, and never can be, it is not strange that he should, at least, have had "a dreaminess" in reference to it; and also have been about to announce the same.

So far, Mr. MECHAN is all right, but if he had made the announcement, he would have been all wrong. He was saved by his editorial "instinct," which is palpably "a great thing." But, Mr. Orr, having no such guardian angel, is all wrong, and beyond remedy, unless he goes over inconspicuously to the PRINCE OF HUMBUGS.

When Mr. Orr had stated that he had a Delaware vine eighteen years old, and that the region was "filled with them growing wild," he had waded to the utmost limit of safety. He took one more step, and that swamped him. He states that his vine at the age of eighteen years, last season, for the first time bearing, produced only half a crop. Now, unless something had urged him on, he would not have taken this step, for he would have known the Delaware vine never attains one-sixth of that age without bearing a most profuse crop, under circumstances which would have precluded bearing on any vine.

For seven years past I have been intimately acquainted with the Delaware, and during its season of growth, carefully noted all of its characteristics. I may further say that I have had a not uninterested general or special knowledge of the

greatest part of the vines that have left the garden of Judge PREVOST, of Frenchtown, and its vicinity, and of their products, or the offsets that sprung from them. With the few that remain there I have also a hand to hand acquaintance. Many thousands of them have passed under my hands, and my heart warms and enlarges at every remembrance of them, for it is a noble vine, and no treachery, deceit or false promise lurks in any part of it. Of sturdy vigor, and most enduring hardiness of both wood and foliage; most abundant in fruiting; unequalled in beauty, and flavor, and wanting in no good quality. I cannot but feel a grateful pride in the good fortune that has so intimately associated me with the Delaware grape, and permitted me to take part in its dissemination.

I need not fear to say I know the Delaware grape, and certainly "none can know but to praise." The excellence of gold only is counterfeited; counterfeiting of copper is rarely attempted, and although from the tenor of Mr. Orr's communication, I knew that it could not be the Delaware, I did not know how to understand his communication otherwise than as a broad joke, for I cannot be persuaded that he ever thought he had the Delaware, yet I felt so much curiosity to know what he really had, and also to learn what he aimed at, that I made a journey to his place, where I found a vine, and Mr. Orr and Mrs. Orr, but no suspicion of a Delaware.

The vines in question have a small black fruit far below the Clinton in quality, and is one of the northern Foxes that approach most nearly to the Frost grape in quality. Of what I further learned on my journey I shall speak to you on another occasion. Of something which I inferred, I may speak to you in private. J. C. RENNISON.

Pockskill, N. Y., Nov., 1859.

While Mr. MECHAN and some others are so decided in the opinion that the Delaware is a native, Wm. R. PRINCE is just as decided in the opinion that it is a foreign variety, brought from Europe, and planted and propagated in New Jersey. The following extracts will show Mr. P.'s opinion on the subject:

"DELAWARE, small, round, clear red, thin skin, not a trace of pulp or foxy flavor, seeds few and small, very sweet, rich and juicy, vinous and aromatic, with a slight most flavor similar to Chasselas Musque and Red Frostiguan; excellent for table and wine; cluster small and compact; it makes delicious amber-colored wine; vine hardy, but of very slender delicate growth like the Rebecca, until the third year, after which it grows vigorously. It is not productive when young, but very fully so when it attains considerable size and age; ripens the beginning of September, two or three weeks before the Isabella.

It requires to be protected by training it against a wall or house having a warm southern exposure, or on a trellis in a protected garden, and will then produce a perfect and abundant crop. It is as subject to weak and stunted growth and to mildew as any other foreign variety. This grape has been widely disseminated as a true native variety, although the Germans in Ohio have from the first declared it to be the Red Traminer of the Rheinish vineyards.

The writer (W. R. P.) having inspected the Vines at Delaware, Ohio, and elsewhere, has fully satisfied himself of its foreign origin. It appears to have been introduced to New Jersey by Mr. Prevost, who emigrated from Switzerland, and brought this and other foreign grapes with him. He cultivated these foreign vines only, as, at that time, no Native Grapes were regarded as suitable for vineyard culture. From Mr. P.'s ground, vines were carried by his brother-in-law to Chester county, Penn., where some are now found over twenty years old. Joseph Heath, formerly an employee of Joseph Bonaparte at Bordentown, and now a resident of Delaware, Ohio, carried this vine from that garden to Delaware. Whether Bonaparte obtained his vines from Prevost, or imported them direct from Europe, is as yet unknown. If seedlings have been found similar, the seeds were undoubtedly dropped by birds, who are especially fond of its early, small, sweet berries.

The foreign origin of this grape is also fully established by the fact that, from all recent investigations, it combines every specific attribute of the *Vitis cinifera*, and that it possesses none whatever indicative of indigenous origin."

Now, we have given our readers the different opinions on this subject, and the facts, so far as they can be ascertained. We do this to show on what rounds opinions, so confidently stated, are founded, so that our readers may not be misled on this subject by any who use bold assertions for arguments. There is not the least proof that the Delaware was brought from Europe, nor that it originated from seed of any European variety. Nor, on the other hand, do we see any evidence that it can be found growing wild in any section of our country. Of its quality and productiveness there can be no doubt. Of its hardiness over a very large section of our country we have the highest hopes. This point settled, and the Delaware takes rank as the first of American grapes.

The only objection we could ever make to the Delaware was its small size. On mentioning this once, in the presence of a number of horticulturists, Mr. DOWNING replied that its small size he did not consider a defect; on the contrary he thought it rendered it much more convenient to handle and consequently more suitable for the dessert.

We have several times seen statements that the Isabella grape had become unhealthy and must be abandoned. It was first started, we believe, by that celebrated institution, the *New York Farmer's Club*, Mr. UNDERHILL's celebrated vineyard of Isabella was reported as worthless, along with many others. We saw nothing of the kind in Western New York. Our Isabella were never better; and now Mr. UNDERHILL denies the whole statement, and says he shall plant this year more than ever.

A gentleman, in whose judgment we have the greatest confidence, writes us—"You made a great mistake in saying the Rebecca is a higher flavored grape than the Delaware and Diana. It is more highly perfumed, but vastly inferior in flavor, lacking tartaric acid greatly, and sugar considerably." Owing to the kindness of Mr. BROCKBANK, and Mr. DOWNING, and Dr. GRANT, we had a very fine opportunity of tasting and testing the Rebecca and Delaware the present season. Perhaps, however, our taste is all at fault. With a similar opportunity next year, we will endeavor to revise our opinion, and perhaps may improve our taste.

WINTER EXHIBITION OF THE HORTICULTURAL SOCIETY OF SOUTHERN ILLINOIS.—This exhibition is to be held at Tamaros, December 30th and 31st.

THE JAPAN QUINCE.

The following interesting article on that beautiful plant, the Japan Quince, we take from the *London Gardener's Chronicle*. More attention should be given to this shrub—it is fine for the garden, and not excelled by any thing for an ornamental hedge:

FLOWER OF THE JAPAN QUINCE.

It has often struck us as a singular omission on the part of gardeners that they have not attempted to domesticate the Japan Crab, or PYRUS JAPONICA as it is improperly called, the plant being in reality a Quince, or Cydonia. This most beautiful of all hardy shrubs except the Rose is now in precisely the same state as when it first, about the year 1815, arrived from China; the poor pallid variety called "white" having been also an importation and not of home production. Here was a plant unsurpassed for hardiness, for brilliancy of color, and for the durability of its blossoms, a winter flowerer and an evergreen, propagated moreover with the greatest ease, left disregarded by those who would have expended a life in experimenting upon the Rose. And what is the more remarkable it was a species evidently having a tendency to change, as its two or three unimportant varieties plainly indicated, and most nearly related to the Apple and Pear on the one hand, and the Rose itself on the other, all three of which are among the most domesticable of plants, as all men know.

It has perhaps been owing to the unwillingness of the plant to ripen its fruit here that the opportunity of raising seedlings has been neglected. And yet it does sometimes produce good seeds, more often perhaps than has been suspected, the fruit itself being worthless and disregarded. Attention has moreover been turned more in the direction of the fruit, whose qualities have been thought hopelessly bad, than towards the flowers, which appears to possess all the elements of mutability. When we think of the poor field Rose, with its red blossoms, not broader than a florin, which, when transferred from an Austrian corn-field, grew up from generation to generation in increasing beauty till it stood revealed what it now is—the loveliest of flowers, there is surely every inducement to subject the Pyrus Japonica to the same discipline.

We have been led to these remarks by the examination of a case of very marked improvement actually effected in the plant before us. Not in the flowers, however, but in the fruit. The Quince which the species bears is described by THUNBERG as having the size of a Walnut in Japan, where it grows wild on the mountains. With us it sometimes becomes twice as big—a rugged angular unattractive thing, which none pause to look upon. But we received the other day from Messrs. Low & Co., some specimens of an improved variety raised by one of their correspondents in the South of France, which presents so very marked an advance towards change as to hold out great encouragement to skilful breeders. Instead of the shapeless, angular, rugged fruit that we see here, the specimens in question were very exactly oblong, as large at one end as the other, without any angles whatever, and clean-skinned like a Nectarine. The largest specimen, of which the annexed cut represents a section,

FRUIT OF THE JAPAN QUINCE.

weighed 4½ oz., and was 8 inches round when measured lengthwise. The flesh was very firm, sub-acid, but rather austere, with a weak fragrance. As it did not promise to be eatable when raw it was made into a preserve with sugar in the

usual way, and it proved to be admirably suited for that purpose, becoming semi-transparent and having a very delicate flavor resembling that of Quince marmalade.

It is now clear that the Pyrus Japonica does not belong one of those unchangeable natures that defy attempts at alteration; but that like others of its Rosaceous kindred it is capable of yielding to the influence of the arts of cultivation. To what extent it will yield can only be ascertained by experiment; but considering the changes already brought about in China in its flowers, and in Europe in its fruit, there is surely no extravagant enthusiasm in anticipating the appearance of it, some day, with flowers as double and as large as those of the China Rose. This at least is certain—there are now sufficient grounds to justify serious attempts at operating upon it.

NURSERYMEN'S CATALOGUES.

It has lately occurred to me to wonder why nurserymen do not take greater pains to circulate their published catalogues. So far as I am aware, the only effort they make in that direction is to furnish them free to those who make personal application for them, and, according to advertisement, to send them by mail to such as apply in writing and inclose a stamp, to pay the postage. A principal object of nurserymen in publishing a descriptive and priced list of their wares, must be to inform the public what trees, vines, plants, &c., they propagate for sale, what are the distinguishing qualities of each, and at what rates they are sold. This information, contained in the attractive little pamphlets sent out by nursery establishments, it is the proprietors' interest to scatter as widely as possible among the people; but the means spoken of above are sadly inefficient. For even of those who would like copies of such catalogues, many neglect to send for them; as they neglect to procure for themselves many other things which they want, but cannot obtain without a little trouble; while the multitude of persons who are naturally careless of such things, and need to be educated to an interest in them, can never be reached in this way at all. Agents for nurseries do something towards spreading a knowledge of the existence of finer fruits and flowers than are commonly found in country gardens, but they generally carry about but a single copy of the list of articles they wish to obtain orders for, and as they can make but a brief call at each house, the people whose patronage they solicit are necessarily limited to a very hurried examination of it. It too often happens, also, that the agent himself is a person of little or no horticultural knowledge, unacquainted with the reputation of different varieties, and their fitness for different localities, and, therefore, ill prepared to render intelligent aid to persons bewildered and perplexed in the attempt to make a hasty selection from a long list of strange names, each claiming some peculiar and desirable excellence. Horticultural journals are of immense service to the nursery interest; their drawings and descriptions of fine fruits and flowers being the best advertisement of the things they represent, and doing more to bring them into notice and create a demand for them than any means employed by nurserymen themselves.

But, as comparatively few of those who read the proposal to furnish catalogues to applicants, avail themselves of the offer, and as agents cannot profitably spend much time discoursing upon the merits of articles to people who do not want them, and as there are thousands of homes wherein horticultural journals are yet strangers, we suggest to nurserymen the policy of sending their catalogues unsolicited—making a general distribution of them as dealers in stores, patent medicines, &c., scatter abroad pamphlets containing the best things that can be said of their vendibles. The great advantage expected from such a plan of advertising is, that, while informing persons who wish to procure articles of horticultural commerce where they may obtain and at what prices; it would also create a desire for these things in thousands of persons who have yet felt no want of them. For, so long as one hears little or nothing of the improved fruits, splendid flowering shrubs, plants, &c., nurserymen offer for sale, he is contented without them; but, leave in his house where he can take up half-a-dozen times a day, for a moment's reading, a little book containing the names and characteristics of rare fruits and flowers, with perhaps drawings of some of the finest, and a statement of the small cost at which they can be obtained, and it will not be long before he experiences a longing to possess some of them.

It would be an experiment well worth trying by an agent for some nursery, to distribute catalogues of the establishment for which he is canvassing, over a certain territory, say one town, informing the recipients that after a time, some weeks or months, he will return and take their orders. A comparison of the aggregate value of orders obtained on a second tour through that town with the worth of those collected in another district equally large, populous and able to purchase, but canvassed in the usual manner, we have no doubt would show largely in favor of the former. For, even those who most gladly improve an opportunity to obtain choice trees and shrubbery, will seldom make out so large an order, during a flying visit from a nursery agent, and after only a hasty glance at the list to be selected from, as they will if they go about it leisurely, with the advantage of a catalogue constantly at hand to consult, as long and as often as they please. One will rarely look over the pages of a nursery list without noticing some tree, shrub or vine that he would gladly add to those he has already determined to purchase, and the oftener it meets his eye, the stronger the inclination for it becomes, till, finally, he concludes he cannot do without it. But, reader, if the nurseryman neglects to confer upon himself and you the benefit of providing you with a catalogue gratuitously, do not inflict upon yourself the injury of doing without one. If you have never examined a descriptive list of fruits and flowers, you have no idea how much pleasant reading it contains. Once get a taste of

this delightful literature, and you will return to it again and again. It is wonderful how rich a language may be made up of a few strong, simple words, descriptive of the size, form, color, texture, odor and flavor of fruits, and the characteristics of trees and flowers. By all means, send and get one of these little books; you will find it a perpetual garden.

South Liverpool, Nov. 1859.

REMARKS.—A cheap way of circulating trade catalogues among the people, is pursued by the English nurserymen, and might, perhaps, be adopted here with advantage, which is to publish them, in a somewhat condensed form, in the Agricultural and Horticultural Journals.

WINTER PROTECTION OF GRAPE VINES.

MESSRS. EDITORS:—In No. 511 of the *RURAL* is a timely and valuable hint over the signature of S. N. HOLMES, of Syracuse, viz.: a *Cheap Insurance for Grape Vines*. For some time I have intended to send you my experience for 12 or 14 years on that subject. When my large vines first began to bear I practiced covering them with dirt through the winter, and they never failed to give a crop of fruit with that treatment. For eight or ten years they have remained on the frame on account of their large size. Three winters in that time has the crop of fruit been injured by the severe cold. The winter of '69 or '70 I got only two-thirds or three-fourths of a crop of grapes; the winter of '55 and '56, when the thermometer was 82° below zero, every fruit bud was destroyed excepting a few branches that got off the frame and were covered with snow, showing clearly that even a covering of snow was a sufficient protection to the fruit buds with that degree of cold, as I got on them large and well filled clusters. The sudden change from warm to cold of last winter, that destroyed about every peach bud in this section, injured the grape crop more than the June freeze did. The freeze injured my crop of fruit scarcely any, yet I got only about one-third of a crop of grapes. I estimate the loss of fruit in ten years by the severe cold of three winters, to be at least 1,000 pounds of grapes. Now what would have been the expense to take these two vines down for ten years, cover them with dirt and put them back again in the spring? I estimate that ten dollars would be ample to meet the expense for ten years, and if 1,000 pounds of grapes can be saved by that outlay, is it not a valuable one?

There was an inquiry last summer from one of your readers how to manage his vines on the south side of a building. He said they were destroyed in the winter. I had a large vine destroyed back close to the ground in the same position; the changes from heat to cold are frequent and sudden, just as it was last winter. One day at noon it was thawing, the second morning after at sunrise the thermometer was 15° below zero. That was the time the peach and grape crops of Western New York suffered so much. The grape vine proved itself the most hardy. Take such vines down and cover them in the cheap insurance. Bloomfield, N. Y., 1859. ALVIN WILCOX.

ALMOND CUSTARD, GOLDEN PIE, &c.

DEAR RURAL:—Seeing an inquiry in your paper for Almond Custard, I send my recipe, with some others, for the benefit of those ladies who like new things, and would be pleased with something new for Christmas.

ALMOND CUSTARD.—One pint of new milk or cream; one teacup of white sugar; one-quarter of a pound of almonds, blanched and pounded, two spoonfuls of rose-water; yolks of four eggs,—stir these ingredients in a spider, over a slow fire, until it is the consistency of cream, then remove it quickly to a deep dish or cups. Beat the whites of the eggs with a little sugar, a few drops of brandy, and lay lightly on the top.

GOLDEN PIE.—Take one lemon, grate the peel, and squeeze the pulp and juice in a bowl,—be sure to remove every seed,—to which add one teacup of white sugar; one teacup of new milk; one table-spoonful of powdered starch, and the yolks of three eggs, well beaten; pour this mixture into a nice paste crust, and bake slowly. Beat the whites of three eggs to a stiff froth, and when the pie is just done, pour it over the top evenly, and return to the oven, just to stiffen, not brown.

SILVER PIE.—Peel and grate one large white potato into a deep plate, add the juice and grated rind of one lemon; the beaten white of one egg; one teacup of white sugar, and one teacup of cold water,—pour this into a nice under-crust and bake. When done, have ready the beaten whites of three eggs, half teacup of powdered sugar, a few drops of rose-water, pour this over the pie, and return to the oven to set. When ready for table lay a few lumps of currant jelly on the top. Have these pies just cold for dinner. Mrs. M. L. SCOTT. Toledo, Ohio, 1859.

ONIONT FOR BURNS.—Herewith I send a recipe for an ointment for burns, which is the very best I ever knew, and no family who will try it will live without it. It will retain its virtue for years. Take half a pint of white manure from under the hen-roost, and simmer it in fresh lard ten minutes, then strain it off into a tin box, and it is ready for use. The offensive odor will pass off in simmering, which is but trifling, and you will have an ointment that will heal a burn quicker than any other ever invented.—Mrs. M. A. RICE, Rowe, Mass., 1859.

COOKING EGG PLANT, &c.—Will some of the RURAL friends give us directions to cook egg plant, and also to make rancid butter sweet?—A SUBSCRIBER, Mexico, Oneco Co., N. Y., 1859.

"NOW I LAY ME."

The dreamy night draws nigh;
Soft, delicious airs breathe of mingled flowers,
And on the wings of slumber creep the hours;
The moon is high,—
See yonder tiny cot,
The lattice decked with vines—a tremulous ray
Steals out to where the silver moonbeams lay.
Yet pales them not!
Within, two holy eyes,
Two little hands clasped softly, and a brow
Where thought sits busy, weaving garlands now
Of joys and sighs
For the swift-coming years!
Two rosy lips with innocent worship part;
List! be thou saint—or skeptic, if thou art,—
Thou must have care;
"Now I lay me down to sleep,
I pray the Lord my soul to keep;
If I should die before I wake,
I pray the Lord my soul to take."
Doth it not nolesome ope
The very flood-gates of thy heart, and make
A better man of thee for her sweet sake,
Who, with strong heart,
Her sweet task ne'er forgot
To whisper "Now I lay me," o'er and o'er,
As thou didst kneel upon the sanded floor—
Forget them not!

From many a festive hall
Where flashing light and flashing glances vie,
And, robed in splendor, mirth makes revelry—
Soft voices call
On the light-hearted throng,
To sweep the harp strings, and to join the dance,
The careless girl starts lightly, as perchance,
Amid the songs,
The merry laugh, the jest,
Come to her vision songs of long ago,
When by her snowy couch she murmured low,
Before her rest,
That simple infant's prayer;
Once more at home, she lays her jewels by,
Throws back her curls that shade her heavy eye,
And kneeling there
With quivering lip and sigh,
Takes from her fingers white the sparkling rings,
The golden coronet from her brow, and flings
The baubles by;
Nor doth she thoughtless dare
To seek her rest till she hath asked of Heaven
That all her sins, through Christ, may be forgiven—
Then comes the prayer—
"Now I lay me down to sleep,
I pray the Lord my soul to keep;
If I should die before I wake,
I pray the Lord my soul to take."

The warrior on the field,
After the battle, pillow his head
Perhaps upon a fallen comrade, dead,
Scorns not to yield
To the sweet memories of his childhood's hour,
When fame was barded for a crimson flower—
The statesman gray,
His massive brow all hung with laurel leaves,
Forgets his honors while his memory weaves
A picture of that home 'mid woods and streams,
Where hoary mountains caught the sun's first beams,
A cabin rude—the wild fields glistening,
The cattle yoked and mutely listening,
The farmer's toll, the farmer's fare, and, best
Of earthly luxuries, the farmer's rest;
But hark! a soft voice steals upon his heart—
"Now say your prayers, my son, before we part!"
And, clasping his hands—a child once more—
Upon his breast, forgetting life's long war—
Thus hear him pray:
"Now I lay me down to sleep,
I pray the Lord my soul to keep;
If I should die before I wake,
I pray the Lord my soul to take."

Written for Moore's Rural New-Yorker.
REMEMBERING.

"A MERRY greeting to my Western cousin,"
wrote my lively coz. Ada, one pleasant June time,
"Art homesick any, mignonette? Don't say nay,
with that willful look in your eyes. I have an
inward consciousness that, on these blessed
summer mornings, you are looking over the
rugged New York hills towards the rising sun,
murmuring, with something very like a tear in
your eye, and something more than a pang in
your heart,

"Still are the cowalls from thy bosom springing,
O, far-off gray dell,—and dost thou see
When Southern winds first wake the vernal singing,
The star gleam of the wood Anemone?"

To all such sentimental inquiry I can answer
yes, though the outward aspect of our bonny town
of Fairhaven is much changed. Ancient, moss-
covered houses, which are doubtless part and
parcel of your recollections of home, have been
torn down to give place to new dwellings, dis-
agreeably white and glaring,—dusty roads wind
through the sunny fields where we were wont to
gather red-lipped clover blossoms, and the golden
chalcids the buttercups hold up so temptingly,
—that grove of "Oriental plane trees" which rested
on the green hollow on the eastern side of the bay
has perished beneath the chopper's axe. But,
after all, it is still as of yore, "the beautiful town
that is seated by the sea." The forests still
harbor those trembling little refugees from a fairer
clime, the fairy wood blossoms, and the wild bees,
dreamy chime rings out from beechen slope and
mossy dell. And those lovely Columbines that
used to bloom on the crag overhanging the tossing
sea,—looking as bright and fresh as MARY
CARTER, when she stood on "Forefathers Rock"
with the blue Atlantic waves dashing around
her,—are yet there, though many a sunny head
crowned in by-gone summers with their scarlet
glory, is laid low in the church-yard. The wood-
bine still drapes the walls of the "old homestead"
with its pendant masses of verdure in Summer,
and its gorgeous leaves and scarlet berries in
Autumn, and the dandelions in the front yard
glow in the deep grass like stars reflected in the
emerald water.
Do my descriptions awake in you any of "the
exile yearnings, under the willows of the stranger

shore?" I hope they do; I am so jealously fond
of the old place that I cannot bear to think of you
as forgetting it. I wandered down to the sea-
wall at the foot of the garden last night, and
everything was so strangely like, and yet unlike,
the days that are gone forever, bearing with them
many of those we loved and cherished, that I
threw myself down on the dewy grass and cried,
and I believe I am crying now; but those were
happy days—"do you remember?" Do I remem-
ber?—as though the hills and dales, and wide
expanse of sunny waters, say, everything, even
the tree and flower pertaining to that olden home,
were not engraved upon my heart with a fidelity
that mocks the limner's pencil! Ah me, the
"exile yearnings" visit me full often with but
sorry cause for awakening words. How often
does memory transfigure these gloomy November
days with her witohery, as she drapes the bare
hills with the flushful garniture of Summer,
spreads a soft sapphire over the dismal sky,
and changes the cold gray rime to a golden haze,
and I a child again, roam over the summer
meadows with sunshine on my heart and brow, or
peep over the mossy well-curb to catch a glimpse
of the brightness at the bottom, or swing beneath
the swaying branches of the graceful willow,
transfigured with the purple sunset glory, or
climb the Alpine summits of the misty hills to
watch for the coming of the gallant ship that bore
the beloved sailor brother, or—but the twilight has
deepened around my musings, and Alas! coming
in scans me with his roguish eyes, and with
unparalleled atrocity declares that I have fallen
asleep over my embroidery! Well, there are "two
lives"—"to seem" and "to be," and what care I
if this busy, practical world confounds the one
with the other?
LAURA E. W.

"I'M WEARY."

"I'm weary, mother," and with these words, a
sweet child of but four short summers raised her
tear-filled eyes to those of her parent, as if longing
for one sympathizing glance. "My flowers are
faded, my bird has hushed its song, the gold has
left my butterfly's wings, and I am weary; let me
rest." This was the sweet child's first lesson in
the mutability of all things earthly,—her lovely
treasures had been touched by the finger of
change, and no wonder that her heart was sad-
dened. She was weary—well might she ask for
rest.

"I'm weary, mother," and a dark-eyed, intellec-
tual-looking girl gazed sadly on the bright sun-
light, as she thought of the time when she, too,
was joyous and free as a sun-ray; but those bright
days were gone forever. She thought of the time
ere her young heart had bowed beneath the weight
of much thought, but wild ambition had fired her
soul,—she had been lured onward by the enchant-
ing rays of the star of fame, and over her it had
exerted a strange, wild power. Night after night
had she wandered in pursuit of some hidden
thought of ancient philosopher, and the morning's
rosy light still found her at her chosen task.
Step after step had she progressed through the
long years of her collegiate study; only one year
remained, and she would graduate with all the
honors. With gladness she looked forward to the
time when she should stand on the upper round
of the ladder of fame,—still, mingled with sorrow,
were her thoughts of childhood's hours exchanged
for the student's life. As she reviewed the weary
years of toil and suffering, both of mind and body,
no wonder that she was weary, and sighed for rest.

"I'm weary," said a rosy-cheeked, laughing
maiden, as she unclasped the pearls from her
snowy neck, "I'm weary, let me rest." All the
night long had she whirled in the mazy dance.
Not only one night, but her entire existence was
one continual round of pleasure. At times she
longed for something nobler, higher,—she was
almost sick of her aimless life, still she lived on
for pleasure alone, and sometimes, when her heart
called loudly for purer purposes and aims, she
sighed for rest.

"I'm weary," said a high and noble statesman,
as he bowed his head on his hand, "I'm weary,
let me rest." He whose tread awoke the stillness
in halls of State,—he on whose slightest words
hung an admiring multitude,—asked rest. From
all such scenes of magnificence, he turned with a
weary heart and an aching brow to the remem-
brance of the happy past,—all the glory of the
present he would gladly renounce for rest.

"I'm weary," said a dying Christian. With
these words upon his lips and a satisfied smile
illuminating his countenance, the soul sought a
refuge in the bosom of his Savior. He had found
the promised rest.

A CITY'S PRIDE IN ITS WOMEN.

THE Philadelphia City Item thus admonishes
that our patriotic pride should not be exclusively
"hero worship."—"Cultivated women are as
much an ornament and honor to a city or a State,
as cultivated men. France has as much distinc-
tion from Madam DeStael as from the most bril-
liant of its philosophers. Fanny Burney, (Madam
D'Arbly), Mrs. Macaulay, Agnes Strickland, and
numerous other females, shed the highest lustre
on England. The Irish boast of Miss Edgeworth,
of the Porters, of Lady Morgan and of Lady Bleas-
ington, with a spirit indicative of the highest
appreciation. Scotland, too, has gained in honor
through the educated genius of more than one of
its 'bonnie, bright-eyed lassies.' Every country
in Europe has been benefited by talented women.
So has our grand America. Our female poets
and fiction writers have done as much for our
intellects, morals, tastes and honor abroad, as our
literary men. Miss Sally Bridges, of this city,
Mrs. James Campbell, (Chief Justice Lewis'
daughter), Mrs. Hale, Mrs. Sigourney, and twen-
ties of others, have written poems that America
will be forever proud of. The nation whose
women are cultivated, cannot but be one of happy
families, of the best and finest description of great
men for all departments in its government, and
of glorious, increasing, perpetual power and
existence."

THE SNOW-ROBE.

BY ALLEN J. CURTIS.

Last night as we slept,
And the vigils were kept
By the spirit of a roguish star,
In garments of white,
Resplendent and bright,
Came the angels in cloud-wrapt car.

But the star never spoke,
Nor from sleep us awoke,
To tell us that angels were near;
So we slept right along,
Nor heard we their song,
Though sweetly they sang and clear.

And they came for this
From their homes of bliss,
To present to our Mother Earth—
At which each of the band
Had wrought with her hand—
A new robe, as a token of worth.

Both softer than silk,
And whiter than milk,
Was the stuff from which it was spun;
And the shuttle flew
As the thread it drew,
Till the splendid robe was done.

The warp was white,
And the woof was light,
Through their mystic fingers run;
And I'm sure it was made
To wear in the shade,
For it soon would spoil in the sun.

Then fold after fold
They quickly unravelled
Of the ample garment they'd wrought;
And it sparkled bright
In the stars' clear light,
Like the gleam of a brilliant thought.

Then away to the earth
With a song of mirth,
Came the beauteous angel band,
And the light of a smile
Lit their faces the while,
For their joy at what they had planned.

And they spread it out,
Without murmur or shout,
O'er the hill, and the wood, and the plain;
Then hasted away,
Ere the break of day,
To their glittering homes again.

When we opened our eyes,
What a glad surprise
Was the view from our windows caught,
Of the spotless white
And the sparkling light
Of the robe by the angels wrought.

Kalamazoo, Mich., 1859.

THE HOMERIC AGE.

THE tired way-farer of to-day sometimes imagines
a golden past, and fondly recalls the fifth act of a
drama whose scenery was the heavens and earth,
and the actors illustrious mortals. Some think of
those far-distant days as mysterious hieroglyphics,
strange and unaccountable; others as dreamy mar-
vels and fable-given. But let him who can, turn
aside, and give his hours to that land of strong
men and iron character, now known only in story,
—to that elegant people and marble splendor of
the city of wisdom,—to those Grecian skies where
modern beauty-lovers resort,—and the old Greek
isles where incense perpetually smoked on altars
consecrated to the heavenly synod. To such as
care to turn away from the bustling now, and seek
the retired then, there are cool retreats, and
refreshing waters, where heated energies may
calm, and thirsty lips moisten. Also, profit and
treasures of intellectual wealth, and rich examples
are found to help and fertilize the mind. But the
multitude are not thus influenced. Drawn on by
the great human tide, they look beyond, but never
behind. For them there are no pleasures in
remote days, when epic song drew infant breath,
and romance had reign over the Greek heart.
With such the cry is—we toil for daily bread, and
care not for the old theories, the sweat of Olympic
sports, the tales of Spartan LEONIDAS, the talk
of colloquial PLATO, and polished atticisms—
or whether the theatre had green curtains, and how
many Athenians were on the street corners,—we
think of to-day, and look up to-morrow. This
prevails with not a few intelligent, but practical
men.

There were no modern doctrines and improve-
ments in that spring-time of intellectual glory, nor
the thousand-and-one inventions of an ingenious
age. No Manchester thrived on the water-courses
of the green valleys, or by the great cities, with
myriad looms and busy shuttles working for the
million. But we read of those who wove the sea-
purple threads of wool all the day, and prepared
the vesture. Nor were there heard the shrill notes
of steam amid hills, and around the temples—but
had not Greece her Calliope? We know not that
dinners were served in the nabob style of modern
fashion lovers, but dinner was as indispensable to
ancient as to latter-day stomachs. Quite minutely
are we informed as to the nature of the feast, and
the dishes. Boiled goose, served up in sauce,
satisfied the keen appetite of the old epicureans,
and why not our turkey-lovers? Pickled livers,
with a potage of pigeons, delighted Theban
gourmands—and why not modern clubs? We
are not informed as to whether pumpkin pies
served as dessert, but roasted poppy seed, mixed
with a hock of pork baked in honey, was a com-
mon dish. The land of song had no DRAKE
or RALPH, instrumental in polluting the pure
atmosphere and classic promenades with fami-
famous mouths,—nor were the public enlightened on
"the confessions of an opium-eater,"—so that we
presume the entertainment did not conclude with
those unwise, sense-gratifying pleasures of latter-
day civilization. Those Greeks were not puny
and sallow, but given to a healthy vigor, and gen-
erous circulation of blood. Probably the Greek
idea of a public dinner was not Americanized. At
any rate, it is improbable that on the following
day, the newspapers announced that "the tables
literally groaned with the delicacies of the season"
—for where were FAUST and ILOH at that period?
While winter keeps the fashion-devotees and
voluptuaries of the present age in "brown ston

front" and marble houses, the summer heat bears
them to sea-shore resorts, and far away to the
green valleys and picturesque scenery of a moun-
tain home. But the Greek mammoths had
summer vacations, and watering places, and quiet
seats, remote from dusty streets and undisturbed
by the hum of crowded cities. There was no sea-
washed Newport, or healing Saratoga, or Baden,
in the category of Theban and Athenian pleasure
spots, but there were cool groves, and famous
walks, and inspiring scenery, and isles of the
deep, to while away eternal hours. Where the blue
Egean laved the shore, a princely Newport had
the ocean-breeze, and the smooth beach. Healing
waters—waters of forgetfulness, and inspiration—
gushed forth from Parnassian heights; and on
adjacent hills and groves were the villas where
tired throngs resorted.

The Greek theology was a harmonious faith. One
church code satisfied the heart, and Zeus was the
spiritual Bishop. No unhealthy qualms of con-
science, or stinging remorse over an unregenerate
heart, soured the temper, or brought on hypo-
chondria. The age was not blessed with divinity
schools and orthodox quills to lay bare Polytheism,
and expose the pseudo-tenets of the Jovine disci-
ples. The heavens and earth were their testa-
ments. The thunder was the voice of their Great
Father; and earth had mansions on mountain-tops
and caverns in the deeps, where his satellites
dwelt, and obeyed his nod. Whether that graft
upon the old tree of evil, which has now blossomed
in its youth—that last work of the Parent of Dark-
ness—entered "the land of genius and of lovely
women," and invisible hands rapped on tables,
and chairs danced, the historians of the age have
not informed us. Nevertheless, the maces some-
times made a flying visit to the abodes of men, and
held colloquies. Had ingenuity been as largely
developed in the Greek brain, as in Yankeeedom,
there might have been Salem tribunals, and worse
than "scarlet-letter" penalties enforced.

While we know not futurity, and can only move
forward by a gradual march, it is possible to
return to other days, and view the ancient world.
The distant in time throws off its vagueness, and
the old marvels, myths and wonders of the past
mingle with the present. We are indeed remote
from the days of Homer. But through the gates
of poetry and history we may visit them, still fresh
and vivid to the inner eye. We are ushered into
the age of mythic glory, free thought, fertile con-
ceit,—an age of heroism and sensualistic beauty.
Clinton, N. Y., 1859. Wm. C. WINSLOW.

WINTER SCENES.

THE following from the Chicago Journal is
worthy of being placed beside the winter sketches
of JACOB ABBOTT and N. P. WILLIS:

That old red sleigh, with its long box that
never was full, for down in the straw, wrapped
in the robes, or on one or another of the four seats
it contained, there was always room for one more.
What a grouping of bright young faces there
used to be in it! Faces in hoods, in caps and in
blankets; hearts that have loved since; hearts
that have broken; hearts that have mouldered.
And away we went over the hill, and through the
vale, under the moonlight, and under the cloud;
when the stars were looking down; when the sun
kindled the world into a great white jewel; but
those days have gone forever away, and the sweet
old necklace of bells, big in the middle of the string,
and growing small by degrees, has lost its power
over the pulses.

In that old sleigh, brides have gone away be-
fore now—those that were married to manhood,
those that were "married unto death." Great
ships have gone over the waters with less of
hope and happiness than that rude craft has
borne over the billows of winter; swan-like
shapes now glance along the arroyo way, but give
us, for its sweet memories of Yesterday, the old
red sleigh.

Then, the days when we were "consters," and
down the big hill, by the maple wood, through
the little pines, far into the valley we came with
merry shout, each the solitary Palinurus of his
own small craft. How like a flock of swallows
we were, dashing down the declivity, in among
a group of sleds, side by side with a rival, shoot-
ing by like an arrow, steering in gallantry ahead,
like a jockey, and on our way up with a sled in
tow, ere the party had reached the valley below.
And then it was, when the wind had swept away
the snow from pond and stream, and the ice was
glare, that we put on the "rockers," and darted
hither and thither, and cut sixes and eights, and
curves without number, and drew the girls that
we loved, and whirled them like leaves over the
highway of crystal.

And the schools where we pelted each other down,
and the schools where we sang Windham and
Mear, and the schools where we ciphered and
wrote, and "went up," gone, all gone, teacher
and taught, like the melting snows, under the
rainbows of April. And when, sometimes, after
the great snow, the winds came out of the north
for a frolic, what wrappings and carvings of the
cold abalaster there were. What Corinthian
adornings surmounted the fence posts; what
mouldings were fashioned beside the way; what
fairy-like oaves in the drifts; what flowers of rare
finish and pendants of pearls on the trees.

Have you quite forgotten the footprints we
used to find in the damp snow; as delicate, some
of them, as a love letter; the mysterious paths
down to the brook or the old hollow tree, that we
used to wonder over and not "figure fours" by,
if perchance, we might catch the makers thereof?
Have you quite forgotten how sorry you were for
the snow birds that fluttered among the flakes,
and seemed tossing and lost in the storm? And
there, in the midst of that winter, Christmas was
set, that made the Thanksgiving last all through
the night of the year, and what wonder the stars
and the fires burned more brightly thereafter!
Christmas, with its gifts and its cheer; its carol
and charm; its evergreen branch and its bright
morning dreams. Christmas, when there were
prints upon the chimney tops if we were only
there to see them, where Santa Claus set his foot
as the clock struck twelve. Christmas, when
stockings were suspended by hearth and by pil-
low all over the land; stockings silken and white;
stockings homely and blue, and even the little red
sock, with a hole in the toe. Blessed forever be
Bethlehem's star.

THE HEAVENLY SOWING.

Sower Divine,
Sow the good seed in me,
Seed for eternity;
'Tis a rough, barren soil,
Yet, by thy care and toll,
Make it a fruitful field,
A hundred fold to yield;
Sower Divine,
Plough up this heart of mine.

Sower Divine,
Quit not this humble field
Till thou hast made it yield,
Lead thee to turn away;
In darkness and in night,
Stay not thy hand, but sow,
Then shall the harvest grow;
Sower Divine,
Sow deep this heart of mine.

Sower Divine,
Let not this barren day
Lead thee to turn away;
Let not my fruitlessness
Provoke thee not to bless;
Let not my field be dry,
Sower Divine,
Water this heart of mine.

Written for Moore's Rural New-Yorker.
THE SABBATH.

"In six days the Lord made heaven and earth, the
sea and all that in them is, and rested the seventh day,
wherefore the Lord blessed the Sabbath day, and
hallowed it."

How like a strain of sweet music seems the
remembrance of the Sabbath, as it mingles with
all the wearisome sounds and annoying scenes of
six tedious busy days. And when it comes with
its quiet hours and hallowed influences, whose
heart does not soften and expand with emotions of
love and reverence for the Being who blessed this
day, giving it to man as a faint type of a rest
which remains for those who cheerfully and
lovingly learn life's most difficult lesson. Other
days may bring with them happy hours, and
pleasant thoughts, but they are never free from
care, for there are ever mingled with them
thoughts of the morrow.

To my mind no greater misfortune can befall a
person than that they should lose their rever-
ence for the Sabbath,—that it should become
to them as other days, never whispering to them
of God and Heaven,—only regarded as a day
excusing them from physical labor, and to be
enjoyed as best pleases their fancy. To such there
comes no fresh baptism of holy influences which
shall rest upon them as a mystic spell, effectually
guarding them from temptations, and strengthen-
ing for life's duties and responsibilities.

"Life has a crown of care for all."
To the Christian the Sabbath is a holiday in
which he lays aside this crown, and enjoys a fore-
taste of "the rest which remains for the people of
God." He who does not love God may lay aside
this crown, but it is replaced by one heavier and
more cumbersome, even the displeasure of God,
and the reproaches of conscience.

"Life is a teacher cold and stern," and methinks
we sadly need all the ennobling influences which
our Father places in our reach, and shall we turn
carelessly away, and while each tiny leaf and
blade of grass seems to whisper "Remember the
Sabbath day to keep it holy," pass on regardless
of all these holy teachings? Let us, instead,
sacredly treasure each God-given aspiration for
purity, and, perseveringly pressing onward and
upward—may each reader of our much loved
RURAL enjoy a Sabbath which shall never end,
the joy and peace of which, is only equaled by its
duration.
Bath, N. Y., 1859. JENNIE.

"GONE, BUT NOT MISSED."

THERE are some professors over whose graves it
would be difficult for devout men to find great oc-
casion for lamentation. Such persons would
doubtless be missed in their families, places of
business, and accustomed places of recreation;
but as to her peculiar and noble offices, the church
would be compelled to say of them, "Gone, but
not missed." She would not miss their charities
for Christ and his poor; she would not miss them
in her circles of prayer and benevolence; she
would not miss them at the bedside of the sick,
nor in the house of the mourner; she would not
miss them when great trials were to be borne, or
hard labor to be done for the extension of the
Gospel. In her Sabbath School efforts, and tract
distribution—in her endeavors to evangelize our
city, our land, our earth, with truth and holiness
—she would not miss them, for they have not
cheered those labors of love with their presence,
their counsel, their charities, or their prayers.—
Like the banners-on of an army, they move with
the host to share the results of victory, but are
absent when martyrs are to bleed upon the field.
The loss of such to the Church by death would be
graded by the benefit which their lives confer up-
on the world; and hence you can judge whether
devout men would make great lamentation over
them. Stephen fell at his post, and this pointed
the grief at his loss.—Dr. Brainerd.

IMPROVE THE TIME.—The lights of heaven do
not shine for themselves, nor for the world of
spirits, who need them not; but for man, for
our pleasure and advantage. How ungrateful and
inexcusable then are we, if, when God has set up
these lights for us to work by, we sleep or play, or
in a manner trifle away the precious moments
given us, and thus burn our Master's candles, but
mind not our Master's work.

INGRATITUDE is so deadly a poison that it de-
stroy the very bosom in which it is harbored.

AMERICAN INSTITUTE OF INSTRUCTION.

The American Institute of Instruction recently held its Thirtieth Annual Meeting, at New Bedford, Mass., and, judging from the published reports, the assembling was one of extreme interest to educators. The exercises extended through three days, and while we would be gratified in publishing the transactions in detail, want of space forbids. We condense from the excellent photographic report of the Massachusetts Teacher:

The President, Hon. JOHN D. PHILBRICK, called the meeting to order, when Rev. Mr. CHASE, of Boston, invoked the Divine blessing. The records of the last meeting, held at Norwich, Conn., were read and approved. Mayor NIX addressed the Institute, extending a welcome on behalf of the city government and his fellow-citizens.

The first address before the Institute, (and in this connection we can only mention the name of lecturer, and topic discussed,) was delivered by Geo. B. EMMISON, LL. D., of Boston, on "The Forest and Garden." The second was by Prof. J. D. BUTLER, of Madison University,—subject, "Claims of the Classics." J. D. RUCKLE selected for his theme, "Mathematics as an element in Liberal Education." Mr. CHARLES HUTCHINS of the Dwight School, Boston, spoke upon "The Parent Side in the Work of Education." The Rev. R. C. WATKINSON of Boston, followed, his subject, "The Beautiful in Nature and Art as connected with Education." Prof. E. D. SANBORN, of Washington University, St. Louis, addressed the Institute upon "Aids in the Study of the Classics."

At intervals during the meeting, individuals prominently identified with educational affairs, and residing in various portions of the Union, were "called out" in reference to the systems pursued in their respective localities, and the interchange of thought and sentiment thus effected, heightened the interest and value of the Association. We segregate the following:

Hon. AMOS SWARTZ, School Commissioner of Ohio, was called upon to give some information of the schools in his State. He answered to the call by a highly interesting speech. I believe, said he, that our school system is as good as that of any other State in the Union, and in some points in advance of all other sister States, though I am far from believing that our schools or teachers, as a general thing, are as good as those here. We live in a great State, with eighty-eight counties; we count the inhabitants by millions, and have 22,000 teachers. Our schools cost nearly four millions of dollars a year, which money is raised, in the greater part, by direct taxation. Our school libraries are growing in size and usefulness, and are supported by a general taxation.

Prof. BUTLER, of Madison, Wis., said that he had lived in the West for the last seven years, which he reckoned about half his life, the remaining seven years he had lived in New England. Wisconsin is a state larger than Old England, but a little smaller than New England, with 267,000 children of school age. She wants good teachers and offers them good wages. Although the State is only eleven years old, the Teachers' Association has held, already, seven annual meetings. Prof. B. referred to a visit which he had recently made in Davenport, where he called on Ma'am Eden, who was upwards of ninety years of age. Conversing with her he learned that she had never been in Boston, and that the farthest place from home to which she had traveled, was Marblehead, a distance of five miles. She went there before the Revolutionary war, to be vaccinated. Prof. B. thought that, great as the contrast was between Ma'am Eden and the present female teacher who had traveled, at least, it was not greater than it would be between that same teacher now, and what she would be when he should meet her next in Wisconsin.

Mr. NATHAN HEDGES of Newark, spoke for New Jersey, which, during the revolutionary time, was in the Union, but which now, according to a New York discovery, is in the State of Camden and Amboy. New Jersey has, for the foundation of her educational system, a Normal School, and connected with it a Model School, which will not suffer in comparison with any in the United States. We have a Preparatory School established at great expense, for those who will later enter the Normal School, and our school-houses and teachers' salaries will compare favorably with those of Massachusetts.

Mr. NATHAN HEDGES of New Britain, made some remarks with regard to the schools in Connecticut. The school system, he said, was not free. Their large school fund gives to the education of every child between four and sixteen years of age, the sum of \$1.40 annually. The people have depended too much on this fund. The "Rate Bill system" is still found in many districts. Within a few years, about five hundred libraries have been formed. The State gives ten dollars to every district raising an equal amount for that purpose.

Mr. CHARLES ANDERSON of Dorchester, formerly a teacher in Prussia, was called upon. He said: "The schools in Germany, and especially Prussia, are good, relatively, not absolutely. The difference between schools in the country, and those in the cities, is as great there as it is with us. To judge of Prussian schools after an inspection of the institutions of learning at Berlin, Halle, or Breslau, is as partial, as to take the Boston schools for the average standard of the schools of our State. There, the higher schools are supported entirely or mainly by government, while the expenses of the common people, who have to pay, not according to their property, but to the number of children they send to school. The school laws of Prussia are a perfect jumble, patchwork from the first to the last. They are administered by provincial, gubernatorial or county officers, every one of whom expounds or modifies them according to his views or to circumstances. With us, the schools of different grades are regarded as sister institutions and the primary school teacher shakes hand with the professor at the university, while in Germany, the common school is regarded by the university and college, as the publican was by the pharisee. The absolute eagle of Prussia has favored and cared for common schools more than from a sense of self-protection. These schools were improving from 1788 to 1810, since that time they have been declining. Normal schools have been removed from large cities to small country towns, experienced educators, like Dr. Duesterweg, G. Schell, Meyer, and others, were dismissed from Normal schools, and their places filled by inexperienced and inferior clergymen; the press suffers under the system of censorship, and the number of educational periodicals has declined within the last ten years about 75 per cent. Teachers' meetings are forbidden, unless a clergyman is at the head of them. The Jews could not long more earnestly for deliverance from captivity, than the enlightened Prussian teacher longs for better days."

The Reviewer.

THE ANATOMY AND PHYSIOLOGY OF THE HORSE: With Anatomical and Quæstional Illustrations. Containing, Also, A Series of Examinations on Equine Anatomy and Physiology, with Instructions in Reference to Dissection, and the Mode of Making Anatomical Preparations. To which is added Glossary of Veterinary Terminology, Toxicological Chart, and Dictionary of Veterinary Science. By GEORGE H. DADD, M. D., V. S., author of "The Modern Horse Doctor," "Cattle Doctor," etc., etc. New York: Saxton, Barker & Co.

Among the various treatises, possessing, in a greater or less degree, an influence upon the agriculture of our country, which have been issued by the American Press, there are none, we opine, which will serve to give us a better reputation abroad, or prove more serviceable at home, than this recent production of Dr. DADD. Previous to the publication of the volume under consideration, our Veterinary Literature was without a work devoted to the Anatomy and Physiology of the Horse, which we, as a people, could claim as peculiarly our own,—one to which reference might be made,—for information or authority,—and, as a consequence, the specialties here treated were either discussed theoretically and imperfectly, or failed to attract attention. In his preface, Dr. DADD remarks that "much indifference has been manifested regarding Veterinary Science, in consequence of the difficulty encountered in its study, for the want of proper textbooks and teachers; and its unsatisfactory results when tested by men unacquainted with its fundamental principles. The well-known works of English and French authors furnish all the necessary information, yet their cost is beyond the means of many, and, consequently, their circulation is very limited. In view, therefore, of supplying this deficiency, which is disclosed in the barrenness of our anatomical and physiological knowledge, and for the purpose of furnishing a work that shall come within the reach and financial means of all men, the author has undertaken the double task; and it is hoped that the effort will not be thought untimely." This purpose has been beautifully and successfully accomplished. The principles of the science are clearly and demonstratively given, and the engravings, designed to aid the student, are choice specimens of art. Rochester—DANFORTH & BROS.

LECTURES FOR THE PEOPLE. By the Rev. HUGH STOWELL BROWN, of Liverpool. First Series,—with a Biographical Introduction by Dr. SIMON MACINTYRE. [16mo.—pp. 414.] Philadelphia: G. G. EVANS.

As a devoted, able, and successful pastoral teacher, HUGH STOWELL BROWN takes high rank in the minds of the masses with whom he has been placed in contact, and has secured a large place in the hearts of his people. Although a young man, (36 years of age last August,) but few exercise greater influence upon all classes and conditions of society. Engaged in mechanical employments until he was twenty-one, he learned, by experience, the wants of the laboring orders, and is endeared to them by kindred associations—devout, earnest, zealous and talented, he has won the confidence and respect of all his hearers. The Lectures, (twenty-one in number,) comprising a volume of more than 400 pages, were delivered in Concert Hall, Liverpool, to the working classes of that great commercial and industrial city who were unable to attend the churches for want of means. They are as much sermons as lectures, furnishing plain, practical truths for mental digestion—although the book of daily experience furnishes the majority of the texts,—delivered Sabbath afternoons to a mixed auditory of from two to three thousand listeners of all denominations. So popular were they, hundreds were compelled to forego the pleasure of hearing, not even standing-places being obtainable. These Lectures are full of every-day, common-sense facts, gracefully and eloquently garbed, and their teachings will be found equally as applicable to the desires or the needs of both old and young on this side of the Atlantic, as in the Mother Country. From the Publisher.

ADVANCED COURSE OF COMPOSITION AND RHETORIC: A Series of Practical Lessons on the Origin, History and Peculiarities of the English Language, Punctuation, Taste, the Pleasures of the Imagination, Figures, Style and its Essential Properties, Criticism, and the various Departments of Prose and Poetical Composition; Illustrated with Copious Exercises. Adapted to Self-Instruction, and the Use of Schools and Colleges. By G. P. QUACKENBOS, A. M., Associate Principal of "The Collegiate School," New York; author of "First Lessons in Composition," etc. [16mo.—pp. 451.] New York: D. Appleton & Co.

This is a companion to the "First Lessons in Composition," one of the very best books published on the subject, and now in use in our Common Schools. The two are well adapted to the private student, as they afford an insight into the mechanism of language, and a study of them can hardly fail to give a proper and graceful expression. No class more than editors feel the importance of such works, or would be more benefited by their circulation. For sale by ADAMS & DANFORTH.

FISHER'S RIVER (North Carolina.) Scenes and Characters. By "BRIT," who was raised there. Illustrated by JOHN MCLEAN. [16mo.—pp. 269.] New York: Harpers.

This is a book which the artist has well illustrated, and therein consists its principal merit. The author was "raised" in one of the dark corners of North Carolina, and, after an absence of twenty years, returned to visit the home of his childhood. During this visit, he states "remembrance of early years naturally revived," and on his return he determined to "write out some of the scenes and stories of that age and section," hence the book before us. The characters are a poor, ignorant, superstitious, whisky-drinking set, without a redeeming trait. The only ambition among them seemed to be which could tell the biggest and silliest stories. Our author was very fortunate in escaping from such a crowd, and we wonder he ever wished to return. We think too much of human nature to laugh over such stories of its degradation. Rochester—STEELE, AVERY & CO.

A NATURAL PHILOSOPHY: Embracing the Most Recent Discoveries in the Various Branches of Physics, and Exhibiting the Application of Scientific Principles in Every-Day Life. Adapted to Use with or without Apparatus, and accompanied with Full Descriptions of Experiments, Practical Exercises, and Numerous Illustrations. By G. P. QUACKENBOS, A. M., Principal of the "Collegiate School," N. Y.; author of "First Lessons in Composition," etc. [16mo.—pp. 450.] New York: D. Appleton & Co.

A WELL arranged, well illustrated School Philosophy, which a brief examination causes us to believe is remarkable for its clearness and its simple explanations of scientific principles as they appear in every-day life. We recommend this book to every young philosopher; to fact, to every one who wishes to know more of nature and its mysterious laws. Rochester—LINSLEY HALL, General Agent.

PHILOSOPHY AND CHRISTIANITY.—Philosophy, in the light of Paganism, was like the fire-fly of the tropics, making itself visible, but not irradiating the darkness. But Christianity, revealing the Sun of Righteousness, sheds more than the full sunlight of those tropics on all that we need to see, whether for time or eternity.—Coleridge.

NIAGARA SUSPENSION BRIDGE.

The accompanying engraving gives a beautiful and truthful representation of the Niagara Suspension Bridge, which remains, as it was the first day when completed, one of the wonders of the world. Far above the water, stretching over the fearful chasm, and apparently suspended by gossamer threads whose graceful curves describe lines of true sublimity as well as beauty, appears the last great triumph of human genius and engineering skill. The distant observer is struck with surprise at its apparent frailness. Everything in nature, which surrounds it, is in such majestic proportion, that the bridge itself seems a mere network of threads and lines, buoyed up by its own inherent lightness, and the elasticity of the surrounding air. And yet, when we descend to a mathematical calculation of its size and materials, its strength and capacities, quite another idea takes possession of the mind, and we merge its grace and beauty into its utility.

The passage way is divided into two parts or floors, one above the other. The upper is used for the transit of cars; the lower floor is the passage way for pedestrians and carriages.

Neither the cost of the bridge nor the magnitude of the undertaking is a matter of surprise or wonder. There are very many mechanical structures, even in this country, already completed, which cost immensely more money; and the tubular bridge at Montreal, now almost finished, will exceed it in this respect more than twenty

times told; but it is the boldness and the originality of the adventure, and its complete success, in the face not only of natural obstacles, but also of the discouraging prophecies of the most celebrated scientific men, which render it remarkable.

The distinguished English engineer, STAPLETON, recently deceased, pronounced adversely to its security, and the public generally regarded it, at the best, a very doubtful experiment. But that experiment has proved eminently successful, and thousands of passengers, and immense quantities of freight, pass over it daily, and in security.

The following table exhibits the proximate, if not the absolute capacities, dimensions and cost of the Suspension Bridge:

Length of span from centres of towers.....	822 feet
Height of tower above rock on American side.....	68 "
Height of tower above rock on Canadian side.....	79 "
Height of tower above floor of railway.....	80 "
Number of wire cables.....	4
Diameter of each cable.....	10 1/2 ins
Number of No. 9 wires in each cable.....	3,659
Ultimate aggregate strength of cables.....	12,400 tons
Weight of superstructure.....	800 "
Weight of superstructure and maximum loads.....	1,250 "
Maximum weight cable and stays will support.....	7,300 "
Height of track above water.....	238 feet
Top of towers.....	16 ft. sq
Base of towers.....	8 "
Length of cables.....	1,250 1/2 feet
Depth of anchor pile below surface of rock.....	30 to 50 "
Outside width of railroad floor.....	24 "
Total length of wire in miles.....	4.000 "
Cost of structure.....	\$400,000

HOW TO CURE COLDS.

HALL'S Journal of Health says the moment a man is satisfied that he has taken cold, let him do three things:—"1st, eat nothing; 2d, go to bed, cover up warm, in a warm room; 3d, drink as much cold water as he can and as he wants, or as much hot herb tea as he can, and in three cases out of four, he will be almost well in thirty-six hours."

If he does nothing for his cold for forty-eight hours after the cough commences, there is nothing that he can swallow that will, by any possibility, do him any good; for the cold, with such a start, will run its course of about a fortnight, in spite of all that can be done, and what is swallowed in the meantime in the way of physic, is a hindrance, and not a good.

"Feed a cold and starve a fever," is a mischievous fallacy. A cold always brings a fever; the cold never beginning to get well until the fever subsides; but every mouthful swallowed is that much more fuel to feed the fever, and, but for the fact that as soon as a cold is fairly seated, nature, in a kind of desperation, steps in and takes away the appetite, the commonest cold would be followed by very serious results, and in frail people would be almost always fatal.

These things being so, the very fact of waiting forty-eight hours, gives time for the cold to fix itself in the system; for a cold does not usually cause a cough until a day or two has past, and then waiting two days longer, gives it the fullest chance to do its work before anything is done.

THE BEST FUEL.

Wood is the healthiest, because it contains a large amount of oxygen; coal has none, hence, in burning it, the oxygen necessary for its combustion must be supplied from the air of the room, leaving it "closely" oppressive. A coal fire will go out unless it has a constant and large supply of air, while wood, with comparatively little, having a large supply within itself, turns to "live coals." Close-grained heavy wood, like hickory and oak, give out the most heat; while pine and poplar, being opened-grained, heat up the quickest. The value of fuel, as a heating material, is determined by the amount of water which a pound will raise to a given temperature; thus one pound of wood will convert forty pounds of ice to boiling water, while a pound of coal will thus heat near eighty pounds of ice cold water; hence pound for pound, coal is as good again for mere heating purposes, as wood is as good again as peat, which is the product of sedges, weeds, rushes, mosses, &c.

But, if a ton of coal, that is twenty-eight bushels, or twenty-two hundred and forty pounds, cost five dollars, it is about equal to the best wood at two dollars and a quarter a cord. Coal, at twelve dollars and a half a ton, is as cheap as wood at five dollars and one-half per cord. It would be more equitable, if wood was dry, to sell it by the pound. Such is the custom in France. For heating sleeping apartments, wood should be used.

RULES FOR GOOD HABITS.—1. Have a plan laid beforehand for every day. 2. Acquire the habit of untiring industry. 3. Cultivate perseverance. 4. Cultivate the habit of punctuality. 5. Be an early riser. 6. Be in the habit of learning something from every one with whom you meet. 7. Form fixed principles on which to think and act. 8. Be simple and neat in your personal habits. 9. Acquire the habit of doing everything well. 10. Make constant efforts to be master of your temper. 11. Cultivate soundness of judgment. 12. Observe a proper treatment of parents, friends, and companions.—Todd.

For Moore's Rural New-Yorker.

BIOGRAPHICAL ENIGMA.

I AM composed of 59 letters.
My 1, 8, 5, 2, 10, 21, 26, 4, 35, 29 is neatness and fashion.
My 26, 47, 59, 42, 48, 19, 23, 17, 6 is a metal and a name.
My 34, 43, 8, 86 is a princely residence.
My 21, 18, 40, 30, 18, 16, 42, 26, 33 is a portion, an elevation and a bird.
My 23, 57, 33, 59, 37, 40 is an enemy to 21, 15, 40, 30, 13, 16, 42, 26, 33.
My 36, 25, 44, 26, 16, 26, 41, 46, 39, 54 is a tall man.
My 19, 51, 8, 11, 14, 55 is an engine and a weight.
My 31, 20, 13, 30 is an animal.
My 38, 25, 9, 56, 53, 44 is a legacy and an heir.
My 12, 7, 4, 17, 49, 29 is a nick-name and a number.
My 24, 35, 39, 45 is an article of female apparel.
My 60, 55, 46, 30 pertains to a ship and a nut.
My whole is a problem.

The wise and the prudent
To solve it may try—
The scholar and student
I also defy.
The looser and winner
May not know the amount,
Till the saint and the sinner
Give their final account.

PUZZLE.

MISS. EDITOR:—I have read the "Lover's Puzzle," and, could I make it convenient, would certainly call and get the printer's bat. As I cannot do so, I propose that the printer read the following Puzzle and call and get my bonnet:

Stand your take to watch take to watch
I ture and will you if you will me.
Williamsville, N. Y., 1859. S. A. M.

ANSWER TO ENIGMAS, &c., IN No. 618.

Answer to Miscellaneous Enigmas:—A true regard for the feelings of others.

Answer to Historical Enigmas:—With the merciful, thou wilt show thyself merciful; with an upright man, thou wilt show thyself upright.

Answer to Geometrical Problem:—60, 80 and 100 perche.

FARMERS AND FARMERS SONS.

EDS. RURAL NEW-YORKER:—I wish to say a word in behalf of farmers sons. It is a lamentable fact that the sons of good thrifty farmers get discontented and dissatisfied, and leave the parental roof to seek employment and fortune abroad, and why is this? May not the cause too often be attributed to a pinching restraint on the part of the parent; in only partially and grudgingly remunerating him for services rendered; and partially in not supplying him with pleasant and profitable recreation. It comes very hard for the farmer whose only ambition is to grasp the "almighty dollar," to hire his own son and pay him fair wages; and date his time of service on and after the day he is twenty-one—but will let him go to "shack" for himself, sometimes (muttering as he goes, "he never earned his salt,") and hire any one that comes along and pay him freely \$10, \$12 or \$15 per month, when the services of the absent son were worth far more, even if he did play for a day once in a while.

Now, were it not better to enlist the attention of sons in the affairs of the farm, (the noblest calling pertaining to earth,) either by paying him well or by giving him a share in the proceeds; any way, only interest him. If you pay him more than he actually earns it is not lost, unless he be a miserably spendthrift, and he is not this, if he has been rightly taught by precept and example. In short, parents, as you love your children do all you can to keep your sons on the farm, and under the wholesome influence of a quiet and peaceful home, and don't mind the sacrifice. When you have done all this if he still persists in leaving home, let him go with a father's blessing, and when he has "squandered all his substance and fed on husks" awhile, he will know how to appreciate a parent's home.

To the youth, too, I would say, honor and love your parents; bear with any notions that to you seem unreasonable; for how often have they borne with your follies and your faults; how often for you have they spent sleepless nights and anxious days. Many things that look foolish to you now will appear very different in twenty years. Things taught me by my father, which I once despised and considered the height of folly, now I hold to as my firmest principles—the sheet-anchor of my faith. Experience makes us wiser, much as we may now despise its teachings.

Vernon, N. Y., 1859.

G N L

HOME MADE PICTURE FRAMES.

EDS. RURAL NEW-YORKER:—W. B. W., of Penn Yan, asks for information about making "picture frames of burrs, acorns, beech nuts, &c." The frame should be of plain work, no moldings except perhaps what is termed a "Jack-plane Molding," a little beveled towards the inside. The particular order of placing the cones, acorns, &c., will depend on the taste of each individual. I have one 24 by 38 inches, but it would be difficult to describe it. The corners are arranged something in the form of rosettes, of white and yellow pine cones, acorns, &c., and also the same midway between the corners. The balance is filled up with acorns, cones, beech nuts, buckwheat, Madeira nuts, filberts, butternuts, black walnuts, Brazil nuts, hazel and almost everything else in the form of a nut with a rough outside, indiscriminately—the more so the better. The frame should be first stained—something near the color of your materials for the outside. The nuts, &c., are fastened on with very thick glue, and when dry varnished over with thin glue. When this is dry it may receive a couple of coats of ordinary varnish which puts on the polish. I would recommend that the work be done in a warm room, and allow it to remain there two or three days, as the glue will not be so apt to give out and let the nuts lose. Any person with ordinary good taste can thus make a very beautiful picture frame.

Although not a "Young Ruralist," perhaps the above may not be the less appreciated by the inquirer.

Pittsford, N. Y., Nov., 1859.

MRS. A. S. C.

"YE BUILD, YE BUILD, BUT YE ENTER NOT IN."

A few evenings since the preceding sentence was read to me, in connection with a circumstance which caused it to make a very deep impression on my mind. But, methinks I hear some impatient Young Ruralist ask the question, "Who are they that build, but do not enter?" I would say that they are dreamers, who spend their precious moments in idly thinking of future joys and honors; and while they are thus dreaming the future advances; but where are the joys and honors they counted so surely theirs? Alas! poor dreamer; perhaps too late thou wilt find that thou must toil ere thou wilt realize the joys and honors which thou dreamed were already within thy eager grasp.

Arouse then, dreamer, and commence some noble work, so that when thy race is run and thou shalt be laid beneath the sod, the world shall be bettered for thy having lived in it. Let not your precious time be any longer spent in dreaming. Thou, and every human being, has a work to perform. And when thou workest, strive to work well, and thus fulfill the purpose for which an all-wise Creator designed us. And He who seeth in secret shall reward us openly, in that great day when all nations shall appear before Him, and will greet us with the words, "Well done, thou good and faithful servant; enter thou into the joy of thy Lord."

Pattersonville, Wayne Co., N. Y., Nov., 1859.

SYMPATHY of tastes is a pleasing attraction; but congeniality of principles is the cement of souls.—Jane Porter.

ROCHESTER, N. Y., DECEMBER 10, 1889.

TO CLUB AGENTS, SUBSCRIBERS, &c.

In answer to recent letters, we beg to state that we have not, in any instance, offered the Eleventh Volume of the RURAL NEW-YORKER for less than our published rates—and whoever expects the lowest club price (\$1.25) to be reduced to \$1 per copy, will be disappointed. Our aim and determination is to adhere strictly to published terms, treating all friends and agents of the RURAL alike fairly and honorably. Any one offering the paper for less than our rates, is either an imposter, or very generous in paying us more than he receives.

We have no traveling agents. The persons who have recently been traveling through the West and elsewhere, pretending to act by our authority, or to be connected with the RURAL, are swindlers, one and all. The proprietor of the RURAL gives no certificates of agency, has no partners in business, nor any relative traveling in his or its behalf. We hope some of the pretended partners and relatives, who, taking advantage of the popularity of the RURAL and the gullibility of the people, are obtaining subscribers, will be headed and jailed soon. Grates and gruel would prove salutary.

—For answers to various inquiries, and for terms and other particulars, please see last page.

DOMESTIC NEWS.

Matters at Washington.

The Tennessee's mail which arrived at Washington on the 1st inst., brought a letter from an entirely reliable source, saying that the Cabinet of the Liberal government of Mexico are united in their views, and that there is every reason to believe they will agree to the pending treaty with the United States. So hopeful is the writer, that he adds that it will be received in this country very soon after meeting of Congress. There is no truth in the newspaper report that Juarez intends asking for an immediate American armed intervention. The rumor, however, was prevalent at Vera Cruz just before the Tennessee left, that the Miramon government was about to make overtures to our own, but its truth was strongly doubted.

Private advices from Nicaragua represent everything quiet, with the exception of fear of invasion by Senator Walker.

President Martinez and the people have the greatest confidence in the friendly disposition of the United States, and have determined to suppress filibustering. Much disappointment was manifested at the non-arrival of our minister, Mr. Dimtry. Some supposed that he would not leave Costa Rica before January. President Martinez admits that M. Bely has already failed to fulfil his contract.

The last dispatches concerning the San Juan affair relieve all practical difficulty on the island. Gov. Douglas and Admiral Baynes both being satisfied with the course pursued here, and the joint occupation is now restored. Nothing but the original difference respecting the title remains in dispute. The President's Message (which will probably be made public during the week, as Congress met on Monday, 5th inst.,) will only refer to it briefly as a question under negotiation.

likely to be adjusted amicably, and none of the papers will be communicated to Congress.

No expectation is entertained by the Administration that Mr. Forsyth can make a treaty in Mexico, or enter into any satisfactory arrangement. The President considers an armed intervention necessary for the protection of our citizens, and, as a precautionary measure, to anticipate a seizure by some other nation, before a total disruption. England has intimated a willingness to our possession, leaving the payment of her debt to future contingencies.

The State Department has been officially advised that war has been declared by Spain against Morocco, and the blockade of the ports of the latter has been announced.

Congress met on Monday morning, the 5th inst. Great interest was felt in the organization of the House, and the election of Speaker. Long before noon the galleries were densely filled, and crowds were unable to obtain admittance. Mr. Allen, the Clerk of the last House, called the House to order at noon. The din of voices immediately ceased, spectators were excluded from the floor and the members took their seats.

The roll was called and 281 members answered to their names. The absentees were Messrs. Stalworth and Landrum, of Alabama; Brown and Adams, of Kentucky; Hioman and Rust, of Arkansas; and Hamilton, of Texas.

On motion of Mr. Phelps, the House agreed to proceed to the election of a Speaker *via voce*. Mr. Houston nominated Mr. Sherman, of Ohio. Mr. Adrian nominated Mr. Davis, of Indiana. Mr. Haskin nominated Mr. Hickman, of Pa. Mr. Stevens nominated Mr. Grow, of Pa. Mr. Briggs nominated Mr. Butler, of Va.

On the first ballot Bocock received 86 votes, Sherman, 65, Grow, 43, Butler, 14, and there were 21 scattering votes cast, ranging from 105. Mr. Grow, after the first ballot, withdrew his name. A miscellaneous discussion was taking place when our report closed, but no further business was done.

The Senate was called to order by the Vice President. Forty-eight Senators were present. The credentials of John C. Ten Eyck, of N. J., and Henry P. Haun, of Cal., were presented. Both appeared and were qualified. The absentees are, Messrs. Benjamin, Clay, Crittenden, Davis, Douglas, Fitch, Fitzpatrick, Hammond, Johnson, of Ark., Polk, Sebastian, Seward and Toombs.

Mr. Mason, of Va., submitted a resolution for the appointment of a Committee to inquire into the facts attending the seizure of the armory and arsenal at Harper's Ferry, by a band of armed men, and whether any citizens of the United States not present were implicated therein or accessory thereto by contributions of arms, money, or otherwise, &c. The Committee to have full power to send for persons and papers. Mr. Trumbull, of Ill., gave notice that when the resolution came up he should move to amend by extending the inquiry to the seizure of the arsenal at Frankfort, Missouri.

Execution of John Brown.

The first execution for treason since the formation of our government, was enacted at Charlestown, Jefferson Co., Va., on the 2d inst., when John Brown yielded up his life to the majesty of the law. We have already published all the details of the insurrection at Harper's Ferry, and, as intense interest is connected with this case, we now give the closing scene in the life of the leading spirit connected with that insurrection against the regularly constituted powers of Virginia. The military assembled at 9 o'clock, and were posted on the field leading to the scaffold, and also at various other points, in conformity with the general orders. Everything was conducted under the strictest military discipline, as if the town were in a state of siege, mounted guards being stationed in the woods, to the left of the scaffold, and picket guards toward the Shenandoah Mountains, in the rear. That part of the military which kept the field was joined in two hollow squares, one within the other. In the centre of these stood the scaffold. Between the inner and outer lines of troops spectators were freely admitted, but none were allowed to remain outside the outer line.

The prisoner was accompanied from the jail to the scaffold by the Sheriff and his assistants, and Capt. Avis, the jailer, the procession being escorted by a body of military consisting of six companies of infantry, one rifle corps, and a company of horse. There was no clergyman present, Brown having declined all religious ceremonies, either in the jail or on the scaffold. Brown was taken to the scaffold in a small cart, in which was placed also his coffin, a plain affair, made of white pine. On arriving at the scaffold, the prisoner looked around calmly upon the assembled multitude for a moment, and then mounted the scaffold with a firm step. His arms were now pinioned by the Sheriff, when the prisoner stood silent for a moment. He then uttered a few words of farewell to Captain Avis and Sheriff Campbell, when, at 11½ o'clock, the trap of the scaffold was pulled away, and with a few slight struggles John Brown yielded up his spirit. After thirty-five minutes had passed the body was cut down, placed in a coffin, and conveyed under military escort to the depot, when it was put in a car to be carried to the Ferry by a special train at 4 o'clock, and placed in Mrs. Brown's possession. The remainder of the insurrectionists are to be executed upon the 15th inst., Friday next.

Personal and Political.

CHIEF JUSTICE MACAULEY, a jurist of high personal character, in Canada, died suddenly last Saturday, of disease of the heart. He was 81 only an hour.

THE HON. CARROLL SPENCE, late Minister of the United States to Turkey, has recently returned to this country, after an absence of several years.

UTICA is without a Mayor. Mr. Conking has resigned to proceed to Washington, having been elected to Congress. The Common Council have as yet effected no choice for a successor.

THE Press throughout the States have been engaged in performing funeral ceremonies over KIT CANNON, but Judge WATTS, who is direct from

New Mexico, says he saw Kit in good health, immediately preceding his departure, and hence emphatically contradicts the report of his death.

WASHINGTON IRVING died suddenly on the night of the 28th ult., at his residence at Irvington. He retired to his sleeping room at 10½ o'clock, and after undressing fell and expired in about five minutes. He was in the 77th year of his age.

THE Paris correspondent of the Times states that Senator Seward had reached that city in good health and spirits. He indignantly denies ever hearing of the projected insurrection at Harper's Ferry, and although he recollects having received a call from a man known as Col. Forbes, there was no mention made of any attempt at insurrection. Colonel Forbes asked him for means for another object, which was refused; and that was all he ever saw of the individual in question.

NOTICE was given in the Mississippi Legislature, the 10th ult., by Mr. Graham, of the future introduction of a bill to abolish existing laws against the introduction of slaves from abroad into the State; and to legalize the holding of blacks in bondage introduced from foreign countries.

A REPUBLICAN State Convention is called to meet at Jefferson City, Mo., on the 28th inst., to appoint delegates to the National Republican Convention. It is presumed that the delegates from that State will present the name of Edward Bates.

THE Republican National Committee will meet at the Astor House in New York city on Wednesday, Dec. 21, to decide on the time for holding the National Convention of 1890, and to agree on the terms of the call.

THE Governor of South Carolina in his Message, while showing the advantage of a united South, says:—"If, as I solemnly believe, we can no longer live in peace and harmony in the Union, we can form a Confederacy with ability to protect itself against every enemy, and which will command the respect and admiration of the world." The following resolutions were passed in the House:

Resolved, That the State of South Carolina is ready to enter, together with the other slaveholding States, or such as desire the action, into a formation of a Southern Confederacy.

Resolved, That the Governor be requested to forward this resolution to the various Southern Executives.

Another resolution was offered asking official information as to the condition of the State arms, ammunition, number of men enrolled in the State militia, the style of their arms, &c.

A DISPATCH from Washington to the New York Tribune says the Republicans are in caucus, considering the propriety of calling a general opposition conference. The N. Jersey and Pennsylvania delegations favor the call to bring on all opposition elements. The Southern opposition members are now holding a caucus. The principal Anti-Lecompton members have signified their readiness to support Sherman for Speaker.

News Paragraphs.

A PARTY of the Winnebagoes, variously estimated as numbering from 75 to 400 persons, have recrossed the Mississippi to take up their old quarters a few miles from Geneseo, in Henry Co., Illinois.

TWELVE miles from Nashville, Tenn., on a good road, is what was the home of General Jackson. Though the grounds and tombs of the Jackson family have been purchased by the State of Tennessee, yet there have been no improvements about them, and decay has commenced its work upon the fences and outhouses. It is proposed by some to establish an Agricultural College on one portion of the Hermitage, to instruct the children and grandchildren of those who fought under him at New Orleans, and all who may be entitled to the privileges of the institution.

DIED at Lucknow, India, September 16th, Rev. J. R. Downey, of the Methodist Mission. He was a young married man, and of great promise. Thus early has one of the six men sent out by the Methodist Episcopal church of this country fallen in the beginning of a most promising life of labor.

A VENERABLE and respected couple in St. Louis celebrated their golden wedding on the 14th of November. They were surrounded by their children, and a large company of happy friends—none more happy or buoyant than the aged pair. But on the 16th, the chain was broken. Elias Ware was followed by the same friends to his "long home." "The golden bowl was broken."

LARGE quantities of white wax have been coming ashore on the coast of Texas during the past month. One man on Matagorda Bay has realized nine hundred dollars on what he has picked up. This wax is supposed to have come from a Spanish vessel recently lost in the Gulf.

THE Russian Grand Duchess Mary de Leuchtenberg has arrived at the Hotel du Louvre, Paris, with one hundred and ten pieces of baggage. She comes, it is said, as the bearer of a verbal communication from her brother, the Russian Emperor, to Napoleon. Having but a mere word to say, she did not bring much luggage.

THE old frigate Constitution, launched in 1793, and doing good service in the infant navy of the Republic, and escaping every disaster to which ships in commission are subject, is now laid up in ordinary at Portsmouth, N. H., an object of patriotic regard. The original cost of the ship was \$302,719, and the amount expended in repairs up to 1880, when fitted out for her last cruise, was \$495,238.

WILLIS, in his letter describing the American Watch manufacture at Waltham, Mass., in speaking of the astonishing minuteness of some very essential parts of the watch, says in regard to the screws used in putting the work together: "A small heap of grains was shown to us, looking like iron filings, or grains of pepper from a pepper-caster—apparently the mere dust of the machine which turned them out—and these when examined with a microscope, were seen to be perfect screws, each to be driven to its place with a screw driver. It is one of the Waltham statistics which is worth remembering, that a single pound of steel, costing but fifty cents, is thus manufactured into one hundred thousand screws which are worth eleven hundred dollars."

FOREIGN NEWS.

GREAT BRITAIN.—No formal invitation to the Congress has yet been sent to England by France, but Count Persigny has been instructed to arrange the preliminary conditions with Lord John Russell.

The London Times, upon the San Juan difficulty, enlarges upon the general conviction that war between America and England is impossible. It, however, says there are some convictions which work out their own truth in practice, but there are others which tend to their own practical refutation. We sincerely hope that the different readings of the action, that war with England and America is impossible, may not be an illustration of this truth. The editorial, after pointing out the importance of San Juan to England, an impossibility of a surrender of it, unless some very different title be brought forward from any yet seen, concludes by expressing much satisfaction that the right of the island will be coolly discussed in Washington and London, while the affairs on the spot will remain in statu quo.

The Times has again a disquieting article on the relations of England and France. It complains that in France every instrument that can work on public opinion is employed to raise a violent spirit of animosity, and that the army are taught to look on a war with England as not remote. The Times cannot discover any serious question at issue between the two Governments, and affirms that it is in the power of the Emperor alone to put an end to the state of things daily becoming more serious, and if he does not do so, there is a reasonable ground for drawing a gloomy inference from his silence.

The Times says, no doubt a feeling of hostility to England is more bitter in France than since 1815, and charges the French Government with directly encouraging it. The enrollment of 80,000 men, as a naval reserve, commences in England on the 1st of January.

FRANCE.—The formal and official invitation will be sent to London and the Cabinets of Vienna and Paris simultaneously. The invitation will not be identical. Austria will propose that the Congress assemble in Paris, while France will abstain from indicating any place. It is certain that Austria, through the medium of Prince Metternich, has protested against the nomination of a Regent, by Piedmont, as such a Regency would be contrary to the conditions of Peace signed at Zurich. It is stated also that England has made representations against the Regency.

The Paris correspondent of the Times of Saturday, says that a confidential communication, of an important nature, has been addressed by the Minister of the Interior to all the Prefects of France, with a view of obviating the effect produced in England by the violent language of the French press. The Prefects are instructed to invite such journals to be more circumspect. The Minister says that a journal while defending energetically the rights of the country might easily avoid offending the susceptibility of a great people by pursuing this line of conduct. Also, that the dignity of the Imperial policy may be reconciled with the interest of the alliance of France, and the maintenance of peace.

The warlike article in the London Times of the 15th, had produced a great sensation.

The Paris journals generally say that the views set forth are exaggerations, and that the unfriendly feeling, if any exists, is entirely owing to the violence of the British press.

ITALY.—Parma, Modena and Romagna had tendered thanks to Prince Carignani for naming a substitute, and informed him that they accepted with gratitude the Regency of Buoncompagni.

It was said that the Sardinian Congress would be summoned to meet before the assembling of the Congress. The annexation of Italy is to be fully discussed, and numerous addresses from the people of Duchies will be presented in order to give weight to their cause.

The Piedmontese Gazette publishes a letter from Prince Carignani to Buoncompagni, in which he refers to the repeated assurances of Napoleon that there should be no intervention in Central Italy, and says that such assurances are encouragements to the policy of the King, who could never consent to let violence from without oppose the national will.

SPAIN.—The protest of the Moorish Government against the conduct of Spain, in declaring war, is published. It asserts that the demands of Spain in each instance, upon being conceded to, were followed by increased pretensions; and also Morocco protests against Spain, because that on three occasions she paid no attention to her engagements, and declared war against legitimate notice.

COMMERCIAL.—Broadstuffs.—Market firm, but quiet. Richardson, Spence & Co. report flour quiet, but firm at 88¢@25¢ per barrel. Wheat firm and 24¢@34¢ per bushel; early in the week, but closed quiet; red 24¢@34¢; white 24¢@34¢. Corn dull, but freely offered at a slight decline. Yellow 88¢@89¢; white 85¢@86¢ per quarter. Bigland, Althys & Co. report wheat 1¢ higher and corn 6¢ lower on the week. Provisions.—Bigland, Althys & Co., Richardson, Spence & Co., James McHenry, and others, report pork dull and nominally unchanged. Lard steady.

BURIAL OF WASHINGTON IRVING.—The N. Y. Tribune of the 2d inst., says:—From an early hour yesterday morning, carriages, barouches, rockaways, farm-wagons, poured into Tarrytown from all parts of Westchester County, and from long miles beyond, bearing sincere mourners to the grave of WASHINGTON IRVING. From this city the cars of the Hudson River Railroad conveyed thither hundreds of our best people, noted in the highest professions, with not a few in the humblest walks of life. From Boston, from Philadelphia, there were present many who had hastily traveled so far to see all that is perishable of the father of American literature borne to an honored grave—Many were there, in the farm-wagons, undoubtedly, who knew little of him as the author of the "Sketch Book," but who knew and honored him as the Christian gentleman, the model of all that is beautiful, and high and noble in human nature, the peace-maker, the counselor in difficulty, and the counselor in affliction. To all he was a friend and a great man gone. How touching, indeed, is the loyalty of men to their sovereign man! All business was suspended in Tarrytown. Every store was as fully closed as on Sunday, while the white and black drapery of mourning was everywhere displayed. If hung in festoons from nearly every house. It was stretched from house to house across the street. It hung in the front of churches of most denominations. Even the Railroad depot had its sign of grief.

The News Condenser.

- Yale College has 641 students.
- The project of an Insane Asylum in Onondaga Co., is agitated.
- Oberlin College has 1,233 students. Of these 450 are females.
- The aggregate public debt of Virginia on the 1st of October was \$30,190,000.
- Dispatches from Costa Rica represent the new Government as highly popular.
- The Episcopal church at Quincy, Mass., was destroyed by fire on Saturday week.
- Mr. Everett is writing an article on Washington for one of the foreign encyclopedias.
- An immense pigeon roost is now established in Chenango Swamp, Crawford Co., Pa.
- During the last day or two the water in the St. Lawrence river has risen nearly three feet.
- It is estimated that there are 1,400 cigar manufactories in this country, employing 7,600 hands.
- The Dayton Empire says castor oil will preserve timber. We should think it would work out.
- The personal property of Brunell, the English Engineer, was worth the snug sum of \$460,000.
- The perpetrators of the outrage on the Dickinson family at Beirut have all been brought to justice.
- Mr. Orelana Allen, a sister of Lorenzo Dow, died at Brooklyn, N. Y., on Sunday week, aged 85 years.
- One hundred and two million dollars worth of dry goods have been imported in New York since January last.
- The authorities of Missouri have offered a premium of \$3,000 for the best plan of a national monument.
- M. De Beriot, the famous violinist, has sold his violin for four thousand dollars—rather a costly instrument.
- Several persons have been arrested in Verona, by Hungarian soldiers, for distributing revolutionary prints.
- The cranberry crop of the towns of Hartwick, Brewster, and Dennis, Mass., for 1889, aggregated \$23,622.
- The most profitable business in Virginia now, is the manufacture of regimentals and uniforms for citizen soldiery.
- It is stated that \$600,000 have been realized by the exhibition of the Great Eastern since she was launched.
- Prof. Whitney, of Yale College, is engaged in the translation and publication of a Hindoo work on astronomy.
- A new steamship has been ordered by the Cunard Company, which is to be five hundred tons larger than the *Persia*.
- During the present Napoleon's reign, the French have constructed railways to the extent of more than 4,300 miles.
- At West Stafford, Connecticut, Francis Patten recently killed a running fox, at nine rods distance, with a stone.
- Mr. A. Robinson, of Hartford, has in his possession a Hebrew shekel, which is supposed to be more than 3,000 years old.
- The first brick house ever constructed in California was demolished last week to give place to a more imposing structure.
- The Emperor of the French has just completed a new work, to be published under the title of *Histoire des causes rayées*.
- It is said that Madame Jenny Lind Goldschmidt contemplates returning to the practice of her profession as a public singer.
- North Carolina appropriates \$150,000 for free school purposes. South Carolina contributes \$74,000 for the same purpose.
- A Tennessee paper says "the inauguration of the Governor was celebrated by the firing of minute guns every half hour."
- Capt. John Wood, of Lebanon, N. H., was one hundred years old on Tuesday last. He walks erect, and without a cane.
- The Spanish mackerel, a game fish of the Southern waters, has appeared in the Hudson river, and furnishes sport for fly fishermen.
- The Ames Shovel Works, at North Easton, have made for the year past two hundred and twenty-six dozen shovels per day.
- The State, county and city taxes levied in Cincinnati, for this year, amount to over one million five hundred thousand dollars.
- The Massachusetts Legislature has passed an act providing for the establishment of a nautical branch of the State Reform School.
- The Montreal Gazette says the Grand Trunk ferry boats carry over 6,000 barrels of flour daily for shipment to Portland and Boston.
- The Erie Railroad, with its appurtenances, is to be sold under foreclosure for default in payment of interest on first mortgage bonds.
- The engines of the large ocean steamers make about 300,000 turns in crossing the Atlantic, between Liverpool and New York.
- A New Jersey farmer named Geo. Rice, husks corn at the rate of one bushel in three and a half minutes, or 15 bushels in 32 minutes.
- It is stated that the American ship *Memphis*, with 700 slaves, had eluded the English cruisers on the coast of Africa, and got out to sea.
- A new brand of flour has been introduced into the New Orleans market, under the style of "Flora Temple, 22½¢—It can't be beat."
- W. D. Perkins, of the Nestorian Mission, now in this country, has a copy of the New Testament, in the Syriac language, 658 years old.
- A Mormon's advertisement reads, "To be let—Rooms for two gentlemen and four wives, or rooms for one gentleman and six wives."
- The probable loss of life by the recent disasters on the English coast is about 600. Numerous losses are also reported on the Welsh coast.
- A lady in New Haven, while recently directing a butcher about a piece of meat she wished to purchase, had two fingers cut from her hand.
- At St. Euldaire, Canada, on the 14th ult., a tract of ground, estimated at 50 acres in extent, sunk to a depth of 30 feet, with a noise like thunder.
- In Chicago, on Thursday, a child was burned to death, and three other persons were seriously injured by the explosion of a can of burning fluid.
- The storm of Friday week destroyed property to the amount of \$8,000 in Chicago. The walls of several large buildings in progress were blown down.
- At Neponset Village, Dorchester, Mass., is still standing, and in good repair, a house built in 1650—one of the most ancient landmarks of Pilgrim handicraft.

TEACHERS

"GET THE BEST."

Teachers will do well to examine the following books before deciding to charter those he has used for years of the same grade.

They are universally approved by those who have examined them and are pronounced the very best books to be had.

Robinson's Progressive Primary Arithmetic. Price 15 cents.

Robinson's Progressive Intellectual Arithmetic. Price 35 cents.

Robinson's Progressive Practical Arithmetic. Price 50 cents.

Robinson's New Elementary Algebra. Price 75 cents.

Robinson's University Algebra. Price \$1.55.

THE BRIGHT HOURS ARE HASTING.

BY ELIZABETH BOSTON.

The bright, bright hours are hasting,
Are hasting fast away,
And summer's bloom is waning,
Is waning every day.

The green, green leaves are fading,
Are fading one by one;
The glens and uplands shading
With hues pale, bright and dun.

The sweet, sweet flowers have perished,
Have perished from our sight,
As those our love has cherished,
Are lost in Death's dark night.

The gay, gay birds are winging
Their flight to other lands,
No more with music ringing,
The grove all voiceless stands.

The wild, wild winds are sighing
With plaintive tones along,
The lonely stream replying
Gives forth a mournful song.

The dark, dark clouds are sweeping
With dusky wings the sky,
Their broad dim shadows creeping
With noiseless footsteps by.

Oh! sad, sad art thou, Autumn,
Thou teller of decay,
And summer's glowing beauties
All pass with thee away.

Yet I love, love well this season,
With fading glories crowned,
For the pensive beauty breathing
From everything around.

And its skies, its skies are dearer,
Though half arrayed in gloom,
Than e'er, when brighter, clearer,
They bend o'er summer's bloom.

Avoca, N. Y., 1899.

Story Teller

A STORY FOR THE NEW YEAR.

"A HAPPY NEW YEAR, I wish you, dear father," said Nellie, as she hastened into the magnificent parlor of Mr. Smith's splendid mansion.

It was indeed a beautiful morning, such as contributes to the joyous feelings of unburdened human nature, and although "sunrise," that beautiful "scene" in the first act of each day's "performance," was over—a "scene" which heavy eyelids forbid many to gaze upon—yet there was beauty enough in the tinted skies, and melody enough in the gentle breezes, to light up the soul of the most obtuse.

Her father was busily engaged with the morning's paper, and only answered his daughter's "good wishes," by placing in her hand a "pair of eagles," such as "bankers" fill their "cages" with; knowing that he might as well make his gift a voluntary action, as to wait for her well-directed hints; or, in case those should fail, a host of plain-spoken importunities.

Nellie Smith was the only daughter of wealthy parents, and her mother being a devotee to fashion, and her father a man who reads the "list of Stock Sales" more than his Bible, it was not a wonder that their only child was proud, gay, and thoughtless. To say that she was not beautiful, as the mass term it, would be an untruth; still, while one of nature's barbers was curling her hair, another, called vanity, had slightly curled her lip. Yet she was pretty.

Her eyes were each of a beautiful jet,
Little globes of love, exquisitely set.

Nature had done much for Nellie Smith, in that she possessed a symmetrical form, while circumstances had stripped her soul to adorn her body. She had arrived at an age when her only and highest ambition was to be designated as the "belle" of the Metropolis; and although she flattered herself that this was the case, yet it remained a question with the close observer, whether she deserved it from any good qualities she possessed, or from the very important fact that she was, in all probability, to be the heiress of a large fortune. She had visited Saratoga with this one, Clifton with that one, Avon with a third, Niagara with a fourth, yet no one dared to call her a "dirt," and she verily believed that she was a "Queen" of an "Empire" where the proprietors of "infant mustaches" and "garrote collars" figured largely as her "subjects."

Nellie had looked forward with joyous anticipation to this day, when her host of admirers were to favor her with calls, and accordingly had arrayed herself at an early hour, that none might find her lacking in any degree of her usual (artificial) loveliness.

It was generally known that Miss Smith would receive her friends on New Year's day, and the servant who "answered the bell" was as anxious to count his "bits" as she was her "beaux."

Not in the least disappointed at her father's mode of reception, she hastened to greet her mother likewise with a "formal kiss," betraying about as much affection as you would find devotion in worship, where "custom" is the sole "master of ceremonies." With a mother's fondness and intuitive perception, Mrs. Smith informed her daughter that "just one more jewel in her hair, would make her look perfectly charming."

"Yes, mother—I know; and I would be highly pleased to gratify you in this request, but I have no time to purchase one this morning, and those which I have are not fashionable."

"Perhaps this would suit my Nellie," said Mrs. Smith, as she presented her with a costly pearl. "It is one I selected for you yesterday; a simple gift, however, for so dutiful a child." The "thousand thanks" and two and a half kisses, satisfied Mrs. Smith that her gift was acceptable, while Nellie assured her mother that she was "indeed

fortunate in having a parent so earnest in studying her good." Suffice it to say, New Year's day passed, and Nellie Smith went to rest that night perplexed to think that the "calls" she had received far outnumbered the compliments. She could reflect upon no good deed to sweeten her meditations, or righteous act to be rehearsed in her midnight dreams; and I presume you are ready to declare that if the three hundred and sixty-four remaining days of Nellie's "New Year" were characterized by the first, my subject is but poorly illustrated.

New Year's day was not alike in every household. Lucy Upton, like Nellie Smith, was the daughter of parents in affluent circumstances. Nature had bequeathed her an equal fortune of physical beauty, and when one looked in her deep blue eyes, they seemed none other than the "windows of her soul," through which you might behold the joy that lighted up her heart within. Her mother had early taught her the precepts of the Holy Book, and by a Christian example had gently led her in the way of blessedness and truth. Her father, a successful merchant, had, in former years, often indulged his charitable spirit by aiding in benevolent enterprises, and finally learned that he had only "cast his bread upon the waters, to be found after many days." It was not surprising, then, that when Lucy greeted her parents on the morning of the New Year, that she received a hearty welcome in return, besides a present, not unlike Nellie's, although bestowed with a different motive. Mr. Upton was sure that his daughter would make good use of the gift, while Mr. Smith disliked the detraction from his sordid gain, no matter what the purpose for which it might be appropriated.

"Oh, mother! what a beautiful day we have for making our calls!" exclaimed Lucy Upton, as she threw open the shutters of the east windows, which let in a flood of glorious, dazzling sunlight. "What! what!" said Mr. Upton, "ladies doing the calling on New Years? I should think you were about instituting a new custom, are you not?"

"For this once," replied Lucy, "and if you will go with us, we promise you a happy day."

Not loth to engage in any enterprise where a like guarantee was given by his wife and daughter, Mr. Upton assented, and scarcely an hour had elapsed before his finely matched span of dapple grays, and well-robed sleigh, freighted with the trio, were gliding down the street, to the utter astonishment of their intimate acquaintances, who, gazing from the windows of their elegant dwellings, wondered why people so wealthy as the Uptons, should desert their household on New Year's day, in violation of a fashionable ordinance.

"Well, there! if that is not perfectly horrid!" cried Mrs. Wilson, "there goes the Uptons on New Year's morning!"

"It seems they do not receive calls to-day," said Miss Flora McFlimsy.

"I really cannot imagine where they are going," exclaims Miss Extensive Circumferential.

Such were some of the many expressions made as our worthy company went dashing down the streets, and Mr. Upton soon found, by the directions which Lucy gave the driver, that they were out on a charitable mission.

In a few moments the merry sleigh-bells had ceased their tinkling in front of one of those rickety tenements where poverty reigns, and starvation does its desperate work.

Mr. Upton instinctively followed his wife and daughter as they crossed the threshold and entered a room where a woman, just recovering from a severe attack of fever, welcomed their approach.

It was evident that she and her group of children, had suffered much; but that some ministering angel had before visited their rude home. Who this Angel was, we leave you to imagine; while we cross to another street, where hunger, wretchedness and sin, have left their foot-prints unmistakable.

In a dreary building of stone, at the left, after passing up the first flight of stairs, lived the poor Mrs. Morris, who once had known better times, but by a sudden reverse of fortune had been bereft of home and a kind husband. She was therefore left to struggle on in endeavoring to support herself and children, and although her eldest daughter was able to sew for the shops, yet the small wages she received were reduced so much smaller on account of "hard times," that they were barely kept from starvation; and now that her mother was taken suddenly ill, it was not strange that Ellen Morris' star of hope had well nigh set. Not having been able to leave her mother's bed-side for the last twenty-four hours, and with no physician, no food, and the last coal in the grate, we wonder not, that amid the heart-rending cries of her younger brothers and sister, she groaned in despair. That groan was heard by Lucy Upton, as she entered this abode of misery followed by her parents. She had never found it before. There had been enough on the streets where we last left them for her busy hands, but not enough for her ever bountiful heart. Few questions were asked of ELLEN. Poverty speaks for itself. Medical attention was summoned by the direction of her father, remedies prescribed, food and fuel furnished. A few weeks had passed, when Mrs. Morris was quite well, and ELLEN received a situation in Mr. Upton's counting-room, where with her pen she earned a good salary, for in their days of better fortune she had improved her time at school.

"What have you there?" said Mr. Upton to Lucy, as they descended from the old stone house to resume their seats in the sleigh.

Not lacking in confidence towards her father, Lucy handed him a book, where he discovered a list of the immediate wants of the many poverty-stricken whom they had visited, comprising such necessities as her own and her mother's charitable observation told them were essential to the palliation of the intense sufferings which they had beheld for a better purpose than to gratify a reckless curiosity. Mr. Upton made no reply, but smiled; not a sarcastic smile, however, but such as comes from the higher and holier impulses of the heart.

We cannot follow them through all the haunts of misery which they visited, but had you secretly entered the wholesale establishment of W. J. Upton on New Year's afternoon, you might have

seen busy hands at work, filling out those memorandums, and, contrary to Mr. Upton's system of "cash trade," these parcels were sent out "on time" to be paid for when the Master saith, "Come ye blessed of my Father."

Yes! many a heart was made glad by the visitations of Lucy and her parents, and when that amiable group bent around the "family altar" at night, and implored "Divine protection over the poor and the destitute, and especially those whom they had seen and aided," think you not that the First day of January was a "happy one" to them? And when Lucy Upton, closed her eyes to dream of the Eternal City with its "shining streets of gold," and saw those same needy, suffering creatures tuning their "harps" for the "everlasting hallelujah," had she not entered upon a "Happy New Year?"

"Dreams! but a deeper thought her soul did fill,
One! One! was near, a spirit holler still."
Monroe Co., N. Y., 1899.

DEATH OF WASHINGTON IRVING.

This community is shocked to-day at the intelligence of the death of Washington Irving, the most eminent of American writers, and as the telegraph shall flash the sad news to the farthest extreme of our land; as steam shall bear it across the sea and it shall penetrate the whole civilized globe, there will be everywhere a common expression of sorrow, that a true man, a genial writer, an accomplished scholar, has passed away from earth. Mr. Irving died suddenly last evening, at his quiet home at Sunnyside, on the banks of the Hudson, the home where the calm evening of his life has been passed; the point which is at once a centre of American culture and the shrine at which the devotees of literature and of truth reverently paid their vows. Henceforth it will be the Stratford-on-Avon of the Western World. Mr. Irving retired at 10½ o'clock, and was in the act of undressing, when he fell and expired almost immediately. Though the shock of Mr. Irving's death is sudden, the event had not been altogether unexpected. Failing health and advancing age have sadly indicated to his friends that the silver cord was loosening.

Washington Irving was born April 23, 1783, in the city of New York, in William street, between John and Fulton streets, not far from the Old Dutch Church, now occupied by the site of the "Washington stores." The father of Mr. Irving was a native of Scotland; his mother a native of England. At the time of his birth his father had been settled as a merchant in this city some twenty years. After obtaining an ordinary school education, Washington Irving, at the age of sixteen, commenced the study of the law. Three years later, under the signature of "Jonathan Oldstyle," he contributed a series of letters to the Morning Chronicle, a newspaper of which his brother, Peter Irving, was editor. These attracted much notice, were extensively copied, and in 1803 or 1804, were collected and published without the author's sanction. In 1804 he sailed for Bordeaux, on a visit to Europe for his health. In his travels he went to France, Genoa, Sicily, crossing from Palermo to Naples, passing through Italy, meeting Alston at Rome, who advised that he should devote himself to art. After several months stay on the Continent, he went to England and returned to New York in March, 1806, fully restored to health. He then resumed the study of the law, was admitted, but never practised. He took the chief part in "Salmagundi," the first number of which appeared in January, 1807, and the last in January, 1809.

In December, 1809, he published his Knickerbocker's History of New York. In 1810, two of his brothers gave him an interest in a large mercantile concern, in which they were engaged, in Liverpool and New York, with the understanding that he devote himself to his literary pursuits. In 1813 and 1814, during the war with Great Britain, he edited the "Analytic Magazine; and in the Fall of 1814, joined the military staff of Daniel D. Tompkins, Governor of the State of New York, as aid-de-camp and military secretary, with the rank of Colonel. On the close of the war, May, 1815, he embarked for Liverpool with the intention of making a second tour to Europe, but the business reverses which followed the peace, involved the house of his brothers, and after two or three years attention to business, endeavoring to avert the catastrophe, the house failed, involving him in its ruin. In 1818 he commenced papers of the "Sketch Book," which were transmitted piecemeal from London, where he resided, to New York for publication. Three or four numbers were thus published, when finding that they attracted notice in England, they were published in a volume, in February, 1820, by John Miller; Miller failed soon after, and the second volume was published in July, of that year, by Mr. Murray, who purchased the copyright for \$200, but finding the work profitable he presented Mr. Irving with \$200 additional.

After residing five years in England, Mr. Irving removed to Paris, August 1820, remaining till July, 1821, when he returned to England and published "Bracebridge Hall" in London and New York, in May, 1822. He wintered that year in Dresden, returning to Paris in 1823, and to London in May, 1824, when he published his "Tales of a Traveler." In August of that year these were published in New York. In August he returned to Paris, and in the autumn of 1825 visited the South of France, spending part of the winter at Bordeaux. In February, 1826, he went to Madrid, where he remained two years, writing the life of Columbus, which was published in 1828. In the spring of that year he visited Granada and other points mentioned in the "Chronicles of the Conquest of Grenada," by Fray Agapida, making a sketch of this work. He prepared it for the press at Seville, and it appeared in London and New York in 1829. In the spring he again visited Granada, and spent some months in Alhambra, where he collected materials for a work of that name, published in 1832. In July he went to England, having been appointed Secretary of Legation to the American embassy at London, under Mr. McLane. In 1832, upon Mr. McLane's return, he remained a few months as Charge, and resigned on the arrival of Mr. Van Buren. In

1830, Mr. Irving and Mr. Hallam, the historians, each received one of the fifty guinea medals awarded by George IV. for eminence in historical composition.

In 1831 Oxford University conferred the degree of LL. D. upon him, and in 1832 he returned to New York, after an absence of seventeen years. On his return to this city he was greeted with an ovation, at which Chancellor Kent presided; similar testimonials were tendered him from other cities, but he declined them. In the summer of 1832 he visited the West with Mr. Ellsworth, one of the Commissioners for removing the Indian tribes west of the Mississippi. It was during this journey that he collected the material for his "Tour on the Prairies," published in 1835. "Abbotsford and Newstead Abbey," and "Legends of the Conquest of Spain" were also published the same year. In 1836 he published "Astoria," and in 1837 "The Adventures of Captain Bonneville." In 1839 he engaged with the "Knickerbocker Magazine" to furnish monthly articles for two years. In February, 1842, he was appointed Minister to Spain, leaving for Madrid on the 10th of April, 1842. His official duties terminating in 1846, he returned home, and in 1848 commenced the publication of a revision of his works which were then extant.

In 1849, he published "Oliver Goldsmith, a Biography," and in 1849 and 1850 "Mahomet and his Successors." In 1855 "Wolfert's Roost." In the same year he published the first volume of "The life of George Washington," the last volume, the closing work of his life, was published a few weeks since. In reference to this last work Prof. Greene in a recent conversation said:—"It is a most invaluable work to this country, for it gives to the universal mind, for the first time, a living presence of Washington! To the plurality of common readers, hitherto, Washington has been a historical abstraction, hidden in the heavy reading of statistics and State-papers. By Irving they are now made acquainted with him in flesh and blood, as it were, a Washington so pictured that they can admire and revere him with a human sympathy."

Since 1849 Mr. Irving's works have been published by Mr. G. P. Putnam, who has in that time disposed of nearly six hundred thousand volumes. Mr. Irving had four brothers. William Irving, the eldest, was a merchant. He was a member of Congress from 1813 to 1819. He married a sister of Hon. James K. Paulding, and assisted in the composition of "Salmagundi." He died in 1821. Peter, another brother, was editor of the Morning Chronicle, and assisted in the construction of "Knickerbocker's History of New York." He was a physician, and died in 1838. Ebenezer Irving is still living. He has made his home at Sunnyside. He is the father of Rev. Theodore Irving, formerly Professor in Geneva College and in the New York Free Academy. John Treat Irving was Presiding Judge of the New York Common Pleas from 1817 until his death, in 1838. He was also a contributor to the Morning Chronicle. His son, a member of the New York bar, is the author of several popular works.

A few years since Mr. Irving purchased a residence on the banks of the Hudson, about twenty-five miles from this city, and between Irvington and Tarrytown. This quaint old house, so suggestive of the humor of its proprietor, is immortalized in "Wolfert's Roost," and in the story of Ichabod Crane, and is the charming spot so appropriately named "Sunnyside." Here Mr. Irving has resided, his brother and his nieces composing the family, and here it was that he met the death for which, with Christian calmness, he had so long waited, and which had so few terrors for one who had governed his life by the precepts of the Christian faith.—N. Y. Com. Adv., Nov. 29.

SALMAGUNDI.

Try to form a conception of a sixth sense, if you can.

He has the hardest kind of work who has nothing to do.

A man can be ruined only by his own voluntary evils.

Fast men, like fast rivers, are generally very shallow.

Ladies, before marrying, had better destroy all old love-letters.

A pin has as much head as a good many authors, and a great deal more point.

The great chastisement of a knave is not to be known, but to know himself.

Ir virtue is its own reward, there will be persons who will have little enough.

A Mr. ARCHER has been sent to the Ohio Penitentiary for marrying three wives. "Insatiate Archer! could not one suffice?"

True is the most subtle yet the most insatiable of depredators, and by appearing to take nothing is permitted to take all; nor can it be satisfied until it has stolen the world from us, and us from the world.

"WIFE," said a man looking for a bootjack, "I have places where I keep my things, and you ought to know it." "Yes," said she, "I ought to know where you keep your late hours—but I don't."

The duties of the present moment we shall meet as they rise, and these will open a gate into the next, and we shall thus pass on, trustfully and securely, almost never in doubt as to what God calls us to do.—Buehnell.

Love is a flame which burns in heaven, and whose soft reflections radiate to us. Two worlds are opened, two lives given to it. It is by love that we double our being; it is by love that we approach God.—Aime Martin.

Two men, Joseph Sparks and Oscar Flint, were assailed in the suburbs of Baltimore, a few nights ago, by a gang of shoulder-hitters. Flint was knocked down, but his companion escaped by flight. When the scoundrels hit Flint, Sparks flew.

"MANNERS," says Sidney Smith, "are the shadows of virtues; the momentary display of those qualities which our fellow creatures love and respect. If we strive to become, then, what we strive to appear, manners may often be rendered useful guides to the performance of our duties."

Publisher's Notices.

TERMS OF THE RURAL FOR 1860.

REDUCTION OF CLUB RATES!

Single Copy, One Year, - - -	\$2
Three Copies, " " " " " "	\$5
Six " " " " " " " "	\$10
Ten " " " " " " " "	\$15
Fifteen " " " " " " " "	\$21
Twenty " " " " " " " "	\$25

And any additional number at the latter rate—only \$1.25 per copy!—with an extra free copy for every Ten Subscribers over Twenty. Club papers sent to different post-offices, if desired.

As we pre-pay American postage on papers sent abroad, Canada subscribers should add 12½ cts. per copy to above club rates.

Subscriptions can commence with the Volume or any Number. No deviation from our Terms.

EXTRA INDUCEMENTS

TO AGENTS AND ALL WHO FORM CLUBS EARLY.

In addition to the free copies offered according to our Terms, we will give to each of the ONE HUNDRED PERSONS sending the first list of TWENTY or more Yearly Subscribers to the RURAL after this date (remitting payment at our club rate—\$1.25 per copy), a bound volume of the RURAL for either 1858 or 1860, price \$3.—or \$2 in Ag. Books, post-paid.

To each of the ONE HUNDRED PERSONS sending the first list of TEN or FIFTEEN Yearly Subscribers as above, remitting payment according to our terms, we will give either another extra copy of the RURAL, or \$1.50 in Ag. Books, post-paid, or a Gross of the Washington Medalion Pens, post-paid, as preferred.

Still More Liberal!—In addition to any extra Copies or Gratuities to which persons may be entitled from the above offers, we will give an unbound but perfect Copy of the Tenth Volume of the RURAL (for 1859) to EVERY ONE who remits (previous to Christmas Day, 1859,) either \$5 for 3 copies, \$10 for 6, \$15 for 10, \$21 for 15, or \$25 for 20 copies. Finally, in addition to what is above offered, we will give to each of the TWENTY PERSONS remitting payment for the first list of SEVENTY-FIVE or more Yearly Subscribers after this date, a Copy of WEBSTER'S UNABRIDGED DICTIONARY—New Pictorial Edition, containing 1,500 Illustrations.—[Crown Quarto—1,700 pages.]

NOTICE AND REQUEST.

HAVING concluded to mail the Eleventh Volume of the RURAL NEW-YORKER by a new Patent Machine Process, it becomes important to receive a great portion of the list of Subscribers for 1860 at the earliest possible moment. To secure this result,—and also as an inducement for the friends of the RURAL to make early efforts to INCREASE its circulation,—we offer above (and in a circular mailed to Local Club Agents, &c.) some extra inducements for clubbing. The new system of mailing by printing is regarded as a vast improvement in both accuracy and speed, and we trust every Club Agent, or person disposed to act as such, will aid us in successfully inaugurating it by sending in lists as early and fast as convenient. And if our friends generally will renew their subscriptions at an early day, they will greatly facilitate the accomplishment of our object. It will require considerable time, labor and expense to adopt the new system, but when once in operation we think every subscriber will regard the change as a decided manifestation of "Progress and Improvement."

PUBLISHER'S SPECIAL NOTICES.

THE RURAL SHOW-BILL FOR 1860—pronounced a fine specimen of the Typographic Art—is now being printed and will soon be sent (post-paid) to all our agents. We shall be glad to send copies of the bill, specimens, &c., to all persons disposed to aid in circulating the RURAL, for which kind service liberal inducements are offered.

VOLUNTARY AGENTS FOR THE RURAL.—Any and every Subscriber, Post-Master or reader is requested to act as voluntary agent for the RURAL, by forming clubs or otherwise. Now is the time for its friends to manifest their interest in the paper and the cause it advocates, either by obtaining new subscribers, or inducing others to act in its behalf. If any lose or wear out numbers in showing the paper,—that's the best way to get subscribers,—we will duplicate them in order to make their files complete for binding.

ASSOCIATED EFFORT leads to success in canvassing for periodicals, as well as in other enterprises. For instance, if you are forming (or wish to form) a club for the RURAL NEW-YORKER, and cannot fill it up in your own neighborhood, get some person or persons a few miles distant to join with or assist you—adding their names to those you may procure, and sending all together. Please think of this, and act upon the suggestion if convenient.

SPECIMENS FREE.—We always take pleasure in sending specimens free of charge. Reader, if you have any friends, near or distant, that you think would subscribe for the RURAL or act as agents, please give us their addresses and we will send them specimens, &c. No matter how many names—"the more the merrier."

NO TRAVELLING AGENTS are employed by us, as we wish to give the whole field to local agents and those who form clubs. And beside, we wish it distinctly understood that all persons travelling through the country, professing to hold certificates from us, ARE IMPOSTORS.

ANY person who remits pay for a club of 6, 10 or 15 at the specified rates for each club, and adds a sufficient number within one month thereafter, can avail himself of the advantage of the price of large club, and retain the amount overpaid.

THE RURAL is published strictly upon the CASH SYSTEM—copies are never mailed to individual subscribers until paid for, (or ordered by a responsible agent,) and always discontinued when the subscription term expires.

ANY person so disposed can act as local agent for the RURAL, and those who volunteer in the good cause will receive gratuities, and their kindness be appreciated.

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY

BY D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Terms, In Advance.—Two DOLLARS A YEAR—\$1 for six months. For Club Terms, &c., see above.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

THE POSTAGE ON THE RURAL is only 3½ cents per quarter to any part of this State, and 6½ cents to any other State, if paid quarterly in advance at the post-office where received.

As a general rule, the grazing farmers of this State use from one-fourth to one-third of the farm in grain and meadow, and the balance of two-thirds to three-fourths is devoted to keeping his animals through the summer. It is quite evident

that this system of pasturing is wasteful. For it is undeniable that it requires at least one-eighth more to keep an animal in cold than warm weather; and yet they take more than two acres to summer their animals to one to winter them. As to all the *modus operandi* of soiling, a detail of them is not within the limits of one article.

In your paper of the 19th ult., I find an article on the "Value of Straw for Fodder," in which you refer to some remarks I made upon this subject at the State Fair discussion. I am glad that the papers have begun to call attention to this subject, and mention it here as it naturally belongs to soiling. Millions of dollars are wasted every year for want of a proper knowledge of the value of straw. It is hardly extravagant to say, that one-half of all the horses, cattle and sheep kept in the State of New York might be wintered upon the straw raised, with proper cutting and steaming. There were in this State at the last census, (1850,) 1,877,639 cattle, 447,014 horses, 3,453,241 sheep. Now, if the straw would winter this number of animals, it would keep half of them through the year. We will suppose that the keeping of each one of the cattle would represent \$15, each horse \$20, and each sheep \$2. This would give a total gain from straw, per year, in this State, of \$11,002,826. And we will suppose that from straw as now used, one-fifth of that sum is realized. This would leave a balance, in favor of cutting and steaming, of \$8,802,280. In this estimate I make the straw take the place of hay merely. Working animals must have grain. Are not these figures worth looking at? I have found, that by selling all the hay which it would take to winter my stock, and taking one-fourth of the avails and purchasing meal to dust upon the straw before steaming, that my stock were better wintered than if fed upon the hay, and I had thus turned my straw into three-fourths of the avails of my hay. And the manure from the straw is worth more for immediate use than if the straw had been thrown into the yard for litter.

It would take about thirty tons of hay to winter my stock this year. Three-fourths of this is twenty-two and one-half tons; this is worth in the barn \$18 per ton, or \$405. I will suppose that the extra labor of cutting and steaming costs me \$50, (and with my facilities it does not exceed that sum.) Here is a net gain of \$355. This gain is larger this year than if hay were cheap, but the saving is in the same proportion. I have practiced upon this method for three years; and experimented quite extensively to determine upon some formula which would show the relative value of straw to hay. I first used two quarts of Indian meal per bushel of straw, and fed cattle upon this and hay, side by side. The straw and meal fattened the animals, while the hay did not. Further experiment satisfied me that a bushel of straw, with from one to one and a half pints of Indian meal dusted upon it and well steamed, was equal to the best Timothy hay. This may appear extravagant, but let not a matter of this importance be condemned without a trial. It will stand the test. But in the allowance of one quarter of the value of the hay which it would take to winter a stock, for purchasing meal or bran to be used with the straw, much more than 1½ pints may be used. One thing is evident; straw is worth saving and using with more care and economy. And it is with a view of exciting the attention of farmers to their own interests in this regard, that I write this article. I trust that it may fall into the hands of some who are not afraid to step out of the beaten track of their fathers. Farmers are behind, in intelligent calculations of means to ends, almost every other class of industry. But from the improvements made in the last twenty years we have reason to hope that a better future is before us.

E. W. STEWART.
Glen Erie, near North Evans, Erie Co., N. Y.

LESSONS OF THE SEASON.

The experience of each succeeding year furnishes many lessons by which the observing farmer may profit. The end of the season, and of the year, is an appropriate time to review the experience and observations of the past, with a view of profiting by their teachings.

A prominent lesson of this kind, and one that brings itself home to the attention of farmers at this time, more particularly, is the damage on corn and potatoes in consequence of not having been harvested in season. But few potatoes were dug in this vicinity before the cold, freezing weather in the latter part of October. The consequence was that many were frozen in the ground; so that probably while there was not a single piece that escaped without losing more than enough, at a low price per bushel, to have paid for digging, in many fields, such as Mercers, and other kinds that lie near the top of the ground, were from a quarter to half frozen. Besides, the cold bad weather, and the presence of so many frozen potatoes, made digging, sorting and taking care of the crop a much more laborious, difficult and disagreeable operation than it would have been if attended to early in the season.

So too in relation to corn. On the first of November nearly all the corn in this section was still in the field. At a time when farmers should be finishing up their corn harvest, a large portion of them were just beginning their husking—while now (Dec. 6,) there are many acres of corn out in the snow. The consequence is that the grain and fodder are both more or less damaged, and the loss will amount to much more than enough to have paid for doing the work in season.

One reason why farmers let their work run along so late in the fall is, that some seasons, say once in four or five years, we have a warm, dry November, when crops can be gathered with little trouble or damage. But such seasons are the exception and not the rule, consequently, as a general thing, it will not do to depend on them. Another, and the principal reason is, the reluctance of farmers to employ sufficient help to secure their crops in good season, and in the best manner, without damage. But few farmers seem to be aware of the loss they sustain by not having their work done in good season, and in the best manner.

This brings us to another lesson of the season,

which is, that farmers, as a general thing, do not employ sufficient force to do the work on their farms to good advantage. The remark is often heard, that this or that crop has not been attended to as it ought to have been for want of time; or, that this or that job had been neglected for want of help; when probably the cost of sufficient help to attend to the crop, or to do the job, would have been less than half the loss or damage caused by their neglect.

Another way in which farmers often miss it, is in undertaking jobs of work that might be done much better and cheaper by mechanics. This was forcibly illustrated a few years ago in the case of a farmer with whom the writer was well acquainted. This farmer was asked how his corn crop came in; he answered that it was poor, not over two-thirds of a crop—that he had not done any thing in his corn after he planted it, so the weeds and grass had got the start of the crop. He said that when he ought to have been to work in his corn, he raised up and new shilled his barn, and put on new siding—that he and his hired man had done it alone, without employing a carpenter a single day—but that it took him longer than he expected; so that, instead of having any time to work in his corn, it was late before he could begin haying. Now, as this may be considered as a representative case, it may be well to look a little into the economy of the operation. First, an average crop of corn may be put down at \$25 an acre, one-third of which would be over \$8. Second, the cost of a carpenter to do the job could not have been more and probably would have been less than \$25—which, with \$10 for labor to make up for the time spent by the owner in assisting the carpenter, would make \$35—so that the actual loss by this operation, which was intended to be saving, was nearly \$50. It should have been stated that there was ten acres of corn and that the estimated loss on the whole was over \$500.

There are many other ways in which farmers lose more or less by not hiring sufficient help, which we have not room for in this article, some of which may be brought to mind by reading these crude remarks. Perhaps some other lessons of the season may be considered in another paper.

Orleans Co., N. Y., 1850.

CROPS, &c., IN FOND DU LAC, WISCONSIN.

EDS. RURAL NEW-YORKER:—I thought a few lines might not come amiss to my fellow Young Ruralists, relating to our crops, prospects, and experiments this year in Fond du Lac. This portion of the county was settled by New York people (principally from Dutchess Co.) about the year 1846, but as the greater portion were quite poor, financially, our progress was pretty slow until within the last five or six years; but they are now getting somewhat forehanded. Our soil is of the first quality of wheat land; heavy limestone clay. But, as HORACE GRELEY says, they don't think that they own to the centre of the earth, and consequently many only plow to the small depth of three or four inches, and are anxious to obtain a broader breadth of land, which is but poor policy in my way of thinking. Face of our country, rolling—not hilly or mountainous, but gently undulating. Wet seasons do not impede our farm work as much as on the low, wet prairies. Plenty of limestone for building purposes, &c., and occasionally a hard-head, a regular "down easter" in form and color, but far ahead in weight according to size. Our timber is oak, white, black, red, pin, burr. The county is divided into three classes of land—timber, prairie, and openings. We belong to the latter species. We have no huge rocks, soft water, speckled trout, chestnuts, black walnuts, buckberries, black-snakes, rattlesnakes, and other such trifles of small value to contend with. We are generally pretty sure of a good crop of spring wheat—(failed last year on account of rust)—average this season about twenty-one bushels per acre; some as high as forty and fifty. The farmer's prospects are brightening considerably, as we obtain fair prices for our surplus grain, which is no small amount. We tried the experiment, to our satisfaction, this season of brining, liming, and vitrioling our seed wheat before sowing. We brined it to get out the oats and light grains of wheat and smut, and limed it to dry it, in order to sow and to promote its growth, and vitriol to kill the vitality of the smut that would stick to the sound grains. The result was, not a particle of smut among that which was brined, &c., but lacking a couple of bushels of seed, left a land through the middle of the lot, took the seed out of the same bin, unlimed, &c., and sowed it. Result, one-third smut, and it proved nearly the same with our neighbors who neglected or failed to prepare their seed in the above way. We are busy hauling muck from the marsh, as an experiment on grass land. Gave it an imperfect trial last spring, but withal proved highly beneficial to our stiff, heavy clay lands.

Fond du Lac, Wis., 1850. OSCAR BERRY.

SAVING FODDER.

HINTS FOR A SEASON OF SCARCITY.

IRREGULAR and excessive feeding of animals is not as good, and will not result as favorably as feeding a less amount so frequently that the animal never gets very hungry. We believe an animal fed more at one time than it should or will readily eat, wastes not only what it leaves, but frequently by over-eating. However careless and slothful we may be in seasons of plenty, such winters as this should call for care and economy.

The philosophy we wish to inculcate in regard to fodder-saving is this:—That frequent feeding will save, to a considerable extent, the quantity generally given. We have seen this demonstrated, but usually by parties who know little of the secret of their own success, and cared less for imparting it, and they are such as we are slow to follow the practice of. A small amount of food satisfies hunger—much less than we think for. If a man were to eat twelve crackers in the morning, he would be hungry at noon—while, by eating a cracker every hour, he will be comfortably free from the gnawings of appetite, if not laboring, for a whole day. The stomach is not emphatic in its

demands so long as food remains in it. So, if we wish to save fodder, we should feed often, sparingly. Especially should coarse fodder be given frequently, and little at a time, when all will be eaten; whereas, if we give liberally, it is picked over, and appetite becoming satisfied by the time the poorest is reached, it is refused and wasted.

We saw an evidence of this in the practice of a poor widow whom necessity compelled to the closest economy. She wintered for several winters two cows on the smallest possible allowance of hay, and they uniformly came out in fair condition. She fed them regularly a little, some half dozen times daily, and none was wasted. A few miles from her lived a farmer keeping a fine stock of young cattle whose practice was a by-word and reproach in the neighborhood. We often heard it said that Old M. took a whole foddering of hay for twenty steers under his arm at once. However this may be, we became intimately acquainted with his practice and its results, and found his stock as well or better cared for than his neighbors, but in a very different manner—none was wasted—not any—and we doubt not his saving each winter amply paid him for the extra care he took in foddering. His cattle were certainly in better condition than those whose yards were littered with the refused remnants of frequent feeding.

This rule is good not only in saving fodder but also in producing rapid growth. PATER KNODA, of Hornby, N. Y., produced two 400-pound net hogs, killed when about ten months old, four successive years. They were fed five or six times daily. He also found the same success in growing calves—producing them fully equaling those that had run with the cow.

We suggest making a virtue of necessity at the present time, by using extra economy and prudence in feeding this winter. NOR A. TURNER.
Monterey, N. Y., 1850.

ENDURANCE OF DROUTH BY SANDY SOILS.

EDS. RURAL NEW-YORKER:—Will you, or some of your correspondents, give the reason why a gravel and sandy soil will bear drouth better than clay or other stiff soil, and oblige—A RURAL SUBSCRIBER, Seneca, N. Y., 1850.

OUR correspondent takes for granted that a sandy soil will bear drouth better than a stiff soil. In this, we have no doubt, he is correct, in the main, though many would be found to demur, and some think it would not be difficult to find authority in the books against this position. We cannot give the reason for which our correspondent asks in a few brief lines, but will endeavor to be as plain and brief as possible.

A sandy soil will hold only about half as much water as a clay soil. If one hundred pounds of clay loam be dried thoroughly, and water is poured upon it, it will absorb from fifty to sixty pounds, according to the proportion of clay, before it begins to drop. One hundred pounds of sandy soil, dried in the same manner, will only absorb from twenty-five to thirty pounds. This shows very plainly that during rains much more water is held by a clay than sandy soil, subject to the demands of growing crops. From this fact it is very natural to argue that, in a dry time, vegetation would suffer most in sandy ground. It is this power of holding water that makes clay colder than sandy soils, as a greater quantity of heat is expended in changing the water into vapor.

Soils absorb moisture from the atmosphere, and it has been found by experiment that a heavy soil absorbs much more than a light one, other things being equal. The moisture in the atmosphere is condensed by any cold substance, as a pitcher containing cold water, or by the surface of the ground, or growing plants, in the form of dew. The cold, clay soil, will therefore condense much more than a warm sandy soil. This would also seem to imply that heavy soils are the most favorable in a drouth. And yet facts do not appear to justify such conclusions. We have closely watched the effects of excessive drouth and its opposite on different soils, the past four seasons. The summer of 1854 and '55 were extremely dry, so that crops suffered in most localities. Nowhere did we see such fine crops, especially of corn and potatoes, during these dry seasons, as on the light lands, and so little apparent injury from drouth. Heavy soils we found, in many cases in 1856, to be dry as powder ten or twelve inches below the surface, while on the sandy soil the ground would be quite moist three or four inches down. On heavy soils the injury from drouth was far more serious. The farmers on the light lands in this section say, give us good, hot, dry summers.

Now, let us look at the philosophy of this a little. Heavy soils have great power of absorbing and retaining water, yet they are adhesive and impenetrable, and a great portion of the water falling upon them runs off the surface, by surface drains, into creeks and rivers, while in the sandy soil it passes rapidly through to the subsoil, where it is held, if the under soil is at all retentive in its nature. A heavy soil, under ordinary culture, is never finely pulverized a sufficient depth, so that in a dry time it is almost impossible for the moisture to be drawn from below by capillary attraction, while in the light lands everything is favorable to the process. The light soil is also more open to the effects of the atmosphere which can permeate through it, leaving a portion of its moisture, as it would of course do, in coming in contact with the colder earth. Although more dew is condensed on the surface of clay soils, we think the effect is not as beneficial as the less quantity on the lighter, as from its impenetrability the moisture may remain on the surface to be dissipated by the first rays of the morning sun.

THE YOUNG LADIES who know the RURAL appreciate it, and usually when they become wives, or move into a new country, continue its acquaintance and also introduce it to others. Miss M. H. B., of Shelby Co., Ill., writes us:—"As there appears to be none of your papers taken here, I think I can get up a club, and as I like your RURAL I wish to do all I can to get it circulated. Please send me a few copies to distribute, for they will recommend themselves better than I can recommend them." We are frequently indebted to ladies for lists of subscribers from all parts of the country—the best evidence of their appreciation of the RURAL.

Agricultural Miscellany.

TO CORRESPONDENTS.—As this volume of the RURAL is near its close, we are constrained to offer an expression of thanks to the hundreds of persons who have favored us with articles during the past year. Our thanks are due and tendered to all who have in any manner contributed to the value and interest of these pages. We hope to continue the acquaintance of many who have imparted freely the results of their observation and experience for the benefit of the large number who seek the pages of the RURAL for advice and information. With such aid as we have had from contributors and correspondents, the volume will comprise a vast amount of practical and scientific information on a great variety of subjects. But, much as we have given, we have received far more than we could publish, and now find scores of excellent articles, necessarily deferred from time to time, or awaiting insertion at the proper season, while others must be omitted altogether. Many of these were received just too late for publication at the proper time, others were deferred for want of space, while not a few were inadmissible because the subject had been discussed before their reception. Our aim has been to give the most timely and useful articles from week to week, yet as most of the matter of each number is put in type from a week to ten days in advance of date, we have frequently received capital articles a few days too late—while, in many instances, we have been favored with several articles, of similar import, on the same subject, and of course the publication of all would be superfluous. On looking over the hosts of communications, on all sorts of subjects, still on hand, we can only regret that the RURAL is so small, and that many of them can never be published. Among them we find some inquiries still unanswered; though we have endeavored to keep "up to time" in this important department, it has been impossible. This explanation is due correspondents, and we are sure that, if those whose articles have not appeared, or whose inquiries yet await attention, could only know how faithfully we have labored, they would acquit us most cheerfully. As to anonymous articles and inquiries, we do not consider ourselves under any obligation to give them the least attention; hence they are not reckoned in this account.

—During the year we have probably written hundreds of letters in answer to inquiries, yet could not attend to all who asked such attention—for want of time or proper information.

SMALL FARMS IN WESTERN NEW YORK.—In a notice two or three weeks ago, we spoke of the demand for small farms, well located, in this section of the Union, and quoted from two recent letters of inquiry. The object of this paragraph is to say that—if the letters received during the past two weeks are reliable—there are quite a number of very excellent farms for sale in various desirable localities of Western New York. Indeed, we believe we could now suit the most fastidious applicant, and have excellent material for opening an agency for the sale of tip-top, well-located farms. But such is not our desire; and our principal object, now, is to say to those who have written us relative to the inquiry of the gentleman whose address was not given, that their letters will be forwarded to him during the present week (at our expense), and that those who wish to communicate with the other inquirer should address him direct. We cannot undertake to publish what has been sent us, as that would vastly exceed our ideas of the limits of propriety in the way of free advertising. As we cannot consistently answer all, we will allude to none particularly. Those who wish to advertise can do so, but we solicit nothing in that line.

—Since the above was written we have received several advertisements of farms.

ADVERTISING IN THE RURAL NEW-YORKER.—We are in frequent receipt of letters speaking of the advantages of advertising in the RURAL, but rarely allude to or quote from them for the reason that we have no occasion to solicit patronage in that line. A letter just received from Messrs. HEDGECOCK, FREE, & CO., of Cincinnati, says:—"We meet with such prompt and gratifying responses through your journal that we are induced to try our Farm Bells. Yours is one of the papers in which we are sure to have a liberal return, especially when advertisements are of a character to prove interesting to the better class of farmers." Yes, "the better class of farmers" and horticulturalists, as well as thousands of the better class of business and professional men in villages and cities, take and read the RURAL NEW-YORKER.

COTTON IN ILLINOIS.—According to the *Prairie Farmer*, Illinois is getting to be a cotton State. The editor remarks:—"McLean county grows. The Illinois Central Railroad are doing a heavy freighting business with it, and now old Sangamon asserts her belief in cotton." A Springfield paper (*The Independent*) says:—"Mr. ALLEN, the Jailer of this county, received a cotton seed from Washington last spring, which he planted, and from the stock grown raised four very large and fully developed bolls of cotton! The boll presented to us has four very long lobes, which, when blown out, form a circumference of about six inches. Indeed, we never saw a finer boll grown of Edisto or Sea Island. This result justifies our opinion as to the process of acclimation. The seed came from as far north as Washington, was planted here in the middle of May, and yet matured before the average season of frost."

HOW TO FILE THE RURAL.—Those of our subscribers who wish to file the RURAL easily, and keep it for convenient reference, before binding, are advised that H. H. PALMER, of Worcester, Mass., is the patentee and manufacturer of a capital *Portfolio Paper File*. It is just the thing for those who wish to preserve the RURAL in good shape and safety. We have had one in use for several months, for our office file, and find it a great convenience. The manufacturer furnishes all sizes, from octavo to the largest folio. For sale by booksellers by ADAMS & DABNEY, and, we presume, by booksellers in the principal cities and villages throughout the country.

AGRICULTURAL DEPARTMENT OF THE PATENT-OFFICE.—The *Prairie Farmer* says CHAS. B. CALVERT, President of the Maryland State Agricultural Society, has been appointed Chief Clerk of the Agricultural Department of the Patent-Office. We know not but that this statement is correct, we had supposed, however, that the agricultural clerkship was to be abandoned for the present.

CORN HUSKING.—We learn from E. N. THOMAS, Esq., of Rose, N. Y., that MR. ALMON HARRIS, of that town, lately husked 60½ bushels of corn from the stock, and bound and set up the stalks, in 8 hours. There are various prices paid for husking—from 8 to 4 cts. per bushel.

TO WATER DOOR-YARD FOWLS, fill a bottle with water and place it bottom up through a hole in a board, so that its neck shall be inserted into a saucer, or any shallow, open vessel. As the ducks exhaust the water from the shallow vessel, the bottle will pay out new supplies. So saith the Tribune.

THE RURAL NEW-YORKER FOR 1850.

It affords us great pleasure to announce to its earnest and influential friends all over the land, that the RURAL NEW-YORKER never closed a year and volume under more favorable auspices than the present is terminating—and that we never had such substantial encouragement for the future. This, we are confident, must prove most gratifying to the ardent friends and supporters of the RURAL and its objects, for they will naturally rejoice in the success and prospects of a journal whose usefulness and vitality depend, in a great degree, upon the prosperity and progress of the Rural Population. In the future as in the past, our aim will be to appreciate and merit the large measure of confidence and support accorded to this journal, by rendering it "an eminently Reliable Guide on all the Important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates."

—Within the past week we have received many very complimentary and encouraging letters from near and distant parts of the Union and the Canadas, Nova Scotia and New Brunswick—from the East, the South, the West, and the North—letters assuring us that the RURAL is a welcome and highly prized visitor in homes thousands of miles separated, and with people in varied climates, living under different governments, and holding antagonistic religious and political tenets. We might fill a page with extracts from these friendly and most appreciative epistles, but will only quote from a few, as indicative of the general sentiments expressed.

In a recent letter, asking for specimens, show-bill, &c., a former subscriber writes—"I stopped the RURAL last Dec., and subscribed for the *Ledger*. I am disgusted with that paper, and can't do without the RURAL hereafter. I have resolved not only to subscribe again, but to get as many of my neighbors to join me in taking the RURAL as I can induce to do a good thing."

Unknown date of "Nashville, Tenn., Dec. 7," a gentleman to whom we recently forwarded a quarter's numbers of the RURAL, writes:—"Your specimen copies came duly to hand, and to say that I am highly pleased would but ill express my admiration of your paper. I will subscribe for the next volume, and hope to have the pleasure of sending you other names also. It is the best paper, taken in every sense, I have ever seen."

The *People's Paper*.—One of our best correspondents—a lady of Cayuga Co., N. Y.—says in a letter just received—"I wish you could hear the praises of the RURAL as sung in this part of the country. Ask people what they think of it, and the answer always is, 'It is the best Agricultural paper published.' And what is the reason? Simply this: It has something about everything. There is nothing you wish to know but may be found in it; and if you have a question to ask, you do not receive for an answer that 'no more correspondence or inquiries are desired.' It is the *People's Paper*, and long may it flourish, as now, in this our 'Empire State.'"

The RURAL in the West.—In most of the Western States and Territories the RURAL has a large and increasing circulation. Hundreds of New-Yorkers who have settled in the West of late years have introduced the paper to notice and support among their new friends and neighbors—and in this way the RURAL has become known and loved by thousands of families throughout the rich valleys and prairies of the truly great and growing West. As a sample of letters recently received from some of these long-time and ardent friends, we copy the following from a correspondent and influential voluntary agent in Illinois:

EDWARD MOORE:—Twelve years ago while you were settling the *Genesee Farmer*, I became one of your readers and a learner from you. Since that time I have for ten years been the weekly recipient of your labor and thought. Twelve years ago I was a boy—I got 40 subscribers for the *Genesee Farmer* one year, before I was 20 years of age. Eight years ago I commenced for you. I felt to do what I did, and did what I felt, and I have worked ever since. I have got you subscribers in N. York, Ohio, Michigan, Indiana, Wisconsin and Iowa. I am glad. I feel that the RURAL is such an Educator as the people, the agricultural population of our country, needs. They need a paper to teach them or impart taste in regard to reading; they generally read little—are tired, and should read what they ought to think. Such reading you furnish. A farmer asked me yesterday, 'I guess I will not take the RURAL, I have taken the *Ledger* a couple of years and can tell when I begin a piece just about what it will amount to—there is such a sameness.' Their cheapness throws thousands of copies of the 'Dollar Paper' and 'Dollar Times' into the very families where they ought not to go—families where but one paper is taken, and they have neither judgment or discrimination in regard to the paper they should have. For this reason I have wished the RURAL could be furnished for one dollar a year to be even with them;—but the same reasons, followed out, would lead to wishing it was published for nothing and circulated gratis; and, by the way, what would it cost to send it for nothing?"

"RURAL" Progress in Canada.—We are daily receiving the most gratifying indications of large accessions to our subscription list in Canada. In several places the names already received for next volume are double those now on our books. A letter just received from an active and earnest friend of the RURAL residing in a prominent town of Canada West, reports decided progress. As the result of two days canvassing he reports the signatures of recently subscribers—including 17 who never took the RURAL, and 14 who were formerly subscribers but felt "too poor" last fall to invest for 1850. Our friend adds:

"It is quite amusing to me, and I doubt not would be equally gratifying and perhaps flattering to you, to hear me opine, all uniform in sentiment but various in form and humor, concerning the RURAL. I say flattering, because it might well be so to hear your name, as I have heard it within the last week, used in connection with the greatest in modern times among the literary and scientific benefactors of the world. One says, 'I want to too poor to take the RURAL for 1850, say—I want it, but I believe there is not a man in Canada too poor to take it (if he or his children can read, and none so wealthy or intelligent that they can afford to do without it). Another says—'Of course I will renew; one reciple alone it has been worth \$50 to me.' Another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I will try to economize in some other shape, and besides that I want it to keep peace in the family, for they have kept me in a sweat ever since I dropped it last year.' Another 'would not do without it for \$10.' Another, the best investment I ever made, and another says, 'I have not time for the RURAL for 1850, say—I

HORTICULTURAL.

LAST WORDS FOR 1859.

One more number completes the present volume of the *RURAL*, but, horticulturally, it is finished with the present number, for the complete and carefully prepared index, title page, &c., so valuable to those who preserve their papers and bind them for future reference and reading, will prevent us from occupying any space in the closing paper of the year. We have not, however, left much to be said at the end of the year, preferring to do up our work promptly, and as well as we are able, every week. Of the manner in which this has been done, we leave our readers to judge, simply claiming an honest intention to serve our readers, to advance the interests of horticulture, to spread and increase knowledge and taste, the love of the beautiful and the true. In this delightful work we hope ever to labor, until our country houses shall truly become rural homes, until the lily shall spring up where once grew the thorn and the briar; waste hearts as well as waste places be made glad, and the deserts blossom as the rose.—We have endeavored to make all our teaching as plain and practical as possible, avoiding all scientific and technical terms, where not absolutely necessary. We have tried to convey valuable information in a manner that could not be misunderstood. We have labored to teach the learner facts and modes of culture—important principles—essential to success, and have ever avoided nice points more curious than useful. No journal has labored more zealously or more honestly in the field of Horticultural Literature the past year than the *RURAL*. Occasionally some of our remarks may have been thought severe, but we think not more so than necessary to expose and check fraud and deception, and save our readers from becoming the dupes of the dishonest and designing, or the self-deceived. Truly can we say we have set down naught in malice, for we have no private interest to serve—the good of our readers is our only object and aim.

The past, however, is before our readers. For the future we have only to say that we shall be unceasing in our efforts to make this Department of the *RURAL* equal, if not superior to anything in the country as the *Amateur's Guide* and the *Horticulturist's Assistant*. With our immense circulation, WEEKLY, we are doing a work for the Horticulture of the Country, unequalled by any other journal; and, we think, therefore, we have a claim upon the kind offices of all lovers of Fruits and Flowers, and with confidence call upon all disciples of FLORA and POMONA to aid us in extending the circulation and influence of a work so well calculated for good, as it is at once a HAND-BOOK for the FARM, the GARDEN, the ORCHARD, and the KITCHEN; a COMPANION for the FIRE-SIDE and the PARLOR.—Hoping to continue the pleasant acquaintance formed with our readers, we shall enter upon the New Year with fresh zeal, and talk more fluently than ever of foliage, fruits and flowers.

PRUNING AND TRAINING THE VINE—No. II.

Messrs. Editors:—I am constantly receiving so many letters making inquiries as to the different modes of cultivating and pruning the Vine, that satisfactory answers to each is altogether out of the question, even should I devote all my time to this work. If, therefore, you will, in addition to what was published in the *RURAL* of the 8d instant, allow me a brief space to explain the *Ohio*, or *bow* system, the facts presented I have no doubt will be useful to your many thousands of readers, and particularly so to that large and rapidly increasing class of the community who are turning their attention to the culture of the grape.

For training vines in the vineyards around Cincinnati, a system has been in practice for many years, with no very essential modification, and is now, by managers of good judgment and most extensive experience, thought to be judicious and particularly suited to the growth of Catawba vines. But a common opinion prevails, that more room than has generally been allowed, will be very advantageous to the health of the vines, and also to the quality of the vintage. I shall recur to this after explaining the system. It is generally known as the "Ohio German System," or "bow system."

After one good shoot has been obtained, two shoots are grown, as shown in Fig. 1. An oblique line across above the eighth bud shows where one of the two shoots is to be pruned to furnish the "bow." If the vine is very strong, a bow of greater length may be taken; if weak, less. An oblique line near the base of the left hand shoot shows the cut to make the "spur" or "point."

On this spur three buds are usually left after the vine has become fully established; but the first season, as shown in figure, it should have only two.

Fig. 2 shows the same vine after pruning, and the long cane standing which is to form the bow, and also the same forming the spur. On the left is seen the spur, and three lines from x, pointing to three buds on the spur, that are to make three upright shoots. These upright shoots will each bear three bunches. This is shown at Fig. 3. At the time of pruning, the bow is entirely cut away, and also one of the three shoots, and that generally the weakest. The strongest is cut above the eighth or tenth bud for the bow, as the case may be, and the remaining one above the third bud for the spur, which proceed as before and reproduce Fig. 1, for this is the system in full operation.

The upright shoots are suffered to grow to the height of the stake, and are then carried horizontally to the next stake. For distinctness the upright shoots are shown in engraving with only one tie, but several are required as the vine grows during the season.

This system appears to be faulty, chiefly in not giving any support to the shoots that spring from the bow, leaving them liable to damage by the wind, and not effecting equal distribution of leaves or fruit, both of which fall together in irregular masses, and the fruit is often deprived of its bloom, which impairs its beauty and flavor.

Besides picking out the laterals, as before directed, shoots that grow from the bow must be stopped, and the general practice is to leave but three leaves beyond the last bunch of fruit. If the vine is very vigorous after the first stopping, it will again shoot with great strength, and must again be stopped, and even a third time, always at one leaf beyond the previous stopping. No stopping is generally required after the last of August.

It has been thought, and I believe justly, that the single bow system imposes too much restraint upon such thrifty growers as the Catawba. This may be easily obviated by growing the vines on a trellis, for which plan a German method is shown by fig. 4, and it amounts to pretty nearly the same as the double Thomey system. For the double bow system, see representation, fig. 6. One year more of time is required to bring the vine into full system than by the single bow plan, but little or no delay in fruiting, for the upright shoots will have a considerable crop the year before the bows are made.

To prepare for this method, see fig. 1. Instead of leaving one long shoot for a cane from which to make a bow, cut both sides at two buds, as seen on the left, and from these grow two shoots on each side, and at pruning next season cut off each pair one to three buds for the spur from which to grow three upright shoots, and one to eight or ten buds to form the bow. At F and F is shown where the bows are to be cut away at pruning, and from each of the three upright shoots one is to be entirely cut away; one cut and three eyes for a spur, and one to eight or ten buds for the bow.

Across, in the line O, and attached to the upright stakes, may be placed a rod to which the ends of the bearing shoots may be secured, which will be of great advantage to the fruit and vine.

Figure 4.

Fig. 4, scarcely needs explanation to one who has become acquainted with the Thomey plan. Two bearing shoots are taken from near the arms, and as soon as long enough they are secured to the wire above, and the upper shoots for the lower system are fastened at the upper ends to the wire that supports the arms of the upper system. This plan is a very good one, and equal to any double system for simplicity. At fig. 5 is shown a plan which is admirable for its simplicity, but seriously objectionable—too much perpendicular length of each standard covered with bearing wood. Five courses of bearing shoots spring from each side of four sub-standards, one of which is shown with its three bunches on second wire. The objection to this is, that the tendency of strength upward is so great that the lower bearing shoots will, soon after the upper ones begin to bear, cease to ripen their wood, and consequently the lower portions of them will become naked. That objection is obviated in plan shown, fig. 4. A great variety of renewal

systems have from time to time been proposed, but generally not by practical men. The systems recommended have all been tested by long experience.

CHAS. W. GRANT.

Iona, near Peekskill, N. Y., Dec., 1859.

REMARKS.—Our readers will receive much instruction as well as pleasure from studying the different systems of pruning and training the vine, but the wire trellis plan is the simplest and best every way.

Inquiries and Answers.

WITHERED PEACHES.—I have a large orchard of peach trees, and last season, some of the fruit, on a portion of the trees, dried up before ripe, and are now sticking on the trees. Can you inform me the reason? The soil is a rich sandy loam.—O. C. COOLEY, Manchester, Adams Co., O., 1859.

THE TREES WERE undoubtedly diseased, or weakened from some cause, and therefore unable to perfect the fruit. When a tree is not too badly affected, the fruit will prematurely ripen, but in severe cases, the growth is stopped, and the fruit withers and dies. Perhaps, by examining your trees, you will be able to ascertain the cause, and, if controllable, apply a remedy, otherwise they may fall the fruit.

GRAPES FOR A COLD HOUSE.—Will some of your contributors inform me what grapes are best adapted to a cold graper, and also what age the vines ought to be when transplanted in such a house?—T. HARRIS, Kalamazoo, Mich., Dec., 1859.

Good strong plants one year old are the best, and can be procured at most of the nurseries. The following varieties are desirable:—Wilmot's Black Hamburg, Grizzly Frontignan, Pimston White Cluster, Sweetwater, Zinfandel, Royal Muscadine, Black Prince, Syrian, Black Hamburg, Black Frontignan, White Frontignan, Deacons Superb.

A common coal stove is of great advantage in a cold vinery in our cold and changeable climate, and is little trouble and little expense. We frequently find in Spring after the vines have started their growth, that we are liable to have a succession of cold, stormy days, sometimes lasting nearly a week, which affects the vines, and sometimes proves detrimental, unless some counter agent is employed to exclude the cold and damp. The same also is the case in the Fall. It may not be necessary to kindle a fire more than two or three times during the whole season. In the autumn, too, a little fire is of great advantage in keeping the grapes, as in cold, damp weather they will rot quickly after becoming ripe, unless a little heat is given to dry them off. We do not say that a stove is necessary, but we do say that its use is very convenient, and profitable. By the aid of the stove, the following varieties may be ripened in addition to the list above: Bowood Muscat, new, Golden Hamburg, Cannon Hall Muscat, Muscat of Alexandria, West's St. Peters.

FRUIT GROWERS' SOCIETY OF WESTERN NEW YORK.—The Annual Meeting of the Fruit Growers' Society of Western New York will be held at the Court House, Rochester, on Wednesday, the 4th day of January, at 10 o'clock in the forenoon. The officers for the coming year will be elected, and questions of interest to the Fruit Growers of the country discussed. A show of winter fruit will also be made, and members are requested to bring specimens for exhibition. These winter meetings are both interesting and profitable, and are well attended by the most intelligent Fruit Growers in this section of the State.

FRUIT GROWERS' ASSOCIATION OF OREGON.—The last number of the *Oregon Farmer* gives an account of the Second Annual Meeting of the Oregon Fruit Growers' Association, which was held at Salem, October 5th and 6th. The *Farmer* says the display of fruit was universally conceded to be very fine and very extensive, though neither the attendance or display was as large as it would have been, but for the great rush to get off the large crop of fall fruit.

THE HORTICULTURIST.—The December number of the *Horticulturist* contains a card from Jno. Jay Smith, stating that his connection with that journal as its editor had ceased. The publisher, in noticing the fact, speaks of the advance in Horticulture since the commencement of the *Horticulturist*, the valuable contributions it is still to receive from the "active minds of the country," &c., but says not one word about a new editor, so we judge it is not to have one.

KEOKUK (IOWA) HORTICULTURAL SOCIETY.—Such a Society has been organized in that city, and officers elected to serve until the first annual meeting, to be held the first Thursday in February, 1860. The following are the officers elected November 17th:—President—A. BRIDGEMAN. Vice-President—W. W. BELKNAP. Secretary—J. L. TEWKSBURY. Treasurer—S. A. DUKE. Another meeting is to be held on the 8th of December next, at 2 o'clock P. M.

THE PINNEO, OR BOSTON PEAR.

Quite a controversy is going on in some of the Eastern papers in regard to the Pinneo, or Boston Pear. This pear, it appears, originated in Eastern Connecticut about a hundred years ago, on the farm of Deacon Pinneo, and was somewhat extensively cultivated in that State. More or less of the fruit for many years has been sent to the Boston market by the Connecticut growers. In 1847 Dr. Russell described it in the *Albany Cultivator*, as the Pinneo, the name by which it is generally known in the section where most grown. Mr. Hovey says he first saw it in Boston about twenty years ago, where it was being sold as the Virgalicio, and in 1847 procured scions from Connecticut, propagated trees, exhibited the fruit, and named it the Boston pear. It seems that Mr. Hovey gave no information as to its origin, although he must have learned the facts when procuring scions, but exhibited it at the shows of the Massachusetts Horticultural Society as "a new native pear," and in 1850 received for it a premium of \$6. In 1854 a gratuity of \$80 was awarded "to Hovey & Co., for their new native pear," though from a report of a committee afterwards appointed to examine into the justice and regularity of this award, it seems that it was done by a minority of the committee, and at the urgent solicitation of interested parties, and a vote of censure was accordingly recommended and passed. This vote, after remaining on record some time, was ordered to be rescinded.

The trees of this celebrated Boston pear were advertised and sold at \$5 each, but when they began to produce fruit it was ascertained by growers in Connecticut to be the same as their Pinneo, and they objected to the change of its name. The subject was discussed at the last meeting of the American Pomological Society, and it was resolved that hereafter it should be known by its original name, the Pinneo, and under that name was recommended as promising well. This is the highest Pomological authority in the country, and its decisions should be respected, at least by its own members, but this decision Mr. Hovey treats with contempt, and this season has, it is stated, placed the Pinneo pear upon the tables of the Massachusetts Horticultural Society, labelled with his own hand, "Boston."

In consequence of complaints made in several journals, charging the Society with complicity in this matter of puffing an old fruit as a "new native pear," a committee was appointed to investigate the charge, and report to the Society. The following is the main part of the report:

Your Committee have carefully investigated the records of the Mass. Hort. Society, and are enabled to declare in the most positive manner that this Society was not in any way instrumental in introducing and endeavoring to palm off an old fruit as a "new native pear," or in concealing its origin, or in claiming the credit of originating it, or in changing its name from Pinneo to Boston; and are in no wise responsible, and ought not to be held up to public odium for the acts of an individual member.

That with respect to the repeated awards of premiums as alleged, this Society acted in accordance with what were supposed to be the facts in the case, and fully believed the fruit to be a new native pear introduced by Mr. C. M. Hovey. That so far from colluding with any person or persons by misrepresenting the facts of the case, and thus misleading the public, this Society has held to the course of honor and honesty, and by the vote of its delegation in the last Convention of the American Pomological Society (unanimous with the single exception of Mr. C. M. Hovey) pronounced in favor of the true and original name of the Pinneo, which vote your Committee have every reason to believe is fully endorsed by the Society, and approved by all the friends of justice and fair dealing to whom the facts of the case are known.

In view of this whole transaction—of the obloquy which has been cast upon this Society for doing unauthorized by its action as to provide that any member who shall knowingly change the name of any fruit already properly introduced or known, and exhibit the same for premium in violation of the spirit and meaning of the preceding vote, shall be deemed guilty of a gross breach of good faith towards the Society and the community, and shall be forthwith expelled from the Society.

Voted, That no person has any right to name or re-name a fruit which he does not originate, unless with the knowledge and consent of the originator or proprietor, and with the knowledge, counsel, and consent of a majority of all the persons who cultivate it; or by a vote of the nearest Horticultural or Pomological Society that shall have been put in possession of all the facts known to the person or persons wishing to have the name so changed.

Voted, That the 8th section of the By-Laws of this Society be so amended as to provide that any member who shall knowingly change the name of any fruit already properly introduced or known, and exhibit the same for premium in violation of the spirit and meaning of the preceding vote, shall be deemed guilty of a gross breach of good faith towards the Society and the community, and shall be forthwith expelled from the Society.

THE REPORT was rejected after a warm discussion, by the casting vote of the President. The Secretary, as usual, had entered the Report upon his record, as a part of the proceedings of the meeting, with the vote upon it; but its rejection, it seems, did not satisfy those who were disposed to smother the truth, and it was voted that "this report not having been accepted, and it being the opinion of the Society that no report should be recorded until accepted, the record of this report is hereby cancelled." This looks wonderfully like small business, and while we have no personal interest or feeling in the matter, we love upright, fair dealing and despise everything like deception, whether in societies or individuals.

A DESTRUCTIVE GRUB.

EDS. *RURAL NEW-YORKER*.—In the *RURAL*, some time since, I noticed a description of the Apple Tree Borer, which is decidedly a hard enemy to contend with. Your description, I think, varies from the grub which infests the trees here, both fruit and forest trees. The grub most injurious here is about three-quarters of an inch long, slender, flat body, jointed, with a large, flat head, which it seems to work from side to side, when ascending. You will readily perceive their work, as the bark turns dark and dents to the wood. I have traced them with a sharp knife from twelve to eighteen inches before finding the grub. In the maple trees, transplanted from the forest, I have found them, in my Mountain Ash and Horse Chestnut.

Why is it that trees brought from the Rochester nurseries are so much more infested with the borer than trees of our own raising? I have scarcely had a tree from Rochester escape them, while my seedlings are rarely attacked. My orchard soil is a sandy loam, under a very good state of cultivation.—Scribner, Kent County, Mich., Dec., 1859.

COLORING RECIPES, MOTHER'S PUDDING, &c.

EDS. *RURAL NEW-YORKER*.—I saw in your paper a few weeks since an inquiry to this effect:—"How can woolen goods be colored drab or stone color, so that they will not fade?" I send you a recipe, and if you see fit to publish it, I think it will answer completely the question proposed.

RECIPE.—Take half a bushel of white oak bark, boil in an iron kettle a sufficient length of time to extract the strength from the bark, strain and add to the fluid two tablespoonfuls of copperas, or a sufficient quantity to set the color. Boil five minutes. This will color woolen or cotton goods.

TO COLOR CHILDREN'S FLANNEL OR SILK PURPLE.—Take one ounce of cudbear to a pound of flannel. Boil the cudbear in rain water, in a brass kettle, five minutes. Wet the flannel in soap suds and put it in the dye. Keep stirring until it has boiled five minutes—hang it in the shade to dry. Freezing will not hurt it.

MOTHER'S PUDDING.—Five eggs; 1 quart sweet milk; 3 teaspoonfuls of flour and a little salt; beat the whites of the eggs to a stiff froth; beat the yolks in flour after, adding a teaspoonful of milk; to the batter add a quart of milk; and, lastly, add the whites. Beat well, and bake thirty minutes. Trim to suit the taste.

ELDERBERRY WINE.—To one quart of the juice put three pounds of sugar, and add water sufficient to make a gallon. After fermenting with a little yeast, and it has become clear, bottle it.

Farmer, Sen. Co., N. Y., 1859.

CURE FOR CHILBLAINS.—I saw in one of your papers some time since, a request from a Michigan correspondent, as to what was good for chilblains. Having waited some time to hear those who had anything to offer, a lady correspondent has recommended suet skins as excellent. Now, as I have been troubled all my life with chilblains, and have tried suet skins and every other prescription I could hear of for fifty years, without being benefited, I will give, for the benefit of all whom it may concern, my remedy, which is this:—Good camphor, say 2 oz. of gum to one pint of good alcohol; keep the feet clean by washing in hot water, the better the better; then moisten the feet well with the camphor, by putting it into the hand and rubbing it well over the affected parts, and dry it in by a warm fire.

While my hand is in I will give you another recipe equally as good as the other: 1 pt. alcohol; 2 oz. aqua ammonia; 2 oz. spirits turpentine; all put into a bottle together. Apply the same as the other. This is only the third winter since I have been able to wear boots the size of my feet, on account of chilblains. Now I am cured.—Moses Hartwell, Yatesville, Yates Co., N. Y.

SIMPLE CURE FOR CROUP.—We find in the *Journal of Health*, the following simple remedy for this dangerous disease. Those who have passed nights of agony at the bedside of loved children, will treasure it up as a valuable piece of information:—If a child is taken with croup, apply cold water—ice-water if possible—suddenly and freely to the neck and chest with a sponge. The breathing will instantly be relieved. Soon as possible let the sufferer drink as much as it can, then wipe it dry, cover it up warm, and soon a quiet slumber will relieve the parent's anxiety, and lead the heart in thankfulness to the Power which has given to the pure gushing fountain such medical qualities.

ANSWER TO "MOLLY."—If I had MOLLY's dress to deal with, I should boil a half pint of flax seed in a quart of water, dissolve a little glue, and strain both into some strong suds, made of bar soap and cold rain water, then immerse the silk and handle it briskly a few minutes so as to raise a good lather from the soap, and hang up without wringing. When two-thirds dry iron on the wrong side, passing the iron quickly and but once over any part of the silk.—Mrs. Nick, Morgan Co., O.

INQUIRY.—Will M. F. W. tell us how much water to use to whiten 100 pounds lard? Also, whether the lard is to be boiled after it is rendered, or is the water to be put into the lard and boiled away during the process of rendering? How much potash will it require to make the lye the proper strength? Will some of the *RURAL*'s correspondents give a recipe for making vinegar from any other source, save from cider?—JOHN, Norwich, Conn., Nov., 1859.

MAKING SAUSAGES.—As the time has arrived for making sausages, I would like to have the following recipe inserted in the *RURAL*. It is one we, in this neighborhood, have tried for several years:—Forty pounds of meat; one pound of salt; three oz. pepper; half pint of sage, pulverized. Some add a little summer savory.—A. WILLSON, Marcellus, Onon. Co., N. Y., 1859.

POTATO BREAD.—Boil and peel a dozen mealy potatoes, rub them through a sieve, mix them thoroughly with twice the quantity of flour or meal, add sufficient water to make a dough of the ordinary consistence, ferment in the usual way with hop or potato yeast, and bake in a rather hot oven.

CRYSTALLISING GRASSES DIFFERENT COLORS.—Having observed the process of crystallising grasses in the columns of the *RURAL*, I wish to inquire the best process of crystallising them various colors.—J. C. F., Westville, Conn., Dec. 1859.

COLORING FLANNEL RED.—Desiring a recipe for coloring flannel red, and cotton green, I apply to your valuable paper for the information.—JENNIE, Wells, Vt., 1859.

"I ALWAYS COVERED MOTHER."

[The following incident has been made the theme of the beautiful song, which is subjoined, from the pen of the poet Wm. W.—"A young lady had taken the sole care of her mother during a long and painful illness. After her mother's death, she performed the last duties previous to interment with mechanical precision, and without shedding a tear. Her first words were spoken at the grave, when the sexton had raised his spade to throw earth upon the coffin. "Nay," cried Kate, arresting his arm and showering a lapful of flowers into the grave, "I always covered mother up, and she used to say I did it so gently." There were few on the ground but wept.]

I have always covered mother.

Since the pain came to her brow,
And she said I did it gently—
None else shall do it now.

I have always smoothed her pillow,
And drawn the curtain fold;
And I'll not forget thee now, mother,
When thy limbs are all so cold.

'Neath the willows, deep and narrow,
They have made thy bed I know,
But they shall not soil thy robes, mother,
With the damp earth-mould below.

See, I've plucked some wild flowers, mother,
And I'll strew them on thy breast;
But the daisies shall fall so gently
That they may not break thy rest.

I'd bring the brighter flowers, mother,
But the roses fled with June,
And the daisies and anemones
Went with the sweet May moon.

But the buds fell from the stem, mother,
To be caught by hands on high—
Now they blossom in God's garden—
Pale lilies of the sky.

And 'tis thus with souls like thine, mother,
For they pass from life to love;
And they leave this dark earth-garden
For the golden walks above.

Oh, the sweet star-lilies blossom
Where no hand may pluck them down,
Or I'd weave, to grace thy brow, mother,
A purer, fairer crown.

But the angel's wings are free, mother,
And you can wander there,
Where the flowers are blooming ever
With a fragrance like to prayer.

Now the counterpane is spread, mother,
You'll wake to morning light—
God's hand has drawn the curtain.
So, mother, sweet, good night!

Written for Moore's Rural New-Yorker.

THE COTTAGE AND THE MANSION.

Of Cottages and Mansions we all have often heard, and possess some knowledge of the splendor and regal magnificence of the one, and the homelike beauty of the other. Though peace and contentment may dwell in the Mansion as well as the Cottage, yet this is the exception and not the rule. Follow me, reader. In the city of B. stands a stately mansion,—wealth and magnificence reign around, and the heart of its proud owner is as cold and formal as the marble columns that adorn its freestone front. So icy is the atmosphere that pervades the mansion grounds, that it freezes the flowers until they dare not lift their rosy cups to receive the rays even of the noonday sun, and they hide their perfume in their heart's secret urn until the mansion occupants have passed by, and then give it to the wooing breezes or the beggar-child who pauses by the garden paling. And if, perchance, a woodland songster strays so far from home as to enter the rich man's garden to purloin a tempting cherry, he hushes his warblings as he nears the proud mansion, for instinct teaches him that happiness reigns not where all so studied and so stately is; and the love-music that gushes from his throat might not accord with the selfish hearts around. And the song-bird in the mansion sorrows in his gilded cage, and pines for freedom and a humbler home. Thus as even the glad things of Nature feel the chilling influence of wealth and selfishness; so the inmates of the mansion, wrapped in this world's pleasures, pursuing the labyrinthine path to earthly honor and glory, feel not the heavenly peace and happiness of the soul that knows that "in his Father's house are many mansions," in glory and splendor, excelling all Earth's crumbling palaces.

But listen—there's music—let us advance. Ah! we have it now. There's a grand festival given to introduce the heiress "Some one" to "Mr. Somebody" just arrived from "Somewhere." Youth, folly and fashion meet to "chase the glowing hours with flying feet," and in this giddy whirl they circle to the grave. The children of the mansion read of the beautiful country, of trees and sunshine, and wonder if it can be more beautiful than the Park. The rich miser, the mansion's owner, has gained his wealth by fraud, deceit and robbery, by crushing to the earth his brother, and by reaping where others have sowed and toiled.—The multiplication table is his "Creed, his Pater Noster and his Deologue," and he bows to "no idols but his money bags." His heart is shriveled within him, and the mendicant eyes with scorn and disdain the nabob who, but yesterday was poverty's child, robbed not in ermine as now, calling not a palace his home but clad in rags, and occupying not a mansion but a cottage. Yet, when life's taper flickers and dies, he will be ushered from the world with pageantry and show, amidst the false lamentations of those professing to be friends. He lives unloved, he will die unwept.—But, let us turn from the mansion and its unhappy inmates, and turn by a more congenial fire-side.

Ah! here is a snug little Cottage on the hill-side. A noble river makes music as it glides through the rural vale. Sweet flowers adorn the door-yard and lend their fragrance to the passer-by. Wildwood blossoms unfold in the morning sunbeams here, and forest songsters with glad

freedom carol their matin and vesper midst the woodbine boughs that clamber o'er the cottage roof. The mowers are in the hay-field yonder, securing summer's wealth to store for winter's use. The cheerful cow-bell, made mellow by the distance, awakens the music of contentment in the heart, as it "tells the steps of the tripping hours, and sounds the notes of rural bliss." But happy voices within, and the busy hum of the spinning-wheel tempt us to enter, for surely happiness with love must mingle where industry smiles o'er all.—We are unseen visitants and do not interrupt the various occupations of those within, nor the cheerful song they are singing. 'Tis pleasant to be poor, for they know that though they inhabit a Cottage here, they will be received with as much splendor in heaven, if there they have stored their treasures, as though they came from a mansion on earth. The children here have ample room to frolic and sport, and are up in the morning to see the sunrise, not from behind brick walls and clouds of dust, but in the crimson eastern sky.

With such a picture drawn, with such a contrast, who would exchange his Cottage, his contentment and pleasure, for a mansion, with luxury and discontent! For though the elegant abodes in which our country abounds, may add some of the fairest ornaments and sweetest attractions to our charming landscapes, still these external attractions differ materially from moral loveliness and internal beauty; for there are a thousand unpretending joys in the cottage, where Jesus presides, far excelling those of the royal edifices where the Savior is not; and it matters not how rural the cot, or how sequestered its site if there be happiness, holiness and peace within its walls. Then give me a home in a snug little cottage where though other sheaves bow not to mine, I may, more blest than kings, bask ever in a Savior's smile; and, when this earthly tabernacle I forsake, who will ask whether in a lonely cottage or a splendid mansion I was reared; or whether in some Thessalian vale I dwelt, 'mid beauties peerless to the eye, or in some green and sunny spot, where Nature's works arose in majestic grandeur and striking sublimity.

Portland, Mich., 1859.

WOMEN AND LITERATURE.

THE literature of three centuries ago is not decent to be read; we expurgate it. Within a hundred years woman has become a reader, and for that reason, as much or more than anything else, literature has sprung to a higher level. No need now to expurgate all you read. Woman, too, is now an author; and I undertake to say, that the literature of the next century will be richer than the classic epochs, for that cause. Truth is one, ere, absolute; but opinion is truth filtered through the moods, the blood, the disposition of the spectator. Man has looked at creation and given us his impression, in Greek literature, and in English, one-sided, half-way, all awry. Woman now takes her stand to give her views of God's works, and her own creation; and exactly in proportion, as woman, though equal, is eternally different from man, just in that proportion will the next century be doubly rich because we shall have both sides.

You might as well plant yourself in the desert, under the changeless gray and blue, and assert that you have seen all the wonders of God's pencil, as maintain that a Male Literature, Latin, Greek, or Asiatic, can be anything but a half-part, poor and one-sided; as well develop only muscle, shutting out sunshine and color, and starving the flesh from your angular limbs, and then advise man to scorn Titian's flesh and the Apollo, since you have exhausted manly beauty, as think to stir all the depths of music with only half the chords. The diapason of human thought was never struck, till Christian culture summoned woman into the republic of letters; and experience as well as nature tells us, "what God hath joined, let no man put asunder."—Wendell Phillips.

HOW VICTORIA TRAINS HER CHILDREN.

A PRIMARY regard is paid to moral and religious duties. They rise early, breakfast at eight, and dine at two. Their various occupations are allotted out with almost military exactness. One hour finds them engaged in the study of the ancient—another of the modern authors, their acquaintanceship with the languages being first founded on a thorough knowledge of their grammatical construction, and afterwards familiarized and perfected by conversation. Next they are trained in those military exercises which give dignity and bearing. Another hour is agreeably filled up with the lighter accomplishments of music and dancing. Again the happy party assemble in the riding school, where they may be seen deeply interested in the various evolutions of the *menage*. Thence, while drawing and the further exercise of music, and the lighter accomplishments, call off the attention of their sisters—the younger Princesses proceed to busily engage themselves in a carpenter's shop, fitted up expressly for them, at the wish of the Royal consort, with a turning lathe and other tools essential to a thorough knowledge of the craft. They thus early become, not only theoretically, but practically acquainted with the useful arts of life. A small laboratory is occasionally brought into requisition, at the instance also of their Royal father, and the minds of the children are thus led up from a contemplation of the curiosities of chemical science and the wonders of nature to an inquiry into their causes. This done, the young carpenters and students throw down their saws and axes, unbuckle their philosophy, and shoulder their miniature percussion-guns—which they handle with the dexterity of practiced sportsmen—for a shooting stroll through the Royal gardens. The evening meal, the preparation for the morning lessons, and brief religious instruction, close the day.—*Select*.

COURTESY.—No woman can be a lady who would wound or mortify another. No matter how beautiful, how refined, how cultivated she may be, she is in reality coarse, and the innate vulgarity of her nature manifests itself here. Uniformly kind, courteous and polite treatment of all persons, is one mark of a true woman, and of a true man also.

THE UNWEARIED SUMMONER.

BY A. H. BULLOCK.

AN ENVY, with message no one can avoid,
Comes bearing the omens of woe,
By whom strength and beauty are rent and destroyed—
Embitters and poisons all blessings enjoyed—
To whom dearest treasures must go.

He comes in a ghastly and terrible form,
Behold with a soul-thrilling awe;
Appears at all times, in the sunlight and storm,
When stern Winter is raging or Summer glows warm—
Is governed by no human law.

No place is exempt from his cruel display—
He witnesses on ocean and land—
The halls of a nobleman fill with dismay,
The throne of no monarch proceedings can stay,
In the cot of the lowly will stand.

Now booms from the cannon, or gleams from the sword,
And then in dark silence draws nigh—
To some sends a herald like ancient proud lord,
To others approaches without sign or word,
And none from his summons can fly.

At no time is idle, by night or by day,
In missions of mourning and sighs,
Has agents in stubborn and countless array,
Can neither be flattered or bribed to delay,
And in slaughter, all tyrants outvie.

Though monster so frightful, in memory dear
We cherish the scenes of his wrath,
Even while it wrings from us the heart-swelling tear,
We engrave on our tablets, un fading and clear,
The note which have darkened his path.

Partially marks his ferocious career—
Some skies oft bedimmed by his breath,
Leaves others till twilight, resplendent and clear,—
No appeal from his sentences, however severe,
For he is the Angel of Death.

His labors suspended, so heartless and rash,
And man would but seldom know fear,
The shock of an earthquake, the hurricane's crash,
The horrors of shipwreck, the swift lightning's flash,
But Nature's grand pastimes appear.

Yet why should we tremble who feel his embrace,
Or shrink from the grasp of his hand?
Our earthly abode is a bleak, dreary place,
And with the Death Angel we hasten, through grace,
To our home in a beautiful land.
Burns, N. Y., 1859.

CHOICE MISCELLANY.

From old Eternity's mysterious orb
Was Time cut off, and cast beneath the skies.

[YOUNG.]

Time is but a meteor glare, which we see as it passes, and it is gone forever. We know not whence it cometh, or whither it goeth; one moment cometh and quickly passeth away, while another and another rush in to fill up the place of its predecessor. "Time," says Young, "is the stuff that life is made of," and we would do well not to waste such a precious possession. How appropriate the inscription on the dial in the temple at London, "Begone about your business." A wholesome admonition to the loiterer.

Time has wrought many changes. Nations have fallen, cities have sunken in ruin, Prince's palaces have become hovels for the poor, while Time, cruel Monster, has marked thousands upon tens of thousands with decay! What changes has he not wrought? The young have grown older, the middle aged and aged have grown old, and dropped one by one into the narrow house prepared for all living. Gray hairs are whitening the heads of millions, and the first silver hair, like a traitor, is sown by the hand of old Time, among our own locks. The rose tints that painted the cheek of some fair lady have been vanquished by the wrinkles of ripening years, and the vigor and strength of youth is followed by tottering steps, and slow and measured tread.

Many that embarked on life's tempestuous sea with us, and enjoyed much of pleasure, happiness and joy, will meet with us no more. They have already been cut down by Time's unsparring hand, and gone to join the millions of the dead. They have launched their barks on the unfathomed and unbounded sea of Eternity. The golden moments of childhood fly quickly by, and we heed them not until it is too late, and we think "Of Time, soon past; soon lost among the shades of buried years." Time is ever making rapid strides; and should it pass as the idle wind and we heed it not? Solomon says there is a time for everything under the sun. The duration of a moment is but the swing of the pendulum, the tick of the watch; it is short, very short, and its flight is beyond our comprehension. No one has ever been able to compute the velocity with which it moves, although the Astronomer has already measured the distance to the sun, moon and stars, and told us their annual and diurnal revolutions. Would that we knew its velocity, that we might be prepared to meet it at its calling. Time is ever moving onward; it waits not for youth or old age; its pace is firm and steady; it is true to its purpose; its motto is onward; it turns aside for no one, but is ever on! until it reaches the vast and unbounded ocean of Eternity, and there it bathes its never-wearied limbs in its unfathomed depths. This is

"The sparkling cream of all Time's blessedness,
The elixir down of happiness complete."

Time is from everlasting to everlasting, but a moment comes like some traitor nymph and steals upon us unawares. It is so short we hardly realize its approach until it is past and gone forever.

It is said there is a moral in everything to the moralizing mind. Since, then, Time once gone never returns, let us make the best use of it; not sad or serious merely, but sober and reasonable—ready to labor in the hour of labor, and rest in the hour of rest. We shall not, then, look back on misspent moments, with that feeling so aptly expressed in the German "Ach ehv' nichig, ach

wie fluchtig!" Ah, how vain! ah, how fleeting! The flight of Time, which is silently, but surely and uniformly, bearing us from scenes, perhaps loved too well, cannot be too accurately marked. The worth of one moment is far above rubies, for upon it depends all; the moments that are past are gone beyond our reach; those that are in the future may never come. All is uncertainty—not the least part of time is insured to man. One moment he may bloom in health, and the next be struggling with the monster Death. As time rolls on changes will take place. All are hastening on, and soon the present generation will rest in the grave. Yet time

"That steals, from day to day,
With slow, unseen, unceasing pace,
Moments, and months, and years away;
Right onward with resistless power,
Its stroke shall darken every hour,
Till Nature's race be run,
And Time's last shadow shall eclipse the sun."
Flavanna, N. Y., 1859. H. A. WHITTEMORE.

A REVERIE.

"How long shall the land mourn for the wickedness of them that dwell therein. They have made it desolate and it mourneth unto me: they have transgressed the laws, changed the ordinances, and broken the everlasting covenant. Truth has fallen in the streets, and equity cannot enter."—Isaiah.

HARPLY has the world grown wiser—surely, not better, in all its long sin-freighted centuries of experience. Secure in the invulnerable mail of selfishness, man isolates himself from charity—sacrifices brotherly kindness—wipes out sensibility—buries love, and prostitutes that intellect with which Omniscience crowned him an image of himself, to groveling passion and sordid gain.

With iron fingers, icy-hearted, strong-eyed want, clutches the vitals of millions, gloating in fiendish glee at the mourning and wailing of its countless victims, deep-toned and terrible in their bitter anguish. Gilded misery, in flaming apparel, stalks abroad in unshamed calmness, only to pass on, unsaved, in its path of wretchedness and crime down to the gates of death. The hatchet unburied, the emblem of friendship and peace ignored brotherhoods are changed to feuds and never ceasing strife.

With as little compunction or regret, birth-rights are bartered for pottage to-day, and no mediating angel to wrestle us into repentance and restitution. Our nativity and life's holy relations denied and renounced that our heritage may be enlarged, or one more be numbered on the calendar of our days—and no piercing conscience wakens to contrition and confession. The blood of brothers unavenged, orlith out from the ground. Slowly dragging misery's chains, the weary nations toil on in their pollution. Seething up from suffering human hearts, the feeble moaning prayer for light,—the bitter wailing of error burdened millions—the agonizing groan of earth's oppressed nations,—swells a tide of woe unutterable, surging onward to the mercy seat. Mercy bends in fearful supplication. Pity plumes her quivering wings in trembling haste to liberate and save. And onward drag the leaden years. In silence each bleeding heart folds its crushing anguish to itself, the spirit bows in utter desolation, groping in a labyrinth of woe.

Is there no sufficient power, that, wakened from its apathy of years, shall yet stretch forth its mighty arms to burst the fetters from imprisoned nations, and bid the captive soul once more breathe the free, glad atmosphere of purity and hope. Shall Mercy plead in vain? Shall Pity fold her wings and wait? Shall tyrant error yet trample truth to earth, and ignorance and misrule hold despairing nations in abject slavery. Thou who "takest away the captives of the mighty, and deliverest the prey of the terrible," may thine Omnipotent arm save us from degradation, desolation and ruin.
Oct West, Nov. 1859. BEN. BURDOCK.

ENGAGING MANNERS.—There are a thousand pretty, engaging little ways, which every person may put on, without running the risk of being deemed either affected or foppish. The sweet smile, the quiet, cordial bow, the earnest movement in addressing a friend, or more especially a stranger, whom one may recommend to our good regards, the inquiring glance, the graceful attention, which is so captivating when united with self-possession—these will insure us the good regards of even a churl. Above all, there is a certain softness of manner which should be cultivated, and which, in either man or woman, adds a charm that always entirely compensates for lack of beauty.—Taylor.

LINKS FOR MEDITATION.—Beautifully and tenderly wrought out is the comparison of the long suffering of God, to the affectionate care of a nurse, in these lines from one of Quaker's Meditations:

Even as a nurse, whose child's imperfect pace
Can hardly lead his foot from place to place,
Leaves her fond kissing, sets him down to go,
Nor does uphold him for a step or two.
But when she finds that he begins to fall,
She holds him up, and kisses him withal—
So God from man sometimes withdraws His hand
Awhile to teach his infant faith to stand;
But when he sees his feeble strength begin
To fall, he gently takes him up again.

THE papers say there is a great demand for women in Oregon. Isn't there a demand for women everywhere? There are plenty of ladies—dainty creatures with soft hands and softer heads, puffed with hoops in the lower story and nonsense in the upper—but genuine, sensible women are in demand all over creation. They are scarcer than diamonds, and far more valuable—better than gold, and safer to tie to than the best State stocks.

THE SLEEP OF YOUTH.—Oh! let youth cherish the happiest of earthly boons while yet it is at its command; for there cometh the day to all, when "neither the voice of the lute nor the birds," shall bring back the sweet slumbers that fell on their young eyes, as unbidden as the dew.—Butcher Lighton.

REMINISCENCES.

ALL vainly thought my wayward heart
The misty veil of time to part,
And look beyond.
With wistful eye and earnest gaze,
I sought to know the unknown ways
Of future years.

But closer shut the veil between
My anxious eye and the unseen
Of life before.
Nor yet an echoing sound I heard
From out those realms, or aërial word
Of good or ill.

But, one by one, unfolding years
Fall soon unsealed its fount of tears,
Its joys decayed.
Then bowed my unsubmitted will,
Nor wished to know, if good or ill,
My destiny.
The dove of Peace that sought my breast
And gently calmed my soul's unrest,
My all of fear.

Butler, Milwaukee Co., Wis., 1859.

CONFESSIONS OF INFIDELITY.

AN unbeliever in the Christian system rarely has any clear or well-defined faith, or any sure ground of comfort in hours of trial and depression. Rejecting Christ as a Savior, he is left to walk "in darkness, not knowing whither he goeth." The Lutheran Observer compares very strikingly the experiences of Voltaire and Hume with that of Paul.

"I seem," said Hume, "affrighted and confounded with the solitude in which I am placed by my philosophy. When I look abroad, on every side, I see dispute, contradiction. When I turn my eye inward, I find nothing but doubt and ignorance. Where am I? or what am I? From what cause do I derive my existence? To what condition shall I return? I am confounded with questions. I begin to fancy myself in a most deplorable condition, environed with darkness on every side." Voltaire says:—"The world abounds with wonders, and also with victims. In man is more wretchedness than in all other animals put together." How did he judge of it? By his own heart. He adds:—"Man loves life, yet he knows he must die; spends his existence in diffusing the miseries he has suffered—cutting the throats of his fellow-creatures for pay—cheating and being cheated. The bulk of mankind," he continues, "are nothing more than a crowd of wretches, equally criminal, equally unfortunate. I wish I had never been born." Here what St. Paul says: "I have fought a good fight, I have finished my course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous Judge, will give me at that day."

"SHUTS OUT THE WORLD."

A few years since, on visiting a mother in Israel, one who wrestled and prevailed in prayer, she led me to a small room in a retired part of her low-roofed dwelling, and showing me the hamp which fastened the door of that quiet retreat, said:—"I often think that this little piece of iron is more to me than all the treasures of the rich in yonder city are to them—for this 'shuts out the world.'" It was a sacred spot, that room of prayer. For more than fifty years it had been a Bethel to the soul of this aged disciple; and how many in that mountain village, eye, and in the world, are indebted to the prayers offered there, eternity alone will reveal. It seemed to me holy ground, hard by the very gate of heaven.

Reader, have you any bar, or bolt, or key, which, when you enter your place of prayer, keeps away the intruding cares and perplexities of the world without? Alas! alas! how many weary, aching hearts, burdened with earthly treasures, would give all they possess for the "little piece of iron," the something which would "shut out the world," and give the sublime repose which He gives to "His beloved."—Tract Journal.

BE NOT DISCOURAGED.—Hope on, hope ever. Life's prospects may appear to you dreary and uninviting; life's realities may be painfully oppressive to your sensitive feelings; but with trustful confidence, believe that He who made a way through the Red Sea for his redeemed ones to pass over, can easily light up your path with sunshine, and strew it with fairest flowers. He who forms the night, creates also the day; He who directed the course of the storm-cloud also sends the fair weather out in the north. The railway of life does not always lie through tunnels. Another moment and your gladdened spirit may be enjoying the fine balmy air, and revelling in the beauties of earth and sky. It may be that you are even just now upon the verge of God's choicest blessings.

BE PREPARED.—No man knows what mercies a day may bring forth, what miseries, what good or what evil, what afflictions, what temptations, what liberty, what bonds, what good success, or what bad success, a day may bring forth; and, therefore, a man need every day be in his closet with God, that he may be prepared and fitted to entertain and improve all the occurrences, successes and emergencies which may attend him in the course of his life.—Thomas Brooks.

TIME AND ETERNITY.—There are two words which should take much of our thoughts and cares, *time* and *eternity*; time, because it will soon be at an end; and eternity, because it will never come to an end.—Erskine.

THE strength which the hour of trial brings often makes the Christian a wonder to himself.

Spice from New Books.

Desire of the Indians for Martial Fame.

No people probably, on the face of the earth are more ambitious of martial fame, or entertain a higher appreciation for the deeds of a daring and successful warrior, than the North American Indians. The attainment of such reputation is the paramount and absorbing object of their lives; all their aspirations for distinction invariably take this channel of expression. A young man is never considered worthy to occupy a seat in council until he has encountered an enemy in battle; and he who can count the greatest number of scalps is the most highly honored by his tribe. This idea is inculcated from their earliest infancy. It is not surprising, therefore, that, with such weighty inducements before him, the young man who, as yet, has gained no renown as a brave or warrior, should be less discriminate in his attacks than older men who have already acquired a name. The young braves should, therefore, be closely watched when encountered on the Plains.

The prairie tribes are seldom at peace with all their neighbors, and some of the young braves of a tribe are almost always absent upon a war excursion. These forays sometimes extend into the heart of the northern states of Mexico, where the Indians have carried on successful invasions for many years. They have devastated and depopulated a great portion of Sonora and Chihuahua. The objects of these forays are to steal horses and mules, and to take prisoners; and if it so happens that a war party has been unsuccessful in the accomplishment of these ends, or has had the misfortune to lose some of its number in battle, they become reckless, and will often attack a small party with whom they are not at war, provided they hope to escape detection. The disgrace attendant upon a return to their friends without some trophies as an offset to the loss of their comrades is a powerful incentive to action, and they extend but little mercy to defenseless travelers who have the misfortune to encounter them at such a conjuncture.

Meeting Indians on the Plains.

A small number of white men, in traveling upon the Plains, should not allow a party of strange Indians to approach them unless able to resist an attack under the most unfavorable circumstances.

It is a safe rule, when a man finds himself alone in the prairies, and sees a party of Indians approaching, not to allow them to come near him, and if they persist in so doing, to signal them to keep away. If they do not obey, and he be mounted upon a fleet horse, he should make for the nearest timber. If the Indians follow and press him too closely, he should turn around, and point his gun at the foremost, which will often have the effect of turning them back, but he should never draw trigger unless he finds that his life depends upon the shot; for, as soon as his shot is delivered, his sole dependence, unless he have time to reload, must be upon the speed of his horse.

On approaching strangers these people put their horses at full speed, and persons not familiar with their peculiarities and habits might interpret this as an act of hostility; but it is their custom with friends as well as enemies, and should not occasion groundless alarm.

When a party is discovered approaching thus, and are near enough to distinguish signals, all that is necessary in order to ascertain their disposition is to raise the right hand with the palm in front, and gradually push it forward and back several times. They all understand this to be a command to halt, and if they are not hostile it will be at once obeyed.

After they have stopped the right hand is raised again as before, and slowly moved to the right and left, which signifies "I do not know you. Who are you?" As the wild tribes have their peculiar pantomimic signals by which they are known, they will then answer the inquiry by giving their signal. If this should not be understood, they may be asked if they are friends by raising both hands grasped in the manner of shaking hands, or by locking the two fore-fingers firmly while the hands are held up. If friendly, they will respond with the same signal; but if enemies, they will probably disregard the command to halt, or give the signal of anger by closing the hand, placing it against the forehead, and turning it back and forth while in that position.

The pantomimic vocabulary is understood by all the Prairie Indians, and when oral communication is impracticable it constitutes the court or general council language of the Plains. The signs are exceedingly graceful and significant; and, what was a fact of much astonishment to me, I discovered they were very nearly the same as those practiced by the mutes in the deaf and dumb schools, and were comprehended by them with perfect facility.

Jerking Meat.

So pure is the atmosphere in the interior of our continent that fresh meat may be cured, or jerked, as it is termed in the language of the prairies, by cutting it into strips about an inch thick, and hanging it in the sun, where in a few days it will dry so well that it may be packed in sacks, and transported over long journeys without putrefying.

When there is not time to jerk the meat by the slow process described, it may be done in a few hours by building an open frame-work of small sticks about two feet above the ground, placing the strips of meat upon the top of it, and keeping up a slow fire beneath, which dries the meat rapidly.

The jerking process may be done on the march without any loss of time by stretching lines from front to rear upon the outside of loaded wagons, and suspending the meat upon them, where it is allowed to remain until sufficiently cured to be packed away. Salt is never used in this process, and is not required, as the meat, if kept dry, rarely putrefies.—*The Prairie Traveler*, by Capt. Maury, U. S. A.

The Reviewer.

EMMONS' MANUAL OF GEOLOGY.

This work has been lately published by Bowen, Baer & Co., Philadelphia. It is a volume of near 800 pages, 12mo., illustrated by a great number of figures of fossil plants and animals as well as geological sections, and is written in a clear, manly style, very rarely diffuse, but always direct and brief. It treats, too, of the geology of our country, where our rocks can be seen and handled, and on which excursions can be made for the verification of its statements and the extension of the learner's knowledge and experience. The teacher, who understands the subject, will find the work an excellent text-book, and be able to make the most profitable use of it for the student. The clear brevity of the statements has made a great amount of principles obvious and satisfactory. The plan, adopted by the author, is to give, on each system of rocks, "a general history of the period to which they belong," and to add "a brief description of the rocks and their order of sequence." Illustrated by the organisms or fossils contained in them. For understanding this, some knowledge of plants and animals, as well as minerals, is essential, and is presented in the early chapters. "Paleontology has become the leading branch" of geology, because it is the "history of life" in the ages before God created man, the fossils being the organisms by which the functions of life are displayed. The pursuits of the author, as late State Geologist of New York, and present State Geologist of North Carolina, give Dr. EMMONS many advantages in the elaboration of such a work. On some contested points, his proofs are strong and full. The work will commend itself to the public. The subject is more important than ever before, and should be studied by all who intend to have any considerable education. Its applications are most interesting.

THE PRAIRIE TRAVELER. A Hand-Book for Overland Expeditions. With Maps and Illustrations, and Itineraries of the Principal Routes between the Mississippi and the Pacific. By EMMONS B. MAURY, Captain U. S. Army. Published by authority of the War Department. [16mo., pp. 340.] New York: Harper & Brothers.

With a quarter of a century's experience in frontier life, a great portion of which time was occupied in exploring the interior of the continent, far beyond the bounds of civilization, the author was well prepared for the work which he has so well accomplished, that of guiding the adventurous "voyager" across the deserts lying between our Western and the Pacific States. None but those who have tried it know the disadvantages the inexperienced labor under for want of a proper and timely initiation into those minor details of prairie craft, which, however apparently unimportant in the abstract, are sure, upon the plains, to turn the balance of success for or against an enterprise. The main object sought in the book is to explain the best methods of performing the duties devolving upon the prairie traveler, so as to secure immunity from the wiles of the savage and the caprice of the elements. The principal routes are very plainly described, so that it would seem none need err. The little volume is finely illustrated, with engravings showing the most convenient forms of camp equipage, as well as strange and wild adventures with Indians, swollen streams and grizzly bears, which travelers have met with, and may again. All who think of an "overland voyage," and all who wish to know more of this wild and interesting portion of our country, should procure this book. For sale by STEELE, AVERY & Co.

THE WESTMINSTER REVIEW for October, 1880. Volume 49, No. 2. Leonard Scott & Co., New York, Publishers.

The Westminster ranks among the most important of the British Reviews, and the present number fully sustains its ancient reputation. The "Table of Contents" presents the following array:—*Millita Forces*; *Rousseau, his Life and Writings*; *Spiritual Freedom*; *Modern Poets and Poetry of Italy*; *Physical Geography of the Atlantic Ocean*; *Garibaldi and the Italian Volunteers*; *Tennyson's Idylls of the King*; *Bonarpartism in Italy*; *Contemporary Literature*. Several of the papers presented will command the strictest scrutiny of the reader, and all are well worthy the closest attention.

THE OLIVE AND THE CEDAR.

Our distinguished Secretary of State, Lewis Cass, delivered an address before the Agricultural Society of Kalamazoo Co., Mich., from which we make the following extracts:

The Mount of Olives, which overlooks Jerusalem, derives its name from these trees, existing there in the earliest ages, and at its foot, divided from it by the brook Kedron, is the garden of Gethsemane, forever memorable as a scene of the passion of our Savior. Eight olive trees, bearing every mark of extreme age, are yet growing there, and tradition has invested them with a sacred character, as contemporaries of the life and death of Jesus Christ. No believer in Christianity can gaze upon them, as I have done, without feeling the most powerful emotions—without feeling that force of association which connects us with names and deeds, long since passed away, when we stand upon the places they have made immortal. The world contains no such spot as this, where the mission of the Redeemer was fulfilled, and where he pronounced its termination in the declaration, "It is finished."

THE CEDAR.—But the most interesting relic of the ancient vegetable creation, is to be found upon one of the ridges of Lebanon, not far from the renowned temple of Baalbec. It consists of twelve gigantic cedars, the remains of the primitive forests which once covered that great mountain chain of Syria, and which yet rear their heads, prodigies of vegetation, and each surmounted with a dome of foliage, overshadowing the spectator as in the time of biblical story. One of them is forty-five feet in circumference, and all, both in size and height, tell the long ages that have swept over them, leaving them the most striking natural monuments that the eye can rest upon. What interesting associations cluster around them! They have been consecrated by history, religion, and poetry. Their beauty has been recorded by Ezekiel, their excellence and perfume by Solomon, who placed them at the head of vegetable creation, when he

SCENES IN AND ABOUT JERUSALEM.

MECHEMETH, OR TURKISH COUNCIL CHAMBER.

With this number we conclude our series of sketches and engravings of Scenes in and about the Holy City. They have been particularly valuable as illustrative of the Scriptures. The present engraving shows the Turkish Council Chamber, containing the Royal Sarcophagus recently discovered in the Tombs of the Kings. Mrs. JOHNSON visited it and made the drawing soon after the late war between Russia and Turkey, which ended at the Crimea, became known at Jerusalem. This war encouraged the wild tribes to acts of hostility against the Turkish power, and kept the inhabitants in constant alarm. Mrs. J., in an interesting chapter on this subject, says:

"I shall not soon forget the deep anxiety and dread we all experienced soon after war was declared, when the fanatical spirit of the Fellahin was first aroused. We had learned from the proprietor of 'the Tombs of the Kings,' that a royal sarcophagus had been discovered in one of its

recesses, a few years previous, and removed to the Mechemeth, or Congressional Hall of Jerusalem, now identified as occupying the site of the 'Council Chamber,' or Sanhedrim. Permission for a visit had been obtained from the proper authorities, and I was sitting there taking a sketch of the room and its contents, greatly enjoying myself, when the Bash Catib's servant came running in, almost breathless, and with the deepest anxiety depicted in his countenance (for he had all along shown us much courtesy and kindness), told us to flee for our lives—that the Fellahin had taken the city! We accordingly fled to our premises with all haste, and barricaded the doors as best we could. But before we could make sure our defence, he came running, with joy now lighting up his face, to inform us that though they had entered the city in large numbers, they were not armed; and were being turned out as rapidly as possible."

For Moore's Rural New Yorker.

AN ACROSTICAL ENIGMA.

I am composed of 18 letters.
My 1, 14, 9, 18 was an European ruler.
My 2, 9, 4, 19 is a city in Italy.
My 3, 16, 13, 5 often leads to sorrow.
My 4, 1, 13, 7, 8, 5 was a great Emperor.
My 5, 9, 10, 13 is a gulf in Europe.
My 6, 7, 1, 9, 1, 14 was a great writer.
My 7, 6, 13, 6, 2 was a philosopher.
My 8, 6, 13, 2, 8, 6, 14 is the name of a battle in the Revolution.
My 9, 7, 13, 5 is a river in Europe.
My 10, 13, 2, 8, 1, 8, 8 is a song.
My 11, 8, 5, 6, 2 was a great leader.
My 12, 15, 17, 1 is a city in South America.
My 13, 8, 9, 6, 9 was an American general.
My 14, 11, 9, 2, 9, 13, 7 is a city in France.
My 15, 7, 18, 1, 4 was a patriarch.
My 16, 18, 11, 6, 16, 18 was a tyrant.
My 17, 11, 14, 2, 1 preserved many thousand lives.
My 18, 7, 9, 1 has been a theatre of thrilling events.
My whole is contained in this number of the RURAL NEW-YORKER.

Flint Hill, Fairfax Co., Va., 1880.

Answer in two weeks.

For Moore's Rural New Yorker.

ILLUSTRATED REBUS.

Answer to No. 1 of Vol. XI.

For Moore's Rural New Yorker.

MATHEMATICAL PROBLEM.

Required the side of the largest equilateral triangle that can be inscribed between three equal circles of 12 inches in diameter, which touch each other?
Nunda, N. Y., 1880.

N. P. S.

Answer in two weeks.

For Moore's Rural New Yorker.

ARITHMETICAL QUESTION.

A FARMER sold a number of sheep, calves and lambs—40 in all—for \$48. How many did he sell of each, if he received for each calf \$1 75, each sheep \$1 25, and each lamb 75 cents?
YOUNG TIZO.

Answer in two weeks.

ANSWER TO ENIGMAS, &c., IN NO. 817.

Answer to Geographical Enigma:—The taking of Constantinople by the Turks.
Answer to Arithmetical Problem:—C has 342 acres, 3 rods, 17 1/2 rods; B, 507 acres, 23 1/2 rods; B's land is 70 cents per acre; side of C's equals 224 rods, 9 feet, 6 1/2 inches.

YOUNG RURALIST.

DIARIES FOR 1880—GET READY.

EDS. RURAL NEW-YORKER:—I was much pleased with the remarks of your Fond du Lac correspondent in regard to a Diary for Young as well as old Ruralists. When ten years of age, I began a daily journal, which I have kept up to the present time. I was inspired with a zeal of this kind, perhaps, from two facts, viz:—My father and grand-father kept a daily record of events, and also the impression made upon my mind when reading the "Farm Yard Journal" in "Evenings at Home." Any boy who has read the above named book cannot but remember the simple, yet interesting style of young ROOSA. "The new born calf" found one morning in the barn-yard—the rascally sheep-dog "which committed such havoc among the neighboring flocks, and yet made good his escape;" and the laughable incident of the servant Joseph being scared by the owls in the "loft of the old farm-house," are not easily forgotten.

In the summer of 1833, I visited the mining region of Lake Superior, and then "footed it" across from Lea Point to the St. Croix, down which stream I smoothly glided in a birchen canoe. After a short stay in St. Paul, I traveled up the valley of the St. Peter's river. Again at the capital of the territory, on the 12th Sept., I was prepared for a trip to Pembina, on Red River of the North, and took up my line of march thither in company with Geo. Nonnman, of New York. We arrived at the northern boundary of our country on the 14th Oct., and the next day were off on a south-west course for the plains, in company with some half breeds and Indians. At Devil's Lake we fell in with numerous herds of buffalo. In this vicinity we had a grand hunt,—and besides these denizens of the plain, the ponds and lakes were literally covered with white, brown, and grey geese—unnumerable quantities of ducks, and many beautiful swans. In mid-winter I left my friend at Pembina, teaching the young "Nijie," and traveled by dog train for St. Paul; crossed the very source of the Mississippi and Red rivers, and arrived home in January. During this voyageur life, my journal was not neglected. The character of the Sioux warriors, their inveterate enemy, the Chippewas, the gambling Winnebago, the daring Cree, the easy half-breed, the brave Pioneer, and the patient Missionary—I say the character of each, is carefully portrayed. Every incident, physical geography of the country, and the weather, even noted. And now, after a day of toil and care, I can recall some interesting scene, or hour of danger, by merely turning the leaves of my Diary. As Mr. Berry says, "I cannot estimate its true value."

Then, boys, try it. Buy you a book of—say four hundred pages,—size of an ordinary account book. You must not take a dozen, or a hundred sheets of fools cap. Such small pieces will accumulate on your hands and be inconvenient to you. Your style should not be as brief as that of friend BARRETT. The occupation of each hand, and where employed, should be noted. Mark the character of your prominent school-mates, or friends—state your views of certain issues before the people,—and note the remarkable events concerning the "rest of mankind." It will be a great pleasure for you, in years to come, to travel back to days of boyhood, and know just what your views were at that time. Have your book marked by the Binder:—"Diary No. 1, 1880," and your name also, if you wish, on the back of the same. Begin with the New Year and write a large, round hand. Never fall into the habit of skating with your pen as does your humble servant. Don't fail, boys or girls, to have all ready for the New Year. You will never regret the step. J. V. Locust Hill Farm, Ind., 1880.

PENNSYLVANIA—ITS MEANING.—Will you please tell the Young Ruralists—one at least—the meaning of the word Pennsylvania? Of course the first part is from PENN, the founder of the State; but the last part is what I want to know.—M. O. S.

SYLVAN means woody, or abounding in woods; pertaining to a wood or grove; hence a book containing a history of the forest trees of a country is called its Sylva. "The woody land of Penn," or Pennsylvania, was the name given by the king to the tract of land now forming the State of Pennsylvania when it was ceded to PENN.

IS HEAT Ponderable?—In the RURAL, a few weeks since, you gave several answers to philosophical questions, in which I was much interested. As we have a dispute in question, I will ask you to decide it, viz:—Is heat ponderable, that is, having weight?

HEAT is imponderable. Weigh a piece of cold iron; then heat it and weigh it again, and the weight will be the same. Procure a cake of ice and weigh it; then dissolve it and weigh the water, and it will be found precisely the same as the ice.

Gov. MORRIS visited the Rensselaer County Fair, in this State, and made a speech, in the course of which he said:—"I have been a farmer—a genuine, hard working farmer—and it is in the hope that my voice will reach the ear of every young-man present, that I assert that there is not an individual in the County of Rensselaer who commenced earlier, labored harder, and had fewer advantages than I, prior to the age of seventeen; and if I have obtained any measure of success in life, it is entirely owing to habits inculcated, discipline practiced, and lessons learned on my father's farm."

There's a great difference between honor and honesty; the former, it is said, exists among thieves, the latter certainly doesn't.

THE worst of faults is a false heart; and the least comely covering that can be imagined is a false hood.

CONTENTS OF THIS NUMBER.

AGRICULTURAL.	
The Progress of Rural Improvement	405

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., DECEMBER 17, 1859.

TO AGENTS, SUBSCRIBERS & C.

An Agent asks if the money sent to secure Christmas Gifts or Gratuities (offered in Rural and Circular), "must reach our office or be mailed previous to Christmas." To which we reply it is only necessary to be mailed—"remitted," as we said in the offer—no matter if it does not reach us until a week or more afterwards. In our offer we said "remitting previous to Christmas day," as Christmas comes on Sunday this year—but in order to give all competitors an opportunity to have the Holiday to complete their lists, we will extend the time, and say remitting (mailing) on or before the 26th of December, (the day which will be celebrated as Christmas.)

As there are fifty-three Saturdays this year, we shall issue no RURAL on the 31st inst. Every yearly subscriber will receive his full quota—FIFTY-TWO NUMBERS—and of course none will expect us to exceed the usual limit of a complete volume. The odd week will enable us to change type, &c., and get our Mailing Machine (Dick's Patent Mailing Dispatch) into operation for the new volume. We think Subscribers, Agents and Post-Masters will all like the new process of printing the names of subscribers, as it will be more speedy and accurate—saving the eye-sight of P. M.'s and their assistants, and enabling us to mail our large edition with more promptness.

Our published terms will be strictly adhered to, and no one has any authority from us to offer the RURAL at less than our rates. The RURAL is not a "dollar paper," as \$1.25 is the lowest club rate, even if a thousand copies are taken.

We have no traveling agents for the RURAL, but depend upon local agents and clubs.

Please forward names of subscribers for 1860 fast as convenient, as we are already typing the list for Mailing Machine. All who compete for first prize, as offered, are informed that there is yet time. Those competing for the Christmas Gifts are advised (in answer to inquiries) that they can send on part of their lists now, and remit pay (with the remainder) on or before the 26th inst.

See Terms, Special Notices, &c., on last page—and offer of Gratuities, &c., in previous numbers.

DOMESTIC NEWS.

Congressional News.

SENATE.—In our last we announced the introduction in the Senate, by Mr. Mason, of Virginia, of a resolution to inquire into the Harper's Ferry affair, and also an amendment by Mr. TAYLOR, of Illinois, to extend the investigation to the seizure of the Arsenal in Missouri, at the time of the Kansas excitement. This resolution opened the subject of slavery, which was discussed with great freedom and tolerable good temper, (tar and feathers only being threatened by one Senator,) until Thursday evening, the 8th, when the Senate adjourned until Monday.

HOUSE.—The subject of slavery was introduced into the House, the first hour of its session, by an attack on an anti-slavery book called the *Impending Crisis of the South*, written by a Mr. HAZEN, a citizen of North Carolina, and which had been recommended by several persons, members of the present House. Then followed a violent denunciation of the book, and all who recommended it, with threats of hanging, and other follies which we have not patience to read, and with which we shall not annoy our readers. Would it not be well for some agricultural chemist to go to Washington with a good disinfecting agent, and scatter it liberally through the House for it is becoming a stench in the nostrils of the people. No Speaker

has been elected, and no business done. At the last trial, 231 votes were cast; necessary to a choice, 116. Mr. SHERMAN, (Republican,) received 110; Mr. BOOCOCK, (Dem.), 88; Mr. GILMAN, (American,) 20; Scatterings, 12. There seems to be little prospect of an organization of the House unless the plurality rule is adopted.

Personal and Political.

The entire Republican State Ticket of Kansas is elected by over 3,000 majority. The following is the ticket:

Governor—Charles Robinson, of Lawrence. Lieut. Governor—Joseph P. Root, Wyandot. Sec. of State—John W. Robinson, Manhattan. Auditor—George S. Hillyer, Grasshopper Falls. Treasurer—William Tholan, Leavenworth. Attorney General—Benj. F. Simpson, Lykins Co. Supt. Instruction—William R. Griffith, Bourbon Co. Chief Justice—Thomas Ewing, Jr., Leavenworth. Associate Justices—Samuel A. Kingman, Brown Co., Lawrence D. Bailey, Emporia. Member Congress—Martin F. Conway, Lawrence. The Governor and Member of Congress are the men elected to those places under the Topeka Constitution of 1855; Topeka is the State Capital, as then; and the State will be admitted under what is essentially the old Topeka Free State Constitution. Mr. Ewing is the son of the U. S. Senator of like name from Ohio twenty odd years ago. Mr. Conway is a native of Baltimore.

In the Georgia Democratic State Convention on the 6th inst., a resolution was adopted recommending Secretary Cobb for the Presidency, when a number of the members withdrew on the ground that such action on the part of the Convention was irregular and unauthorized.

A RESOLUTION was introduced in the South Carolina Senate, on the 6th inst., declaring it inexpedient for South Carolina to enter into any Convention with the Northern States for the nomination of candidates for President and Vice President.

The Charter Election in the city of New York was held on the 6th inst. It was a triangular fight between Fernando Wood, (Hard) Mr. Havemeyer, (Soft) and Mr. Opyke, (Republican.) The total vote cast was 78,657, as follows:—Opyke, 22,716; Havemeyer, 26,813; Wood, 30,289. Wood's majority over Havemeyer, 3,526; over Opyke, 7,528.

The Democratic National Committee have fixed upon the 23d of April for the Convention, at Charleston.

News Paragraphs.

CATTLE buyers from Milwaukee are traversing Iowa, and collecting all the herds of cattle they can purchase to drive to that city, where they are slaughtered and shipped to Liverpool. The capital is furnished by Canadian operators.

The London Times says that fabricators of false coin are very busy either in Mexico or the United States. More than the ordinary number of dollars recently received, via New York, have been found bad.

The Toronto Globe says that on Saturday, the 26th ult., the remains of Loust and Mathews, who were executed in the Court House Square, Toronto, in the Spring of 1838, for their connection with the rebellion of 1837, were exhumed. They were buried on the day of execution in Potter's Field, Yorkville.

LARGE discoveries of antique gold articles have been made in Ireland. In the neighborhood of Athlone the value of the gold taken out is estimated at twenty-seven thousand pounds sterling. The relics are melted up by the gold refiners of London in a remorseless manner.

It is reported at Vienna that an autograph letter of the Emperor would soon be published, which will annul all the restrictions imposed since 1851 on the Jews in Austria, and enabling them to be the possessors of landed property.

An officer in the English army, who was with his regiment in India during the whole period of the late revolt, returned to his home during the last month, and the morning of his arrival the postman brought to him a letter which was mailed in May, 1857, which had been following him for two years and a half, and which had only that morning reached him in the same place where it was mailed, and in the presence of the person who wrote it.

The Revolutionary War, according to official accounts furnished to the British Parliament, cost Great Britain 43,633 men, exclusive of officers, and \$645,615,455.

There is a horse in the regiment of the 11th Hussars of the English army, which has attained the remarkable age of thirty years. By the horse register it is shown that he joined the army as a four-year old on the 2d of October, 1833; was sent to the Crimea in 1854, and was present in all the actions, including Balaklava, in which that regiment was engaged, being one of the very few horses who survived the exposure of that winter. He is still, in 1859, in good health, and fit for duty.

KANSAS has become a formidable rival to Illinois as a "land of refuge" to the unhappy mated. The divorce law is a wide open gate to single blessedness, and one Judge has recently granted 25 petitions at one sitting. It requires only twenty days residence.

DURING the present year nearly a dozen churches of different denominations have been destroyed by fire within the limits of the State of Massachusetts. Some of these it is known were set on fire by incendiaries. The loss of so many buildings of the same character, in one locality, in so short a time, is unparalleled.

A GRANDSON of Tecumseh is now living in Natchez, Miss. He is a well educated and accomplished gentleman, having traveled over a great part of Europe, and is said to be an excellent physician. He derived the secret of the curative powers of many herbs from his grandmother, who was a "medicine" woman.

The English Chapel in Geneva, Switzerland, is the only church in that city in which the service is conducted in the English language. Lately a prayer for the President of the United States has been introduced into the service.

A STRIPPER of sixteen, who blacks boots for a living at the railway station in Boston, has traveled through nearly every State in the Union, achieving his passage from place to place by ingratiating himself with railroad conductors and agents. He has just returned from St. Louis, the entire expense of his trip being 35 cents.

A BUILDING is erected at Peoria which will cover three acres of land all under one roof. It is for the manufacture of pottery, and will constitute the largest establishment for that business in the world.

The medical men in England say that vaccination is becoming ineffective; the virus used for vaccination having never been renewed since Jenner's time.

A TERRIBLE prairie fire swept over fifteen miles of Jasper county, Iowa, a few days ago. The Newton Press states that it destroyed one man's house, stable, stacks, and two horses; the orchard and nursery of Mr. Newell; the stabling, stacks, and 300 bushels of corn belonging to John Houk, and barns and other property of A. W. McDonald, and an immense amount of fencing.

In Leghorn, recently, a remarkable scene took place. For the first time, the Jews of that city offered up a prayer for a Christian Prince, and invoked the blessing of Heaven upon Victor Emmanuel, King of Sardinia. At the first word, the three thousand Jews present rose to their feet, and remained standing until the close of the prayer, to which they all responded with an overwhelming "Amen."

The last legislature passed an act directing so much of the State lands lying adjacent to the prison at Sing Sing, as were not necessary for the purpose of that institution, to be sold at public auction, under the direction of the Inspectors of Prisons. Accordingly, the Inspectors sold about 60 acres last week. The sale brought \$34,280 95. The lands sold have heretofore been leased from year to year, at a rental of about \$300 a year.

It was stated by a leading dentist of Chicago, in a recent address to his brethren that the annual value of gold plate and leaf used in the United States for the replacing and repair of defective teeth, is \$2,250,000. This is a fact that tests the existence of a high civilization and a good deal of toothache in this blessed land.

SUBTERRANEAN FORESTS.—The Racine (Wisconsin) Advocate states that in digging for water in sloughs throughout the whole town of Yorkville, Racine county, traces of dense tamarack forests are found, and generally in a leaning direction, their tops towards the southwest, as though some mighty flood had suddenly overwhelmed them.

INTERESTING POSTAL DECISION.—P. M. General Holt has recently decided an interesting and novel question. A husband who had been separated from his wife, demanded that his village Postmaster should deliver her letters to him, and threatened a suit at law if his demand was not complied with. The wife, on the other hand, forbade the delivery of her letters to her husband. In these circumstances, the Postmaster applied to Mr. Holt for instructions. That gentleman pronounced the claim advanced by the husband too preposterous to be seriously refuted—indeed, he says it is abhorrent to law as it is to the Christian civilization of the age—and he directs the Postmaster to deliver the letters to the wife.

CALIFORNIA GOLD.—The shipments of gold from California so far this year, greatly exceed those of any previous year for the same time. As near as can be ascertained, the yield of gold from the California mines, exceeds sixty millions of dollars per annum, and this year the product, it is confidently predicted, will be at least eighty millions. This would seem to conclusively establish the inexhaustible character of the mines and their augmenting richness.

BANKING PERILS IN GEORGIA.—Banking is likely to be a peril in Georgia. The Governor of that State, in his recent message, recommends a revision of the criminal code, to the end that a suspension of specie payment by any bank of Georgia shall be deemed conclusive evidence of fraud on the part of the President and Directors, and punishes the officers of the bank for it, by imprisonment in the Penitentiary, without permitting them to show that it was not a fraud.

MARRIAGE OF COUSINS.—Gov. Magoffin, of Kentucky, recommends the Legislature of that State to prohibit by law, under severe penalties, the marriage of cousins. He says that the imbeciles, insane, deaf mutes and blind in the different asylums of that State, who are the offspring of cousins, is from sixteen to twenty per cent. of the whole number; and he claims that it is the right and duty of the State to protect herself against the evil and expense by forbidding such unions, which nature plainly forbids by the natural penalty she uniformly inflicts.

THE GREAT EASTERN A FAILURE.—The London correspondent of the Boston Post, writing about the mammoth steamship, makes use of the following language:—"The Great Eastern has flummoxed! The leading journal records its trial trip as 'only a partial success.' We all know what that means. She rolls like a porpoise or a log canoe, the decks leak, the iron plates don't fit, the decorations crumble and disappear, and—the worst remains behind—she can only go a little more than half the speed that was expected of her! The very best that can be got of her under the most favorable circumstances of wind, water and coal, is thirteen miles an hour. So say some knowing engineers who were on board, and who wished and hoped the most favorable results. There is no disguising it. The great hull is worth all it would bring for old iron."

NEW YORK COMMERCE.—The amount of imports at New York in October was \$13,617,976 against \$13,542,984 for October 1858. Exports, \$18,829,256—of which one half was specie. Total imports for ten months, \$211,262,116, being a large increase upon 1858, but a slight increase over 1857. Exports for the ten months, \$118,005,227. Duties received, \$38,833,700,08. The imports since Jan. 1st have been larger than for the corresponding ten months of any previous year upon record. During October the stock in warehouse was decreased a little over three-quarters of a million.

FOREIGN NEWS.

GREAT BRITAIN.—Lord Cowley, the British Ambassador to France, had arrived in London, and it is reported that his mission was to lay before the English Government a proposal from the French Government for a simultaneous disarmament by England and France; but it seems that the English Government have no idea of decreasing the strength and efficiency of the army, for we have news by the same mail that the English Government had decided upon making a considerable increase in the army, by the formation of a second battalion to each of the regiments up to and including the 31st, by which means an increase equivalent to eleven regiments will be obtained. The London Post says this measure ought to excite no surprise, when the small amount of the British army is compared with the extent of territory which it has to occupy, and the drafts necessary for India and China.

The Morning Advertiser states that it is the intention of the Government to limit the intended Reform Bill to the mere extension of the franchise. The question of disfranchisement, and the mode of taking the votes, are either to be deferred or made separate measures.

FRANCE.—The cases of death from cholera in the French army, during the twenty days' campaign against the French tribes of Morocco, is 2,106.

The French Government was forming large depots of coal to provide against the inconveniences that might result from any future war, from coal being declared contraband of war.

Several official paragraphs had been dispatched to the provincial journals, encouraging the impression that the Emperor had charged Lord Cowley to represent to her Britannic Majesty his willingness to promote a general disarmament in Europe.

It is reported on what is considered good authority, that the French papers are restrained in their expressions against England.

ITALY.—General Garibaldi had quitted Nice for Genoa. Before his departure he addressed the inhabitants of Nice, and said: "I shall resume my command when necessary. Let us be united under Victor Emanuel. Let us continue under arms as long as an inch of Italian soil remains oppressed."

The Sardinian Government had addressed a dispatch on the subject of the Regency of Central Italy to its diplomatic representatives in the various courts. It states that the Government recognizes in the offer of the Regency to Prince Carignan, the ardent desire of the population of Central Italy to see their reunion with the monarchy of Sardinia consummated, but the Government, assured of the early meeting of the Congress, advised the transfer of the acceptance of the Regency to Chevalier Buoncompagni, until assembled Europe has regulated the position of the province of Central Italy.

AUSTRIA.—An imperial autograph letter orders the ministers to grant a full amnesty to all persons compromised by the part they had taken in the Italian affairs. The amnesty will apply to civil as well as military persons; criminals of no political character are to be executed.

SPAIN.—A Madrid dispatch of the 21st says the fortifications of Ceuta continue. The embarkation of the first corps d'armee has been completed, and the second has commenced. The bad weather renders the shipment of war material difficult. The organization of the battalion in the Basque province is proceeding actively.

The Spanish Government is said to have entered into contract with English firms for the supply of different sorts of stores for the army in Morocco, and for a large quantity of English coal for the fleet.

Several steamers had also been chartered, and one had already left England for Spain, to assist in the transport service.

PEACE CONGRESS.—The ratifications of the treaties of peace were exchanged at Zurich on the 21st. The letters of invitation to the Congress will be sent out from Paris. Prince Metternich will send out those of Austria. The Le Nord says it is probable the discussions on the Congress will extend over five or six months. The treaty of peace will first be examined, and then the Italian question will be discussed. It was reported that Count Rechberg, assisted by Prince Metternich, will represent Austria at the Congress. The Paris correspondent of the London Times, in his latest letter, confirms the statement that the invitations to the Congress had been delayed not from any difference between the English and French Cabinets, but rather owing to some difficulties started by Austria on the Regency question.

The father of the child Mortara had arrived in Paris, determined to demand from the Congress the restoration of his child.

COMMERCIAL.—Broadstuffs.—Flour dull and 6d@1s lower. Wheat dull and 1@2d lower. Corn quiet and declined 6d@1s per quarter. Quotations nominal.—Protections. Pork dull and sales unimportant. Lard quiet.

THE TRANSPORT OF COTTON.—It is but a few years since the Mississippi river via New Orleans was the only outlet for the great staple of the South. Within a short time, however, railroad facilities have increased so rapidly that competition for trade has sprung up, and now the western roads, as well as the canal and roads of our own State, begin to be benefited by it. Heretofore the cotton used at the mills in Oneida Co., and other points, found its way from Memphis via New Orleans and New York, and thence by canal or railroad. Now it can be brought via Cairo, Chicago, and Buffalo, at less rates. The Illinois Central road is now doing a large business in this traffic for the North. It is stated that forty-one cars were loaded at Cairo with cotton in a single day last week, and 2,000 bales were sent over the whole line of the road during October, for the factories of Western New York.

OUR LAST NUMBER was delayed somewhat in consequence of the breaking of the steam engine which drives our presses, just after commencing work. This is the only delay during the year; and, though obliged to substitute a four-man power, our edition was printed and mailed within twenty-four hours of the usual period.

The News Condenser.

—The Legislature of Georgia has abolished public executions.

—The fisheries of Lake Michigan are said to produce \$1,500,000 annually.

—Thomas Hyatt has realized \$400 by the sale of Brown's photographs.

—The shock of an earthquake was felt at Rockingham, N. C., on the 24th of Nov.

—An iceberg, ten miles long and very high, has been lately encountered off Cape Horn.

—Advices from Brownville state that, out of revenge, Cortinas had hung three Americans.

—Mr. Smith O'Brien has been lecturing in Dublin on "America and Her Institutions."

—The Irish are talking about raising 20,000 men in Ireland for temporal service of the Pope.

—Nosed, the wealthy banker of Milan, has contributed 100,000 livres to the Garibaldi fund.

—Christmas is coming, and it is feared that it will lead to a complication in the affairs in Turkey.

—Another Persian Ambassador, Hassan Ali Khan, has arrived in London on a "special mission."

—A bill has been introduced into the Georgia Legislature expelling all free negroes from the State.

—Nine churches are to be sold at auction in Cincinnati, the present month, for non-payment of taxes.

—The Virginia Legislature have unanimously approved the sentence of Cook and the other prisoners.

—Washington Irving's funeral was a very large and solemn one. The procession was over a mile in length.

—A son of Judge Haun, the new Senator from California, died about six hours after his arrival in New York.

—The Menal Bridge, built by Robert Stephenson, is 1,600 feet long, 80 feet wide, and 100 feet above the water.

—Between the 16th of Oct., 1858, and the 4th of July, 1859, 149 foreign vessels arrived at the port of Nagasaki, Japan.

—The best find yet made by the divers about the Royal Charter is a bar of gold weighing nearly four pounds.

—The shipments of gold from California this year will probably be \$40,000,000; about \$30,000,000 have arrived.

—They are about to dedicate a colossal statue of Franklin for the new Franklin Market, in Philadelphia.

—The young woman to whom General Tom Thumb has pledged his heart and hand, is just forty-two inches in height.

—Thirteen thousand dollars worth of diamonds were, on Saturday week, confiscated in the U. S. Court, New York.

—The expenditures of the United States Government for the last quarter, ending October 1, were twenty million dollars.

—Thirty-one slaves have been captured on the coast of Africa by the British cruisers within the past few months.

—There are stone bridges in China, three and four miles long, and an arch of the incredible span of six hundred feet.

—Mr. Ralph Farnham, a revolutionary soldier aged one hundred and three years, is living in the town of Alton, Maine.

—There have been erected in St. Louis, the past year, 2,542 new buildings, valued at more than seven million dollars.

—The American Tract Society has made a grant of 1,000,000 pages to be distributed by colporteurs in the State of Illinois.

—Skating clubs are being formed all over the country. The ladies are apparently as active as the gentlemen in this matter.

—A married lady in Loudon Co., Va., is said to weigh five hundred and fifty-three pounds. Her husband is a great lady's man.

—The Montreal Gazette says the Grand Trunk Ferry boats carry over 6,000 barrels of flour daily for shipment to Portland and Boston.

—This year it is estimated that there will be received about 200,000 barrels of flour and over 5,000,000 bushels of wheat, at Milwaukee.

—The physician of the Utica Asylum writes, under date of Nov. 28th, Gerrit Smith was greatly improved, and is now quite himself.

—The hog cholera is making dreadful havoc in the valley of the Mississippi, the estimated number of hogs killed by it being 250,000.

—A Paris letter says Louis Napoleon will soon have a fleet of 23 steel-plated ships of the line—proof against everything but lightning.

—Hon. Edward Stanley, late of North Carolina, but now of California, is about to enter the ministry of the Protestant Episcopal Church.

—A canal boat, constructed by J. Wilkinson, of Bradley Forge, England, in 1787, is supposed to have been the first iron boat ever built.

—Small pox is prevailing quite extensively in Albany. On Sunday last there were no less than twelve small pox funerals from two wards.

—The Shah of Persia has sent ten Persian youths, one of whom is a Christian, to Dippe, to be educated at the College there, at his expense.

—The steam frigate Minnesota has only been on one cruise and yet is so rotten as to be stripped. Unseasoned wood was employed in her planking.

—Over three hundred barrels of Sorghum molasses have been made in Carroll Co., Ind., the present fall. It sells readily at 60 cents per gallon.

—A joint stock company, with a large capital, is reported to have been formed in Cincinnati, with the design of controlling the Pork Market.

—The La Crosse papers state that a larger emigration is now crossing the river at that point into Minnesota than has been known since 1850.

—It is stated that 4,000 persons die annually in England of small-pox, the lives of 3,990 of whom might have been preserved by timely vaccination.

—Under a rule adopted by the Board of Education in Cincinnati, the German language is hereafter to be taught in all the public schools of that city.

—The Earl of Southesk has sent a number of beavers from Canada to England, in the hope that this useful animal may become naturalized to that country.

—The dogs killed in Cleveland, O., the past season, were sold to a glove manufacturer in Littlefield, Medina Co., where their skins were made into kid and buckskin.

—The system of holding political conventions is being tried in Canada. This is one of our American notions which are becoming popular with our neighbors.

—Large numbers of trout are found dead and dying in the streams near Phillips, Me., supposed to have been destroyed by the effects of the great fires in the woods.

TO HOUSEKEEPERS.—SOMETHING NEW.
B. B. BAKERS'
BEST MEDICINAL SALERATUS.

Is manufactured from common salt, and is pre-
pared entirely different from other Saleratus. 68
All the kindred salts are made by boiling down
inanner as to produce Breat's Salt, and all kinds
of cake, without containing a particle of
ammonia. It is perfectly pure, and does not
thereby producing what some results. Every
particle of saleratus is turned to cake, and passes
through the system, leaving no residue behind.
It is consequently not injurious but promotes health.
Water and Flour. You will readily perceive, by
reading the above, that it is entirely different
from other Saleratus. 69

It is packed in one pound papers, each paper
marked "B. B. Baker's Medical Saleratus."
Also, a pure, washed loaf of bread, with
a glass of effervescent water on top. When
broken open, you will find the same result. 70
This is the best medicine for all ailments of the
stomach, liver, and bowels. It is also good for
all ailments of the head, chest, and lungs. 71
It is also good for all ailments of the skin, and
for all ailments of the eyes, ears, nose, and throat. 72

"BYE-AND-BYE."

We say it first when our hearts are gay,
When our life's young sky is blue and bright,
And we dream the morning hours away
With never a thought of the coming night.
"Bye-and-bye" we will win of fame
Some lofty niche in her temple high,
The world shall ring with our honored name
In the years that are coming "bye-and-bye."

But time rolls onward and hope delays
Her flattering promises to fulfill,
Yet we list to her song of the future days,
And, trusting as ever, believe her still.
We have no sight for the swift-winged hours
That are flitting by us so silently,
We are looking still for the thornless flowers
That we are to gather "bye-and-bye."

Years remorselessly speed away,
Stealing the bloom from the faded cheek,
Streaking the sunny locks with gray,
But never bringing the good we seek.
Till weary of sorrow the aching breast
But longs in the quiet grave to lie,
And only sighs for the dreamless rest
That shall be its portion "bye-and-bye."

Here in our chrysalis state we lie,
Shaping wings for a heavenly birth,
And the spirit that fain would mount and fly,
Is bound by life's pitiful creeds to earth;
But soon or late shall its chains be riven,
We shall gain the knowledge for which we sigh,
Why much was withheld and little given,
We shall know God's reasons "bye-and-bye."

Story Teller

Written for Moore's Rural New-Yorker.

JUDITH.

BY CAROLINE A. HOWARD.

I HAVE not painted much of late years. When a man gets towards the sixties, if he has anything like a competency, he begins to have a partiality for good dinners and arm-chairs.

Is art less attractive than in my more enthusiastic youth? Not a bit of it! On the contrary, I think I am a more sincere worshiper at her shrine, since the munificence of Fortune has enabled me to regard her only with the highest devotion, and not as one compelled to seek her through motives of self-interest.

Yes, it does take a little from the romance of artist-life, to feel the harsh hand of Necessity continually urging to new efforts, bidding you coin your bright fancies into money if you would have bread. But it does not take away all the beauty and charm. Some of my happiest days have been passed in this very city, in a little house on C— street.

I was not alone; my little wife was the sweetest, most charming company which I could have. To her I owe some of my best efforts and highest inspirations. Our house was small, though sufficient for our simple wants. The lightest and most cheerful room was used for my studio, and to it my NELLIE used to bring her sewing and sit with me while I worked away upon the canvas, with occasional pauses for her approval and suggestions.

Here we are at the door. You look around and smile. I dare say you are thinking of the contrast between my present residence and that to which I have just alluded. Well, there is a contrast, but thank Heaven! I believe that hopeful perseverance and prudence have made it all my own.

If you will walk into the back parlor I will show you a painting which I have preserved as a memento of those old struggling days. My wife calls it hers, and as she has always prized it very highly, I have refused numerous offers to part with the original, but have made several copies of it. I have seen various representations of the same subject, but never any just like this. Let me open the blinds that you may have a good light upon it. There!

And I stood before it. Rather it stood before me, so life-like was it in form and coloring. It was full length, and nearly filled the little niche in which it hung. The scene was a midnight landscape, over which the rays of the full moon threw occasional gleams of light from scattered masses of cloud. Lying here and there in the shadows were the tents of HOLOFERNES' army, while in the foreground appeared the more gorgeous tent of the commander. The moon, once more emerging, threw its clear radiance directly upon it, bringing into bold relief the figure of JUDITH, as she lifted the curtain of the tent and held it for her handmaid to pass out. Perfect dignity invested that tall and queenly figure, from which a rich embroidered robe hung in graceful folds, almost concealing the delicate, sandalled feet. The form of the maid was just visible in the interior of the tent, bearing upon her shoulders the bag which contained the head of HOLOFERNES. JUDITH, half turned to hasten her tardy footsteps, bringing to view her beautiful, almost fearful face, in which so many emotions contended for the mastery.

My feeble pen may not attempt perfectly to describe that face. The glossy dark hair was brushed plainly back from the low, smooth brow, and gathered in braided bands, confined with gold and jewels. The eyes, dark and piercing, gleamed with a triumphant light, telling of the proud, defiant spirit within. Yet, above those bold, dark eyes lay a line of long and silky lashes which told how their flashings could be subdued at will and melt into softest pleadings. The nose, like that of her countrywomen, was narrow at its rise and large and prominent at its base, detracting something from the delicate beauty of the other features, but increasing the expression of courage and firmness. The mouth was small and crimson, and in smiles must have added to the rather sensual softness of the rounded chin and cheeks; but now it curled and stiffened with contempt and strength of will. A faint flush stained the clear

olive complexion, and betrayed the eagerness of the intent which was so nearly consummated.

After dinner my host still further increased my interest in this striking painting by relating to me its history which, to the best of my recollection, was this:

As I told you, we were poor, and poor young artists were then, as now, too common to excite much notice. I had been sick, and recovering, found my funds at a very low ebb, and even my cheerful wife, worn by care and anxiety, began to look rather sorrowfully on our future. I must paint something remarkable—something which would attract immediate attention. I had a historical piece upon the easel partly finished, but I put that aside and hastily sketched a *Judith*. I had studied the Jewish features carefully; they always interested me. The picture which had brought me the highest price of any which I had yet painted, was a *Wandering Jew*, which, strangely enough, was bought by FANQUAN, the Jew exchange broker.

At first, I sketched a head, representing in the face the emotions of JUDITH when bending over the couch of her victim before the deed. But it was too vague. Then I took a half length, but had no better success. I was feeble and excitable, and after spending days, which grew into weeks, in this way, I was nearly determined to give up and take my wife into the country to her father's until I should be strong and well again.

I had sat down one day for a last attempt, and with a sad heart and cloudy brow was working busily, when NELLIE, who had gone out to take the air in a stroll upon Broadway, rushed in breathless, and seizing a fan, began, in her lively way, to recount her adventures.

"O, LAWRENCE! it is so warm, and I am so out of breath! I walked so fast, I was in such a hurry to tell you! I've seen a model for your *JUDITH*! If you can only get her! In a lace store in Canal street! O, you must go!"

In short, as NELLIE related more calmly when she had leisure to collect her thoughts, she had entered a lace store on Canal street to make a few purchases, and been waited upon by a French girl who had struck her fancy so much that I must see her without delay, and if possible induce her to sit for her portrait.

Had we been in Paris instead of New York, such a proceeding would not have been unusual, but I felt that, as it was, there were some difficulties in the way. To ask a young woman to perform such a service would require tact, and that of which I had less—money to pay her handsomely.

However, to gratify my wife, I walked out with her next day, and we paid a visit to the *might be JUDITH*. I was delighted. NELLIE had an artist's eye, and in this instance it was a true one. I need not describe the girl. Look at the painting,—imagination has done but little. But how to approach her was the question. NELLIE insisted that I should leave that to her, and thus she managed it, fortune favoring.

She called frequently, and always contrived to see and speak with the girl, whose reserve gradually wore off before her lively frankness. She found that ELISE DENMEAD embroidered for the store in which she was employed, and also for any who wished her services. Having at that time some delicate work on hand she gave a part of it to her to do. When she had finished it she came to the house, and NELLIE, wishing to gratify her, showed her over my studio. She displayed so much appreciation and good sense, that I was quite surprised, and gave her an invitation to come whenever she felt inclined. I showed her my unfinished *JUDITH*, and by skillfully painting out her resemblance to the character intended, I paved the way for asking her to sit for me once or twice. I watched her closely, and saw that she was flattered. The vanity of the French woman was a strong trait in her, which her expressive countenance could not conceal. Forgetting her reserve, she expressed her sense of the honor with true French vivacity, and promised to come as often as I pleased. The press of business would not allow her to come at present unless in the evening, but she hoped to be at leisure soon.

Such was the interest which she had awakened in my wife's kind, sympathizing heart, that we soon learned her story. An orphan, she had left her native land and found employment in New York, first as a milliner's apprentice, then as a seamstress and nursery-maid, until she had taken the place in which we found her. She had been there two years, and possessing the confidence of her employers, was able to support herself comfortably. She boarded, with several others of her class, in a respectable house in a quiet street, and though she led a lonely and laborious life, she seemed happy and contented.

She was but nineteen years of age, and though educated in the harsh school of poverty, possessed a natural refinement and simplicity truly pleasing. No one could converse with her without feeling assured of the purity of her mind. We admired her, but we sometimes trembled for her as we noticed the deep-seated and natural vanity of her disposition, with that confiding affection which timidity only covered with reserve.

Finding that I should be delayed in the painting, I worked upon my historical piece, and had the rare good fortune to find a purchaser for it before winter set in.

ELISE sat for me twice, sittings of an hour each, in about a fortnight after her first visit, and the picture was fairly commenced. NELLIE sat near her, and they beguiled the time with conversation about herself, her trials and hopes, all of which NELLIE drew from her with an earnest desire to understand, and, if possible, benefit her. She said she had few friends beyond three girls with whom she was thrown in contact, and whom she cared but little to know. She was acquainted with some of their customers, who had always been kind, and those with whom she had lived had always taken a lively interest in her welfare.

She possessed a true friend in a lady in Brooklyn, for whom she had formerly worked. Mrs. ALLEN and her children often came in their carriage to the store, and last summer, when she had vacation, they invited her to stay several days with them. There she met with Mrs. ALLEN's brother, a man between thirty and forty years of age, and, as she

described him, a very benevolent, intelligent and agreeable bachelor.

This visit to Brooklyn was a green spot in her life, for she dwelt upon it with evident pleasure. She said Mr. FELIX FOWLER, the brother, had called at the store several times to leave messages from his sister, and once or twice had left a bouquet or some choice fruit for her at her boarding place. He was so kind and thoughtful of those less favored than himself.

I gave her a few sharp, questioning glances when she spoke of this acquaintance, but she stood them without flinching. Evidently she knew her place, and regarded him as an indulgent friend, whom she considered too old, as well as too far above her, to appear in any other light.

Some time elapsed, during which we saw nothing of her, and upon inquiry, NELLIE learned that she was sick. She visited her at her boarding place, and was glad to find that other friends had cared for and attended her. Mrs. ALLEN was away spending the summer, but her brother, who did business in the city, had been unremitting in his attentions.

NELLIE said that had he been a lover, rather than a generous friend, he could not have been kinder than he seemed to have been. ELISE spoke of him with tears, calling him her best friend. Some how, NELLIE said, she felt uneasy, and did not half like this very kind Mr. FOWLER.

One day, after ELISE began to recover, we were walking out, and suddenly turning a corner, we met her seated in a chair by the side of Mr. FOWLER, as we supposed. She saw us and blushed deeply—for just as we met them he was bending over her, apparently speaking in a low tone. Something in his look and air struck me unfavorably, and as we walked on I told my wife that she must speak to ELISE, and, if possible, ascertain her exact position towards him. It seemed to me very like a courtship. Too like for a man of wealth and of the world to seem towards a poor shop-girl.

When next NELLIE called to see her, ELISE acknowledged that he had several times taken her to ride. The doctor had ordered wine for her and advised her to ride out. How could she get such luxuries as these unless provided by some friend? But NELLIE urged that they should come from others; that it was not well to receive them at his hands. Men were seldom so disinterested. In vain she cautioned; ELISE had perfect faith in his honor. He was so good, so thoughtful. Was he not Mrs. ALLEN's brother? She would have warned her had there been aught amiss in her receiving his kindness. Fearful of wounding her innocent and unsuspecting heart, NELLIE said no more—but ill at ease, awaited a more favorable time, resolving, if possible, to ascertain something more of this man.

Though paler and thinner than before, ELISE once more consented to sit for me, and the picture went on again. It was nearly marked out, and I was anxious to finish it in time for the January exhibition. ELISE was to have a vacation in August, and we had planned a little recreation for her in a visit with my wife to her father's farm up the East River.

I had been over in the neighborhood of Newark for a few days, sketching with one or two other artists, and was returning on the ferry boat, when I noticed, leaning carelessly upon the railing, Mr. FELIX FOWLER. I directed young NORWOOD's attention to him, asking if he knew him. He knitted his brow, looked sharply at him, and then catching Mr. MARSHALL by the arm, said—"Hey! MARSHALL, isn't that that fast FOWLER who drives such fine horses?"

MARSHALL assented, and turning again to me, NORWOOD added—"He is a queer being, so they say. Nothing very bad, only he never did anything for himself but drive horses and spend money. A few years ago he married an heiress, expecting thereby to have plenty at his command, but he was mistaken there. He couldn't touch a cent of her property, so he quarreled with her and she went back to her home in New England. He is quite a lady-killer, they say."

I had heard enough; he was a married man! He was, too, as I expected, a designing and unscrupulous man. I hastened home, feeling that no time should be lost in warning ELISE, who, I was sure, supposed him to be a bachelor. I was right in supposing that Mrs. ALLEN had not deemed it necessary to allude to his unhappy marriage, never dreaming that he would pursue his acquaintance with ELISE, or dare to give it her sanction. She was probably entirely ignorant of his visit to the girl.

NELLIE was horrified at the news which I had heard, and would have hastened to find ELISE without delay, but I deemed it best to wait until the next day. On the next morning, just as she was about setting out, a note was brought to her. It was from ELISE, and informed her that she had gone into the country to spend her vacation with an elderly lady, an aunt of Mr. FOWLER's, who had kindly written to invite her. Mr. FOWLER had escorted her, she said, and she was delighted with the place, so quiet and retired. She knew she should be quite well ere she returned to the city. She added that she would write again before her return, but she omitted to give the name of the place to which she had gone.

We could not but feel anxious, and had Mrs. ALLEN returned to Brooklyn, I should certainly have called upon her to learn her feelings in the matter. But she had not returned and I had not her address.

The two weeks passed away and still ELISE did not return. At the end of that time my wife received a letter from her. There was something touching, almost sad in that letter, something which spoke of a change in the simple-hearted girl. She wrote with an evident effort to be cheerful and happy, and wished NELLIE to go to her employers and say that she had been unavoidably detained over her time, but would soon return. To us she hinted that she thought the time near when she should leave the store altogether for a home of her own. Referring to her benefactor as she called him, she said—"He has been here more than a week, sick, or rather ailing, and I have taken care of him. I felt it my duty to stay with him, as the lady with whom I am visiting keeps but one servant. By

the way, she is not Mr. FOWLER's aunt but an old nurse of his. I must have misunderstood him. He came out to see her and was taken ill, so he has lingered. Ah! well—the hours have flown all too swiftly."

From the tone of this letter we feared that our worst suspicions were in a fair way to be realized. A few days brought ELISE once more to our house. She was looking happier, more brilliant than ever. I dreaded to dash her hopes to the ground, for it was evident on whom those hopes were founded. The picture of JUDITH was nearly finished, and in a gay mood she seated herself, as she said, for me to add a few last touches, since she was so improved in appearance all her friends said. We inquired for Mr. FOWLER, and she said he brought her home, but was soon going to Boston and Philadelphia.

Ere she left, my wife privately and earnestly besought her to give her confidence. She confessed that Mr. FOWLER had given her proofs of his love, though they were as yet not engaged. Her confidence in him was perfect. NELLIE then told her as gently as possible, what we had heard of him. She flew into a passion on the instant, declaring it to be a foul slander, and finally, with a burst of tears, she went away almost angry with NELLIE for telling her.

Mr. FOWLER left town, and for some days we saw nothing of ELISE, and supposed that her petty anger kept her away. NELLIE called at the store, but found she had left there for another situation. We began to feel anxious on her account, and only waited Mrs. ALLEN's return to lay our fears before her. We hoped to find ELISE again and convince her that we were truly her friends, but we relinquished that hope when, one day in the early Autumn, my wife returned from a walk, saying that she had seen some one upon one of the Avenues, whom she was confident was ELISE but as she turned to cross, the female saw her, drew down her veil and disappeared. She evidently wished to avoid her.

The first of November we paid a visit to Mrs. ALLEN's and without reserve related the incidents of the Summer. She seemed much shocked at our suspicions, and admitted that her brother's conduct had not always been satisfactory, but that she was certain that in this matter he had merely been inconsiderate. She feared that ELISE though innocent, was very weak minded, and had been led by her vanity to misconstruct Mr. FOWLER's intentions. She further informed us that her brother intended going to Europe in the spring, and that there were hopes that a reconciliation with his wife was about to take place. Unsatisfactory as this was, it was all we could do for the present. Thus we heard no more of ELISE for three or four months.

My picture entered the exhibition, attracted much attention, and I had numerous opportunities to sell it. This I was unwilling to do, and orders for duplicates came in as rapidly as I should be able to execute them during the current year.

It was one chilly evening in February that my wife and I were sitting by our cosy fireside discussing my improved prospects, and speculating upon the fate of one so nearly connected with my reputation as an artist. Suddenly we heard the outer door shut violently, and in another moment ELISE stood before us. She dashed her bonnet from her head, and, standing erect, glared around the room with restless, suspicious eyes. She was sadly changed. Her pale face and disordered hair gave her a wild expression, with which her neglected attire, bearing marks of travel, was strongly in keeping.

"It was true!" she cried "all true! He thought to deceive me, but I was too strong for him. Ah! the villain!" and she laughed a harsh laugh. "Did you think that I should never find you? He was going abroad with his pretty bride to leave me here alone, but I found him, and" coming nearer, she spoke in a cautious whisper, "I've sent him on a longer journey, and I shall meet him soon."

The poor creature would have raved on thus more wildly and incoherently than ever, but we restrained her gently, and having persuaded her to retire, sent for a physician.

As she turned to leave the room with my wife, she paused in the doorway, and lifting her trembling hand shook it at me in an attitude of defiance, exclaiming—"That last was dose too much, but it was not half so bitter as you made me drink."

Her expression was at that moment almost exactly that of JUDITH standing in the door of the tent, but heightened by life and madness. I felt as by instinct to whom her words were addressed, but it was with a start and a thrill of horror that I beheld in her once beautiful, now distorted proportions, the depth of her betrayal. Alas! for her the flower of life had perished.

Let me not detain you longer. It is only necessary to add that in the hope of freeing herself from temptation, the poor girl had left the city for a more retired home, but he had traced her out and succeeded in restoring peace and confidence between them. We must not speak of her fall otherwise than to say that it was but as hundreds have fallen before and since.

When the consequences became apparent, he resolved to rid himself of the burden at all events, the more so, that about this time, he had hopes of a re-union with his wife, and a trip to Europe.

Providing for her temporary wants he left her, and went to New England, thinking never to see her again, and hoping soon to place the broad sea between them. With a woman's quickness she divined his motives and followed him, not hoping to reclaim him, but determined to be revenged. She wrote to him appointing a meeting in Boston, and fearing exposure he dared not refuse. They met amicably, and to all appearance parted so, but never swerving from her purpose, she had mingled poison with his wine. Startled at the magnitude of her crime, her weak mind gave way, and feeling only an instinct to fly, she cared not where, she had come to us.

God did not permit the forlorn young creature to be her own avenger. The poison which she meant should do the work had failed. He was very ill but recovered, and though his friends knew the immediate cause of his sickness, they could get no clue from him, so closely did he keep his secret.

ELISE never recovered her reason, but disease at times overpowered her ravings, and a few short months terminated her sufferings. FOWLER lived a prominent citizen of this city. I do not doubt that you have seen him. Either the influence of his wife or the fearful experience of that year changed him somewhat for the better. He is an old man now, but the world has seemingly forgotten the follies and sins of his early manhood, and he is held in respect by many.

Publisher's Notices.

TERMS OF THE RURAL FOR 1860.

REDUCTION OF CLUB RATES.

Single Copy, One Year,	82
Three Copies,	85
Six " and 1 free to Club Agent,	810
Ten " " " " " " " "	815
Fifteen " " " " " " " "	821
Twenty " " " " " " " "	825

And any additional number at the latter rate—only \$1.25 per copy—with an extra free copy for every Ten Subscribers over Twenty. Club papers sent to different post-offices, if desired.

As we pre-pay American postage on papers sent abroad, Canada subscribers should add 12½ cts. per copy to above club rates.

Subscriptions can commence with the Volume or any Number. No deviation from our Terms.

PUBLISHER'S SPECIAL NOTICES.

VOLUNTARY AGENTS FOR THE RURAL.—Any and every Subscriber, Post-Master or reader is requested to act as voluntary agent for the RURAL, by forming clubs or otherwise. Now is the time for its friends to manifest their interest in the paper and the cause it advocates, either by obtaining new subscribers, or inducing others to act in its behalf. If any lose or wear out numbers in showing the paper, that's the best way to get subscribers,—we will duplicate them in order to make their files complete for binding.

ASSOCIATED EFFORT leads to success in canvassing for periodicals, as well as in other enterprises. For instance, if you are forming (or wish to form) a club for the RURAL, New-Yorker, and cannot fill it up in your own neighborhood, get some person or persons a few miles distant to join with or assist you—adding their names to those you may procure, and sending all together. Please think of this, and act upon the suggestion if convenient.

SPECIMENS FREE.—We always take pleasure in sending specimens free of charge. Reader, if you have any friends, near or distant, that you think would subscribe for the RURAL, or act as agents, please give us their addresses and we will send them specimens, &c. No matter how many names—"the more the merrier."

NO TRAVELING AGENTS are employed by us, as we wish to give the whole field to local agents and those who form clubs. And beside, we wish it distinctly understood that all persons traveling through the country, professing to hold certificates from us, ARE IMPOSTORS.

Any person who remits pay for a club of 6, 10 or 15 at the specified rates for such club, and adds a sufficient number within one month thereafter, can avail himself of the advantage of the price of large club, and retain the amount overpaid.

THE RURAL is published strictly upon the CASH SYSTEM—copies are never mailed to individual subscribers until paid for, (or ordered by a responsible agent,) and always discontinued when the subscription term expires.

Any person so disposed can act as local agent for the RURAL, and those who volunteer in the good cause will receive gratuities, and their kindness be appreciated.

"SHAWMUT MILLS" ROCHESTER.—We continue to do CUSTOM GRINDING at the lowest rates, and having improved the machinery of our mill for that purpose, we pledge ourselves to give full satisfaction to all customers.

We have for sale at all times, wholesale and retail, the best and most reliable brands of Flour. Also, Corn Meal, Rye Flour, Mill Feed and Screenings at the lowest prices, and we solicit the attention of the farming community. JAS. M. WILKINSON & CO., Brown's Race, Rochester, Sept. 23, 1859.

H. WORCESTER'S
PIANO-FORTE MANUFACTORY & WAREHOUSES,
Corner Fourteenth Street & Third Avenue.
H. WORCESTER offers for sale a large assortment of choice

PIANO FORTES, from 6 to 7½ octaves, in elegant rosewood cases, all of which are manufactured under his own supervision, and are for sale on reasonable terms. By devoting his personal attention to the touch and tone of his instruments which have hitherto been considered unrivaled, he will endeavor to maintain their previous reputation, and respectfully solicits an examination from the profession, amateurs, and the public. 807-11608

GUANO.—We would call the attention of Guano Dealers, Planters and Farmers to the article which we have on hand and for sale at THURTY PER CENT LESS THAN PERUVIAN GUANO, and which we claim to be superior to any Guano or fertilizer ever imported or manufactured in this country. This Guano is imported by WM. H. WEBB, of New York, from Jarvis's Island, in the "South Pacific Ocean," and is sold genuine and pure as imported. It has been satisfactorily tested by many of our prominent Farmers, and analyzed by the most eminent and popular Agricultural Chemists and found to contain (as will be seen by our circulars) a large per centage of Bone Phosphate of Lime and Phosphoric Acid, and other animal organic matter, yielding ammonia sufficient to produce immediate abundant crops, besides substantially enriching the soil. It can be freely used without danger of burning the seed or plant by coming in contact with it, as is the case with some other fertilizers; retaining a green, healthy growth, it causes the plant to grow in a healthy condition, and as experience has proved, free of insects. For orders in any quantity, (which will be promptly attended to,) or pamphlets containing full particulars of analyses and tests of farmers, apply to JOHN B. BARDY, Agent, 604-131 No. 88 South st., corner of Wall st., N. Y.

MAKE YOUR OWN SOAP.
SAPONIFIER.

PURE CONCENTRATED POTASH.
Warranted double the strength of ordinary Potash. One pound will make twelve pounds good strong Soap without lye and with little trouble. Manufactured and put up in 1, 2, 4 and 6 lbs. cans, in lumps, with directions, at the CHELSEA CHEMICAL WORKS, New York.
E. R. DUKE & CO., 181 Pearl street, N. Y., Proprietors. 600-154

THE LOGAN GRAPE.—The earliest ripening, black, hardy Grape with which we are acquainted. Its fruit was sent to us this year earlier than any other Grape grown out of doors. Very early bunch compact. Our Illustrated and Descriptive Catalogue of over 70 sorts of Grapes, sent to applicants who inclose a stamp. 604-131 C. P. BISSELL & SALTER, Rochester, N. Y.

FAIRPORT CHEMICAL WORKS.
D. B. DELAND.

Acknowledging the favor and patronage which have been bestowed upon him by the Trade and others, since the commencement of his enterprise, respectfully informs his patrons and the public generally, that with greatly increased facilities he continues to manufacture a superior article of **SALERATTS, PURE CREAM TARTAR, BI CARBONATE OF SODA, SAL SODA, &c.** The above articles will be sold in all varieties of packages, at as low prices as they are afforded by any other manufacturer, and in every case warranted pure and of superior quality. Orders respectfully solicited and promptly filled. Consumers of Saleratts, Cream Tartar, and Bi Carbonate of Soda should be careful to purchase that having the name of D. B. DELAND on the wrapper, as they will thus obtain a pure article. Fairport, Monroe Co., N. Y. 483-1161

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so assiduously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

For Terms and other particulars, see last page.

CLOSE OF THE YEAR AND VOLUME,
And of first Ten Years of the Rural New-Yorker.

TEN YEARS! How long a period—the seventh of a life-time of full “three score and ten”—and yet how swiftly has it passed, bringing us to another and important milestone in the cycle of Time! A decade of years has the RURAL NEW-YORKER existed, and, thanks to its myriad friends, annually progressed and triumphed—augmenting in circulation and usefulness as it increased in age and the vigor and strength of maturity. And now it becomes our duty, for the tenth time, to indite a closing article for the Year and Volume. How hackneyed the theme, yet what emotions arise and what thoughts are awakened on an occasion so interesting and important. Our first emotion is one of gratitude—a sincere aspiration of thanksgiving to Him who “doeth all things well”—that we have not only been permitted to live and labor, but to see the fruition of our most sanguine hopes in regard to an enterprise which was neither commenced or continued on selfish principles, and to witness a remarkable advance in the great cause of Rural “Progress and Improvement” which this Journal has zealously, constantly, and we trust successfully, sought to promote. This is not an age of miracles, yet how wonderful, almost miraculous, have been the changes, the inventions, the progress and improvements of the past decade in nearly every department—Mental, Moral and Physical. Would that time and space, and memory and power, permitted a proper enumeration of even what has come under our own observation in only one department—the advancement of Improvement in Rural Affairs and matters connected therewith. But we must omit a discussion of this pleasant theme, and turn our attention to more timely topics—matters pertinent to the occasion and season.

For five hundred and twenty weeks, and during the publication of that number of issues of the RURAL NEW-YORKER, it has been our earnest, constant and conscientious endeavor to faithfully discharge our duty to all in any wise interested or affected—Individuals, Families, Community and the Country. Starting with a consciousness of the great responsibility assumed, and humbly realizing our inability in many respects, we resolved to make a vigorous and persistent effort to establish in the heart of the best cultivated and populated Rural District of America a WEEKLY Agricultural and Family Journal which should be Honest, Independent and Reliable. We had heard much about the necessity of great genius and talent and science and capital in such a sphere of journalism, but believed that Pluck, Industry, Principle and Energy were the first requisites, and indispensable to a success worth achieving in such an enterprise as we had undertaken. Comparatively young, and hence hopeful, sanguine of future success, in benefiting others at least—confidently believing that those whose interests we advocated would eventually appreciate our efforts—we determined, against the advice of our best friends, to venture our all (financially), and devote years of untiring labor in an endeavor to establish upon a firm basis, a combined RURAL, LITERARY AND FAMILY NEWSPAPER which should excel in merit and usefulness—and from that day to this our great aim has been to render this Journal eminently Instructive, Useful and Entertaining—to enhance, so far as in our power, the Physical Interests and Home Happiness of all its readers—without misleading the judgment, injuring the

morals or vitiating the taste of a single individual. This was our standard, an elevated and laudable one—perhaps too fastidious to suit the popular taste—but we resolved to adhere to it, and, if necessary, “learn to labor and to wait” long years for that success and reward which we firmly believed would eventually crown well-directed and persistent efforts for the achievement of laudable objects. And we were obliged to thus labor and wait for years—ignoring ease and pleasure, sacrificing health, and sinking thousands of dollars, and even the last dollar we possessed—before the RURAL NEW-YORKER reached a “paying basis,” though, meantime, it paid thousands of its readers, and us in the consciousness of benefiting others and promoting a noble cause. Though this was a period of trial and sacrifice, we never wavered for a moment or lost our faith in the cause espoused, or those to whom we looked for support;—in vulgar parlance, our pluck was always good and courage 96 to the inch. And the result, as already intimated, has thus far—for we looked ten years ahead in the outset—fully realized our early anticipations.

In adversity and prosperity, through good and evil report—and notwithstanding the base imitations in name, style and manner, and subsequent exhibitions of envy and jealousy, of some of its contemporaries—the RURAL NEW-YORKER has pursued the even tenor of its way, always calling things by their right names, exposing and condemning what it believed to be Wrong, and defending and advocating the Right, under all circumstances and regardless of the frowns or favors of individuals or associations. It has ever relied upon its intrinsic merit for support, and never asked or received a dollar of patronage, as such, from any individual or society—nor has it ever been in any wise connected with any business which could be promoted through the use of its pages, or the puffing of which therein would detract from its independence or reliability on any subject connected with the business of those whose interests it advocates. This is one great secret of its power and success with those who think aright—for the great mass of intelligent men and women of this land believe in honesty, not only as the best policy, but as the best principle in practice and action.

The RURAL NEW-YORKER is not, and we trust never will be, a favorite with those speculators and swindling sharpers whose chief labor of life is to prey upon and into the pockets of the innocent and confiding of all classes, annually depleting the purses and abusing the confidence of thousands of unsuspecting persons throughout the country. Our pages prove that these martyrs, who would fain sacrifice themselves in teaching the people how to acquire wealth (and wisdom?) with remarkable ease and celerity, owe us nothing in love or money. Nor is this Journal a special favorite with the would-be savans and self-styled professors who make great pretensions in various branches of science connected with Rural Affairs, but who have only a moiety of the knowledge, ability or experience possessed by many of its contributors. Agricultural Improvement gains little—may lose much—from the pretentious displays of men who really know little, practically or thoroughly, yet kindly condescend to teach by precept the science and practice of Agriculture to those who are their seniors in both years and experience. But the RURAL is a favorite with tens of thousands of intelligent, progressive and enterprising cultivators all over the land—not only in our own highly favored “Empire State,” but throughout the rich valleys and prairies of the West, the steep and rocky hills of New England, the naturally fertile sections of the “Old Dominion” and other localities of the sunny South, and in the better portions of the British Provinces at the North. From the Atlantic to the Pacific, and from Canada to the Gulf, it is, we are proud to know, a welcome and entertaining visitor to the Farmer, the Horticulturist and the Family Circle—now having a far Larger Circulation than any similar Journal.

Thus much, and perhaps altogether too much personally, of the past. Perchance it would have been better, had we referred to former volumes of the RURAL for its record and position—for with all the mistakes, and sins of omission and commission, which must be apparent to the discriminating reader, whatever has appeared in its pages must pass the ordeal of intelligent, though we trust, lenient criticism; and the value and character of the paper in the past must be the criterion by which to judge of its future. This is but just and proper, and we therefore submit and refer to the record with diffidence and humility—promising only that, if life and health are spared, and our efforts properly seconded by its Correspondents, Agents and Subscribers, the FUTURE of the RURAL NEW-YORKER shall be worthy of its past history—that it shall strive to command and augment the confidence and support of its myriad of ardent

friends, and those interested in its subjects, in the East, the West, the North, and the South—and that the spirit of its glorious Motto, “Excelsior,” and laudable Objects, “Progress and Improvement,” will continue to be manifested in our efforts to furnish an unequalled RURAL, LITERARY AND FAMILY NEWSPAPER.

THE FARMER A MANUFACTURER.

EVERY farmer, great or small, is a manufacturer. In the manufactory which he superintends, is made butter, cheese, beef, pork, corn, wheat and potatoes—in fact, all the real necessities of life. No other manufacturer is engaged in a work of so much importance. We could get along without manufactories of silk, cotton, or woolen goods, but let the factories that make our bread and meat cease to work, and ruin—death in its most horrid form—would stare us in the face. There is no work that requires more thought and care, none that makes greater calls for the exercise of the highest faculties of the mind, than farming. To no man, in any position of life, is a general knowledge of the wonderful laws of nature of more importance than it is to the farmer. Cotton, it is well known, can be made into cotton cloth, and wool into blankets and broadcloths; but the great question with the manufacturer is, how this can be so done by a judicious selection of materials, and skill in their manufacture, as to afford a profit over cost. On his wisdom in this respect depends the all-important question, whether his business is a success or a failure. Manure and labor will manufacture crops to an almost unlimited extent; but on the cost of this manure, and the way and purpose for which it is used, depends the success or failure of the farmer—the fact whether or not he makes these crops at a profit over cost.

The farmer, like the manufacturer, pursues his business to earn a livelihood for himself and family, and to accumulate a small store for a rainy day. No manufacturer would boast of his large productions, or think he was doing a business that he had reason to be proud of, if what he made cost all it was worth in its production. The farmer may grow sixty or seventy bushels of wheat to the acre, and proclaim the fact all over the country—obtain the first premium for the largest crop grown in the State or Nation, and the wonderful performance be heralded through all the papers in the land; yet, if this large crop cost more in its manufacture than it would bring in the market, what has been gained, and who would like to follow such an example for a living? The farmer that raised thirty bushels, at a price that would allow him a fair profit over cost, would be far more worthy of praise and imitation. He that can make corn and wheat at the lowest possible price, and meat and butter cheaper than his neighbors, is the best farmer; it being always understood that he is not using up his capital—the fertility of his soil.

We can largely increase almost any of our crops by the use of guano, (and if we believe half the stories told, by the use of many patent manures;) the question is, whether we can use guano in the production of crops, at a profit. This must, of course, depend a good deal upon its price and the value of the produce. The English farmers find its use profitable, and to many of our crops it may doubtless be applied with advantage. Experiments alone will give us the necessary light on the subject.

For some years we have thought that in the production of potatoes the prospect was the most favorable, and a few small experiments made a year or two since, rather confirmed us in the opinion, though the rot sadly interfered with our arrangements. The past summer we undertook to investigate this question a little more thoroughly, and procured a quantity of Peruvian Guano for the purpose. This was carefully weighed and applied at the rate of three hundred and fifty pounds to the acre. The soil was a sandy loam, somewhat impoverished by previous cropping. The guano cost in New York three cents a pound, and transportation, cartage, &c., nearly one cent more, making the whole cost about \$14. To this we may add \$1 per acre as the cost of applying, which was much less than it cost us, on account of care in weighing the guano for every row, but is perhaps more than the necessary cost in ordinary practice. The increase on the acre from the guano, over that which received none, the soil being precisely alike, in every respect, was 73 bushels. The product from both the manured and unmanured land, was both weighed and measured, for the sake of the greater accuracy. The land also, was accurately measured, staked off and labeled. The extra 73 bushels cost for the raw material (guano) from which they were made, 20 cents per bushel. The cost of cultivation was the same as though no guano had been used, and digging and handling but a trifle more. Potatoes were worth here the past fall about 40 cents per bushel, so that the

A NEAT POULTRY HOUSE.

DURING the year we have given drawings and descriptions of houses, barns, corn-cribs, and almost every other farm building, and now, in the last number of the volume, present our readers with a very pretty and convenient Poultry House, built by C. N. BEMENT, at Springside, near Poughkeepsie, of which Mr. B. gives the following description:

In a sequestered nook, and cluster of trees, on the sunny side of a high bank, surrounded by rocks covered with shrubbery, may be seen the new fowl-house, lately erected by the writer. This location was selected for the purpose of protection from the cold northern blasts, and receiving the warmth and benefit of the Winter's sun. The deciduous trees in front being deprived of their foliage in Winter, admits the full influence of the sun, and, when in full leaf, to shade and ward off his searching rays in Summer.

Description.—The elevation, as will be seen in the figure accompanying this article, is a rather pretty affair. The centre building, with the gable to the front, is twelve feet square; eight feet posts. The roof very steep and surmounted with a kind of cupola, for the purpose of ventilation and ornament; in the bottom of this are two small swing doors, to close up when necessary. The roof is of one and a-quarter inch plank, tongued and grooved, the joints painted with white lead and battened. The entire front is of glass, extending to the very point at the top.

The left wing is a lower edifice, twenty-two feet long and ten feet wide. The floor, which is of broken stone covered with fine gravel, is sunk below the surface, two feet in front and eight feet in

the rear. The back wall resting against the bank, is of stone, twenty inches thick, faced with brick. The front wall and ends are also of brick. The roof has a gentle pitch to the rear, and made of one-and-a-quarter inch plank, tongued and grooved, joints painted with white lead before being laid. The under sides of the rafters are lined with hemlock boards, the spaces between the rafters filled with tan, rendering it frost-proof. The front wall is of brick, and two feet high, on which the wood and ash rest. In the base are gratings, to admit air; also above the glass, and just under the eaves, are open spaces for ventilation. In very cold weather these spaces may be closed with shutters. On the right is a door for entrance, and on the left is a small one for the egress and ingress of the fowls.

Internal Arrangement.—In the rear, and running the whole length of the room, are two tiers of boxes or nests, which are eighteen inches square, and the same in height. Adjoining the nest is an apartment of the same size, where the hen enters to go to her nest, which is latticed in front, giving air and apparent secrecy, with which she seems much pleased. The under tier is about two feet above the ground floor. The range of tiers is set out from the back wall ten inches. These nests are covered with boards, sloping down, like the roof of a house, to catch and carry down the droppings of the fowls from the perches immediately over, to a trough in the rear. By this arrangement the manure is all saved, and out of the way of the fowls. We kept our Spanish fowls in this house last Winter, without injury by frost, to their wattles or large combs.

profit from the use of the guano was about \$14 to the acre.

We will not pretend to say that the farmer cannot, by judicious management, make manure that will grow potatoes cheaper than by using guano, but we do say that no one near a good market like this, can afford to plant, cultivate and dig an acre of potatoes for 50 or 75 bushels, while he can add to the product from 80 to 80 bushels by the use of Peruvian guano that will cost fourteen or fifteen dollars. When potatoes are low, from an over-supply, or on account of the great distance to market, say from 20 to 25 cents a bushel, of course they cannot be grown with guano at a profit; but at 40 cents a bushel, or more, we can make money by using guano to increase the crop.

How the farmer can make corn, wheat, meat, &c., at the least cost, is the great question which farmers should investigate. Each one can do something towards solving this problem. By keeping the necessary accounts he can tell how much it costs him per bushel to produce the different grains under the different systems of culture, and the cost per pound of beef and pork under different systems of feeding. It is such facts as these, derived from actual experience, that we are anxious to lay before our readers.

IMPORTANCE OF THE HAY CROP.

HAVING had occasion to travel through the counties of Wyoming, Allegany, Cattaraugus, Chautauqua, and the south towns of Erie county the past summer, after the June frost, I was particularly struck with the great loss which its destruction of the grass over all this region had occasioned to the farmers. In no section of the State was its severity more marked than in this, nor saw any other so badly afflicted. It will require years to place the farms in as good condition as they were on the 1st of May.

Its results demonstrate more than ever the great importance of the hay crop over all others—especially in the dairy and grazing regions. The hay

raised in 1854, as appears by the census of 1855, was,

Allegany.....	54,637 tons.
Cattaraugus.....	62,646 "
Chautauqua.....	106,613 "
South Towns of Erie.....	60,000 "
Wyoming.....	68,421 "

Total tons.....341,276

The rapid increase of stock indicates that the growth of hay has nearly doubled in the last five years. But suppose there had been no increase, not over one-tenth of a crop has been made in these counties. That involves a loss of over 300,000 tons, which, at \$10 per ton, its value to the farmer in ordinary years, shows a pecuniary loss to the farmers of that devoted region of not less than three millions of dollars.

But the loss does not stop here, for the loss of the hay crop involves the dying away from these counties at least three-quarters of all their animals, and they must be sold at prices so low as to make it out of the power of many farmers to replace them again next spring, and their land will not yield its proper return, because they have nothing to eat their pasturage.

The milk cows by the Census of 1855, now, in

Allegany.....	19,000
Cattaraugus.....	23,638
Chautauqua.....	36,046
Wyoming.....	16,781
Erie, South Towns.....	18,000

Total.....113,419

which last spring were worth at lowest average \$25 per head—making a total value of \$3,402,750. The loss by reason of the forced sales will be equal to at least \$20 per head—thus involving a total loss of \$2,250,000. The loss upon their other cattle, of which they had 143,000 head, and upon their sheep and horses, would be at least \$2,000,000 more.

The failure of the hay crop, then, in these four counties and the half of another, directly and indirectly involves a pecuniary loss to the inhabitants of not less than seven millions of dollars.—The destruction of the wheat crop forms no comparison to this.—P.

"TIS SWEET TO LIVE."

BY IDA FAIRFIELD.

Life hath dark shadows, doubts and fears,
And bitter storms, which give
A shade of gloom to after years,
And mark a pathway stained by tears,
But yet, "tis sweet to live."

The weary child of want and woe,
Who begs from day to day,
With bare feet, through the biting snow,
And young heart beating sad and slow,
For length of days will pray.

The stricken mourner, bending low
Above her best love's bier,
Bereft of joy by one fell blow,
Still dreads, amid her bitterest woe,
That life and health are dear.

Hope ever lends her beacon light,
Whose soft, alluring ray
Rich promise gives of days more bright,
Uncolored years of sweet delight,
To cheer each wanderer's way.

Life hath up-welling founts of love
For every human soul,
Glad hours, whose golden memories prove
Incentives, whoso'er we rove,
To wait, and reach some goal.

The glory of the actual dwells
Before our eager eyes,
What life hath been, our being swells
With chance of greatness, which foretells
The future promised prize.

And sometimes love, and hope, and joy,
Their richest treasures give,
That peace which death can never destroy,
Life's purest good without alloy,
And then "tis sweet to live."

Ashaway, N. Y., Dec., 1859.

HINTS FOR THOSE WHO NEED THEM.

USUALLY, where there is poverty there is a slovenly, untidy, heedless woman. A man may work ever so hard, and get good wages, and yet have a barren, thriftless home, himself and children go ragged and comfortless, unless his wife understands true economy and takes care of what comes in her way.

It is surprising how few women consider it necessary to use prudence in the management of their wardrobe and household affairs. A woman who considers it beneath her time and attention to use half-worn garments to supply her family with bed-clothes or carpets, and cannot take the trouble to keep a rag-bag or basket, deserves to be poor always. How much better old dress skirts look, neatly tied into bed-comforters, than stringing all about the house, and tucked into odd corners or broken panes. No matter if poverty does not compel you to save paper-rags, keep a bag nevertheless, and when full give it to your poor neighbor; it will cost you not a moment of time to take care of "lots" of things that, if you do not want them, will be useful to some one. I like to help a tidy, industrious, poor family, but when I go into a house and see disorder, waste, filth, and enough laying about, if properly taken care of, to make a comfortable home, I feel it is of no use to give such people things to abuse and destroy. They will always be poor, and no person could possibly assist them.

Pomposity and false pride, or shiftlessness, and pride, and poverty, usually go hand in hand. What a pity that men and women, who have no love of labor, no fancy for housework, no love of children, should marry and attempt to raise a family, to be a nuisance to themselves and the community.

Some err through ignorance, but many more through idleness, and unwillingness to study and practice the constantly recurring details by which people in this country usually amass a comfortable independence. They go to their graves, mourning over their poverty, and envying those "more fortunate," as they call it, and wondering at the "mysterious ways of Providence," while, all the time, the fault lies at their own doors.

INFLUENCE OF MOTHERS.—"My mother," said Mr. Benton, not long before he died, "asked me never to drink liquor, and I never did. She desired me at another time to avoid gaming, and I never knew a card. She hoped I would not use tobacco, and it never passed my lips."

Not long ago, the Rev. Dr. Mills, in one of his powerful appeals to mothers to consecrate their children to the ministry of the gospel, said, "A youth, after great deliberation, and with the knowledge that his mother desired him to be a clergyman, decided at last to become a lawyer; and soon after, his mother inquired of him, in a tone of deep and tender interest, 'My son, what have you decided to do?' 'To study law, mother.' She only replied, 'I had hoped otherwise,' and her convulsive sobbing told the depth of her disappointment. 'Do you think,' said he, 'I could go into the law over my mother's tears?' He reconsidered the case, and has long been an able and efficient clergyman.

Give your children fortune without education, and at least one-half of the number will go down to the tomb of oblivion—perhaps to ruin. Give them an education, and they will be a fortune to themselves and their country. It is an inheritance worth more than gold, for it buys true honor; they can never spend nor lose it; and through life it ever proves a friend—in death a consolation.

His that hath called us is love; his Spirit, a spirit of love; his ordinances, ordinances of love; his followers, a communion of love; and our vocation, a calling of love.

READER! SPARE THE BOOK.*

(DEDICATED TO ALL POSSESSORS OF VOLUME X OF THE RURAL NEW-YORKER.)

READER! spare the book!
Out not a single leaf!
You dream not of the pains we took,
Or you'd regard our grief.
For many a thoughtful hour
We cull'd our fruitful brain
To set before you fruit and flower
All strung on Beauty's chain.

READER! spare the book!
It is our fancy's pet;
Turn daintily its leaves, and look
How tastefully 'tis set!
There's learning in its page!
There's humor in its lines!
And there the wisdom of the sage
With poetry combines.

Reader! spare the book!
Make it your daily pride,
And keep it in a cherished nook
Your cunning skill to guide.
And if your file is not complete
Please name the lacking number,
And you shall be in its receipt
Before you long can slumber.

Choice Miscellany.

Written for Moore's Rural New-Yorker.
IT'S OF NO USE.

"It's of no use," young man, to put on so many airs! Just as well act natural. If you have no sense of honor, if you break the Sabbath, ridicule virtue and religion, you are no gentleman, and there is no use of pretending you are one. It matters not how rich may be your garments, or how agreeable your conversation; the true metal is not there, and there is no use of counterfeiting. "It's of no use," young lady, to mince, and simper, and act as if you were better than anybody else. You may never enter the kitchen, and may sneer all you please at those of your sisterhood who labor for their bread, but you are no lady—nothing but a silly, ignorant—so there is no use of feeling so big.

What is the use of strutting about so pompously and using all the large words Webster's Dictionary affords to make people think you are educated? Did you never notice that the most talented and best educated persons are almost invariably those who use the simplest language—and did it never occur to you that you show yourself to be a simpleton every time you speak?

"It's of no use" to make a great spread, and try to keep up an appearance of wealth, when you are not worth a cent in the world. Why not live within your means, and, instead of trying to ape those who are rich, wait till you have something of your own. People will think as much again of you, and what if they don't—do have the courage to act as you please, for depend upon it, you will always get found out. You cannot "make a whistle out of a pig's tail."

Finally, "it's of no use" for any of us to try to "shine in borrowed feathers." It is a great deal better to always act natural; then we shall never be troubled lest people find out we are not what we seem.

AMELIA.

Sayuga, N. Y. Dec. 1859.

Written for Moore's Rural New-Yorker.

SEED-TIME.

SEED-TIME lasts but a short period, and those who delay endanger the harvest. It would be foolish indeed to expect a harvest without putting in seed. No one adopts a theory so entirely preposterous, and yet their practice is sometimes not much better than such a theory would be. If the seed-time is neglected, the harvest will not be worth the sickle of the reaper. There are those who idle away the precious season of spring, and the soil is not prepared to receive the seed in season, and then the young blade is left to languish for want of cultivation, and to struggle with weeds which have been warmed into an earlier growth. Others early prepare the soil and sow their seed. Gathering clouds and windy days do not keep them from their labor. It is true, there are winds that blast the fruit, and frosts that wither the corn, but the rule still holds good that those who in due time sow their seed, do in due time reap their harvest.

Youth is the great seed-time in the rural world, and those who neglect to labor then find no harvest in store for them when gathering years withers and dries up the source of their worldly pleasures. He who should undertake a long journey to a new country, and make no provision for his wants while on the way, or when at his journey's end, would act very unwisely, but how many commence the journey of life and make no provision for their journey, nor lay up any store for the future.

If one desired to cross an unknown sea and thereby reach a certain haven, how unwise it would be to start away without a guide, or any certain knowledge of his course, and yet how many start on the journey of life just as unwise. Let the young bear in mind that the voyage of life can never be repeated—and that one mistake in the beginning may prove disastrous in all their after-life. Join, my young friends, in the universal effort at perfection, and make high and noble aims for life. Sow early and well thy seed, and trust hopefully to the future for the harvest.

Syracuse, N. Y., 1859.

FITON.

SINCERELY to aspire after virtue is to gain her; and zealously to labor after her wages is to receive them.

LIBERTY will not descend to a people; a people must raise themselves to liberty; it is a blessing that must be earned before it can be enjoyed.

SALMAGUNDI.

DAY-BREAK.

Lo! suddenly a trembling sigh there came
From the torn bosom of the widowed Night;
Far in the East a streak of yellow light
Marked the dim outline of the world with flame,
All else was dark, but slowly came a change:
A song awoke within the dusky wood;
There grew from out the gleam a mountain range,
And glittered at the base the river's flood,
The distant city with its spires and domes,
The pleasant valley with its fields and homes;
The stars put on their pale lights one by one;
The ghastly shadows faded fast away;
The hill tops told the coming of the day,
And from his couch arose the morning sun.

MEAN bashfulness without merit is awkward; and merit without modesty is insolent. But modest merit has a double claim to acceptance, and generally meets with as many patrons as beholders.

THE chief things proven by him who professes to be perfect, are ignorance of himself and ignorance of God.

THE man who builds a house that he has not the means to pay for, simply provides a home to run away from.

LOOK not back on your dark, stumbling paths, nor within on your squalid and vacillating heart, but forward to the land that is far off.

TRUTH is as much responsibility in imparting your own secrets as in keeping those of your neighbor.—*Fruits of Leisure.*

Few persons have tact enough to perceive when to be silent, and when to offer you counsel or condolence.—*Fruits of Leisure.*

IN order to put your company at ease, be yourself at ease. Be at home within yourself, and all within your house will be so.—*Bones.*

I AM firmly persuaded that the man who has not a sort of affection for all women, cannot love one as he ought.—*Sterne.*

NO religion can be genuine, no goodness can be constant or lasting, that springs not, as its first and constant source, from faith in Jesus Christ.

THE best way to do ourselves good is to be doing good to others; the best way to gather is to scatter.

NEVER condemn a friend unheard, or without letting him know his accuser and the charge preferred against him.

LOVE demands little else than the power to feel and to requite love.—*Jean Paul Richter.*

KEEP THE BIRTH DAYS.

A WESTERN exchange makes the following excellent suggestions, which must meet the approbation of all. We trust they will also be received with favor by the "old folks." It says:

Keep the birth days religiously; they belong exclusively to, and are treasured among the sweetest memories of home. Do not let anything prevent some token, be it ever so slight, that it is remembered. Birth days are great events to children. For one day they feel that they are heroes. The special pudding or cake is made expressly for them; a new jacket, or trousers with pockets, or the first pair of boots, are donned; and big brothers and sisters sink into insignificance beside "little Charlie," who is "six to-day," and is so soon "going to be a man." Mothers, who have half-a-dozen little ones to care for, are apt to neglect birth days; they come too often—sometimes when they are busy, and sometimes when they are "nervous;" but if they only knew how much such *souvenirs* are cherished by their pet Susey, or Harry, years afterwards, when away from the hearth-stone they had none to remind them that they had added one more year to the, perhaps, weary round of life, or to wish them, in old-fashioned phrase, "many happy returns to their birth-day," they would never permit any cause to step between them and a mother's privilege.

THAT PORTRAIT, AGAIN.

MR. MOORE:—I was about to ask a favor, but do not know that I have any right to do so, or how far I may be getting "beyond my limit;" but, at a venture, I can but speak—for I have put it off, and hesitated, for a year or more. Would it be inconsistent, or out of place, if you were to give us the portrait of D. D. T. MOORE, in the *RURAL*? and is not my wish that of thousands, were it expressed? For one, I confess to a great anxiety to see how he looks, and to know somewhat of his previous history, up to this time. But, as I do not expect ever to meet him *vis-a-vis*, I will be content with the shadow of his phiz, and whatever information he is pleased to bestow. If the request is deemed impertinent, or betrays lack of just sense of things, I have no excuse to offer, for I can frame none. We naturally become much interested in, and attached to, an Editor whose paper has been our daily companion for years, and each one of us imagines him our particular friend, for he encourages, sympathizes, cheers, advises and amuses us all, by turns, till it almost seems that he must have had our individual case in view. As for Mr. Moore, "may his shadow never be less," and we wish him a right merry Christmas, and many New Years, in which to continue the good work in which he has been so eminently successful. *Vive la Rural.*

Dec. 20, 1859.

NOTE.—We appreciate the above, as it is from one who has written (over various signatures) many capital and instructive articles for the *RURAL*. But, complimentary and sincere as is the request—and gratifying as we confess it to be, from such a source—we are moved to decline, and to reiterate what we said last year in response to a like appeal, to wit:—This, and similar requests heretofore, toucheth our approbation, and with our "heaven" in hand, we "make our manners" in acknowledgment. But, really, our friends must "wait a little longer," if not a long time—for, though not over young, our youthful (we will not say green or verdant) appearance, (and the lack of silver-grey-don't, that even if we possessed sufficient merit to warrant the *apocrypha*, we doubt the propriety of going into the *plutocracy*. When we get 100,000 *RURAL* subscribers, and sufficient age and dignity, perhaps it may answer. It would not do now, at all, for (aside from the above and other cogent reasons) recent illness has made us so much worse looking than usual, that a portrait would indeed prove a counter-fact presentment! Excuse us, friends!

ANCIENT FASHIONS.

THE New England Historical Register for 1857, contains the following interesting account of the clothing in the Old Times:

Stockings were anciently made of cloth or milled stuffs, sewed together. Henry II. of France, was the first who appeared with silk stockings. That was in 1559, and in 1561 Queen Elizabeth was presented by her milliner with a pair. The first pair of worsted stockings knit in England was made in 1564.

Red-colored stockings, whether of yarn, worsted or silk, were much worn in New England for nearly half a century after the arrival of our fathers.

In 1629, when provision was made for emigrants to Massachusetts, the stockings furnished were accompanied with ten dozen pairs of Norwich garters. At an early period of our country, silk garters were worn by the more fashionable, and puffed into a large bow-knot at the knee, but as the costume fell under the notice of the civil authorities, it was forthwith prohibited.

Gloves have been long in use, and it was once a proverb that, to be well made, three kingdoms must be concerned in the making,—Spain to dress the leather, France to cut it, and England to sew it. But France, for a considerable period, is said to have had the preference in all these three respects.

Sixty years ago, pall holders, and other persons attending funerals, wore white leather gloves. In 1741, men's and women's "white glazed lamb" gloves were offered for sale in Boston.

"Ruffs," however odd it may appear to us, were formerly worn by males as well as females. Queen Elizabeth appointed officers, it is related, to clip the ruff of every person seen wearing it of larger dimensions than the law permitted. A clergyman in 1608 took occasion to allude to a lady who wore a ruff that looked "like a sail; yea, like a rain-bow." Ruffs were wired as well as starched. Anne, widow of Dr. Turner, for assisting the Countess of Essex to poison Sir Thomas Overbury in 1613, received the following sentence:—"That, as she was the first to introduce the fashion of yellow starched ruffs, she should be hung in that dress, that the same be held in shame and detestation." In the play of *Albion*, edited in 1614, Arsinilla asks Trinculo, "what price bears wheat and saffron, that your band is so stiff and yellow?"

Speaking of starch, it first came into use in England in 1564. It was carried thither by a Mrs. Dinghen Vanden Plassee, who set up business as a professed starcher, and instructed others how to use the article for 25, and how to make it for 20. The *New-England* of 1712 gives this notice:—"Very good starch, made in Boston by a starch-maker lately from London, is for sale."

The picture of Gov. Winthrop appears with an elegant ruff. The custom was imported by some of our primitive settlers, but in 1729 this part of the dress became so enlarged that the Legislature of Massachusetts felt obliged to command that it be kept within due bounds.

In the reign of James I., bands succeeded the full, stiff ruff. They were prepared with wire and starch, so as to stand out "horizontally and squarely." They were held by a cord and tassel at the neck.

People of the ton had the strings and tassels of their bands sometimes elegantly scalloped and embroidered, which custom finally attracted the attention of our civil authorities, who, in 1634, "forbade bands to be ornamented with costly work." In 1689, a law was likewise enacted prohibiting the wearing of bands as had been the fashion.

WHY HE FELL.

WE often wonder that certain men and women are left by God to the commission of sins which shock us. We wonder how, under the temptation of a single hour, they fall from the very heights of virtue and of honor, into sin and shame. The act is, that there are no such falls as these, or there are next to none. These men and women are those who have dallied with temptation—have exposed themselves to the influence of it, and have been weakened and corrupted by it. If we could get at the secret histories of those who stand suddenly discovered vicious, we should find that they had been through this most polluting preparatory process; that they had been in the habit of going out and meeting temptation in order that they might enjoy its excitements; that underneath a blameless outward life, they have welcomed and entertained sin in their imaginations, until their moral sense was blunted, and they were ready for the deed of which they thought they were incapable.—*Timothy Tiltcomb.*

HAPPINESS AND SUCCESS IN LIFE.—Life without some necessity for exertion must ever lack real interest. That state is capable of the greatest enjoyment where necessity urges, but not painfully; where effort is required, but as much as possible without anxiety; where the spring and summer of life are preparatory to the harvest of autumn, and the repose of winter. Then is every season sweet, and in a well spent life, the last is the best, the season of calm enjoyment, the richest in recollections, the brightest in hope. Good training and a fast start, constitute a more desirable patrimony than wealth; and those parents who study their children's welfare, rather than the gratification of their own avarice or vanity, would do well to think of this. It is better to run a successful race than to begin and end at the goal.

Masculine virtue, or courage, is as necessary to eminence as a powerful intellect. He who is deficient in either, will never, unless from the influence of fortuitous circumstances, be able to place and maintain himself in the van of his fellows.

THE EVER GREEN MOUNTAINS OF LIFE

BY JAMES G. CLARKE.

THERE'S a land far away 'mid the stars, we are told,
Where they know not the sorrows of time—
Where the pure waters wander thro' valleys of gold,
And life is a treasure sublime.
'Tis the land of our God—'tis the home of the soul,
Where ages of splendor eternally roll,
Where the way-wary traveler reaches his goal,
On the ever green mountains of life.

Our gaze cannot soar to that beautiful land,
But our visions have told of its bliss—
And our souls by the gale from its gardens are fann'd,
When we faint in the desert of this;
And we sometimes have long'd for its holy repose,
When our spirits were torn with temptations and woes,
And we've drank from the tide of the river that flows
From the ever green mountains of life.

O! the stars never tread the blue heavens at night,
But we think where the ransom'd have trod,
And the day never smiles from his palace of light,
But we feel the bright smiles of our God.
We are traveling homeward—thro' changes and gloom,
To a kingdom where pleasures unchangingly bloom,
And our guide is the glory that shines thro' the tomb
From the ever green mountains of life.

"READY FOR EITHER."

ONE of our missionary associations has adopted a device found on an ancient medal, representing a bullock standing between a plow and an altar, with the inscription, "Ready for either." Ready to toil and labor in the field of service, or to be offered up as a sacrifice in defence of the faith of Christ. No more significant device could be chosen to express the feelings of the missionary. None need enter this field who shrink from the most painful and trying drudgery, considered from a worldly point of view, to which man can be subjected. With but a few to sympathize and encourage, unsupported by the applause and admiration which his noble self-sacrifice and heroic constancy excite in the breasts of his brethren in his own land, meeting neglect and contempt from those for whose eternal happiness he has sacrificed home, friends and country, he must endure labors under an enervating tropical sun that most men would shrink from under circumstances best calculated to stimulate and encourage. From morning till night there is no rest for mind or body, for millions are perishing around him, and there are but few to lighten his labors. But the foreign missionary must be equally ready to seal his testimony with his blood. Surrounded by the idolatrous heathen whose religion teaches the destruction of the Christian as a meritorious act, he may be sacrificed at any moment. Many have perished in his manner, and many more will doubtless lay down their lives before the evangelization of the race is accomplished.—*N. C. Presbyterian.*

"MYSTERIOUS POWER"

CHRISTIANITY, like a child, goes wandering over the world. Fearless in its innocence, it is not abashed before princes, nor confounded before synods. Before it the blood-stained warrior sheathes his sword, and plucks the laurel from his brow, and the midnight murderer turns from his purpose, and like the heart-smitten disciple, goes and weeps bitterly. It brings liberty to the captive, joy to the sufferer, freedom to the slave, repentance and forgiveness to the sinner, hope to the faint-hearted, and assurance to the dying. It enters the hut of the poor man, and sits down with him and his children; it makes them contented in the midst of privations, and leaves behind an everlasting blessing. It walks through cities amid all their splendor, their imaginable pride and unutterable misery, a purifying, ennobling, remedying angel. It is alike the beautiful champion of childhood and comforting associate of age. It ennobles the noble, gives wisdom to the wise, and new grace to the lovely. The patriot, the priest, the poet, and the eloquent man, all derive their power from its influence.—*Mary Howitt.*

TRUE COMFORT.—Comfortless ones, be comforted, Jesus often makes you *portionless* here, to drive you to Himself, the *everlasting portion*. He often dries every rill and fountain of earthly bliss, that He may lead you to say, "All my springs are in Thee." "He seems intent," says one who could speak from experience, "to fill up every gap love has been forced to make; one of his errands from Heaven was to bind up the broken-hearted." How beautifully, in one amazing verse, does he conjoin the depth and tenderness of his comfort with the certainty of it—"as one whom his mother comforteth, so will I comfort you, and ye shall be comforted."

THE SABBATH.—This is the loveliest, brightest day of the week, to a spiritual mind. These rests refresh the soul in God, that finds nothing but turmoil in the creature. Should not this day be welcome to the soul, that sets it free to mind its own business, which has other days to attend to the business of its servant the body? And these are a certain pledge to it of that expected freedom when it shall enter on an eternal sabbath and rest in Him for ever who is the only rest of the soul.—*Leighton.*

Nor more faithfully did the pillar-cloud and volume of fire of old precede Israel, till the last murmuring ripple of Jordan fell on their ears on the shores of Canaan, than does the presence and love of Jesus abide with his people.

The *quality* of love in man is exactly like love in God—in element, but in *quantity*. A taper is big enough to tell you what light is, but not what the whole history and power of light is.

PUBLISHER'S SPECIAL NOTICES.

Notice to Advertisers.—ADVANCE OF RATES.—After the 1st of January, 1890, the Terms of Advertising in the RURAL NEW-YORKER will be Twenty-Five Cents a Line, each insertion, in advance. A price and a half for extra display, or 25¢ cents per line of space. SPECIAL NOTICES.—Following reading matter, headed—Seventy Cents a Line, each insertion. These rates are predicated upon a circulation at least double that which the RURAL had when our rate of 25 cents a line was established. We have already received more advertisements than we wish to give in the first number of the new volume.

To Printers and Publishers.—TYPE FOR SALE.—The Type used in printing this volume of the RURAL, is offered for sale at half the original cost. It is White's best hand metal, and also copper-faced—has been used only one year, and is still good, as the impression of this number proves. It consists of about 700 Ea. Minion, 235 Ea. Agate, 150 Ea. of Nonpareil, and sundry fonts of head-letter, &c. Terms, Cash—deliverable January 1st, 1890.

Also for sale, duplicates of a thousand or more Engravings, such as have been used in illustrating various Rural, Scientific, Historical and other subjects in the RURAL NEW-YORKER, during the past ten years.

CLIPPING WITH THE MAGAZINES, &c.—We will send the RURAL NEW-YORKER for 1890 and a yearly copy of either The Atlantic, Harper's, Godey's, or any other 63 magazine, for \$1. The RURAL and either The Horticulturalist, Hovey's Magazine, Arthur's Magazine, or any other 63 magazine, for \$3. Canada subscribers must add the American postage.

THE RURAL is published strictly upon the cash system—copies are never mailed to individual subscribers until paid for, and are always discontinued when the subscription term expires. Hence, we force the paper upon none, and keep no credit books, experience having demonstrated that the Cash System is altogether the best for both Subscriber and Publisher.

POSTAGE ON THE RURAL.—The postage on the RURAL NEW-YORKER is only 3¢ per copy, or 10¢ a year to any part of this State, (except Monroe county, where it goes free), and 6¢ a year, or 20¢ a year, to any other part of the United States, payable quarterly in advance at the office where received.

ROCHESTER, N. Y., DECEMBER 24, 1889.

FINALE OF VOLUME X.

BRIEF AND TIMELY ITEMS AND REMINDERS.

This No. adds "Finis" to Vol. X of the RURAL NEW-YORKER, and terminates our engagements with all whose subscriptions expire therewith. As we adhere strictly to the cash system in its publication, a prompt renewal is necessary to secure the uninterrupted continuance of the paper. Though some will neglect to renew, and others be induced to substitute a trashy literary, or merely political paper—as did some last year, to the subsequent regret of themselves and their families—we are confident, from the large number of renewals and new subscribers already received, that we shall part company with but very few, while our accessions will be far greater than ever before. Of the few that drop the RURAL, more will do so through neglect or procrastination than desire or intention; hence, believing they will invite its visits again after a few or many days, we will bid none a final farewell. Thousands are already renewing all over the land, and other thousands joining the RURAL Standard—all of whom, whether old friends or new, are and will be cordially welcomed, and we shall labor to render unto each and all ample pleasure and profit for their respective investments.

—And here we frankly ask every friend of THE RURAL, and of useful, pure and hence safe literature, to speak and act in its behalf at a season when only a little effort is necessary to augment its circulation and benefits. Its low price—and especially its remarkably low club rates, compared with those of any similar journal—renders it necessary for us to rely mainly upon the voluntary efforts of those who like the paper and believe it is benefiting the People, the cause of Improvement and the Country. But its price places it within the reach and means of every one who has a garden, farm or family—whether in country, village or city—and hence it is comparatively easy for its friends to increase its circulation and usefulness. Now is the best time to do this, and we trust every interested reader of the RURAL will lend such attention and influence in that direction as may be consistent and convenient.

While we are laboring for your benefit, Reader, please become our proxy and do what it is impossible for us to perform in person—present the claims and merits of the paper to your friends. A little effort now—a few kind and truthful words, and showing the paper to this and that neighbor—will secure from three to ten, twenty or thirty new subscribers in your neighborhood, school district or township. Why, this very morning (Dec. 20,) we received from a subscriber near Lancaster, Pa., a neighbor of President Buchanan, but none the better or worse for that—a list of seventy-one subscribers, mostly new. You may not equal this, but if you try you can form a club. We this morning received a handsome list from a subscriber in Greene Co.—mostly new subscribers. His friends predicted a failure when he started, "but," he writes, "I tried, and the result is before you." And you can do likewise, if you will. Local effort is a sphere in which you are potent and can succeed, and we trust will kindly manifest your interest in the RURAL NEW-YORKER by proper and timely action.

See Terms, Special Notices, &c., on next page.

A VALUABLE VOLUME.—The Tenth Volume of the RURAL NEW-YORKER contains more valuable and interesting reading, and has cost more labor and money, than can be easily estimated. The very complete Index of the leading departments, given herewith, will give the reader some idea of the labor and expense devoted to the volume, and of its value as a work of reference. We index over three thousand five hundred Articles, and three hundred and twenty-six Engravings!—and yet not half the articles and items are indexed. The volume contains at least ten thousand distinct articles and paragraphs of interest. May we not safely challenge any Agricultural, Horticultural,

or Family Journal extant—not only in the number and variety, but value and interest of the articles and illustrations given in this volume? And where can so much useful, instructive and entertaining reading be obtained for \$2 (to say nothing of our club rates, \$1.50 and \$1.25)—aye, or for twice or thrice that amount, in books?

—A friend is concerned lest some of our subscribers will stop the RURAL and take a political paper instead next year, (to elect a President and "save the Union,") but any man who stops the RURAL, and thus deprives his family of its reading, will miss a figure, and lose more than we shall in the operation. We think our subscribers are generally sensible enough to appreciate that, without argument.

PROGRESS AND IMPROVEMENT.—The improvements we are instituting in publishing the RURAL for 1890, will involve considerable extra expense. For instance, the paper for which we have contracted is to be of better quality and heavier than that heretofore used, and will cost much more. We have also instituted a reform in the printing—press work—of the paper, which will be manifest. The proper inauguration of our new Mailing Machine will subject us to considerable expense. The materials and type-setting necessary to start the process will alone cost nearly two thousand dollars, aside from expense of machines, their operation, &c. But we think, or trust, all these items will be appreciated—for we anticipate better paper and printing, and great accuracy and dispatch in our mailing department.

—The Contents of the new volume will vie with its Appearance. We have made no startling announcements to catch gulls,—as that business is overdone by our contemporaries,—yet have more and better material and facilities at command than ever before wherewith to enter upon a new year and volume, and are determined to use them to the best advantage. Time will determine whether the RURAL for 1890 exhibits decided "Progress and Improvement."

NAY, GENTLEMEN!—We are in frequent receipt of letters asking us to vary from our published terms, or what we will give for a certain number of subscribers;—if we will take \$1.25 per copy for ten copies—if we can't afford the RURAL "for a dollar"—what we will give extra for so many subscribers—what is the best we can do in certain cases, and so on. Now, we are called amiable, liberal and accommodating by those who know us personally, and it would certainly afford us pleasure to say aye, but we must adhere to published terms and rates, and cannot make private offers to any one. Whatever price we receive for the paper, or whatever we offer for efforts in behalf of its circulation, is and will be, printed—and we have no time to write letters on the subject. The rates of the RURAL are far less than those of any similar journal of its size and value in the world, while we think our gratuities are more liberal. We have not made a dollar's profit on the subscription of the paper the past year—having lived on its receipts for advertising—and probably shall make nothing next. We must have rules and rates, and adhere to them. Those who want a cheaper paper—or one which can be had for less money—must look elsewhere; and those who think our offers for aid in circulating the RURAL are insufficient, are of course at liberty to withhold their influence.

THE VOLUME OF THE RURAL can still be furnished, as we purposely retained an extra edition of each number to supply the demand at the end of the year. Those whose files are incomplete, can be furnished numbers which are lacking, by applying early. Bound volumes will be ready in a few days—price, \$3. Unbound copies will be furnished at our usual rates—and can be ordered with clubs for the next volume at the same rate as the club, until we announce otherwise.

—We would again state that neither of the first five volumes of the RURAL can be furnished. We can supply the others—1855, '56, '57, and '58—bound, at \$3 each. The only volumes we can furnish unbound are those of last year and this (1858 and '59)—price, \$2 each.

THE RURAL AS A PRESENT.—Several inquiries on the subject, remind us that we have inadvertently omitted to state that the next volume of the RURAL will be furnished at the lowest club rate—\$1.25 per copy—in all cases where it is sent to friends or relatives as a present. Many of its readers annually send from one to ten copies to distant friends—considering the RURAL the best present they can make, as it renders the recipient glad fifty-two times in the course of the year, and as often reminds him or her of the kind remembrance of the donor. How many shall we make thus happy in 1890?

THE YOUNG RURALISTS are taking advantage of our offer to give Webster's Unabridged Dictionary, Pictorial Edition, to any minor remitting party for forty subscribers previous to Christmas. One young man in Kalamazoo Co., Mich., (G. W. FINLAY)—has already become entitled to the Dictionary, (which has been forwarded,) and many others are competing. As we wish to give all the boys and girls a chance to secure this splendid gratuity, we hereby extend the time of competition to the 10th of January. We hope the seniors will not grumble, as some have, on account of this liberal offer in behalf of "Young America."

THANKS TO THE PRESS.—We tender grateful acknowledgments for the kind, cordial and highly complimentary notices of the RURAL NEW-YORKER which are appearing in various papers throughout the United States and the Canadas. Our brethren of the Press are the most competent judges of the first cost, taste and value of a Newspaper, and when they almost universally concur in pronouncing the RURAL the best of its class, we may perhaps be permitted to "follow copy," but a whole number would not contain half they have recently said in its behalf.

ADDITIONS TO CLUBS are always in order and received at the same rates as original clubs, and, if sufficient is added to a club of 6, 10 or 15, within one month, the rates will be reduced as noticed on next page of this number.

DOMESTIC NEWS.

Matters at Washington.

CONGRESSIONAL.—The Senate passed the resolution for the appointment of a Committee to inquire into the seizure of the Harper's Ferry Armory, and rejected the amendment, making a similar inquiry in regard to the seizure of the Armory in Missouri. Messrs. Mason, Davis, Collamer, Fitch and Doolittle are the Committee. This, and the election of Dr. Gouley as Chaplain, is about all the business done by the Senate.

The House has not yet organized. The 10th ballot for Speaker was taken on Friday last. SHERMAN, the Republican candidate, received 111 votes, and lacked four of an election; BOOCOCK, Democrat, 84. The discussion is warm, sometimes personal and extravagant. Some members talk about hanging their associates, dissolving the Union, and making a general smash-up, as though it would be an easy and delightful task. If they do nothing more they will succeed in proving themselves great fools or knaves. These men who publicly avow themselves, in the Legislative Halls of the nation, as ready for treason, we fear are worse traitors at heart than JOHN BROWN, about whom they make such a tirade.

Dispatches have been received from Gen. SCOTT, and considered in Cabinet Council. His mission to San Juan has been highly successful, he having made a temporary settlement entirely satisfactory to the British authorities there. His course meets the entire approval of the Administration.

FIRE IN THE AMERICAN TRACT HOUSE.—About half past 7 o'clock on the morning of the 18th, the American Tract House, New York, was discovered to be on fire. The flames were confined to the 4th and 5th floors of the building. On the first floor is a large quantity of books and tracts, comprising the bulk of the stock; these are thoroughly soaked by water and are useless. Loss about \$75,000, and fully insured.

VICE-PRESIDENT BRECKENRIDGE has been elected to the United States Senate in place of Mr. Crittenden. His term begins March 4, 1891—the day when he ceases to be Vice-President.

FOREIGN NEWS.

THE PEACE CONGRESS.

THE invitation of the French Government to attend the Congress had reached the British Cabinet, but the Austrian invitation had not been received. It is taken for granted that England will be represented, and speculations are afloat as to who the representative will be, as to which nothing authentic is known. The Times urges Palmerston himself to go, and rumor says, not without sanction in high quarters, that he will.

The Opinions of Turin confidently points to Count Cavour as the probable first representative of Sardinia.

Martinez De La Posa will represent Spain.

All the Powers will be represented by two Plenipotentiaries. The 31st of January is spoken of for the first sitting.

The principal representatives of the four great Continental Powers will, it is reported, be the following:—Russia, Prince Gortschakoff; Austria, Count Rechburg; France, Count Walewski; Prussia, Baron Schlemitz.

The Times' Vienna correspondent learns from Berlin that Prussia, Russia and England, were endeavoring to establish a basis for the negotiations with France and Austria during the Congress.

A Rome dispatch of the 2d, says:—The report that the Pope had already consented to be represented at the approaching Congress, and had appointed Antinelli to represent him is without foundation.

ENGLAND.—The London Star says that the Royal Commissioners who were appointed to inquire into the National Defence, have agreed to report the South Coast Dock Yards so imperfectly defended as to require £12,000,000 to fortify them thoroughly. The Star also says that the Commissioners will recommend a loan for the amount required.

The following letter from the Secretary of the French Emperor, has been received in England and published in London the 5th of December:

PALACE TUILERIES.—To Messrs. Shaw, Mellot & Co., Gentlemen.—You have written to the Emperor to know what his intentions are in regard to England. Great fears or great confidences should alone explain this step. On the one side you are possessed with an imaginary trouble which appears to have seized upon your country with the rapidity of an epidemic; and on the other hand you reckon on the loyalty of him from whom you desire a reply. It was easy for yourselves, however, to give it. If you had calmly examined the true state of your apprehensions you had only found them in all the rumors created by your countrymen, by the obstinate profligation of the most chimerical alarms, because until now there was not a word or act of the Emperor's, which permits a doubt of his sentiments; and consequently of his intention towards you. His conduct, invariably the same, has not changed a moment to show his faithfulness and irreproachable honor that whatever has been, he declares it to you in his name shall continue to be.

Witness, again, the approaching community of perils to be shared at a distance by your soldiers and ours. Great nations should appreciate but not fear each other.

Receive, gentlemen, the expression of my distinguished sentiments.

(Signed) CHIEF DU CABINET.

FRANCE.—Considerable activity was evinced in shipping forces to China, and it was expected that the last ships forming the Chinese expedition would have quitted France by December 15th.

The monthly average price of wheat as published in the Moniteur, shows an advance of five-eighths of a cent on the previous month's average.

The French frigate Perseverance, with troops for China, has been twice driven back by bad weather.

The Paris Bourse was buoyant, but the business was small. Rente closed on the 2d at 70½.

It is reported that the Protest of Austria against the Regency of Buoncompagni has been withdrawn in consequence of Count Walewski having given an assurance to Prince Metterich that the nomination would in no way be prejudicial to the Central Italian Dynasties.

The News Condenser.

—They are arranging in Albany to form a shelling park.

—The taxable property of the State of Ohio is \$300,000,000.

—In Virginia every man is taxed for the salary he receives.

—There was a fine auroral display at Boston early on Tuesday morning week.

—Mules are in great demand in Kentucky, and are fast dispersing horses in farm work.

—The printers of Buffalo are making arrangements for celebrating the birthday of Franklin.

—In Milwaukee, at 7 o'clock Wednesday morning week, the mercury stood ten degrees below zero.

—On a trial at Milwaukee, one lawyer testified that the fees of a brother lawyer were \$19,000 last year.

—About twenty million bushels of oysters have been taken from the Virginia waters during the past year.

—A vigilance committee has been appointed in Bedford county, Va., to look after any suspicious strangers.

—Mrs. Doane, widow of the late Bishop Doane, of New Jersey, died in Florence recently, at an advanced age.

—Isaac F. Shepard, late treasurer of a Boston Savings Bank, is found to be a defaulter to the amount of \$57,000.

—Gold diggings have been discovered in Brown county, Indiana, which are said to pay from \$2½ to \$5 per day.

—A Detroit paper notices that \$376,400 worth of intoxicating liquors are retailed yearly, in 700 places in that city.

—It is estimated that the opera, theatres and negro minstrels of New York city received \$16,000 on Thanksgiving day.

—Iron paper, of which seven hundred leaves were included in one inch in thickness, was exhibited at the Great Exhibition.

—The Albany Penitentiary earned a surplus of \$6,000 over the expenses last year. A good investment for the city.

—What a horrible place New York is getting to be. Only yesterday they actually convicted an emigrant runner of swindling.

—Five thousand cast iron boxes for the reception of letters for the U. S. mail are being put up at convenient places in New York city.

—During the week ending December 8d, the receipts of the city of Cincinnati were \$7,194.47, and the expenditures \$30,657.76.

—It is said that 15,000 hogsheads and 15,000 barrels of sugar, with 12,000 bales of cotton, have been received this season at Cairo.

—The Raleigh (N. C.) Register calls attention to the fact that there is not one powder mill in the United States south of Delaware.

—Within the past week large and rich deposits of lead ore, valued at from \$100,000 to \$200,000, have been discovered near Dubuque.

—A church bell of glass, 14 inches high and 18 inches in diameter, has recently been placed in the turret of a chapel at Barrowdale, England.

—Col. Colt presented to the Italian Committee in New York 100 of his death dealing weapons, to be forwarded to Gen. Garibaldi, the Italian patriot.

—It is stated that the health of Hon. Lynn Boyd, of Kentucky, is so precarious that his friends must prepare themselves to hear of his speedy demise.

—Hon. Jerome B. Kimball, a graduate of Harvard in 1852, and Attorney-General of Rhode Island, died in Providence on the 10th inst., of typhoid fever.

—Three Inspectors of Election in Canada have been sentenced to six months imprisonment and a heavy fine, for making a fraudulent election return.

News Paragraphs.

THE Arabian horse Imaum, died on Monday morning, at the farm of the late Garrett Vanmeter, near Richmond, Va. He was one of the two horses presented to President Van Buren in 1837, by the Imaum of Muscat, and must have been at the time of his death about 80 years old.

VICTORIA BRIDGE CELEBRATION.—A special train, comprising three locomotives and ten cars, containing about 600 invited passengers, passed over the Victoria Bridge at one o'clock, Saturday, the 17th inst. On its return, a cold collation was served up in the northern abutment of the bridge which was covered for the occasion. Speeches were made by the engineers of the bridge. The bridge is now fairly opened to traffic, and regular passenger trains commenced running over it this morning.

THE VIRGINIA EXECUTIONS.—Four more of the persons engaged in the Harper's Ferry raid—Cook, Copple, Green and Copeland—were executed on Friday last. They are represented as meeting their fate with calmness, but we have no heart for such recitals, nor do we think our readers would feel pleasure in reading them.

NON-INTERCOURSE.—The Southern papers are recommending direct trade with Europe, and non-intercourse with the North. Meetings have been held to advance the same object. A New Orleans correspondent of a Washington paper says that sixty-seven ships are loading there for Liverpool, sixteen for Havre and sixteen for other foreign ports. Sixty-four of the principal cotton buyers and brokers of New Orleans have agreed to send their cotton to England direct instead of allowing it to come North for transshipment. Prentice, of the Louisville Journal, objects to non-intercourse with the North for various reasons, among which are the idea of not eating New England salmon next spring, or of refusing an ice crop from Chicago when the dog star rages; the bare thought of having Indiana grouse, or a Maine supply of potatoes interdicted; of being compelled to read of New York oysters or Pittsburgh ale, and be in the tantalizing condition of not enjoying them; the terrible calamity involved in giving up the Newark cider sold for champagne, &c., &c. The Journal says:—"Our friend of the Richmond Whig will forgive us, if, after having stood politically shoulder to shoulder for years, we now part stomach to stomach on this question of 'internal improvement.'"

FIRE AT MEDINA.—A destructive fire occurred at Medina on Sunday, the 18th inst. The large mills owned by HILL, WHELAN & CO., with eight run of stone, were burned to the ground. Loss estimated at \$60,000.

Markets, Commerce, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Dec. 20, 1889.

LACK OF SPACE compels the omission of our Table of Quotations, but we make note of such change as a careful survey of the market indicates. Flour and wheat remain as last quoted. Corn is dropping. Old would bring 78 cents, while new ranges about 65¢. Oats have fallen off to 35¢. Rye wheat is up to 42.50. Pork, owing to the mild weather, we have been experiencing for the past few days, with no prospect of a speedy change, is dull, with a decline of 25¢ to 50 cents per cent. The range is \$6.25 for light and heavy. Hay down to \$14.00.

Produce and Provision Markets.

NEW YORK, Dec. 19.—Flour.—Market dull and rather quiet. Sales at \$1.00 for super. State; \$1.05 for extra; \$1.10 for good extra; \$1.15 for inferior to good extra; \$1.20 for extra; \$1.25 for extra; \$1.30 for extra; \$1.35 for extra; \$1.40 for extra; \$1.45 for extra; \$1.50 for extra; \$1.55 for extra; \$1.60 for extra; \$1.65 for extra; \$1.70 for extra; \$1.75 for extra; \$1.80 for extra; \$1.85 for extra; \$1.90 for extra; \$1.95 for extra; \$2.00 for extra; \$2.05 for extra; \$2.10 for extra; MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY

Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Variety, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductors devote his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so judiciously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal.—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

Rural New-Yorker.

STEAM ON THE NEW YORK CANALS.

In our columns we have given a pretty full account of the experiments instituted to test the practicability of using steam on the Erie and other Canals of the State, for propelling boats. We rejoice greatly that the results of these trials were such as to convince the State officers—the Governor, Canal Commissioners, &c.,—as well as all practical men, that steam can be used as a motive power, at a great saving of expense, and without injury to the banks of the canal. In this movement we see a prospect of good that seems to have been overlooked by those who have written on the subject, and was not once alluded to, we believe, in the many congratulatory speeches made on the occasion. We are not insensible to the fact that the substitution of steam for horse-power will lessen the cost of carriage, and therefore increase the amount of business, to the advantage of the State and all those engaged in canal business, and to the farmers of Western New York and the Great West, whose grain will find access through this channel to the New York market, and the markets of Europe; but we rejoice more especially at the humanizing influence of steam on the internal navigation of the State.

Who that has traveled on the Erie Canal, or become conversant with its operations, has not been pained at the treatment of horses engaged in the lifeless drudgery of towing? Given over to the care of ignorant, and often cruel drivers, exposed to all weather, seven days and nights in the week, their haggard appearance, and gaits and bruises, appeal to the sympathies of every humane heart.

The Erie Canal, from its origin, has been a school of vice. Many a bright boy, tempted by stories of the independence of a driver's life, has left his father's house, to return, if ever, a wreck in mind and body. Lured by the hopes of earning a livelihood, many a widowed mother has permitted her only son—her last hope in this world—to "drive on the canal," to see him return after a season steeped in vice, grown old in sin—a curse, instead of a blessing—her grey hairs soon brought down with sorrow to the grave. And is it strange that this should be so? Look at the hosts of low drinking houses that almost line the banks of the Canal—the character of the men with which these boys are compelled to associate—sleeping in boats or barns—working nights and days, and Sundays, and we see an array of evil influences brought to bear that few boys—may we not say few men?—could resist. The Erie Canal may have enriched business men, but it has impoverished families, robbed many a mother of her richest jewel—it may have filled the State Treasury, but it has also filled the State Prisons and Penitentiaries. We hope the time is not far distant when no more boys shall be employed on our canals. Let them receive their education, not on the canal, but in the common school, or at work on the farm, where they can read evenings, and have the benefit of family influence and wholesome example. We look upon the application of steam on the canal as a great moral reform movement.

Scores of cattle and hogs die every summer in their transit through this State in Railroad cars. It is truly painful to see these animals, packed as closely as they can stand, in hot summer weather, their tongues protruding from their mouths, and showing other signs of suffering. Here they suffer not only from the heat and close packing, but for want of water, and it is not strange that many die, and are thrown out at the stopping places. Indeed we have sometimes thought it strange that any survive. Those that live after such a journey, and so much suffering, are unfit for human food, and on reaching their destination, are no doubt much depreciated in value. For humanity's sake, at least, we have long hoped that an end would be put to this mode of transporting stock. It is calculated that with steam, boats will reach New York in four days from Buffalo, without transshipment. Boat builders and cattle dealers are now engaged in designing the best form of a boat to be used for transporting stock on the Canal, and the

great end aimed at is cheapness of carriage, and such arrangements for the comfort of the animals that they will suffer no diminution of weight on the voyage. These boats will be constructed for the purpose of carrying stock alone, and will be arranged with every convenience for watering and feeding. It is estimated that the cost of transportation will be about one-half the price now charged by the Railroads. Interest, if not humanity, therefore, we hope will induce all engaged in forwarding cattle to the Eastern markets, to give the canal boats a trial.

DOES UNDERDRAINING PAY?

RATHER a strange query for the editors of the RURAL to propound to all their readers, when they have labored long and earnestly to prove that it was one of the best investments which could be made by the agriculturist. Strange, truly, when they have iterated and reiterated that a thorough system of underdraining would prove of incalculable benefit to almost every foot of land possessed by the farmer. Stranger still, that, after all this labor of word and argument, we are ready to go back to the starting point—to unsettle a principle supposed to be fixed—and put forth anew the query.—Does Underdraining Pay? We have a reason for this, however, as will be seen by the annexed sentence:—"Underdraining is a popular process by which any quantity of money can be hidden under ground past finding again." This valuable piece of information we first saw in a political paper published in our State Capital, and if we ever had a particle of unbelief in the aphorism—"Falsehood travels faster than Truth;" or "Truth has but legs while Falsehood wears wings," such doubtings are effectually scattered to the winds, because of the avidity with which the "Union-Saving" portion of the press has seized so precious a morsel. Why assertions of this character should be given to the public through the agency of the printer, we are at a loss to discover. Common sense will never find an argument upon such premises—facts will not warrant such declarations. Theory brands the statement with falsity—practical experience will nail it as a base coin to the counter. Let us examine a few of the facts recorded upon this subject.

From the article on the "Progress of English Agriculture," we learn that lands where, to use the words of Mr. COLE, "two rabbits might be found quarrelling over a blade of grass," were given by a thorough introduction of drains to profitable agriculture. "Hundreds of thousands of acres," says the Review, "formerly condemned to remain poor pasture, or to grow at long intervals uncertain crops of grain and beans, have been laid dry, rendered friable, and brought into regular rotation. Sheep stock thrive where previously a few cows starved; the produce has been trebled, the rental raised, and the demand for labor increased in proportion. In the neighborhood of Yorkshire manufactories, moorland, not worth a shilling an acre (rental) has been converted into dairy farms worth two pounds."

In 1840, Sir ROBERT PEEL passed the act locating twenty millions of dollars for the purpose of assisting land owners to drain their farms. The various systems of husbandry which had wrought such wonders upon light soils, those who possessed heavy, retentive clays desired to adopt, and to grow such crops as afforded a certain reward. For centuries the farmers had been engaged in the trial of multifarious expedients to relieve the soil of water. The means called into use were upon the surface, as laying up in "lands," "backs," or "steacher," that the rain might flow off into drains a few inches deep. Not unfrequently, it is said, farmers would traverse their fields after heavy rains, attempting to lead the stagnant little pools to the neighboring ditches. Favorable seasons rewarded the husbandman for his toil, but a wet season destroyed his hopes. The soils were valued for their strength, and for their returns under bright auspices, and the questions were, in what manner can the uncertainty attached to them be removed?—how can we plant and be sure that we may also reap? These were the aspirations of the cultivators, and deep draining gave to expectancy glad fruition.

What are the details of experience in our own country? In the Report by Mr. NOBLES, of Orrington, Me., to the Bangor Horticultural Society, we find some interesting facts in regard to the effects of draining upon "cold, springy land." The drains were constructed partly with tile and partly with stone—depth three and one-half and four feet. He describes his farm "as lying on the north-east side of a hill, naturally wet, and hence unfit for working until late in the season." Size of lot drained one and one-half acres—designed for a pear orchard; drains laid in 1852. "Thirteen drains," says the Report, "fifteen rods in length, and twenty feet apart, were opened down the hill." The effects of draining are thus described:—"Upon this piece of land the frost comes out some days earlier, is later in the fall, and of less depth in winter than contiguous land undrained. The whole is dry enough for spading or plowing

as soon as the frost is out in the spring, or within ten hours after a heavy rain. During the drouth of 1854, there was at all times sufficient dampness apparent on scraping the surface of the ground, (with the foot, in passing,) and a crop of beans was planted, grown, and gathered therefrom, without so much rain as will usually fall in a shower of fifteen minutes' duration, while vegetation on the next field was parching for the lack of moisture. Undrained land of similar character was hard and lumpy in dry weather, and cohesive and miry when wet, while this was light, porous, arable and free from water." The one had been drained, the other drowned.

A correspondent of the RURAL, in our issue of August 15th, 1857, remarks:—"It has been demonstrated over and over again, that the increased product from a well-drained field for a series of years, will not only provide for the interest on the outlay, but extinguish the principal in a little time, after the first year; and yet many farmers cling to the 'penny-wise and pound-foolish' policy of allowing a superabundance of water to remain in the cultivated lots, and bear with all patience the frequent loss of one-half or two-thirds what their lands would readily have produced. When, O, when, will they practically understand that there is no safer, or better yielding investment of their money, than to bury it from 30 inches to three feet under the surface? When will they come to know that for hardly any purpose can they so well afford to submit to exorbitant rates of interest, as to provide themselves with the wherewithal to change their swamps and swales, and cold, damp fields into warm and reliable soil for the production of crops? * * * Of some thirty acres of spring grain on the writer's farm, all of which looks pleasant in his eye, one-half would have been nearly or quite ruined but for some 1,100 rods of drainage in the same; and the present appearance is that the enhanced product this year will be nearly equal to the total cost of the drains, albeit said cost has been fully and amply compensated by former crops."

The spring of '57, it will be remembered, was late, on account of excessive and long-continued rains, and the opportunities for testing the beneficial effects of a system of drainage were excellent. An experienced agriculturist, residing within a few miles of this city, speaking of the advantages of draining, remarked that "he had sown his barley and it was up, while his neighbors had not yet got their grounds prepared. All those whose land was not thoroughly drained had almost begun to despair—that for the crops on portions of his own farm, on which he had not created any means by which to relieve it of surplus water, he had little hope. That where drains were erected he could put on his horses and plow twenty-four hours after the most severe rain, and find the soil in better condition than where it was undrained three days subsequent."

There are hundreds who can furnish experience corroborating the statements already given, but to the thinking farmer they are not necessary; other reasons might be furnished and arguments put forth claiming more attention in this particular branch of husbandry, but our space forbids. All around us are facts so demonstrative that the advantages to be derived from thorough draining cannot but be apparent. Those who have not witnessed what a revolution well-constructed drains can work upon a retentive, cold, heavy soil, will find a visit to lands provided with these artificial outlets of redundant moisture a profitable one, fully convincing them that drainage is an exceedingly effective agent in Progressive Agriculture.

HOG PASTURES.

It being generally understood that hogs live by "special providences" until it is time to "fat" them, there is little attention paid to the most economical way of growing them up. Certain it is, that a good, easy-keeping variety will make commendable progress on grass, and it is worthy of investigation whether hog-raising may not be profitably carried on to a larger extent in Western New York by the aid of good pastures and other appliances. It may be safe to calculate that a good-sized, thrifty pig will gain in six months on grass, a hundred pounds or more. If an acre of grass would keep three hogs, and add a hundred pounds to the weight of each, that would be \$12 for the acre of pasture, reckoning the 300 pounds gain at 4 cents a pound, live weight. The particular point which the pastoral letter is ambitious to inculcate is this:—grass being a good thing and profitable to swine, attention should be paid to the furnishing of an abundance of it, and of the best quality, to these animals. Instead of being forced to bite twice at a short, dirty, dried and battered spear of June grass by the roadside before getting any off, imagine a clean and comely Suffolk in a fresh, green pasture just four inches high, filling himself with evident relish. That looks like gain.

The Atlantic Telegraph scheme having succeeded, all other visionary and impracticable enterprises will of course raise their heads and step forward; so I venture forth with mine. It is no less than this. Make a bog pasture big enough for all your hogs, and divide it into two or three parts, letting the animals remain only a week in one division before moving them into another. I deem that idea every way original, but I won't take out a patent right or copyright, provided you give credit to the RURAL for the suggestion. We have often heard that a change of pastures makes fat calves—horses and sheep, too, have not been forgotten in this connection; but hogs, alas! are not counted in. I propose to count them in. I don't know but they pay as much for their board as anybody, its cost and quality being considered; and I don't know but they have as good right to find fault when it don't suit. You "didn't know they had fastidious appetites." Well, you ought to know it. Just judge them by yourself. The likeness is closer than you are aware of.

I am not well enough informed to express an opinion as to the best kind of grass for pigs, but I have heard a man in a fat office, a boy in a peach orchard, a young fellow going to the Fourth of July between two girls with white dresses on, compared to "pigs in clover," from which I conclude that somebody has found out that a clover-field is a delectable place for hogs. I ask for information, and would be glad to know of RURAL readers, which are the best grasses for swine?

I think hogs should not pasture in the same field with other stock, as there is an objectionable flavor where they go; so let them have a place by themselves, and have it well fenced and plenty of water. I have an excessive dislike of jewelry, but I sometimes think that hogs are better for rings in their noses.—H. T. B.

A FEW HOURS IN THE GENESSEE VALLEY.

ONE day last week we were at Avon, with a few unemployed hours before us. As we had some farming friends in the neighborhood, we thought a part of the time spent with them would be useful, especially as we had never been upon the farms in that region, though often in sight.

A good half-hour's walk brought us to a friend's house. He is the occupant of a "flat" and an upland farm of about seven hundred acres, which he rents from some heirs of the Wadsworth Estate. Nearly or quite five hundred acres belong to the flat, and are more or less subject to the overflow of the river. He had no wheat upon the flats, his cultivated crops being corn, broom-corn, barley and oats. The barley was nearly a failure, oats tolerable, and the corn promising a good crop. The meadows were very productive, yielding a large burthen of grass, and generally of first quality. The pastures were very fine, equal to any of the famous Blue Grass pastures of Kentucky. Upon these, for some years to come, the farms along this region will be compelled to depend for their main support.

The grazing of cattle or the dairy must take the place of wheat growing, and these "flats" will furnish the material for capital dairy farms. As much butter and cheese can be made to the acre here as in any region of the State. And when the farms embrace a portion of upland, as well as "flats," there will be no difficulty in raising wheat to a moderate extent by using manure freely, and underdraining when required. Still, for the time being, the value of the land must depreciate very sensibly, until a more diversified system of farming is adopted.

The midge will not be got rid of. It has been more or less prevalent for the last twenty years. Its ravages have only become serious, when, by too severe a system of cropping, some of the elements of fertility have been so exhausted that the wheat plant does not grow with its accustomed vigor. Some other element must be returned to the earth, besides what clover and plaster furnishes, before the farmer can defy the midge. That will be found in barn-yard manure.

The rich pasturage of the flats, and the great yield of hay which they will furnish, render them very valuable, and if the landlords confine them to those two branches, the permanent wealth of that region will not be materially diminished. No country can be really independent that depends mainly upon grain-growing for the support of its farms. It will be found that the dairy regions of this State are really more independent than the wheat region, although the wheat lands have been commanding much the highest price per acre. Many think that more capital is invested in wheat farms than dairy farms. It is a mistake—for, though the wheat farms are valued at a higher price, the stock upon a dairy farm will balance the difference.

The entire failure of the wheat crop in this region is but exemplified by the fact that at a point on the Valley Canal, just west of Avon, where a few years ago from 250,000 to 300,000 bushels of wheat were taken in yearly, they do not expect to

buy 3,000 bushels this year, and for two years past flour has been imported to supply the inhabitants of one of the finest wheat regions of the Union.

The midge, one of the frailest of insects, is in its ravages the most destructive enemy the farmer has to contend with, and its power will soon be felt over a whole Continent. In this State alone, its ravages have cost the farmers not less than ten millions of dollars for this year. When they reach the black lands of the prairies in the Western States, as they will in some three or four years, for they are now in Michigan, it will become a pretty grave question as to where we shall obtain our wheat bread.

But not much has been said about our friend's farming. We will defer that till another visit.—P.

SELF-OPERATING WELL BUCKET.

Eds. RURAL:—Although we have, in this progressive age, almost every expedient for drawing water in the shape of pumps and elevators that could be conceived of; and many of them are very valuable in rendering the labor of drawing water from wells and cisterns comparatively easy; yet there are hundreds of your readers, and others, who will agree with me, that not by any of these means does water taste as pure and wholesome as when drawn from the well in a bucket.

Those, then, who wish to drink water pure—free from the taint of decaying wooden pipes or rusty iron—will, with me, choose to let "The Old Oaken Bucket" hang in the well.

Though "dear to the hearts" of all "cold water men," there is an inconvenience attending it, as it is commonly used, in filling and emptying. With your permission, I will tell your readers how I overcome the difficulty. Here, then, is a correct drawing of my well carb, a board being left off in front to show the manner of emptying the bucket. Like its owner, it is plain looking, but I find it answers the purpose for which it was designed, admirably.

I cut a hole three inches square in the bottom of the bucket, then, on a thin piece of board, four inches square, or a half inch larger each way than the hole in the bucket, I tacked a soft piece of leather, letting it extend far enough on one side to tuck to the bottom of the bucket—forming a hinge to the valve. I then had a blacksmith move the ears from the top, to a little above the middle of the bucket, or to that point, where the bucket when filled, would balance nicely without tipping over. I then had the ball cut in two pieces, making each piece a foot long, after being straightened, and an eye turned on each end, as seen in the drawing.

A thin piece of iron 1 1/2 inches long, one edge bent over, for the hook, fastened to the spout, to catch into, was riveted to the top of the bucket, inside. I procured a well twisted 1/2 inch cord, twice as long as my well is deep, found the centre and fastened it, in two places, by driving a staple two inches each side of the centre of the axle, then wound the cord evenly on the axle,—always winding towards the ends,—and fastened the ends of the cord to the bucket. The axle was turned evenly, and not made of a large sapling as is often the case.

There is a ratchet on one end of the axle which holds it firmly at any desired point.

When the bucket is let down to the water the valve in the bottom opens, and the bucket is instantly filled, without tipping. You wind up, and the weight of the water firmly closes the valve, and you are enabled to bring the bucket up till the hook on the spout catches it, tips it, and throws its contents into the spout.

The object of having two ropes is to steady the bucket. I have used this plan over five years, and would not change it for any pump I ever saw. For simplicity and efficiency I never saw a better. Hoping this may meet with your approval, and be of use to your thousands of readers, I subscribe myself, as ever, a friend to the RURAL.

Waverly, Tioga Co. N. Y., 1868.

J. A. GRAYES.

APPLICATION OF MANURES.—ABSORBENT POWER OF THE SOIL.

Messrs. Eds.:—Having read a number of articles in your valuable paper, on the "absorbent power of soils," and having noticed lately in the N. Y. Tribune, the remarks of "B. W., of Seneca Co.," before the American Farmers' Club of New York city, alluding to this subject, and, differing with him, I thought that my opinion, founded on experience, might be of interest to the readers of the RURAL. I formerly was of the opinion that manures should be applied to the soil before decomposition had taken place to any great extent, thinking that the only loss to be guarded against was by evaporation, consequently the manure should be turned under before it had become much rotted, spreading it as turned under, so that none of the essential properties should be lost. B. W., above referred to, says, "if you can keep manure from going up, you may let it go down as much as it will." On the contrary, I would say if you can keep manure from going down you may let it go up as much as it will. In proof he says, further, that "water will always run clear, from tile drains." This is unquestionably so; but, because water runs clear from tile drains, therefore cleansing itself from all impurities, by leaching through the earth; however foul and filthy it may be on the surface—yet in practice it does not hold true that the most essential properties of manure do not leach down beyond the reach of the roots of the plant. I suppose that sand and fine gravel makes the best filter; that water filtered through such soils is the most pure; yet we know that such soils are the most barren—that it is only by constant manuring and nursing such soils that we can get good crops. A good, thorough application of manure on clayey or clay loam soils, will render such soils productive long after a like application on loose, sandy soils has ceased to perceptibly affect the crop. I have always advocated deep plowing, and one of the strongest arguments in favor of the practice, is that it not only makes a deeper soil, for the roots of plants to spread and extend themselves—thereby absorbing a greater amount of food for the plant—but it brings to the surface, and within reach of the plant, the leachings of centuries of decomposed vegetable matter and the manures that have been applied.

My practice for years has been to leave the manure as near the surface as I can, and have it covered, or thoroughly mixed with the soil. My plan is this:—I draw my manure when it best suits my convenience, sometimes in the winter or spring, and put it in large, compact piles, on or near the ground where I wish to apply it. I leave it until just before planting my corn, or, if applied to summer-fallow, or where I wish to sow wheat, until two or three weeks before sowing my wheat. I then draw it out and spread evenly over the surface of the ground. I then take gang-plows—which are well adapted to the purpose—and plow the manure under, from three to four inches deep; let it lay a few days, take my harrow and thoroughly mix with the soil, and if I drill in my wheat, I give it another gang-plowing and dragging before drilling, in order to get a fine tilth. If the land be a clay the manure has a tendency to ameliorate the natural tenacity of the soil, thereby securing the quick and healthy growth of the wheat plants.

Any farmer that has any thing to do with clay land knows, if you can get a good, thrifty growth in the fall, that such lands are the best wheat lands we have. I have found that is lands thoroughly manured, and treated in the manner above described, the benefit arising therefrom is plainly to be seen for years; whereas, if plowed under to the depth of seven or nine inches and suffered to remain there—if it was a stiff clay soil—little if any benefit would redound to the crop that followed the application. If such applications were continued for a few years, you would find the soil very much improved, but its effects would not be as perceptible to each crop that followed the application as a surface dressing, evenly mixed with the surface soil. I would ask if manures lose so much by evaporation as Mr. B. W. would seem to infer? Why is it that composted or rotted manures spread on the surface of clay soils without being mixed with the soil are productive of more good to the crop that follows, than if plowed under deep, with a common plow? In fact the stiffness, or tenacity of the soil seems to be ameliorated far more than if it were turned under deep, in a decomposed state. Should I plow under manure on a stiff soil, I would wish it to be unrotted—in fact, as coarse as I could get it under—for the tendency would be more to keep the soil loose and porous, than to materially enrich it for that crop. So you see that in practice, I am opposed to deep applications of manures, and, at the same time, I do not advise a top-dressing; without thoroughly mixing with the surface soil. In no case would I plow manure under eight or nine inches deep if composted or rotted. I do not believe that manures lose much of their essential properties by "going up," as B. W. has it, but much is lost by being absorbed by the soil at too great a depth to afford sufficient nourishment for the growth of crops. From practical experience and close observation in the practice of others for a period of over fifteen years, I have formed the above opinions, which I could substantiate by various experiments, tried at various times, on different crops, and different soils. Knowing short articles are preferred, I will close this communication, and, if desirable, will at some future time give you the result of my experiments.

W. H. H.

Wheatland, N. Y., 1868.

PREVENTING DROUGHTS—A NOVEL THEORY.

Eds. RURAL:—In these times of signs and wonders, inventions and discoveries, it would seem to me that a circumstance of such vast importance to the well-being of the human family as the fall of rain, should receive more attention, and be the subject of more experiments by philosophers and meteorologists, than it has ever yet received.

Suffering, as we now are, from a destructive drouth, the discussion of the above subject would be interesting, if not profitable. The idea of manufacturing thunder showers will be looked upon as chimerical by some, and blasphemous by others; but I verily believe the thing may be done. To witness as I did last night, the rapid formation and equally rapid dispersion of thunder clouds, very reasonably suggests the idea that the operating causes are not so great as to be beyond the power of imitation by human skill and sagacity.

With HUGH MILLER, I believe the physical world is not yet completed; and that it was designed, in the creation of man, that he should be a co-worker with Deity in perfecting the physical, as well as the moral world. And surely, nothing would conduce more to that end than to be able to cause and control the fall of rain upon our famishing fields and extensive plains made sterile by want of water.

We have never yet been fortunate enough to meet with a theory which explains to our satisfaction, all the phenomena of a common thunder shower. We are told, to be sure, that lightning is caused by electricity passing from one cloud positively, to another negatively electrified; and that thunder is the resulting consequence. But I have never yet been told how, under apparently the same circumstances and conditions, one cloud becomes positively, and another negatively electrified. Indeed, we know there is yet much to be learned on the subject of electricity. It is not unlikely, that what we call empty space, is an ocean of electricity, binding in telegraphic sympathy suns, planets and comets.

After these preliminary remarks, I will proceed to give as briefly as possible, my plan for producing rain. In the first place, have a balloon of a lifting power sufficient for the purpose; then construct a bundle of copper wires, from one end a half to two miles long; let the upper ends of the wires be properly shaped and prepared as conductors, and surround the balloon with them, letting the points extend as far above the balloon as their strength will sustain. The cord, or bundle of wire, for the sake of convenience, should be wound upon a reel, and the lower end of the wires placed in water.

Thus arranged, let the balloon ascend, and when it is at a sufficient height, (if my theory is good,) the wires will commence conducting off streams of electricity from the atmosphere in the region of clouds, causing a condensation of vapor, and forming a cloud, from which rain would be immediately precipitated. A cloud thus formed, would be a nucleus around which the forming process would continue until a large scope of country would be overcast with clouds, as in ordinary rains. Showers produced in this way would not be attended with lightning and thunder, and, probably, not with destructive winds.

Observation teaches us, that when a tract of country becomes very dry, it seems to repel or dissipate clouds as they rise over it; and the prospect of rain is nearly (perhaps I should say entirely,) hopeless, until a brisk wind springs up, thus bringing over the country, from other and more favored parts, a more humid and better conducting atmosphere.

Perhaps I should before have said that my theory stands upon the assumption, that a portion of atmosphere in contact with very dry earth becomes completely a non-conducting medium, thus preventing any electricity passing from the clouds to the earth, and consequently preventing a condensation of vapor sufficient to cause a fall of rain.—The above theory may be very absurd; but I am sure nothing but actual experiment can refute it.

O. J. PHELPS.

Hesperian Plains, Piquette, Ohio, Aug., 1868.

REMARKS.—In these days of Atlantic Telegraphs it will hardly answer to scout the ideas of any individual, hence the space given to the foregoing seemingly chimerical propositions. The assumption of Mr. PHELPS, "that a portion of atmosphere in contact with very dry earth becomes completely a non-conducting medium, thus preventing any electricity passing from the clouds to the earth, and consequently preventing a condensation of vapor sufficient to cause a fall of rain," may be admitted as true, yet the balloon and conducting rods, as proposed by Mr. P., may defeat the very object he desires to attain. He must have a proper atmospheric condition else the electricity may go up in place of down, and thus prolong instead of alleviating the drouth. Will Mr. PHELPS give bonds not to make the matter worse? However, the subject is worthy of discussion, and is thrown out for the purpose of eliciting the ideas of those who have devoted time to the study of this subtle element.—Eds.

LIGHTNING RODS, AGAIN.

Messrs. Eds.:—In your note appended to the article on Lightning Rods, inserted in the RURAL of the 28th ult., you state truly, that it is a common belief that the conduction of electricity in the same metal depends upon the surface. This common error has arisen from confounding Static and Dynamic Electricity, or, to use plainer language, Electricity in motion and Electricity at rest. The experiments of the solid and hollow rods prove nothing in relation to this matter, for, in the case of the tube, the surface was nearly doubled while the section was greatly reduced, and consequently, an equality of conducting power in both cases shows that neither conductor was taxed to near its limits—without which it would be impossible to obtain even comparative data.

The experiment by which POUILLET decided this point is the most accurate and the most beautiful. After finding the conducting power of a round rod or wire, he flattened it so as to retain the same section, while the surface was greatly increased. The conducting power remained the same, thus proving the truth of my first proposition.

Another experiment, devised by myself, consisted in placing ten strips of thin silver leaf in a pile with strips of paper interposed between each strip

of silver. The conducting power of the pile as thus constructed, being ascertained, the paper strips were removed, and the silver strips pressed into close contact between two blocks of varnished wood. The conducting power remained the same. I recommended simply tacking the strips together (the ends being overlapped,) for the following reason:

1st, Telegraph wires which are merely twisted together answer all practical purposes.

2d, The same plan has been used by able electricians to convey the current from a distant battery into their laboratory, it being convenient to have the battery out of doors to avoid the fumes.

3d, It is the method adopted in the British navy by Sir W. SNOW HARRIS, and has never been known to fail.

It is obvious that the longer the lap the greater the security. The word "diameter," for which in your note you correctly substitute thickness, was an oversight on my part.

J. P.

BUILDING CISTERNS.

Messrs. Editors:—I observed in the RURAL of the 26th June, a communication by J. VANDER, of Belle Valley, Pa., on this subject, and am heartily glad to hear that any one will talk up the importance and means of obtaining large supplies of rain-water; one of the most desirable appendages to a household, for all family uses. It is truly surprising, so many people will spend large sums of money in digging wells, with the uncertainties of obtaining water, except second-rate, (if any) particularly in line stone sections of country, when if the money thus used had been invested in making large cisterns, to contain the floods of clear rain-water that annually pour off the houses, they would be so much better served every way.

While his plan must result in having a very good cistern, it seemed to me (not exactly ambiguous,) rather complex in detail. There appears to be considerable engineering, so to speak, in getting it completed; so, I would suggest a plan, too, by which one may be more readily made, and answer an excellent purpose.

Dig a hole the diameter and depth desired, (and don't make a small one,) then eighteen inches from the edge, commence and dig down all around, some eighteen inches deep. In this space build up with stone, laid in water lime, for the purpose of forming a more permanent rim, or protection to the mouth of the space dug out, avoiding the tendency, from any cause, to cave in. In this stone work insert your joists or cross pieces,—upon which you will plank and cover the cistern—these pieces should be a foot or more from the top, sufficient to allow the covering to prevent the plastering from freezing. The work of plastering may now be commenced, and completed the usual way, always using clean and coarse sand, and let it be thoroughly dry before letting the water in. It is well, where it can be obtained, to finish with a coat of Rosendale Cement, as it prevents much of the hardness of the water, observable when lime alone is used.

The curb, water pipe, and inlet will be located at pleasure, the usual way; recommending also, to continue the conductor pipe from the roof into the cistern within a foot of the bottom, placing a flat stone where the discharge is, to prevent the wear on the cement; thus the fresh water is taken in at the bottom, and the waste pipe being at the top, the water is less liable to become impure by standing inactive. The pipe entering the cistern should be made of zinc, it being less liable than tin to oxidize or rust out.

It is very desirable to so place the cistern that a pipe from near the bottom can be taken into the cellar, where, having a large faucet, the water can be so easily applied to a properly constructed portable water filter, thus securing the most healthy, the purest and sweetest of water, for all culinary and drinking purposes.

This method is recommended from long experience, as the cheapest, and more convenient than the plan of making a cistern-filter, adopted by some. The latter answer a very good purpose if properly made, but the objections are, the trouble and expense of making, also the fact that so much more water is filtered than is necessary for daily consumption, it becomes less pure and perfect by standing in an inactive state—then there is so much more water filtered than used, the power is unduly exhausted,—and finally the trouble and expense of re-packing.

Canaan, Conn., August, 1868.

CROPS IN STARK CO., OHIO.

WHEAT.—The wheat crop has suffered immensely by rust and weevil. Wheat on the upland has suffered the least. The opinion of our best farmers is, that there will be about three quarters of a crop this year. The wheat best adapted to this, and adjoining counties, is the Mediterranean—It requires a peck or a half a bushel more of seed to the acre.

RYE.—Rye is tolerably good this year. I noticed a piece this harvest that had been entirely ruined by the weevil—something very singular for this locality.

BARLEY.—This crop is very good, but it is unprofitable as will appear by the annexed prices.

CORN.—The crop this year is promising as in 1865.

OATS.—This crop also suffered by the rust, causing it to fall so flat that we had to mow it.

POTATOES look exceedingly well.

MARKETS.—Wheat, Red, 90c; White, \$1.00 per bushel. Rye, 50c; Barley, 20c. Corn, 75c; Oats, 25c.

T. J. ROACH.

LARGE FLEECES.

EDITORS RURAL:—Noticing occasionally in the columns of the RURAL, weights of heavy fleeces of wool—reports of sheep shearing festivals, &c., therefore, I send you the result of the shearing of a small flock of my own, as follows:

One Yearling Buck of thirteen months growth, weight of fleece, 23 lbs; weight of carcass, 75 lbs. Also, a flock of ten Bucks, same age as above—Average weight of fleece, 15 lb 4oz; average weight of carcass, 72 lb.

Unlike Mr. TAYLOR, I want it distinctly understood that the sheep that sheared the above weights of fleeces were heavily grained,—perhaps they con-

sumed too much grain for their future benefit; also, their conveniences for wallowing in plenty of dirt were middling good. I should consider it a fruitless task to attempt to make a wool-growing community believe that my sheep sheared as heavy fleeces of clean wool as some particular men report their sheep to shear, fed only on hay and grass.

Wheeler, Steuben Co., 1868. JULIUS STICKNEY.

CONDENSED CORRESPONDENCE.

WHEAT, CORN AND POTATOES IN OGLE CO., ILL.—A correspondent of the RURAL (E. J.) writing from Oregon, Ill., says:—"The wheat crop in this section is very poor—some fields yield about 3½ bushels per acre. The corn crop promises to be superior. Potatoes are bad middling, and the rot is beginning to manifest itself. Ogle county holds her Annual Fair, at Oregon, on the 5th, 6th, and 7th of October.

TO PREVENT MOSQUITOES BITING.—B. ROOFER, of Scottsville, asks, "what will prevent mosquitoes biting?" I have always found the application of the spirits of camphor a sure preventive. I hope, Mr. Editor, as you are laboring to benefit others, you, yourself, may be benefited by this simple piece of information, and for the future make no unsuccessful attempts to rid yourself of those troublesome insects.—A HOUSEWIFE, Herkimer, N. Y.

HOW TO KILL LIVE-FOR-EVER.—I have noticed, in the RURAL, an inquiry of the above import. I will give you our experience. We have a three-acre lot of good soil, that, twenty years ago, was literally covered with this pest. We used to plow, plant, and sow it, in turn with the other lots—carting off loads and loads of the roots; but stock it down and it was as green as ever. At last we put sheep upon it—changing to another pasture about once a week. They cropped it off some, but our chief exterminator was salt. Salt, enough of it, will kill almost anything. We sprinkled fine salt on the branches freely, letting the sheep and the rest of the stock eat of it what they would, put on old brine and all refuse salt, and it entirely disappeared. We have plowed the lot since, but there is none to be seen. We say, then, salt it to death. Don't mow it; every leaf or particle that drops will make a new root.—E. H. WRIGHT, Milton, Conn., 1868.

INQUIRIES AND ANSWERS.

A SUBSTITUTE FOR RENNET.—I would like to inquire through the RURAL if there is a substitute for rennet in cheese-making?—Mrs. M. J. W., Westville, La Porte Co., Ia., 1868.

BURYING POTATOES.—I wish to be informed, through the columns of the RURAL, of the best method of burying potatoes to preserve them through the winter in good condition. Will any one who knows by experience, respond?—W. O. HOMER, Cortland Co., N. Y., 1868.

CALLS ON HORSES.—A four year old colt has been afflicted with lumps on the neck, which became raw during plowing, or when he was worked hard. By stating the cause or the cure, you will greatly oblige.—A SUBSCRIBER, Cardington, Ohio.

THE query of "A Subscriber," is rather indefinite, but we infer that the friction of the collar produced excoriation. New horses are very liable to have the skin injured by the harness—it is tender, and a little matter exposes the quick.—Prevention is better than cure, and this depends upon the driver. As a preventive, after every journey the neck should be closely examined. If there be any spot, however little abraded, hot and tender, when pinched, that part of the collar which produced it, should be cut out before the next journey. The guard or safe, is a useful article to prevent galls of this kind. It is merely a thin slip of soft leather, covering the seat of the collar. It obviates friction, and prevents injurious pressure from any little protuberance or hardness in the stuffing of the collar. On the first or second journey a new horse often comes in with his neck somewhat inflamed; it is hot, tender, and covered with pimples. In the stables it is said to be fired. A solution of common salt in water is usually applied, and it serves to allay the inflammation; it should be applied whenever the collar is removed. Tumors, containing bloody water, frequently rise on the neck. They should be opened immediately, emptied, and kept open for a few days. The piece should be taken out of the collar, and a safe used. As a preventive we know of nothing better than frequent bathing of the neck in a solution of whiskey and alum—as much alum being put in the liquid as it will dissolve—and this, when persisted in, we have known to actually cure the worst cases, even when the animal has been kept in continued service.

FOWL MEADOW GRASS.—What is Fowl Meadow Grass?—S. G. M., Benton, Luz. Co., Pa.

REMARKS.—This is a valuable grass for low, moist meadows. FLINT describes it thus:—"The specific characteristics of this species are two to four, sometimes five, flowered spikelets, oval, spear shaped ligules elongated, flowers scutell, green, often tinged with purple, roots slightly creeping; wet meadows and banks of streams, very common. Flowers in July and August. In long continued moist weather the lower joints send up flowering stems. The panicle is erect and spreading when in flower, but more contracted and drooping when ripe. This grass grows abundantly in almost every part of New England, especially where it has been introduced and cultivated in suitable ground, such as the borders of rivers and intervals occasionally overflowed. It will not endure to be long covered with water, especially in warm weather. It is well to let a piece go to seed, save the seed and scatter it over low lands. It makes an excellent grass for oxen, cows and sheep, but is thought to be rather fine for horses. It never grows so coarse or hard as that the stalk is sweet and tender, and eaten without waste. It is very easily made into hay, and is more nutritive, according to Sinclair, than either foxtail, orchard grass, or tall meadow grass. Owing to its constantly sending forth flowering stems, the grass of the latter part contains more nutritive matter than the first crop at the time of flowering, hence the names *fertilis* and *serotina*, fertile and late flowering meadow grass. It thrives best when mixed with other grasses, and deserves a place in all mixtures for rich moist pastures."

Rural Miscellany.

WHEAT AND CHESS.—Keep cool, reader exultable, for we do not propose to agitate the subject of transmutation sufficiently to open a prolix and unprofitable discussion. The N. Y. Tribune says:—"Mr. John Carpenter, of Rainsville, Ind., sends us a fine, plump head of Wheat with a Chess growing out of one side of it." Though honestly made, we doubt the correctness of this assertion, and will give a reason why we disbelieve. Two or three years ago two heads of wheat were sent us from different localities, presenting every appearance, at first sight, of having "chess growing out of the sides" of them; but on close inspection it was found that the wheat and chess did not grow together, though they were so closely attached as to deceive those willing to believe without critical examination. Accounts of these were published in the RURAL at the time. In one case the sample had been previously shown by Judge WATSON, of Irondequoit, to the editor of one of our daily papers, whereupon it published to the world that the long mooted question was settled! We soon convinced Judge W., however, that the announcement was premature, albeit himself, the editor aforesaid, and many others who had seen the curiosity, had supposed there was no doubt on the subject. Now, we suspect that the Tribune man has been deceived or "sold" in a similar manner; at least we will give him a new behavior if he will show us (or send to the next N. Y. State Fair, at our expense,) a head of wheat with genuine chess "growing out of one side of it."

THE COTTON CROP.—Under date of Aug. 17, Dr. M. W. PHILLIPS, an extensive planter, of Hinds Co., Miss., writes as follows:—"This has been an awful year for the Cotton Planters—overflow, rains and worms, with no prospect for the better. Rains every day, when we need all the clear sunshine and dry weather possible. Well, it is so, and we should be content to believe all will be well. Notwithstanding all these backsets, we have a goodly country, a noble country, and much cotton will be made. I put the figures at 2,500,000 bales, not to exceed 2,750,000, and at a value of \$125,000,000. I think from Memphis to New Orleans is the most desirable country on earth, and that the leading agricultural spirit can see more than anywhere else to elevate, expand, and give a true feeling of the greatness of our land and nation. I would like to have all your Northern leading agriculturists visit this country."

—Dr. P. will accept our acknowledgments for the kind invitation and offer of hospitality, which accompanied the above—and our regrets that we cannot yet awhile visit him and the rich region of country to which he alludes.

AYRSHIRE CATTLE FOR MASS.—A late number of the Ayrshire Express, published in Ayr, Scotland, makes the following announcement:—"Another compliment has just been paid to the skill of our Ayrshire farmers, by the purchase, by Mr. SANFORD HOWARD, of Boston, U. S. America, of six bulls and eighteen cows and heifers, for the Massachusetts State Ag. Society, and various individuals. These animals are from the very best stocks, and are of the very best quality in the country."

Among the individuals for whom a portion of the above animals were purchased, are J. S. CASOR and Dr. LORING of Boston, Mr. CARTER of Worcester, and Hon. JOHN BROOKS of Princeton. The animals are expected to arrive this week.

FROST IN THE SOUTHERN TERR.—GRASSHOPPERS, &c.—A correspondent of the RURAL (J. C.) writing from Owego, under date August 24th, says:—"This vicinity has been visited by an early frost, also in Litchfield, Bradford Co., Pa., on the night of the 18th. Several other places had a slight touch on the 22d and 23d. Little or no damage has been done. Grasshoppers are doing considerable mischief to growing crops, as well as pastures and meadows. We are also having quite a drouth, while a short distance from us rain is not unfrequent."

NATIONAL HORSE FAIRS.—Three Horse Shows, each claiming to be "National," are to be held the present season. As already announced, one is to be held at Springfield, Mass., Sept. 14th to 17th, inclusive. Michigan announces two—one at Coldwater this week, (Sept. 1st to 4th), and the other at Kalamazoo, Oct. 12th, 13th and 14th. Though the premium lists of the Michigan Fairs are not as large as the former, they are varied and liberal, and from the character of the managers and people we doubt not the exhibitions will prove creditable to the Peninsular State.

AGRICULTURAL FAIRS.—In addition to the large number of Fairs recently announced in the RURAL, we give the times and places of holding two or three others in this State, from information obtained during the past week. The Genesee Co. Fair is to be held at Batavia, Sept. 16th, 17th and 18th. Wayne County, at Lyons, Sept. 22d and 23d. The Nunda Union (several Towns,) at Nunda, Liv. Co., N. Y., Sept. 8th and 9th.

THE HOG CHOLERA.—Remedy.—This disease has recently appeared, in its most virulent form, in Frederick Co., Md. Mr. PETER CUTLER, who lost thirty head, arrested the disease, and saved the remainder of his hogs, by using the following remedy:—1 pound of sulphur, 1 pound of rosin and 1 pound saltpetre, beaten into a powder, and given in the proportion of a large spoonful to seven hogs, every other day.

SUPERIOR WHEAT IN NEBRASKA.—The Nebraska City News makes the following reference to the wheat:—"The winter wheat now harvested and being threshed out, in this and Douglas Counties, weighs from 61 to 62 lbs to the bushel. And we venture to say a more beautiful article was never raised in any other State or Territory."

VERY TRUE is this remark by some sensible writer:—"Money invested in a tool, and the tool exposed to the weather, is like money loaned to a spendthrift with no security received. In both instances it is a dead loss, and the result of indolence or inexcusable indifference to one's own interest."

Orchard and Garden.

HORTICULTURAL NOTES

AFTER spending a day among the nurseries and fruit and flower gardens, we return to our desk, a little weary, but delighted, and thankful to the Giver of all Good, who has adorned our earth with so much of beauty, so much to please the eye, gratify the taste, and elevate the heart. Difficulties the cultivator has to contend with—insects, and diseases, and unfavorable seasons, sometimes blast his hopes, and always make care and vigilance essential to success,—yet the flowers are always gay, and luscious fruits are always found in the gardens of the diligent.

Upsetting the specimens we have collected in our travels, and spreading them out in bright array before us, and opening our note book for memoranda taken on the grounds, we will give our readers a little horticultural gossip. First, we have the *Pears*. The fall varieties are now ripening, and although the crop is not as large as some seasons, we never saw finer specimens. The *Limon* which we have just now eaten, in perfection, and of which we give an engraving, is of medium size, ob-ovate, resembling a small, white Doyenne in size and form. In color it is greenish-yellow, sprinkled with reddish dots, and often marbled red on the sunny side and around the crown. Stem about an inch long, moderately stout and inserted in a shallow depression. Calyx small, open and shallow, flesh fine, melting, sweet, musky, somewhat resembling the Bartlett in flavor and perfume. The tree is a free grower, and good bearer. This is a Belgian fruit, and will rank among the best summer pears of medium size. We give an engraving of this variety below.

The *Tyson* is nearly double the size of the above, and the tree is an upright, vigorous grower, making a most beautiful tree. It originated near Philadelphia. Flesh juicy, melting, sugary and slightly aromatic.

Rousslet Stuttgart is a small pear, of pyramidal shape. Flesh rather coarse, juicy, melting, sweet, with a rich flavor, and aromatic.

The *Bartlett* are ripening, and specimens picked early are now fully ripe. Our market is pretty well supplied with this excellent fruit. The only objection we ever heard urged against this pear, that it ripens with the peaches, is of little account this season, as our peach orchards will not give us a taste. By the by, we saw some very fine, thrifty *Bartlett*, to-day, on the quince root, and loaded with fruit.

Dwarf trees of the *Vicar of Winkfield* are everywhere bearing an excellent crop. Indeed, many of the trees are suffering, because the fruit was not thinned out early in the season. A little attention to thinning the fruit on dwarf trees will be labor well expended. When a tree is allowed to over-bear, it not only affects the growth of the tree, but the crop is apt to be small the next season. By a little care on this point dwarf trees will give a good crop of fruit every year.

The *Louis Bonne de Jersey* is another very productive sort both on quince and pear stocks. It seems to produce a good crop most uniformly, and sometimes with very poor culture. We never saw finer specimens of *Buerre Superfin* and *Buerre d'Anjou* than are now on the trees. Mr. ELLWANGER thinks we did not do justice to the *Pulsifer*, in our notice last week. We described it from the specimens we tasted, "a very good, pleasant, but not high flavored fruit." The specimens we had were perhaps picked too early; indeed, we think they were wind-falls, that were kept until they ripened. Mr. E. pronounces good specimens ripened and eaten since our notice, as very high flavored.

THE LIMON PEAR.

Among the *Plums*, we have to-day (Aug. 31st) eaten the *Laurence*, a delicious plum, a seedling from the *Green Gage*, which we described last week; also, the *Bradshaw*, one of the finest of the large plums. It is about the size of the Yellow Egg, of a dark violet red, with a bluish bloom. The flesh is yellowish-green, rather coarse, but juicy, sweet and pleasant. The tree is very vigorous, and bears most abundant crops. *Diopre Rouge* is a very beautiful, medium sized French plum, of fine flavor. Its color is bright red.

PRINCE KNIGHTSBRIT.

Prince Knightsbrt is a Belgian variety, the tree a free grower and productive. Fruit not quite as

THE JAPAN LILY.

large as the *Bradshaw*, very deep purple, with a very thick bloom, rich and fine. *Goliath* is a large, round plum, skin a deep red, and very prettily mottled with green and brown, and almost covered with fine dots. It is very juicy, with a sprightly flavor. *Nelson's Victory* is a delicate plum of medium size, very juicy, and the color, which we can hardly describe, is a delicate mixture of crimson and yellow. Those who have become discouraged with attempting to grow plums on account of the curculio, should visit the plum orchard of ELLWANGER & BARNY, of this city, where all our specimens were obtained, and they will there see scores of trees bearing a full crop of this fruit.

GOLIATH.

In the ornamental grounds, the *Altheas* are at this time conspicuous, and they are invaluable, on account of their late flowering. All lawns and ornamental grounds should contain a few *Altheas*. The season has been very unfavorable for the growth of *Dahlias*, and we fear our fall show of this queen of flowers will be quite behind that of other seasons. The *Bedding Plants*, particularly the *Verbena* and *Petunia*, are the gayest of the gay. How much do we owe to these two flowers. From early summer, until November, they greet us with smiles of beauty, in their thousands of bright and laughing eyes.

The *Gladiolus* and the *Japan Lilies* vie with each other, and equally command the admiration of the observer. The *Japan Lily* is as hardy as the *Tiger* or any of our garden lilies, and should be planted more generally. They were brought from Japan about twenty years ago, and we have known them in this country some ten or twelve years, but the high price at which they have been sold has prevented many from planting. They are now so cheap as to be within the means of all, and as they exhibit a striking and delicate combination of colors, possess a fine perfume, and are hardy, and of the easiest culture, we hope all lovers of flowers will remember the *Japan Lilies*, when planting this fall. There are several varieties, and we give an engraving of one of the best, *Speciosum*.

The *Annuals* are now among the most showy of the flowers. These cost nothing but a little labor, and every village lot and every farmers' "door-yard" may be adorned with them. *Pinks Drummondii* and the *Balsams*, and the *Amaranthus* are now as fine as can be desired, and the *Aster*, that beautiful fall flower, is being very much improved. Some of the broad-petaled, or *Peony Asters*, are almost as perfect and beautiful as a good *dahlia*.

PRODUCTIVE DWARF PEAR TREES.—About a mile or so south of this city, on the grounds of Wm. KING, we saw five *Louis Bonne de Jersey* pear trees on the quince root, eight years planted, and well loaded with fruit, almost fit to gather. They are healthy and vigorous, and the fruit from these trees last year sold for twenty four dollars. This looks as if growing pears would pay.

A FINE FRUIT GARDEN AND AVENUE.—Now that the fall fruits are ripening, and the fruit gardens and orchards can be seen under the most favorable circumstances for gaining information, we design to visit as many of our friends as possible within a convenient distance. To-day we accepted an invitation to visit the grounds of JAMES BUCHAN, situated less than two miles from the center of the city; and here, in a quiet, unpretending spot, we found one of the best fruit gardens it has been our fortune to visit in a long time. On entering the grounds we found ourselves in a beautiful avenue, some 40 feet in width and 1,200 feet in length, both sides thickly planted with deciduous and evergreen trees, many of them grown to 20 or 30 feet in height, and furnishing an abundance of grateful shade. This is the only really fine avenue we have about our city. The fruit garden proper we found contained over five acres, in which we were delighted to see pear trees of all our most popular sorts, loaded with fruit. About 100 standard pear trees, planted

some eleven years ago,—*Bartlett*, *Virgalienus*, *Beurre Diel*, &c.,—were magnificent trees, showing every sign of health and productiveness. A *Flemish Beauty*, some fifteen feet in height, was so loaded with fruit that almost every branch had to be supported with stakes and poles to prevent the entire destruction of the tree. Mr. BUCHAN only commenced to plant dwarfs about four years since, but has now some 400, all healthy and vigorous, and many of them beautiful specimens, bearing from half-a-dozen to fifty fine pears. Here, too, we found an orchard of standard apple trees, of about an acre, beautiful in form, the trunks of many of them entirely hid by the over-hanging branches. Here, at least, the fruit garden always rewards the intelligent, industrious cultivator, while it exposes and punishes the careless and negligent.

DO QUINCES PRODUCE BLIGHT?

MESSRS. EDS.—Can you or any of your numerous correspondents inform me through the *RURAL* if Pear Trees in the immediate vicinity of old quince bushes are more liable to blight than those more remote? I will state one case:—Some five or six years since, we lost three pear trees which stood near some old quince bushes; the blight first commenced on the quince, then on the pear; two other trees were attacked at the same time, but we saved them by cutting back. The remainder of our trees were at some distance from these and remained perfectly healthy until the present season, when the same quince bush was attacked with the blight again, and the pear tree standing nearest the quince has blighted also. We have another quince bush standing in another part of our yard, (and for want of better stocks) we cut off part of the top and grafted it with the *Beurre Clairgeau*. This quince also blighted, and when the grafts had grown to the length of one foot they blighted, and out of eight scions set I have but one left. The *Beurre d'Anjou* and *Beurre Bosc*, the two trees standing nearest to this quince, have also blighted; the former so bad that I have taken it out, root and branch, and burned it. The above named quince bushes are all we have, and all the blighted trees we have had, stand near those bushes. The remainder of our pear trees (150) remain perfectly healthy. I do not mean to say the quince caused or is the cause of the blight on the pear, but it looks rather singular that all the blight that we have had should be on trees in the immediate vicinity of these old quince bushes, while the others are perfectly healthy. This may be accidental, but if others have trees similarly affected, we shall be glad to hear from them, as this blight is a very mysterious disease. Please give all the light you possess on this subject. J. B. CLARKE. Greece, N. Y., Aug., 1868.

REMARKS.—We have never seen any evidence that the quince produced the blight in pear trees. The blight of the quince and pear tree is probably the same disease, though they affect the trees differently, the blight of the quince being confined principally to the tender branches. It is the opinion of many good cultivators that this disease is infectious, and the smell given off by trees badly affected favors this idea, as does many facts that we might mention. The facts stated by our correspondent are worthy of note, and any of our readers who may be acquainted with facts either favoring or disproving the idea suggested by Mr. CLARKE, will please communicate them. Nothing is known certainly of the cause of this disease, and as little of its cure.

THE PEAR TREE AND ITS ILLS.

HAVING heretofore written briefly referring to my experience on this subject, and time having with me demonstrated my practice; and as other of your readers, as appears by your correspondence, have tested its merits, I am induced to recur to the subject again. The experiment before stated, of paring off the dead bark from one of my trees in particular, last year, and coating the remaining bark with soap, in effect exceeded my most sanguine expectations, the tree continuing its apparent re-invigoration by the means, and this year is loaded with fruit, which is ripening in perfection. Whether this canker upon the bark of the body of the tree is produced by the same cause as what is termed pear tree blight, is as yet unknown to me. The necessity, in heavy clay soils like mine, of tile under drains, at least three feet in depth, contiguous to the pear tree, at least, is dictated alike by reason and sound practice, from the most sagacious cultivators of the present age. And it is my earnest hope that every one of your numerous readers will not let the coming fall and winter pass by in like soils, where pear trees are growing or to be planted, without thorough draining. S. N. HOLMES. Syracuse, N. Y., 1868.

A CURIOUS INSECT.

EDS. *RURAL*.—The note with its contents has come to hand. The writer says:—"A neighbor has found several singular looking 'worms' upon his cherry trees, one of which I send you. They seem to be quite voracious in their habits, devouring the entire leaf." This is all the description given. The frail tube of an elder, in which the specimen was enclosed, was crushed into four pieces, no doubt by the ruthless stamp of the Post master—these chaps have no sympathy for the naturalist.

A post mortem examination of the mass of smashed matter adhering to a portion of its envelope, revealed several fleshy projecting points, covered with short, dark brown hairs. This leads me to infer that the insect was similar in character, to a very singular species of Caterpillar brought to me by Mr. GRIS, Sept. 1, 1867, of which I took drawings, illustrating it in various positions, and inclose you a copy of them, so that your correspondent may judge whether my conjecture is correct. There are, however, various species, differing in outline and color. I judge it is the larva of a species of Moth, the *Pecudo Bombyces*, called *Noiodontiana*, order *Lepidoptera*; and of the genus *Limacodes* Latr. (*Apoda*, *Haworth*, so named because they are apparently destitute of feet.) The latter name, *Apodes* or *Apoda*, is also applied to an order of fishes, of which the common Eel is an example; and of course abandoned by entomologists.

Dr. HARRIS describes a species of these extraordinary Blag Caterpillars, sometimes seen on oak trees, in the month of September. He says:—"It is of a dark brown color, and is covered with a short, velvet like down; its body is almost oblong square, but the sides of the rings extend horizontally in the form of flattened teeth; three of these teeth on each side, that is, one on the forepart, the middle, and the hind part of the body, are much longer than the others, and are curved backwards at the end. When fully grown, the Caterpillar measures nearly an inch in length. It does not bear confinement well, and my specimens died without making cocoons." Such is my experience, also. Dr. MALSHUMMER, however, raised the moth, and states that the Caterpillar eats the leaves of the wild cherry, as well as those of the white and red oak; that it makes its cocoon about the middle of September; changes to a chrysalis the following April, and that the moth appears in about eight weeks afterwards. The name given to this insect by Sir J. E. SMITH, (Abbott's "Insects of Georgia," p. 147, pl. 74.) is *Pithecius*, the meaning of which is, shrivelled and monkey-faced old woman.

In its winged state, *Limacodes pithecius*, or the hag-moth, as it is called, is of a dusky brown color; its fore-wings are variegated with light yellowish brown, and with a narrow curved and wavy band, of the same light color, edged externally with dark brown near the outer margin, and a light brown spot near the middle; the fringes of all the wings are spotted with light brown; the legs are covered with long hairs; the antennae, in both sexes, are slender, almost thread like, and not feathered. It expands from nearly one inch to one inch and a quarter.

Fig. 1 shows the upper part, and hairy scolopae or teeth, of the specimen in my collection, covered with velvety hairs, of a mottled mahogany color. Fig. 2. The same, turned up to show its under side. Fig. 3. The retractile head, antennae and jaws, magnified.

In place of pro-legs, there are a series of bladder-like elevations on its abdomen, which seem to have the power of exhausting the air beneath them—they swell and sink in succession, like waves in motion. The body has an orange-yellow fleshy margin, above this there is a row of small wart-like granules, covered by short radiating hairs, on a bare fleshy space adjoining to the hairy projecting appendages, as shown in figs. 1 and 2. To see this queer thing in motion, is enough to fill us with wonder and surprise; under the lens, it looks like a Buffalo robe thrown over its body, with the skin of the legs expanded in front and rear—so odd is its appearance, that I could not believe at first that it was a part of the insect, but some assumed covering, like the leafy envelopes of the basket-worm. The allied genus *Oiketicus* and *Psychre*, are remarkable for the habit which their larva have of constructing for themselves portable cases, of bits of grass, and sticks or leaves, in which they reside, and undergo their transformations. In this respect these insects represent the *Caddice-worm*, *Phryganetia*. And Mr. NEWMAN asserts that they ought to be removed from the present order. Be that as it may, I shall not attempt a discussion, content to know what the creature is. I have imparted all that I deem necessary to give your inquiring correspondent a clue to further investigation, and will esteem it a favor if he will forward me a perfect insect; and, if possible, a larva of the same. JACOB STAUFFER. Lancaster, Penn., August, 1868.

RASPBERRIES.—SUMMER CARE AND PRUNING.—The fact that many readers of the *RURAL* may forget the importance of pruning and cultivating the Raspberry at this season of the year, is the reason for this article. It is my practice, as soon as the fruit season with them is over, to cut out all the old canes carefully, as well as the weak and slender new ones—pinching off the ends of those I leave, if of sufficient height—stirring up and pulverizing the soil about the roots. In so doing I largely increase the facilities to their maturity and growth, with the prospect of at least four times the usual quantity and quality of fruit the coming year.—S. N. HOLMES, Syracuse, N. Y., 1868.

Domestic Economy.

HOW TO DO UP SHIRT BOSOMS.

MESSRS. EDS.—It is a rainy morning—Mrs. M. is busy in the cheese room, but wishes me, through the *RURAL*, to tell JOSEPHINE how to "do up" shirt bosoms nicely—for the truth is she abhors a messy-looking shirt on a man. She says when the clothes are ready to iron, take pearl starch, make it rather thick when boiled, (like thick jelly) rub it into the clothes over night—next morning iron in the usual way 'till dry. Have an ironing board—the size of the bosoms with three or four thicknesses of cloth sewed over it to run under the bosoms—now take a linen cloth, wet it and ring it out as dry as you can, and with it just dampen by lightly rubbing it over the bosom. Take your polishing iron and rub it hard and quickly over it—if you want an extra shine on, dampen and repeat the rubbing. If you have not a polishing iron, any common round-pointed iron will do by using the point only. The polishing iron should have two slightly convex surfaces—one on the point and one on the heel. S. O. M. Benton, Luzerne Co., Pa., 1868.

TO DRY SWEET CORN FOR SUCCOTASH.

MESSRS. EDS.—I saw in a recent number of the *RURAL* a call for a recipe to dry Sweet Corn for Succotash, for winter use. Having seen two or three recipes, I thought I would give you my plan, which I think is far better than the slow, tedious process of drying in the oven. Pick the corn when fit for present use, (the Stowell is the best,) strip off the husks and silk, put it into hot water and let it scald (not boil) a sufficient length of time to cook the milk, which will facilitate its drying very much. Take it out, cut the corn from the cob, and spread it on sheets or tablecloths in the sun to dry. If got out early on a fine day it will be out of danger by night, but not sufficiently dry to keep; repeat the drying process until perfectly dry, then put it up in sacks for future use. We know this to be a good way from long experience. GREASE, N. Y., 1868. Mrs. J. S. CLARK.

ELDERBERRY WINE.—I have seen a recipe in your valuable paper for almost everything but elderberry wine, and having one I know to be good, I send it. Having taken the largest stems from the berries, put them into a kettle with water enough to scald them. Measure the water you put in. When well scalded, strain, and to every pint and a half of juice, allow one quart of water, making allowance for what you put in to scald them, and to every pint of juice, add three fourths of a pound of sugar, then return to the kettle, scald and strain into a clean jar. When cold, toast a slice of bread, put yeast on both sides and lay gently on the top. When done fermenting, put ginger, cloves, and cinnamon into a little bag and place in it. When done hissing, take out the bag, put the liquor in a cask, but do not close too tight, let it stand undisturbed several months. It is better for having age. Those troubled with asthma will find it a great medicine.—LIMA, Albion, N. Y., 1868.

NEURALGIA.—Will you, or any of your readers, give, through the columns of the *RURAL*, a safe and sure cure for Neuralgia, and oblige an afflicted person, who has used many things, but without success?—C.

REMARK.—We have never found anything better for this distressing complaint than an application of chloroform and laudanum, one part of the former to three of the latter. If the disease is confined to the head, bathe the face, and moisten a little cotton-batting in the mixture and place it in the ear. Should any of the teeth be decayed, clean them out and place a small quantity of cotton, after a slight immersion, in the cavities.

STICKING SALVE.—One lb. resin; 1 oz. mutton tallow; 2 ozs. Beeswax; 2 ozs. turpentine; 4 oz. sweet oil—melt all together, and when thoroughly incorporated, take it from the fire and add one ounce of pulverized camphor gum. If there is not heat enough in the mass to melt it, set it over the fire again. When partly cool, work it like shoemaker's wax into rolls. We have used plaster made from the foregoing recipe in our family for several years past, and consider it excellent.—A. T. N., Otsego, N. Y., 1868.

SPONGE CAKE.—I have noticed a number of recipes in your valuable paper for making sponge cake, and will add another which I know to be good. Take one pound of white sugar; eleven eggs—separate the whites from the yolks and beat the whites to a solid froth, stir the yolks and sugar together until the lumps are all removed, then put all together, and add one-half pound of flour—have the oven ready and get it in as quick as possible. Add a little salt and nutmeg.—C., Portage Co., Ohio, 1868.

GOOD VINEGAR.—Good vinegar may be made by putting three gallons of pure rain water, one pint of molasses, and a piece of "mother" together, into a stone jar. Set in a warm place. It will be good in about four weeks.—S. G. L., Gorham, N. Y., 1868.

PICKLED TOMATOES.—Take small, smooth tomatoes, not very ripe; scald them until the skin will slip off easily, and sprinkle salt over them. After they have stood twenty-four hours, drain of the juice, and pour on a boiling hot pickle, composed of one pound of sugar to every quart of vinegar, and two teaspoonsful each of cinnamon and cloves. Drain off the liquid, scald it, and pour it on them again, every two days, for a week.—Selected.

TOMATO CATSUP.—Take one half bushel of tomatoes, scald them, and press them through a common sieve. Boil them down one-half; then add two tablespoonsful of salt; one of black pepper; one teaspoonful of cayenne pepper; one half of cloves; one-half of cinnamon; and one-half of mace. Mix well, and add one teaspoonful of vinegar. Bottle and seal, and set in a cool place.—Selected.

Ladies' Port-Folio.

MY BOON.

BY CLARA ACQUITA.

I am not to dwell in a palace,
Or reign in courtly halls—
To be the toast at the banquet,
The belle at the season balls;
I care not for Fame's proud chaplet,
Of world-praised genius born—
For the laurel has many a poison drop,
The rose a hidden thorn.

But I plead for a meek contentment,
A heart filled up with love—
A faith to hope for all things,
A trust in Him above!
I crave the child, the homely,
And Charity—may the rest,
Ever a cherished dweller,
Eternal in my breast.

When I go through the shadows,
Forth on the Unknown Sea—
Go, let me trust Thy mercy,
Lean my doubtings all on Thee!
And ye that are left behind me,
Raise no sculptured biers,
No leaning, sorrowful statues,
I ask but the poor man's tears.

What is a costly cenotaph?
Perishing, soulless, and cold,
But the tears of those ye have cared for
Are better than jewels or gold!
The grief of one ye have comforted,
Raised from the depths of despair,
Is better than pillars or tablets,
For the heart of a mourner is there!

Farmington, N. H., 1858.

DOMESTIC CARES.

It seems to me that one great cause for the disturbances and vexations of domestic life, is the too universal habit of over-looking the ten thousand every-day trifles. In every house where there is no system, no order, no arrangement, there must be contentions, trials, difficulties. There are nearly always some members in a family, who, without aim, or reflection, feel excused from the necessity of attending to this or that little duty—which must surely fall to the lot of some one to do—and thus there are some who are over-burdened with tasks. Duties are neglected, and, hence accumulate—meals are behind time—other things are not ready in season, causing delay, vexation, fault-finding, recrimination, falsehood, and a host of evils.

There are few people in the country who are exempt from household cares, by reason of a multiplicity of servants to attend to everything needed, and those who indolently depend on such help, know too well how their tasks are generally performed. Hired service is sometimes, but not often, well done.

It is always better to know how to avoid trouble than to be obliged to seek a remedy. Needlessness is the parent of hours of unnecessary labor and weariness, and, generally, to be tried, is to be cross and fretful, especially if the work is out of season, and because of somebody's—perhaps your own carelessness. Putting away a garment you did not need that it needed a few stitches. A day's or half day's sewing in consequence. In caring for milk, grease, or other liquids you needlessly spill here and there, hence scouring and scrubbing. In preparing food, covers are left off, crumbs scattered, and in a short time, hordes of flies and ants give you an hour's annoyance—or some one else, which is all the same. Getting things to use, you forget to restore them to their place—somebody wants them in haste—the whole house in confusion, every one looking bitter and thither, accusations, denials, general disturbance, tears, &c. In putting the room is suffered to be strewn with shreds—pieces are piled away in confusion and when wanted, nowhere to be found; wastefulness of time, means, and temper is the result. And thus it goes. Many a mother who, while her children were small, kept a neat, tidy house, and where order and satisfaction reigned, sees as her girls and boys grow up, her cares multiplied and increased, instead of lessened. Disorder, waste, wrangling, and no system, no peace, no happiness. The daughters and sons have been at school and learned something more important than lessening home cares, and sparing home duties. "Mother and father make a great fuss about a little waste here and there, and about order, &c." "If one must be always on their guard about making a little work it's a pretty story." And so the littles accumulate. All are unhappy and many an extra dollar goes to renew, or supply, where duties are postponed and neglected. Daughter lets her gloves rip, and rips—mislays her kerchiefs, veils, &c.; runs in a hurry to get mother's—here are always in order—mother can't refuse, because Mr. So-and-so, has called to take her out riding. By and by mother wants them; daughter not to be found—things rumpled and soiled. Boys wish to go away unexpectedly; no shirts, or neck-ties done up; buttons off, rents, &c. General blow up, and prospects of a social whirlwind and earthquake.

Who has not seen families who came under some of these descriptions? Need people complain that their sons will not stay at home—that husband is fault-finding, and home is any thing but a quiet, delightful retreat? Let each one do their part without ostentation, noise, or praise. Let the daughters, especially, assume the care of keeping general order in the house and in the wardrobe. What is your object in life, if not to be a successful housekeeper? Put away your "high falootin'" notions, roll up your sleeves, and see if you cannot be useful and be a lady at the same time.

SPECTACLES.

EFFECTS OF ENCOURAGEMENT.—The celebrated Benjamin West related that his mother once kissed him eagerly, when he showed her a likeness he had sketched of his baby sister; and he adds,—"That kiss made me a painter."

To give brilliancy to the eyes, shut them early at night and open them early in the morning, and let the mind be constantly intent on the acquisition of knowledge, or on the exercise of benevolent feelings.

LITTLE KINDNESSES.

Written for Moore's Rural New-Yorker.

How often in life we see faces lighted up with joy, as though the soul were speaking out its very being—a being that perhaps has never known what sorrow or trouble was—sporting in the sun-shiny days that seemed created for another world. Beautiful thoughts are suggestive of a power and brighter aims than seems allotted to us for more than a season, at least. They have a graciousness that seems to call our attention and win us from the coil of a serpent's charm. Then, again, if we mark the progress of one bright face in early life, basking in all the childish innocence that becomes ripened into maturer years,—that same pleasing disposition is manifested in all the little acts and kindnesses without a murmur. Poor creature, it is well for thee that you bright cloud has a silver lining, to portray the good from the evil. While thou art enjoying life, and are happy within thine own home, with its own comforts and blessedness, without are cankering hypocrisies, ever ready to destroy the happiness if it were the very Angels in Heaven! Yea, envy, hatred and malice take great liberties with those that have a jealous mind, and nothing in this world seems too bitter for them to utter against thee, to injure thy feelings and crush that happy soul! How many enmities and heart-burnings flow from such a source!—how much happiness is interrupted and destroyed! Envy, jealousy, and the malignant spirit of evil, when they find vent by the lips, go forth on their mission like foul fiends, to blast the reputation of others. Shall we go on with these illustrations? They may be taken from every condition in life, and from all its wide relations. There is not a reader who cannot point out instances of this kind in his own circle of acquaintances, and even set them in a stronger light; and there is not a reader who, with the writer, would not exclaim, that there is nothing so agreeable to our nature, so convenient to our affairs, whether in prosperity or adversity, as the friend-ship of those we love.

If the disposition of speaking well of others were universally prevalent, this world would be a comparative Paradise. We would see, not only now and then a happy countenance lighted up with joy as though the soul were speaking, but every family group or friends circle would bear the impress of a Heaven upon earth. Oh! what a haven for thought to dwell in! The child in innocence, carried forward and moulded in all tenderness, to dwell in earth's Heaven, where not a cast down countenance is ever dreamed of; but is this so? Can there be such a spot for a friends circle, unless the world awake to a sense of reverence?

BE EARNEST.

An earnest soul not only engages in great and good enterprises itself, but also attracts others to the work. Enthusiasm is thereby enkindled in congenial minds, until the requisite number of co-operators are secured. We know there are some excesses to which earnest spirits are liable; but excesses must be endured so long as man remains mortal. It was this earnestness which gave the positive mind of young MELANCTHON great power over the actions of the thousands who thronged his lectures from every part of Europe. It helped COLUMBUS in his noble undertaking, and moves the Saxon race in the mighty work which they are accomplishing. To the earnest, arduous toil becomes invigorating and attractive, and the soul delights in that which would otherwise soon disgust. Enthusiasm is the poetry of exertion, enlisting the varied passions of the soul in behalf of those deep problems which the intellect is endeavoring to solve. Let us be sincere then—earnest and true, and we shall not be numbered with those who

"Fast rooted to their native spot,
In life were useless and in death forgot."

Andover, Ohio, 1858.

INFLUENCE OF FEMALES ON SOCIETY.

From an accurate account of the condition of women in any country, it would not be difficult to infer the whole state of society. So great is the influence they exercise on the character of men, that the latter will be elevated or degraded according to the situation of the weaker sex. Where women are slaves, as in Turkey, the men will be the same; where they are treated as moral beings—where their minds are cultivated, and they are considered equals—the state of society must be high, and the character of the men energetic and noble. There is so much quickness of comprehension, so much susceptibility of pure and generous emotion, so much ardor of affection in women, that they constantly stimulate men to exertion, and have, at the same time, a most powerful agency in soothing the angry feelings, and in mitigating the harsh and narrow propensities which are generated in the strife of the passions.

The advantages of giving a superior education to women are not confined to themselves, but have a salutary influence on our sex. The fear that increased instruction will render them incompetent or neglectful in domestic life, is absurd in theory, and completely destroyed by facts. Women, as well as men, when once established in life, know that there is an end of trifling; its solicitudes and duties multiply upon them equally fast—the former are apt to feel them much more keenly, and too frequently abandon all previous acquirements to devote themselves wholly to these. But if the one sex have cultivated and refined minds, the other must meet them from shame, if not from sympathy. If a man finds that his wife is not a mere nurse or a housekeeper; that she can, when the occupations of the day are over, enliven a winter's evening; that she can converse on the usual topics of literature, and enjoy the pleasures of superior conversation, or the reading of a valuable book, he must have a perverted taste, indeed, if it does not make home still dearer, and prevent him from resorting to taverns for recreation. The benefits to her children need not be mentioned; instruction and cultivated taste in a mother enhance their respect and affection for her and their love of home, and throw a charm over the whole scene of domestic life.—William Tudor.

Choice Miscellany.

THE STRANGER ON THE SILL.

BY T. B. REED.

BETWEEN broad fields of wheat and corn
Is the lovely home where I was born;
The peach tree leans against the wall,
And the woodbine wanders over all;
There is the shaded doorway still—
But a stranger's foot has crossed the sill.

There is the barn; and, as of yore,
I can smell the hay from the open door,
And see the busy swallows taring,
And hear the peewee's mournful song;
But the stranger comes. Oh painful proof—
His shavings are piled to the heated roof.

There is the orchard—the very trees
That knew my childhood so well to please,
Where I watched the shadowy moments run,
Till my limbs limbered more of shade than sun;
The swing from the bough still sweeps the air,
But the stranger's children are swinging there.

It bubbles, the shady spring below,
With its daisies and the hazel grow;
'Twas there I found the calamus root,
And watched the minnows poise and shoot,
And heard the rills lave his wing—
But the stranger's bucket is at the spring.

O, ye, who daily cross the sill,
Step lightly, for I love it still;
And when you crowd the old barn's eaves,
Then think what countless harvest sheaves
Have passed within that scented door,
To gladden eyes that are no more.

Written for Moore's Rural New-Yorker.

"OF WHAT IS THE OLD MAN THINKING?"

AN old man sits alone in the chimney corner. The artless prattle of childhood is hushed, and twilight's gathering shades darken the fields, and creep unnoticed into the lonely room. The birds are twittering their faint good-nights in the treetops, and the bees hum softly their drowsy tunes. The crickets chirp in the grass, and the frogs croak by the water's edge; but the old man heeds them not. He sits unconscious of the sights and sounds around him, silently communing with his own heart—busied with his own thoughts. Of what is he thinking? Of a farm-house home—of the red cheeked girls and sun-browned lads who called him brother—of a saintly mother, with her sunny smiles and loving heart—a white haired father and his parting blessing. The old man is a boy again; he drinks from the "moss-covered bucket," fishes in the brook, hunts birds' nests in the green old woods, skates on the mill-pond, and bounds through the drifted snow on his way to school.

Twilight deepens into night. The clock ticks louder and louder in the stillness, but he hears it not; moonbeams flick the wall with silver, and strange, fitful shadows dance around the old man's arm-chair, but he sees them not. He is still thinking. Thought, like a winged arrow, passes over the intervening years of youthful tasks and pleasures, and he stands erect in the pride and strength of manhood. Now, not alone he treads life's pathway. A fragile being—his wife—leans upon his arm, walks by his side, clinging to him through good and ill like the wild vine to the forest tree. He sees again the love-lit glance of her eye, he hears the melody of her voice; and children, his laughing blue-eyed children, play in and out at the open door, warbling with the birds in their gleefulness, or, wearied of play, climb upon his knee and rest their flaxen heads upon his breast. Laden with little care and much happiness, the day fleets by; but the night of sorrow comes, and one after another of the old man's heart treasures are laid beneath the nodding violets, until mother and children rest together, all save one—a wanderer on the face of the earth, a "stranger in strange lands," and tears furrow the old man's cheeks as he thinks of the absent—his youngest and his only son.

Calmly the old man is sleeping now. His eyes are closed, and his head droops lower and lower on his breast; a smile lights up his countenance. Of what is he dreaming? He is dreaming of the future—not that shadowy, uncertain future of his youth and manhood; but the veil is drawn aside, the portals opened, and by the light of the past he can trace his time to come. He sees in the distance the heavenly city, nearer and nearer he approaches its shining walls, clear and more clear sound the harp-strings of the redeemed; and now he mingles with the "loved and lost of long ago."

"A father bends o'er him with looks of delight,
His cheek is impaled with a mother's warm tear."

Wife and children cluster round and lead him in "green pastures" and "beside the still waters." Oh! what joy to the earth-wearied heart,—and is it all a dream? Night paled into morn, and still the old man sat in his easy chair. Golden sunbeams streamed in upon the oaken floor, the perfume of fresh-blown flowers floated through the open window, but he admired not their beauty and fragrance. Merry children rushed in with smiles and "good-morning" greetings, but he returned not their friendly salutations. Wondering at his silence, kind friends gathered round the sleeper, and said in low tones,—"The old man is dead;" but they knew nothing of the happy thoughts, the glorious visions of the past night, nor of the dream which began on earth and ended in Heaven.

OMEGA.

WYOMING, N. Y., 1858.

RECREATION.—Recreation is intended to the mind as whetting is to the scythe; to sharpen the edge of it, which otherwise would grow dull and blunt. He, therefore, that spends his whole time in recreation, is ever whetting, never mowing; his grass may grow and his steel starve. As, contrarily, he that always toils and never recreates, is ever mowing, never whetting; laboring much to little purpose; as good no scythe as no edge.—Then only do the work go forward when the scythe is so seasonably and moderately whetted that it may cut, and so cuts that it may have the help of sharpening. I would so interchange that I neither be dull with work, nor idle and wanton with recreation.—Bishop Hall.

LEVEY in manner, leads to laxity in principle.

THE MARTYRS OF TO-DAY.

Written for Moore's Rural New-Yorker.

THE martyrs of to-day are the heroes of the age—the untitled nobility of the earth. They may not have offered the headsman's axe or the curling flame, yet their intrepid spirits have borne, unflinching, sufferings beyond the block, and agonies unknown at the stake. They are the invisible pillars of the Church and State—the balancing weight when the scales are turned by passion or shaken by ignorance. Theirs is the soothing power that reconciles the vicious, comforts the weary, and binds up the broken-hearted. They dwell alike in the crowded city, the peaceful hamlet, and the open country. Their homes are stately mansions, sweet cottages, and rude huts. World-wide in their sympathies, they emphatically live in self-sacrifice to those by whom they are surrounded. No age so remote, no clime so distant, no people so illiterate or profane, no age so dark and hopeless that it has not been illuminated by the unquenching light of these same martyr-deeds. A few, in support of a great principle, world-wide and incorporated with government, may have achieved the notoriety given to those who have suffered at the stake, and yet may have less of martyr blood than many whose lives have been an unmitigated immolation. They are found among the unlearned, the unhappy, and even the vicious. Look at the humble Christian, who daily plods on, oppressed by care and chafed by petty persecutions, ever patiently unheeded of their annoying effect, and sustaining a temper calm and equable,—the unflinching token of a true higher life. Who more unambiguously displays the elements of martyrdom than the feeble invalid, calmly enduring pain, and wrestling with suffering through long years of aching misery and speechless agony? Who has borne more in the perils of flame than the undaunted wife of the inebriate, in rearing her children to respectability and usefulness? Who more than she has felt the continual dropping of an unuttered and unutterable fear at the heart—fear that the evil may increase, even beyond the safety of life, human or eternal?

Our age is heroic; not as when women were drowned or beaten if they would not adore their belief; not as in those days when men, making no sign and uttering no groan, were officially butchered and burned; but in that silent, hidden world, which, as a lever, moves mankind. None may know the martyrdom of the patient, neglected wife, of the unloved husband, of the deserted child, or degraded parent. With such the universe abounds—they are those of yesterday, of to-day, and forever.

L. A. S.

North Fairfield, O., 1858.

THE OLD GARDEN.

THE old garden! What need to write more? The thought of the Sweet Williams comes to us again, and the little grass pinks are sprinkling the borders with rubies, and the blue violets cluster modestly along the fence, and jonquies—Heaven restore the day we called them "pinks"—filled up the corners; and over there is a row of "bachelors' buttons," white, purple and blue,—gay and varied enough for the roundabout of poor Joseph. It is morning, and the sweet bells of the morning-glories "toll their perfume" along the vine; it is mid-summer, and the old red rose, forever sacred to memory and affection, blushes, and blesses all the air; it is September, and the starry China asters rise in rainbow lighted constellations in the grass.

The red plumes of "love lies bleeding" are moving in the wind, and the marigold of French velvet glitters on the ground—new coin of gold, just strack in the mint of June.

There, too, were the hollyhocks, small orchestras every one, for the summer bees; many a time, gathering the edges of the leaves of his tinted chamber together, have we made prisoner of the solo singer. And there, all by itself, the broad disc of the old-fashioned sun-flower turns to the light, while a brown bird, the Crusee of the rocking world, picks fiercely at the rare Mosaic of its close sown field of seed.

There, too, are the lilacs beside the garden gate, flinging their fragrance in the open window, and out in the dusty streets; and there, with its broad grasp of roots fast hold of a square rod of earth, is the balm of Gilead, that each year outlives the threat of the ax and the fire.

Down the main walk were a dozen tufts or so of garden sorrel, and over there were the feathery plumes of the asparagus; and who would ever forgive us for forgetting the caraway and the dill, that made the old meeting house fragrant of a Sunday, blended with the breath of pink and white roses.

And how, as we think of the garden, can we fail to remember the green, flaring boxes of wood—hoppers wherein, upon the Lilliputian acre of earth, Spring poured its sweet treasures of sunshine and rain? The little green boxes with the geranium race—the lemon, the rose and the strawberry? And the dew plant, with its frosted verdure, that both dwell in these little green boxes of gardens?

And where are they all, the old-fashioned gardens and flowers? Gone with the Mollys, and Pollys, and Betseys—"as lovely and fleeting as they." Gone with "Coronation," and "Mear," and "Windham," and "Wells." Gone with the old mossy bucket

—that hung in the well.

There are new names, new tunes and new flowers; the gardens are splendid with statues, and fountain, and vine; shrubs, gorgeous with the glow of tropic suns, tower up to skies the glazier made, and furnaces diffuse a birdless June, and prolong it thro' the ahivering year.—B. F. Taylor.

HARDNESS OF CHARACTER.—Hardness is a want of minute attention to the feelings of others; it does not proceed from malignity or a carelessness of inflicting pain, but from a want of delicate perception of those little things by which pleasure is conferred or pain excited. A hard person thinks he has done enough if he does not speak ill of your relations, your children, or your country; and then, with the greatest good humor and volubility, and with a total inattention to your individual state and position, gallops over a thousand fine feelings, and leaves in every step the mark of his hoof upon your heart.—Sidney Smith.

Sabbath Musings.

Written for Moore's Rural New-Yorker.

MY FATHER MADE THEM ALL.

'Tis sweet, when morning's opening rays,
Beam o'er the earth abroad,
To gaze around on all that's fair
And think of Nature's God—
To watch, while from each tree and flower,
The twinkling dew-drops fall,
And think, while we their beauties view,
My Father made them all.

'Tis sweet when passive evening spreads
Her mantle o'er the earth,
When all day's busy toils are o'er
And hushed the voice of mirth;
To gaze, while o'er rock, hill, and flood,
The last bright sunbeams fall,
And think, with reverence and love,
My Father made them all.

'Tis sweet to view the glory fade
From out the crimson west,
And watch each radiant cloud float by,
Like islands of the sea;
While from unnumbered orbs on high
The soft beams on us fall,
To think (oh, rapture-breathing thought)
My Father made them all.

And, oh, 'tis sweet, when on our way
Affection sheds her light,
When friends are warm, and foes are few,
And all around looks bright;
To think as we the gifts receive,
From whose kind hand they fall,
And feel, with warm and grateful hearts,
My Father made them all.

But sweeter still, when round our path,
The lowering storm-clouds lie,
And not a single ray of hope
Is beaming from the sky;
When like the leaflets from the trees
Misfortunes on us fall—
Sweet to look upward and exclaim,
My Father made them all.

And when, upon life's chequered scene,
Death spreads his brooding wings,
And in this earth-worn, weary heart,
Immortal music rings;
Oh! 'twill be sweet while far below
These mortal fetters fall,
While heaven's glories rise, to cry
My Father made them all.

Salem, Iowa, 1858.

THE TWO TELEGRAPHS.

THE mighty Cable stretches along the plateau of the ocean from continent to continent, and along the wire flashes thoughts with a speed so rapid that it is too wonderful for comprehension. The Atlantic Cable is at the bottom of the ocean, and the news has spread all over the civilized world, and the whole country celebrates the event with rejoicings and illuminations. Every thoughtful mind will rejoice at an achievement so grand, and which promises so well. There is hardly any limit to its usefulness. But, like everything else in this life, it may fail. That long, slender wire may break; messages sent along its track may never reach the end. Notwithstanding all of these contingencies, the achievement is so sublime that it awakens an enthusiasm, such as has not been felt before.

There is a telegraph far older than the one that lies buried in the ocean, and its wires never break, and messages sent along its track never fail to reach the end. It is that avenue of communication between man and his Maker. If we would send a thought to a friend we must communicate it to an operator, and he will send it along the wires with the speed of light, but at the other end there must be some one to receive and deliver it, or it will fail. On this heavenly telegraph we may send our messages, and we need no operator to give it wings,—and not only the message but the earnest thought, indeed, the yearning desires far outspeeds the electric spark, and even while the petition lingers upon the lips of the petitioner it has reached the Mercy Seat, and blessings fall.

Thousands of years these heavenly wires have been used by every praying heart; in no instance has the communication failed. The Saviour stretched these wires from the Celestial City down to Earth, thus binding us to the skies. Angels proclaimed the joyful tidings to man, and the greatest illuminations that the world has ever seen, followed. It lighted up a pathway through the sky, but its greatest glory was over where the Saviour lay. These heavenly wires are always ready, and they are free. Who will send a message?

EYROL.

PARENTAL DUTY.

A WRITER in the London Leisure Hours, makes the following remarks, which are full of truth as they are of good common sense:

"The father who plunges into business so deeply that he has no leisure for domestic duties and pleasures, and whose only intercourse with his children consists in a brief word of authority, or a surly lamentation over their intolerable expensiveness, is equally to be pitied and to be blamed. What right has he to devote to other pursuits the time which God has allotted to his children? Nor is it an excuse to say that he cannot support his family in their present style of living without this effort. I ask, by what right can his family demand to live in a manner which requires him to neglect his most solemn and important duties? Nor is it an excuse to say that he wishes to leave them a competence. Is he under obligations to leave them that competence which he desires? Is it an advantage to be relieved from the necessity of labor? Besides, is money the only desirable bequest which a father can leave to his children?—Surely, well cultivated intellects; hearts sensible to domestic affection, the love of parents, of brothers and sisters; a taste for home pleasures; habits of order, regularity, and industry; hatred of vice and vicious men, and a lively sensibility to the excellence of virtue, are as valuable a legacy as an inheritance of property, simple property, purchased by the loss of every habit which would render that property a blessing."

If the way to Heaven be narrow, it is not long; and if the gate be strait, it opens into endless life.—Beverage.

The Educator.

Written for Moore's Rural New-Yorker
THE INTELLECTUAL CULTURIST.

AMONG the thousand avocations of human life, where mental strength and energy are requisite, the teacher's task is the most difficult. All the way from the sage and hoary-headed professor of our Collegiate Institution, down to the gay school mistress of sixteen, the same motives prompt, the same responsibilities weigh. They labor for the same purpose, toll for the same great end. Yet, most of all, are primary teachers responsible; for they are moulding human minds, stamping with their own hand impressions that must remain forever—pruning a twig that shall become a tree, from which the intellectual world shall gather a harvest of rich fruit, or warping the tender stem so that it shall develop itself into a distorted and angular figure—his thing that God-given spark of intelligence into a great fire of wisdom, or smothering its feeble light until it shall go out in darkness and obscurity. The discipline which the child receives is the foundation upon which is reared the superstructure—the man, and his character formed of materials gathered when he first set out upon the great journey of life.

Not all plants will flourish beneath the same soil and temperature—neither will all minds develop themselves under the same course of instruction. There are beautiful flowers flourishing beneath arctic snows in the polar regions—and there is beauty and fragrance in the bright blossom of the sunny south—there are minds apparently stupid and inactive, that could you lift the veil, could you penetrate the darkness in which outward circumstances have enveloped them, you would find beneath that dull exterior, the germ of a plant more beautiful than any beneath polar snows—a brighter flower than mother earth can boast. As every perfect seed contains within itself the embryo of a new plant, so every perfect cranium contains the rudiments of a human mind. A seed will not germinate unless exposed to moisture and the atmosphere, and that too at a proper temperature—neither will the mind develop itself unless exposed to such influences as serve to call into exercise those faculties with which nature has endowed it. As the plant absorbs moisture and the gases, and puts forth leaves to be nourished by the genial atmosphere, so does the mind absorb truth, and put forth thoughts to the great world without. We may trace still further the corresponding development of mind and matter. When the plant has become a tree, and as it were, matured, its growth to our eye is less rapid, in fact, 'tis exceedingly slow, though many years may have added their circle there, and the increase of size is scarcely perceptible. Not that the earth has ceased to nourish, or the tree to absorb nutriment, but there is more surface over which it must be equally distributed—a larger tree to be fed by earth and air. And, as it increases in age and size, it becomes less and less susceptible to outward influences. Though the winter frost may chill it to the core, it cannot drive life from its sturdy frame—though the winter winds may rack it fearfully, it holds its footing firm and sure—though time's huge wheels may have borne a century into eternity, still it stands unshaken in its strength.

When the man has become matured, his character and habits formed, his progress to us is less perceptible, though he is constantly thinking new thoughts, and developing new ideas. He grows within himself, though the outward observer may not perceive it, since 'tis enveloped in the same exterior which presents to the eye no change. It is nourished, and fed, and strengthened by the great universe of intelligence, and from that mighty chaos of mind it arranges, develops, and embodies thought, and sends them forth, beautiful and living truths. And, as he becomes strong within himself, he yields less to the ever varying tide of popular prejudice, is governed less by a capricious and changing world's opinion. Though the chilling winds of adversity like a wild hurricane blow around, he neither falters nor trembles, for his strength of mind and high purpose never fail. He rears for himself a high standard of right, and lives up to the mark he has set there. He weighs every man's arguments in his own scales of reason, and accepts them only as the balance is against himself. He measures other men's thoughts, feelings and motives, by his own, and in proportion as they are wide and high, so are they pure and true. But the narrow, pigmy, uncultivated intellect—is like a stunted, scrubby tree,—neither agreeable to look upon, nor useful to the world—there it stands a firmly rooted evil. And there the ignorant, his perverse nature clinging to all that is unclean, recognizing nothing above the material and animal—religion supreme. We cannot prune the stunted shrub and develop it into a beautiful and flourishing tree, neither can a mind matured in ignorance, be developed into a just and true representative of the individualized intelligence it was created.

But if that plant, while it were young, and susceptible, had been watered, watched, and cultivated with care, it might not have been the puny ill-shaped brush it now is. So is it with mind that has been allowed to mature in ignorance. Hence the responsibility of those who assist in the growth and expansion of the intellect—the far-reaching and deep-searching intellect—the great motive power of being, and the mighty propeller of the giant wheels of progress. How can it be otherwise than that we should feel the responsibility of even our puny efforts, since the instructions which we impart take deepest root, are more strongly impressed, and consequently the longest retained. The works of the least do follow us; not only do the thoughts we send forth ripple upon the waters of time, but vibrate even upon the waves of eternity. Little Valley, N. Y., 1854.

REDUNDANCIES IN SPEECH.—They are "united together" should be "They are UNITED." "I shall fall down" should be "I shall FALL;" down is superfluous. You do not lift up; "to lift up" should be "to lift;" you cannot lift a thing down.

THE first ingredient in conversation is truth; the next, good sense; the third, good humor; and the fourth, wit.

Written for Moore's Rural New-Yorker
EDUCATION OF THE YOUNG.

THERE is nothing more interesting to a rightly constituted mind, than a helpless infant, dependent, as it is, for protection and support. Unlike the brute of creation, whose instinct derives no strength or skill from protracted age, or the experience of former generations, the youth by careful culture unfolds the power of his mind, thus befitting himself, with the assistance of others, for a noble or ignoble existence. Hence, it becomes necessary that we should know the most prudent course to pursue with these little ones who are introduced into a world of activity and intelligence, mingled with care, troubles and misfortunes—Their career in life will be accompanied with much good or ill to themselves, associates, and future generations. "Train up a child in the way he should go," is the desire of Him that never errs in giving instruction; and it seems necessary that among the first teachings of youth, should be a knowledge of their relationship and consequent duties to their Creator. Acknowledging the necessity of Christianity as an ingredient to the education of the youth, we are to consider how it can be introduced free from melancholy. "Its ways are pleasantness, and all its paths are peace." By this we are informed that it is only necessary to be divested of all gloom and melancholy, to be pure, unselfish religion. Then let all parents and guardians, having the welfare of the rising generation at heart, be truthful, teaching them as accountable, reasonable beings, who have each a talent to employ for the glory of its Giver.

Spencerport, N. Y., 1855.

D. B. S.

PUBLIC SCHOOL LIBRARIES.

A GOOD newspaper would be worth no small sum in the school-room. Multitudes are growing up ignorant of the every day occurrences around them. Let the daily paper visit the school-room; let a few moments be devoted to mentioning the chief items of interest, or allow opportunity of consulting it at the various intervals of study, or when lessons are fully learned, and better men and women will be made. The world will not seem a strange one when they go forth to act for themselves. Teachers, are you troubled with novels in your school? Do you have to keep an eye of "eternal vigilance" to keep out the vile trash? You cannot destroy that longing for something not in the text books; you may possibly prevent the pernicious things from coming into the school room; but may you not take advantage of this very longing to aid in education? Make a judicious selection of a paper you are willing your pupils should read, substitute its realities for the false pictures of overstrained imagination, make such use of it as the circumstances of your school make most fit, and good will come of it. You cannot get many novels for your stove, if your pupils become interested in the daily paper. Let them understand that History is daily revealing itself in telegraphic reports of Congressional and Parliamentary action; let them see the continual record of new inventions; let them read of Humboldt and Kosuth, with as much interest as you would excite about Greek and Roman heroes; let them be as much interested in the intestine broils of poor Mexico, as in the long past civil wars of Rome—in the strange career of Napoleon the Third as in that of Cæsar and Hannibal. Geography comes in the daily paper. Fremont's and Livingstone's make discoveries too rapidly for stereotyped text books to keep up—it needs the ever-renewed activity of the periodical press to present new facts as fast as they are known. The paper at home will be read if interest be excited at school. Get a tri-weekly, or semi-weekly, or a weekly, if you can't get a daily; try to have the regular visits of periodical intelligence—wait not for a new geography to learn that Minnesota is a State. The teacher himself cannot afford to be without regular intercourse with the world. As long as men and women will shut themselves up to their school-rooms and text-books, so long will they make the profession to which they claim to belong, a by-word for impracticable plans and odd ideas. Let them live in the world, not secluded from it, and they will be respected according to their desert.—Illinois Teacher.

Home Journeys.

DOWN THE ST. LAWRENCE!

EDA. RURAL:—From your editorial sanctum we proceeded to Charlotte, (mouth of the Genesee,) where we lay till after midnight, awaiting a boat. The "Ontario and St. Lawrence Steamboat Co." advertised to start at 9 o'clock, but they never get away before 11 o'clock, and seldom as soon as that hour. It would promote the comfort of passengers not a little if said Company would promise no more than they intend to perform. Four hours of night watching is a poor preparation for a journey. About 1 A. M. the welcome word came, "the boat has come," and we were soon aboard the Europa, Capt. THORP, and fairly started on the "Northern Route."

Wednesday was a beautiful day, and after passing the ports Oswego, Sackett's Harbor, and Kingston, we began the descent of the St. Lawrence. All the way to Montreal—200 miles or more—the ride was delightful. The "Thousand Islands," the "Rapids," and the whole scenery along the route are always praised, and always will be, by every tourist. Ten thousand miles by rail will hardly afford the measure of gratification to a lover of Nature, that he will experience in passing along through the thickest of the islands just before and after sunset. Dropping gently down at the rate of 15 miles an hour, the glassy surface of the river unroofed by a breeze, and through it the shadow of each island, and tree, and rock appearing as distinct as the object itself; our vision at times restricted to a narrow channel, and anon peering through among the islands to the shore, miles distant, we actually became enthusiastic; but when the sun settled below the horizon, and the reflection from the red sky of the west upon the glassy surface spread out before us a lake of fire, into which, far behind, were rolling from the vessel's keel gentle waves of prismatic light, all

THE LYRE BIRD.

This beautiful bird, of which the engraving is a fine representation, is a native of New South Wales, and we know of no more interesting specimen of the feathered tribe with which we could favor our readers. It resembles the English Pheasant in size and somewhat in appearance, but its limbs are longer in proportion, and there are other considerable points of difference. The wings are short, concave and rounded, and the quill feathers are lax and feeble; the general plumage is soft, deep, soft and downy. The tail, however, is very remarkable; it is modified into a beautiful, long, plume-like ornament, representing, when erect and expanded, the figure of a lyre; hence its name—the lyre bird—while, as the type of a new genus, it has received the appellation of *menura superba*. This ornamental tail is restricted to the male bird. It consists of sixteen feathers; of these the outer one on each side is broadly but loosely webbed within, its outer web being narrow; as it proceeds it curves outward, bends in, and again turns boldly outwards and downwards, both together resembling the framework of an ancient lyre, of which the intermediate feathers are the strings; these feathers, except the two central, which are truly but narrowly webbed on the outer side, consist each of a slender shaft, with long filaments, at a distance from each other, and springing out alternately. The appearance of these feathers, the length of which is about two feet, is peculiarly graceful; their color is amber brown, but the two outer tail feathers are gray, tipped with black,

forming one of those "magnificent sunsets" of which tourists speak, but which they cannot describe, our excitement became intense.

The next day we made the descent of the Rapids—four or five in number, and two of them really frightful to the uninitiated. As our good boat "Sailberry" made its fearful plunges down, down, a mere feather, tossed by the rushing, maddened waters, the spray, foam and white caps lending a terrific wildness to the scene—a general shriek went up from the boat's company, as hearts palpitated and cheeks blanched. But we were soon through the worst of it, seemingly, but not really dangerous, as boats almost every day of the season do pass unharmed. The La Chaine Rapids, near Montreal,—the last on the list,—are considered more dangerous. But an old Indian pilot is taken aboard, who, holding hard to the wheel, guides the boat safely through a narrow, rushing channel—the only one at this point that is navigable at all. On either side and near, rocks of formidable size, both above and below the surface of the water, are visible, upon which a boat would inevitably be dashed to atoms should a sudden break, or the proper track be departed from.

There is much at Montreal to interest the visitor. The Victoria Bridge, across the St. Lawrence,—estimated in the outset to cost 7,500,000, but now thought will cost 12,000,000 of dollars to complete—is truly a great work. The massive Cathedral, with its lofty towers, and twelve-ton bell; the stately stone Churches, Convents, Nonneries, and other public buildings; its commodious and well kept Hotels; its narrow streets and narrower side walks; its heterogeneous population—English, French, Indians, &c.; its general cleanly and substantial appearance, are all noticeable features of this ancient city.

From Montreal to Saratoga is a pleasantly diversified route. At Rouse's Point—which is reached by rail—you take steamboat to Port Ticonderoga, one hundred miles up Lake Champlain, and after viewing the ruins of this ancient fortification, are transferred by stage—four miles—to the steamer Minnehaha, bound for the head of Lake George—thirty-six miles distant. This beautiful sheet of water, as is well known, lies in a mountain gorge. Without wishing to disparage its justly celebrated scenery, I may say that, save in the single feature of boldness of outline on either side, it does not begin with an equal length of the

edged with rufous, and transversely marked on the inner web with transparent triangular bars. In the female the tail is long and graduated, and the feathers are perfectly webbed on both sides of the shaft, although their texture is soft and flowing. The general plumage of the *menura* is amber brown above, tinged with olive, and merging into rufous on the wings and also on the throat. The under parts are ashy gray.

GOULD, an eminent naturalist, who studied the habits of this bird in its native haunts, says, "It is extremely shy, and while among the bushes, I have been surrounded by these birds pouring forth their loud and liquid calls for days together, without being able to get a sight of them; and it was only by the most determined perseverance and extreme caution that I was enabled to effect this desirable object."

They build in old hollow trunks of trees which are lying on the ground, or in the holes of rocks. The nest is merely formed of dried grass or dried leaves scraped together. The female lays from twelve to sixteen eggs, of a white color, with a few scattered light-blue spots. The Lyre bird is of a wandering disposition, and though keeping probably to the same bush, it constantly traverses from one end to the other, from the mountain top to the bottom of the gulches. It is said to be able at one leap to pass over as much as ten feet in a perpendicular direction from the ground. It seldom takes wing, but leaps from branch to branch, and frequently reaches a considerable height.

St. Lawrence in the region of Alexandria Bay. Our boat halted several times to receive from fishermen's craft their goodly strings of perch and trout, and from another boat a wild deer of the forest just killed, a noble buck of four years' growth and wide-spread antlers. Doubtless ere this the animal has been served up to some of the three hundred and fifty pleasure-seekers now sojourning at the Fort William Henry Hotel, at the head of the Lake.

Saratoga has had an uncounted throng during the season, which now, evidently, has culminated. The "hard times" have not kept people away which may be owing to the fact that there is not much to do at home, or perhaps (on the principle that a man must "fall" three times to be rich) to the "crash" having provided a largely increased number with the means wherewith to delight their dear souls at this fashionable resort. I note a few evidences of growth during three years' absence. The Columbian Hotel and Union Hall are of greatly enlarged capacity. The Presbyterian Society have a new and handsome structure. Other improvements in private and public edifices have been made, while the walks are just as pretty, the groves quite as lovely, and the fountains not less delicious and health-giving than when the writer years ago sought to lengthen his lease of life by their constant and determined use.

W. B. R.

WALKING AND POOR AIR.—Anaximenes taught that air is mind. Some one else says that is the hidden food of life. Plutarch seems to incline to Anaximenes' opinions, remarking that perhaps the reason why there is a sympathy of feeling on various subjects arises from breathing the same air. Air is an exhalation of all the minerals of the globe; the most elaborately finished of all the works of the Creator. All classes of men affirm this. Sidney Smith says to public speakers that if they would walk twelve miles before speaking, they would never break down. In English universities, boat races, horseback rides, and ten mile walks are a part of the educational means for physical development. Plato says a walk in the open air will almost cure a guilty conscience.

WOULDER with thyself be acquainted, then see what the others are doing. But wouldst thou understand others, look into thine own heart.—Schiller.

The Young Ruralist.

BOYS, STICK TO THE FARM!

SCEN is the advice with which we (the boys) are often favored in the "RURAL," and also in many other papers of the day. It would seem from the frequent advent of these advisory epistles, that the advisers were much concerned in regard to the welfare of "the boys," or were fearful of losing their helps when they come to plow, sow, reap, and mow. As all useful employments are alike honorable, would it not be better for each one to choose the calling for which he is best adapted, and thus answer the great purpose of his creation?

It needs not an extensive observation to see the evil effects growing out of disregarding this law of adaptation; they can be found in every community, yea, in the narrow precincts of home. Yonder are the abodes of two farmers. We will walk over and pay each a visit. As we come near the first farm, we see the fences are in good repair, and that the trees and shrubs are arranged in a neat and tasteful manner, and everything goes to show that this is the abode of thrift and convenience. We now pass on to the next farm. Here we find everything in a disordered state, and it is plain enough to see that this is the abode of inconvenience. "But he is lazy," you say. This may be so in some instances, but not in all. The trouble is he is not in his proper sphere of action.

When these two farmers commenced in life there was no choice in the farms—either was as good as the other; there was no difference between their property, yet they were not on equal terms; for one was in his proper sphere, the other was not.—Every human being was created for a certain design, and to execute which, he is given certain peculiarities of character, and of mind; it is, therefore, his duty to become acquainted with himself, in order that he may accomplish the great end for which he was created. Let every youth adopt for his motto, "Know Thyself," and when he has obtained this knowledge he can choose his proper place, to which, if it be useful, let him "stick," and success will crown his efforts.

Pekin, Niagara Co., N. Y., 1855.

REMARKS.—There is some truth in this. Many persons, doubtless, fall in the business in which they are engaged for want of adaptation to it.—They dislike it, and take no pride, no interest in it, and yet having learned no other are compelled to continue in the business at which they are regularly engaged. As a general rule, however, it will be found that he who succeeds in one business will succeed in almost any other to which he may give his attention. The careful, industrious, energetic mechanic will make a successful farmer as we have often seen proved, and vice versa.

THE HERO BOY OF HAERLEM.

MASSA. EDITORS:—We often hear the old, and even the middle-aged among us, speak of the joys of childhood and youth, and regret the bright hours, the innocent pleasures and dreamy splendor of that happy period, when the young heart was open and confiding, and the mild eyes gazed with wonder and amazement on the fair scenes of earth; when even the most insignificant object filled them with endless curiosity, and the woes and cares, the sorrows and anxieties of life were far distant in the bosom of the future.

The youth, however, long for the time when he may enter on the active duties of life, and is ever figuring to himself the proud position he will occupy in after years, when the fetters of childhood are burst asunder and the honors and riches of this world will be within his grasp,—forgetting that the season of youth is fraught with opportunities of well-doing, and the youngest may prove himself a real hero.

I remember reading an account of a little boy who lived in Haerlem, Holland, many years ago. His father had charge of a portion of the huge artificial dykes, which, in that country, prevent the sea from inundating the low lands. On these lands many people live, though their dwellings are built below the level of the sea. Hence, their situation is one of great danger from the bursting of the dykes. When this little boy was nine years old, his father sent him on an errand some miles from home. Darkness set in on his return, and when hurrying along by the great dyke his ear caught the sound of water trickling through from the sea; he knew in an instant that were he to run for help the crevice would be enlarged so much in the soft soil that no power on earth could stem the mighty torrent. He shouted for help, but no voice responded to his call; then he thought of his father and mother, and the kind friends at home, and felt that their lives depended on his exertions. After searching in vain for something with which to fill the aperture, he plunged his arm into it, and stood thus through the long, dark night, silent and alone, till a priest, passing that way in the morning, released him from his unpleasant position. His real name is forgotten, but he is known in history as the Little Hero of Haerlem.

T. O. Bradford, C. W., 1855.

CRYSTALLIZING GRASS.—Will you, or some of your numerous subscribers inform me how to crystallize grass, and oblige a reader of your excellent RURAL?—FLORA, August, 1855.

REMARKS.—Dissolve eighteen ounces of alum in a quart of soft water, (observing this proportion for a greater or less quantity,) boiling it over a slow fire in a close tin vessel, stirring it occasionally with a stick until it is dissolved. When it is nearly cold suspend the subject to be crystallized by a thread from a small stick laid horizontally across the aperture of a deep glass or earthen jar, into which the solution must be poured. The articles should remain in the solution twenty-four hours, and then be taken out and suspended in the shade to dry. If the subjects to be crystallized are put into the solution when it is quite cold the crystals are apt to be formed large, and the warmer the solution the smaller will be the crystals. Its strength may be tested by putting a drop on a blade of grass, and observing if it crystallizes as it cools. Almost any flower or vegetable substance may be operated upon. Fancy baskets may be made in this way, by first making a wire frame of any desired shape, twisting woolen yarn around the wires, and immersing it as directed for grasses.

Foreign Intelligence.

Arrival of the Anglo Saxon and Canada.

The steamship Anglo Saxon arrived at Quebec on the 23d ult., and the Canada at Halifax on the 24th.

GREAT BRITAIN.—Great anxiety is felt in regard to the Atlantic cable. The first regular message from Newfoundland was received at Valentia on the night of the 9th. The speed of the transmission is said to be greater than was anticipated at Plymouth, and the currents were apparently as strong. The shore continued to be quiet at 4:00. No messages except government ones can be sent during the electrical experiments, which were expected to occupy several weeks.

The London Times reviews editorially the lamentable condition of Mexico, and concludes that: "It seems there is nothing left for the United States but to consummate the work they had begun, and annex the land of Montezuma and Cortez, which even under the lash of the slave-driver, will not regret the illusion of the liberty of the Mexican Empire."

Queen Victoria was visiting her daughter at Potsdam.

FRANCE.—The papers teem with accounts of the Oberbourg fete, which has concluded with a banquet on board the Le Bretagne. Queen Victoria left on the 6th, under a triple salute. The fete were continued on the 7th by the inauguration of the Napoleon Duck, and the launch of the man-of-war Ville Denais. The Emperor had ordered a pyramid of granite to be erected at the head of the new dock, to perpetuate the Queen's visit.

The fete terminated on the 8th, with the inauguration of the statue of Napoleon I. The Emperor delivered a pacific speech on the occasion, saying it appeared to be part of his destiny to accomplish by peace the great designs conceived during war. He said the government would not wage war except in defense of the national honor, and the great interests of the people.

The monthly return of the Bank of France shows an increase of cash in hand at Paris, of 32,000,000 francs, and in the Branch Banks 1,400,000 francs.

SPAIN.—Diplomatic negotiations between the representatives of Spain and Mexico, for the settlement of the long pending dispute, were expected to commence very shortly.

Gen. Almonite, Mexican Minister to England and France, had notified Spain that he was made Plenipotentiary.

TURKEY.—The late collision in Bosnia, in Turkish Croatia and Montenegro, has caused a sort of panic in the capital. The Mussulmen and Christians were living in a fear of one another. The Sultan, to show his confidence, had gone with a fleet on an excursion to Smyrna.

A plot, having for its object the massacre of the Christians, had been discovered at Smyrna. The Governor had made a seizure of arms, and sent the guilty parties to Constantinople.

It was reported that on the 23th of July a band of Montenegrins, 1,000 strong, assailed Kitchichim, killing nearly 1,000 inhabitants who, confiding in the armistice, were unarmed. The Montenegrins burnt many houses, and carried away women and children into captivity.

CHINA.—Hong Kong dates are to June 23d, and Peking same. The gun boats had advanced to the Tsin Shih without opposition, and commanded both the river and the great canal. The English and the French ambassadors were located on shore. The American and Russian fleet had followed the allies up the river. A mandarin of high rank, the second officer in the Empire, had arrived from Peking, as a special minister to negotiate. Re-inforcements continued to be dispatched from Hong Kong.

INDIA.—The India Calcutta mail of July 4th, and Madras 11th, had arrived at Alexandria. The news is of little importance. Gen. Layard had resigned on account of ill health. The Gwalior rebels were believed to be making for Bhurpore. Mautsinga was besieged at Shagure by the Begums army. Gen. Whitlock's force had captured Fierguan in Banda.

Commercial Intelligence.

BREADSTUFFS.—Richardson, Spence & Co. quote flour and meal, Philadelphia and Baltimore 21d 1/2; 22d 1/2; 23d 1/2; 24d 1/2; 25d 1/2; 26d 1/2; 27d 1/2; 28d 1/2; 29d 1/2; 30d 1/2; 31d 1/2; 32d 1/2; 33d 1/2; Choice Poetry.

Written for Moore's Rural New-Yorker.
OUR GUEST.

BY IDA FAIRFIELD.

We had read of a mother—had heard his name
From gossip, babbled with fear,
We knew it was linked with the pall and the grave,
And the bitterly falling tear.

We knew that he, in our neighbor's hall,
Had sat an unbidden guest,
And drank life's wine with a ruthless hand,
The self-made "lord of the feast."

But many a long, bright year had dawned,
Over time's silvery sea,
And a happy band of twelve had grown
In the shade of our own home tree.

No cloud o' darkened the sunlight there,
And our hearts forgot to sigh,
For the pale guest, in his annual rounds,
Still passed our bright home by.

But one summer's day, his step we heard,
And we felt it was drawing near,
A step as light as a fairy queen's,
Yet it thrilled our hearts with fear.

For days his shadow, dark as the night,
Across our threshold lay,
And we vainly strove, with borrowed light,
To frighten its gloom away.

He entered then—and chose for his bride,
The loveliest of our band,
And lot in her heart life's crimson tide
Grew still as he clasped her hand.

'Twas vain that we prayed—in vain we wept,
For her ear had caught the tone
Of the golden harp by the angel swept,
In the light of the "great white Throne."

So she smiled on him, serene and fair,
And seemed not loth to go,
For he had sworn he would lead her where
Life's beautiful rivers flow.

And our guest turned grimly to depart,
Unmoved as he entered there,
Unheeding the wail of the bleeding heart,
Or love's wild, pleading prayer.

And the sunlight falls not as of old,
And the gloom no more departs,
For never the same will our band be told—
Death shadow is on our hearts.

Independence, N. Y., 1888.

The Sketch-Book.

Written for Moore's Rural New-Yorker.
A SKETCH OF THE REVIVAL.

BY JENNY A. STONE.

Long and clear rang the village bell. Up through
the evening air floated peal after peal, and the
snow clad hills sent back a shrill echo to the vale
beneath. The little church was filled to overflow-
ing. Faces were there on which all the heart's
anxiety might easily be read, and others just as
careless of the great future before them. And
many were the bright eyes dimmed with tears, and
hands convulsively clasped together, as the elo-
quent lips of the speaker poured forth consolation
for the bleeding heart, and woke the deep voice of
repentance in the bosom of pride.

"Now is the accepted time, now is the day of sal-
vation."

The words floated down the aisles and out upon
the clear, frosty air, while many a proud young
head bent lower and lower, and tears dropped fast
from dim and aged eyes.

Then there was a long silence, followed by the
sound of many passing forward to the little altar.
Side by side they knelt. Men and women with the
snows of many winters on their heads, and knees
that until now had never bent in prayer. Fair
maiden, manly youths, and tender children, — all
seeking for the self-same blessings,—all bowing be-
fore the one great Father.

Near the right of the pulpit two brothers were
standing. The broad, intellectual brow of the one,
and firm, expressive features of the other, gave
ample evidence that should they choose to heed
the call, they would make no common laborers in
the vineyard. But the Spirit had spoken once, yes,
twice, and still they resisted the pleading. And
now they were gazing curiously to mark what
friends should be among the worshippers who passed
them. Footsteps light with the tread of hope,
and others heavy with their weight of despair, all
sounded along the aisles.

A young girl rose from a seat near the brothers
and with an irresolute step came slowly forward.—
Half pausing as she reached them, they caught a
glance of dark, earnest eyes, whose long lashes
were beaded with tears, turned imploringly toward
them, and then the maiden passed onward and
knelt for the blessing.

"ANNETTE LACY!" whispered the younger
brother, turning to the pale face beside him.

"Isen," was the only answer, as they threaded their
way out into the open air, just as the man of God
commenced his earnest appeal for the precious
souls who had come to the foot of the cross.

HENRY ELTON, the elder, stepped quickly, lifting
his hand now and then with a mysterious, impen-
sable movement to his brow, as if to brush away
some unpleasant conviction that had settled there.

But it was very evident that he did not succeed—
for, as his brother spoke his name for the third
time, he turned toward him a face full of perplexed
meaning, and answered, "Well, what is it,
ANNETTE?"

"I was going to say," replied the other, "that
ANNETTE would not be apt to go to the ball with
you to-morrow."

"Why not speak out your full thoughts," ques-
tioned Henry, blithely, "and say that I had better
spare myself the pain of a rejection, by absenting
myself from Mr. Lacy's mansion altogether?"

ANNETTE made no reply to this, but a moment
after said, "You intend to see ANNETTE soon, don't
you, HENRY?"

"Yes, to-morrow," was the brief reply, and with
a "good-night," the brothers separated.

The morrow evening had come with a bright
wintry moon that made the snow sparkle with
a million diamonds, and a pure, frosty air that gave

a clear, musical tinkle to the sleigh-bells, as one by
one the crowded vehicles passed the house of AN-
NETTE LACY on their way to the hall of mirth.—
Thrice had Mrs. LACY tapped at her daughter's
door, and now she entered.

"ANNETTE," said she, "HENRY is in the parlor,
and wishes to see you. What shall I say to him?"
"One minute, mother. Tell him to wait one
minute, and I will come."

Mrs. LACY turned away, and again the young girl
knelt at the bedside.

"Give me strength," she prayed, "strength and
wisdom, O my God."

The earthly love was wrestling strongly with the
voice of duty within her heart. "O, I cannot give
him up," was the thought that burst sobbingly from
her lips.

A clear burst of song came floating up from a
neighboring cottage, and its burden was the fa-
miliar hymn,

"Jesus, my cross have taken,
All to love, and follow Thee."

The tears sprang to ANNETTE's eyes, and with
them the struggle was past. With a sad, sweet
smile hovering around her lips, she descended to
the little parlor, and advanced to meet her lover.

"ANNETTE," he said quickly, "I do not come to
claim your promise for to-night. I know that is
impossible after what has passed, but I must also
know whether this is to make any difference be-
tween us—any difference in your love for me."

The girl's voice was very low and tremulous as
she replied, "No, HENRY, my love is not changed,
it never can be, but oh! our relations to each
other must be changed, unless," she added, plead-
ingly, "unless you will turn and go with me. O,
HENRY, I cannot serve two masters. Will you not
try, first for my sake, if it must be, and then for the
love of Jesus, to walk in this path?"

"I cannot feign an interest in religion that I do
not feel," HENRY ELTON answered moodily. "Is
this all I am to hope, ANNETTE, for all the love I
have wasted? Think of it, don't answer me now,
I will come again."

The door closed and he was gone, walking with
quick, nervous steps out into the open country.—
Away from the lighted church, away from the
streets and cottages, away from the haunts of men,
out into the clear, frosty night he had gone to find
the solution of a great mystery; for HENRY ELTON
had an interest in religion that he was unwilling to
own. Deep in his soul he felt that ANNETTE had
chosen the true path.

But little did the young girl dream, as she turned
her footsteps towards the church door that
evening, as the bell rang out its accustomed call,
that her proud lover was kneeling in the forest on
the crusted snow, praying for pardon and peace.
Her face was sad, very sad; for the earthly hope
she strove to crush had been her first dream of hap-
piness, and the path she was treading was yet new
to her feet—the consolation not yet full. But so
many sweet promises and blessed hopes were given
her that night, that she trod the aisles with a heart
full of rest and peace, and whispered, "all for
Jesus," as she knelt again at the altar.

And although her eyes were turned away, yet
others saw that just as she knelt, the heavy door
swung open, letting in a flood of moonlight from
without, and with a firm, light tread, HENRY ELTON
advanced and knelt beside the maiden. The
prayers were offered, the blessing pronounced, and
the lovers rose face to face, while close beside
them ANNETTE ELTON still knelt, his lips moving in
voiceless supplication.

"O, how I pity ANNETTE," said a gay girl, as the
revelers passed the cottage late that night. "She
was such a happy creature, but of course, young
ELTON will never marry her now."

And ANNETTE LACY started from her pillow, as
the obnoxious bells broke in upon her peaceful
dreams.

"Thank God I am not there," she whispered, with
a sigh of relief, as her head sank back again.—
"And thank God that HENRY and ANNETTE are go-
ing to seek Christ, too. Dear Father, do not give
me all my blessings in this world."

Badley, Mich., 1888.

For Moore's Rural New-Yorker
A SKETCH BY THE WAY-SIDE.

BY WINNIE WILLIAM.

We live in such a charming little valley called
Daisy Dell, my mother, Aunt Denny and I, in the
whitest of all possible white cottages, with green
blinds, and such a profusion of flowers in the gar-
den. I will not speak of my mother. It is not nec-
essary, as every one who has ever had a mother,
knows how good and kind she can be. How her
bright smile, loving heart, and skillful hands, make
home such a happy place. But Aunt Denny—she
can better be imagined than described, as the
novels say. She is a maiden lady, somewhere be-
tween forty and fifty, very romantic, fond of poetry
and flowers, and much addicted to the habit of
talking to the moon. I remember one night I
slept with Aunt Denny, and after she had laid aside
her false ringlets, and taken out her teeth, prepar-
atory to the coming on of "Nature's sweet restorer,"
she blew out the light, and raising the curtain,
commenced an apostrophe to the Queen of Night.
Oh, dear! how I laughed! It sounded so funny to
hear Aunt Denny talk without her teeth!

Since I have studied Astronomy, I have discov-
ered the reason of Aunt Denny's midnight ad-
dresses to the silvery planet, I believe it was HEN-
SCHER, who made known the fact that there is a
"man in the moon!" No doubt Aunt Denny
studied Astronomy when she was a girl.

Nothing very unusual happened to disturb the
even tenor of my way during my childhood. Every
night my mother would come to my little room
and hear me repeat:

"Now I lay me down to sleep,"
and every day Aunt Denny would drill me in my
A B C's. I always pity little children, who are per-
secuted by alphabet-teaching Aunt Denny's.

Dear me! no one knows how much I suffered
when a child, over those same A B C's. I
asked Aunt Denny one day, who invented the
alphabet. She said it must have been ADAM, for
he was the "first man," and his name began with
A, ergo, the "first man" invented the alphabet, and
it began with A. I never pitied ADAM after that,
for being excommunicated from the Garden of

Eden. Ever since, I have imagined him, seated
among thistles and thorns, teaching CAIN and
ABEL their A B C's.

Aunt Denny is exceedingly fond of poetry. I
remember two lines that seem to be perpetually at
her tongue's end, viz:

"Full many a flower is born to blush unseen,
And waste its sweetness on the desert air!"
"So appropriate, so expressive!" Aunt Denny
says. I asked her once, if she wrote it.

"No, dear," she replied. "I did not write it, but
SHAKESPEARE did. By and by, you will appreciate
it better."

I was ten years old at last. I thought the day
never would come. Ten years old—and I had been
talking and dreaming of the time for months. I
have lived several years since then, but I think I
should always like to be, only "ten years old."

The day came, as bright and beautiful as ever
the sun shone upon. A previous shower had given
a brighter shade to Nature's carpeting, and every
leaf, every flower, fairly glittered with the spark-
ling rain-drops, while the birds sang so merrily—
all because it was my birthday; so Aunt Denny
said. All the little girls in the neighborhood had
been invited to spend the afternoon with me, and
we were to have tea in the garden, under the
arbor, and I was to be arrayed in my new white
frocks, which my mother had made on purpose for
the occasion. We were talking over our arrange-
ments, when we heard the tinkling of a guitar, ac-
companied by a tambourine, and a sweet childish
voice, singing under the window:

"You are going far away, far away,
From poor JEANNETTE,
And there's no one left to love me now,
And you, too, may forget."

The musicians were a boy about twelve years
old, and a little girl apparently of my own age. I
thought I never had seen any one half so beautiful
as she was. Her soft dark eyes were full of tears
as she sang.—I cried too; I couldn't help it, and
the boy's lip quivered as he lightly touched his
guitar.

"How sweet!" exclaimed Aunt Denny, as the
child concluded her simple song. "I wonder if
'JEANNET' really perished while rushing after
glory, or married some one else, and poor 'JEAN-
NETTE' was left to 'waste her sweetness on the
desert air!'"

My mother only laughed and called the children in.
The boy said his name was FRANCISCO, and
little FLORENCE was his sister. Their home was in
Italy. Oh, such a pretty home! He had never
seen anything like it in America. They had so
many beautiful flowers and birds. It was such a
happy home too. Every night they would have
such times singing together. Their mother had
such a sweet voice, and their father was a good
bass singer, and he and the little FLORENCE would
join them. They were very, very happy. But
their mother grew so pale and thin, and one day
she died. So they left their home then, and came
upon the great waters—their father, little FLORENCE,
and himself. They had not been in the ship many
days when their father was taken sick and died,
and they buried him in the blue waves. So the
little orphans came to this country alone.

"We earn a few pennies by singing," said the
little FLORENCE, "just enough to buy our food, al-
though we have not had anything to eat to-day."

My mother, bless her! made ready our table for
the little ones, and then stood by, watching them
eat, while her eyes shone with pleasure. As the
children rose to go, Aunt Denny slipped a piece
of money in the girl's hand, and bade her come
often.

In the course of time the young Italians and I
became great friends. We used to sit together on
the banks of the little stream which winds its way
through Daisy Dell, and the brother and sister
would sing me songs of their native land, always
ending with "JEANNETTE and JEANNON," my
favorite.

As the summer wore on, the little FLORENCE be-
gan to fade. My mother and Aunt Denny took
her home, and nursed her with the greatest tend-
erness, but in the autumn, the leaves were falling on
her grave.

Poor FRANCISCO, he was sick a long time after.
When at last he fully recovered, he worked day
and night, and in the spring following, a neat white
marble tablet stood at the head of the little mound,
bearing this inscription:

"FLORENCE—Singing in Heaven."
Seven or eight years have passed since then, and
FRANCISCO is in college now, but he spends his va-
cations at Daisy Dell.

Time has begun to write some wrinkles on my
mother's brow, and silver her glossy brown hair.
But her heart is not changed a bit—no, indeed!

Aunt Denny is the same Aunt Denny still; teeth,
ringlets and all. FRANCISCO tells her in his play-
ful way, that she must be blessed with more
"sweetness" than falls to the lot of common mortals,
for she has not expended it all yet.

I like FRANCISCO. He is so gentle, so good, and
sings so delightfully, and then, he has such splen-
did eyes!

THE EVIL OF A BAD TEMPER.—A bad temper is
a curse to the possessor, and its influence is most
deadly wherever it is found. It is allied to martyr-
dom to be obliged to live with one of a complain-
ing temper. To hear one eternal round of com-
plaint and murmuring, to have every pleasant
thought scared away by this evil spirit, is a sore
trial. It is like the sting of a scorpion—a per-
petual nettle, destroying your peace, rendering
life a burden. Its influence is deadly; and the
purest and sweetest atmosphere is contaminated
into a deadly miasma wherever this evil genius
prevails. It has been said truly, that while we
ought not to let the bad temper of others influ-
ence us, it would be as unreasonable to spread a blister
upon the skin, and not expect it to draw, as to
think of a family not suffering because of the bad
temper of its inmates. One string out of tune will
destroy the music of an instrument otherwise per-
fect; so if all the members of a church, neighbor-
hood, and family, do not cultivate a kind and affec-
tionate temper, there will be discord and every evil
work.—Steele.

THERE is nothing so great that I fear to do for
my friend, nor nothing so small that I will disdain
to do for him.—Sir Philip Sidney.

ARITHMETICAL PROBLEM.

THREE MEN, A, B, and C, own a tract of land.
One-half of A's share, plus $\frac{1}{3}$ of B's, equals $\frac{1}{2}$ of
C's share. One-half of B's share equals $\frac{1}{3}$ of C's.
One-third of B's share, minus $\frac{1}{10}$ of it, plus $\frac{1}{5}$, is
equal to 19 acres. Query.—A, B, and C, each own,
own how many acres? All together own how
many acres?

GENESEE VALLEY NURSERIES.

Fruit Trees, Ornamental Trees, and
Shrubs, Roses, &c., &c.

THE Proprietors of these well known and extensive Nurseries, have
FRUIT TREES, ORNAMENTAL TREES, SHRUBS, ROSES,
GREEN-HOUSE and BEDDING PLANTS, DAHLIAS,
PHLOXES and OTHER HARDY
BORDER PLANTS.

The assortment of ROSES is very extensive, and embraces all
varieties which could be obtained, and which are considered worthy
of cultivation. Our collection of HYBRID PERPETUALS is the
most complete in the country.

The GREEN-HOUSE DEPARTMENT receives particular attention,
and the stock of Fuchsias, Geraniums, and other Green-House
Plants, is large and varied. In the

FRUIT DEPARTMENT,
our stock consists of
APPLES of the best quality, Dwarf and Standard,
PEACHES, both Dwarf and Standard, and Quince and Pear stock
PLUMS, a collection of well known and popular sorts
CHERRIES, of all varieties, Dwarf and Standard.
BUTTERFLY, a collection of all the most popular
GRAPE VINES, of all varieties, and QUINCE, a collection of all the most popular
and standard varieties.

SMALL FRUITS.
CURRANTS, a collection of all the most popular and standard varieties.
RASPBERRIES, of all varieties, Dwarf and Standard.
BLACKBERRIES, of all varieties, Dwarf and Standard.
STRAWBERRIES, of all varieties, Dwarf and Standard.

ORNAMENTAL DEPARTMENT.
The stock of Ornamental Trees and Shrubs, both Deciduous and
Evergreen, will be found to embrace all that is desirable among
LAWNS and STREET TREES and SHRUBS. ROSES, consisting
of Hybrid Perpetual and Summer Roses, Moss, Bourbons, Noisettes,
Ten, Debut of China, and Climbing or Floribunda.

HARDY HERBACEOUS or BORDER PLANTS and BUL-
BOUS FLOWER ROOTS, an extensive assortment.

All the above are offered at the lowest possible prices, and
the stock is constantly increasing. For further particulars, apply to
the Proprietors, or to the Agents, who will be glad to send you a
list of the stock, and to answer all inquiries.

GENESEE VALLEY NURSERIES, Rochester, N. Y.

A GIFT WITH EVERY BOOK,
WORTH FROM 25 CENTS TO \$100.00.

OUR NEW DEScriptive CATALOGUE of all the most popular and standard varieties of
Fruit Trees, Ornamental Trees, Shrubs, &c., is now ready for distribution. It contains
a full and complete list of all the stock on hand, and is sent to all who send for it
free of charge. It is a valuable work, and one that every nurseryman and dealer
should have. It is sent to all who send for it free of charge.

A. FROST & CO.,
GENESEE VALLEY NURSERIES,
ROCHESTER, N. Y.

KETCHUM'S REAPER AND MOWER.
R. L. HOWARD'S
Cash Premium List for 1888!

T. O. PETER, DAKOTA, GENESEE COUNTY, N. Y.
UMPIRE TO AWARD PREMIUMS.

First Premium	\$150 00
Second Premium	100 00
Third Premium	100 00
Fourth Premium	60 00
Fifth Premium	25 00

In order to advance the interests of Agriculture more effectively
than can be accomplished by attending public trials, which
often are very unsatisfactory to the public, I offer the following
premiums

1st.—ONE HUNDRED AND FIFTY DOLLARS
To the farmer who shall cut the greatest number of acres of grain and
grass, in the shortest time, in the best manner, and with the least ex-
pense, with Ketchum's Combined Machine, manufactured this year,
during the season of harvest.

2d.—ONE HUNDRED DOLLARS
To the farmer who shall cut with any Ketchum Combined Machine,
not less than fifty acres of grain and fifty acres of grass in like man-
ner.

3d.—ONE HUNDRED DOLLARS
To the farmer who shall cut one hundred acres of grain, with any
Ketchum Mower, in like manner.

4th.—FIFTY DOLLARS
To the farmer who shall cut fifty acres of grain, in like manner, with
any Ketchum Mower.

5th.—TWENTY-FIVE DOLLARS
To the farmer who shall harvest twenty acres of clover seed, with any
Ketchum Machine in like manner.

The above premiums will be awarded to the person who shall
cut the greatest number of acres of grain and grass, in the shortest time,
in the best manner, and with the least expense, with Ketchum's
Combined Machine, manufactured this year, during the season of har-
vest.

I will furnish blanks for affidavits to any person, and reserve the
privilege of publishing any of the statements and the awards in any
newspaper. These premiums will be awarded to the person who shall
cut the greatest number of acres of grain and grass, in the shortest time,
in the best manner, and with the

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

The *Rural New-Yorker* is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductors devote his personal attention to the supervision of its various departments, and earnestly labors to render the *Rural* an entirely Reliable Guide on the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so valuably advocates. It contains more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars see last page.

Rural New-Yorker.

PLOWING BY STEAM.

Now that the telegraph wire is stretched across the trackless waters, and the lightning flashes down, down among the silent caverns and over the mountain tops of old ocean, carrying cold compliments between Queens and Kings and Presidents, and warm words of love from friend to friend, we must move onward to greater achievements. What the next great step will be in the march of improvement we cannot say, but most assuredly this step will be made, and will be as much in advance of the present as the railroad and the telegraph are in advance of the stage coach and the stage coach. There is no stopping place—no bonanza to the inventive genius of man. Agriculture has, perhaps, received its full share of attention and advantage from this faculty, and it is no doubt destined to receive still greater benefits. We can remember when most of the threshing was done by the flail, and with how much difficulty machinery for this purpose was introduced in some of the most civilized parts of the world—when every European arrival brought us intelligence of the destruction of threshing machines in England, by mobs of infuriated farm laborers, who feared they would deprive them of their labor and their bread, and leave them to starvation. Now, not content with using machines driven by horse-power, steam is much used for this purpose, and no sane man opposes their use or thinks they are aught but a benefit. The youngest of our readers almost can remember the introduction of reaping and mowing machines, and some will recollect when the reaping hook and sickle were the implements used in cutting wheat. Seed-sowers and planters are of but recent introduction, and within a very few years the various forms of cultivators and shovel-plows have almost superseded the use of the hoe, much to the relief of the farmer and the benefit of the crops, as the soil is kept in much finer tilth, with less labor. It was only a week or two ago, and during quite a "dry spell," that a farmer informed us that while he once dreaded the drought, now he had no fears, as by the free use of the small plow, cultivator, and shovel-plow, all injury from this cause was prevented.

Plowing by steam is bound to attract considerable attention in the agricultural world for a few years. The idea will seem chimerical to many, but certainly not more so than some things now in general use would have appeared fifty, or even twenty years ago. The present week we have for the first time seen a Steam Fire Engine in successful operation. The proposition to make steam available for this purpose would have been laughed at ten years ago. On small, or hilly farms, steam, we suppose, will never be used, but there is no land in the world better adapted to steam-plowing than the boundless prairies of the West. In ten years from now scores of steam plows may be engaged in turning over these rich soils. Be this as it may, we will keep our readers advised of all that is being done in the way of plowing by steam.

A prize of \$2,000 was offered by the Royal Agricultural Society of England for "the Steam Cultivator that shall in the most efficient manner turn over the soil, and be an economical substitute for the plow and the spade." Our last English journals give the report of the Committee which have awarded the premium. There were five competitors for the prize, only two of which came up to the requirements given above, and to one of these was awarded the prize and to the other a gold medal. The Committee after giving a full report upon the working of the prize engine and plow, (Fowler's) and the many careful experiments made as to saving of expense, say they found the following result. Light land can be plowed by steam at 50 cents an acre less than by horse power, heavy land for 80 cents an acre less, while land can be trenched by steam power as well as it can be done by the spade and at less than one eighth the cost. The Committee close their report by saying:—

"These money results, satisfactory, though they be, are not, we consider, the only points of advantage which the introduction of these machines confers upon agriculture. By their aid we can carry out a complete system of autumnal cultivation now so generally admitted to be desirable, but which it is extremely difficult to effect with the ordinary force of a farm, in ordinary seasons, and under ordinary circumstances. We can continue our cultivation by plowing or otherwise, well nigh regardless of weather, and upon land which would not submit to the pressure of horse labor. We have perfect control over the work we wish to have done; and when it is done, it is found to be more regular throughout, and to be in a more open and desirable condition than could be obtained by the best and most judicious application of the ordinary implements of a farm. These are points which we cannot too strongly recommend to the attention of those interested in the advancement of agriculture.

We wish it distinctly understood that throughout the trials we have charged the machines with the maximum of working expenses, and have credited them with the minimum value for the work performed. We feel confident that when in constant operation on a farm, the work done would be at a lower rate of cost than that now given, and their great advantages then more clearly and directly shown. At the same time, too, it must not be forgotten that the engines themselves are equally applicable to all the other power purposes of the farm.

From the foregoing results of the trials intrusted to our decision by the Council of the Royal Agricultural Society, and conducted throughout under our immediate supervision, it is beyond question that Mr. Fowler's machine is able to turn over the soil in an efficient manner at a saving of 25 per cent.; on heavy land, 25 to 30 per cent.; and in trenching, 80 to 85 per cent.; while the soil in all cases is left in a far more desirable condition and better adapted for all the purposes of husbandry. We are, therefore, unanimously of opinion that he is fully entitled to the price of £300, and we now give our award accordingly."

THE CHINESE SUGAR CANE.

AFTER the lapse of several months, in which time it would almost seem that the *Rural* had given this Saccharine Celestial the wall, we again revert to his "Sweetness" with pleasurable sensations. The past season has been an extraordinarily favorable one for testing the value of this cereal, both for its powers of producing sugar and fodder, and we think that a finality can be reached—the question can be definitely settled as to whether it may be written "a good thing," or "classed with *Morus Multicaulis*, *China Tree Corn*, *Rohan Potatoes*, & *idone genus*. If it falls, the "speculation in crushers," foretold by our *Rural* correspondent, (W. B. P.) will find its days numbered, and we may reasonably expect "lots of old wares" upon the market—should success be the word, unbelief must pay a premium for an "expressing agent," in addition to being assigned a position amid "false prophets."

In the vicinity of Rochester there was a considerable amount sown the past spring, and, as far as our knowledge extends, the crop wears a promising appearance. The growth of the past season has been strong, and with a few weeks good weather the probabilities for its arriving at maturity are propitious. Thus far we can speak favorably—the result of the final process of manufacturing syrup and sugar is still to be demonstrated. The mode of operation which is to be the guide of the sugar-maker is not yet definitely settled, even among those whose experiments have been the most successful; while the great majority who are now cultivating it, have, to say the least, very crude opinions upon the subject. Thus, in our report last season, one has a product "resembling the green scum of a frog pond, and no more grain than is possessed by tar;" another makes a syrup, but with "a strong and rather disagreeable vegetable flavor;" a third has an "excellent article of sweetening, but dark;" while the fourth produces an "amber-colored liquid, much to be preferred to the best sugar-house in all respects." Here we have disagreement—a gleam of hope—a flash of light—and one enjoying the full fruition of a properly conducted experiment. Our purpose now is to lay before the readers of the *Rural*, in two or three consecutive numbers, such reliable experimental knowledge as has been obtained upon the subject, so that the great army of investigators may work understandingly, and that their labors may result in the best returns which the Chinese Sugar Cane is capable of yielding.

Among the Chemical Researches given in the last Patent Office Report, we find several records of experiments made by C. T. JACKSON, of Boston, Mass. The first plants operated on were from the government grounds in Washington. The juice,

after being strained through linen, had a specific gravity of 1.062; and, after boiling and the separation of an albuminous scum, 1.055. Three and one-half fluid ounces of the strained juice was evaporated at 212° F., until it became a dense straw-yellow syrup, too thick to run when cold, and giving 217 grains of saccharine matter. That portion of the juice which had been freed from all albuminous matter and filtered through paper, gave, on evaporation of a fluid ounce, 78 grains of thick yellow syrup, which, being dissolved in absolute alcohol, left 9 per cent of mucilaginous substances containing starch. The alcohol took up 69 grains of saccharine matter. The result in this lot equalled 14 36-100 per cent. on the juice. In other instances the yield of syrup varied from 12 down to 9 per cent. Lime-water and also bone-black were used as purifiers. A small proportion of crystallized sugar was obtained from the bottom of a vessel in which the syrup had stood for some days. Dr. J. found that when the seeds were ripe the cane contained the most sweetness—in some specimens which were just in flower there was but very little saccharine matter.

In the statements of J. H. HAMMOND, Esq., of Silverton, South Carolina, before the Beach Island Farmer's Club, we observe a point of difference between his demonstrations and Dr. Jackson's in reference to the sweetness of the cane at various stages of growth. Mr. H. had a rude mill put up with two beech wood rollers, and first cut 1,750 canes, which he supposed a fair sample of the patch. He says:—"The first 300 or 400 were passed through the mill twice, the remainder four times, and the yield was 194 quarts of juice. The juice was received in common tubs and tested by a thermometer, and a saccharometer with a scale of 40°. The thermometer stood in every instance at 78° F. The juice, when strained, was 110 in fresh-laid egg. I boiled it in a deep, old-fashioned 'cow-pot,' and, after six to seven hours' boiling, obtained 32 quarts of tolerable syrup. The next day I selected 10 canes, the heads of which were fully matured, 10 more in full milk, 10 more the heads of which were just fully developed and the top seed beginning to turn black, and again 10 comprising all these stages, but from which I did not strip the leaves. They were all passed through the mill seven times, and yielded nearly the same quantity of juice—about 3 quarts for every 10 canes. The juice, tested by the saccharometer, showed that the youngest cane had rather the most, and the oldest rather the least saccharine matter. The whole, together with that of a few other good canes, exhibited at 80° of the thermometer 24½° of the saccharometer. From 42 pints of the juice I obtained, after four hours' boiling, 9 pints of rather better syrup than that made the day before. In these boilings, I mixed with the cold juice about a tea-spoonful of lime-water, of the consistency of cream, for every 6 gallons."

Another experiment in boiling was made before several members of the Club, in which 37½ quarts of the juice—the yield of 800 canes—were put in the pot. Mr. H. says:—"With the thermometer at 85° in the juice, the saccharometer stood at 24½°; we boiled the juice until it ran together on the rim of the ladle and hung in a transparent sheet half an inch below it before falling. And this in two and a half hours. The result was 8 quarts of choice syrup. The next day I repeated the experiment on a larger scale, with equal success, and brought to the Club enough of the syrup to enable every member to try it and judge of its quality. All who tasted it agreed that it was equal to the best that we get from New Orleans. In these last boilings, I put a table-spoonful of lime-water, prepared as before, to every 10 gallons. The whole process of clarifying and boiling was carried through in the same pot, and that very unsuitable from its depth."

In our next we shall commence a record of the experiments of J. S. LOVING, of Philadelphia. Mr. L. would seem to have met with the most marked success of any of those who have yet endeavored to manufacture both syrup and sugar from the Sorghum, and the facts spread out in his report will doubtless prove of much value to all who are expecting their own fields shall hereafter furnish them with sweetness, as well as fatness.

TRANSFERRING BEES

Messrs. Eds.—In the *Rural* of July 24th, I noticed a communication from M. M. BALDWIN, in which he assumes to give the public some valuable information and advice "for the benefit of all concerned, and the 'Movable Comb Hive'—those selling it in particular. As I have been informed by Mr. LAKOTZKA's assignee that Mr. BALDWIN, or that family, have purchased the right for the 'Movable Comb Hive' for Niagara Co., and as five hundred or more of the 'Combination Hives' have been sold in that and Orleans Counties the past season, it has become necessary for them to make some bold and special effort to change the

WARREN'S PATENT PLOW—FIG. 1.

It affords us pleasure to present *Rural* readers the accompanying description and illustrations of an Improved Plow, invented by Mr. H. WARREN, of Penn Yan, N. Y., and patented on the 20th of July, 1858. We understand that this plow has been thoroughly tested by several of the best farmers in Yates, Steuben and other counties, who pronounce it a great improvement. It is apparently worthy the attention of the agricultural public, and we trust will prove alike creditable to the inventor and valuable to cultivators. The figures represent the several parts, and, with the following description by the inventor, will enable our readers to comprehend the improvement and its advantages:

"The beam is much improved over the beams heretofore in use. It is made lighter and longer, and the peculiar shape of the beam gives it much lateral strength, which makes the iron of a uniform toughness and consequently greater strength. A transverse section of the beam nearly resembles the letter S.

The union of the beam with the mold-board is an important point in this plow and is entirely new and very plain in construction. Figures 2, 3 and 4 clearly show how this union is made; and it may be seen that the beam extends downward and forms the landside portion of the plow. The forward part of this portion is fitted to the landside part of the mold-board in such manner that when the plow is drawn the joints are drawn more firmly together, so that if the bolts become loose the plow will keep its proper shape and not be in danger of being broken by careless plowmen. This method of forming the connection is as cheap as any of the

methods heretofore used, and is far superior to any other in practical utility.

The mold-board is a fine specimen of mechanical skill; it is simple and easy of construction, and its peculiar connection with the beam gives it strength and durability beyond any plow now in use. The share is fitted to the mold-board only, and is fitted ingeniously. It has a firm and unalterable place which much decreases the liability of breaking shares.

Figure 2 is an attachment for a wood beam; it may be put in the place of the iron beam when a wood one is preferred, and can be done without any alteration whatever, by simply removing the iron beam and substituting the wood in its place. This attachment and the wooden beam have the same effect on the mold-board. The attachment, and the iron beam also, rises up back being clogged. This arrangement is very important when large clover, stubble or coarse manure is to be plowed under. The whole construction and arrangement of the plow is well adapted to the manufacturer's wishes and to the wants of the farmer. The satisfaction and recommendations of the farmers who have used it, is a sufficient guaranty to the inventor and manufacturers to induce them to offer this Plow to the public or farmers in general, for no doubt now remains that it will give satisfaction when it is thoroughly tried by a practical farmer."

Further information relative to this improvement can be obtained by addressing WALTER WARREN, the inventor, or Messrs. WARREN & F. W. TOLLEY, the Proprietors, at Penn Yan, Yates Co., N. Y.

SECTIONAL PARTS OF WARREN'S PATENT PLOW.

current of public favor and patronage from the "Combination" to the "Movable Comb Hive." And it is evident, from the whole tenor of the article, that the object and intention of the writer was not so much to benefit "all concerned," as it was himself and others interested in selling the "Movable Comb Hive,"—and not so much to give instruction in regard to "transferring and driving bees," as it was to "transfer" public favor and patronage from the "Combination Hive" to the "Movable Comb Hive," and "drive" the "Combination Hive" out of their way. But we have no fears at all of the result where both hives have been introduced, and their merits are known.

In a former article of his on "Driving Bees," in the *Rural* of April 3d, he says:—"Having had considerable experience in driving, and having met with complete success, I will, without hesitancy, give, for the benefit of all concerned, the true *modus operandi*."—and in the closing sentence of the article says:—"The above instruction, if strictly followed, will insure success to the most ignorant bee-keeper." But now, after a period of about two months, he comes out in another article, and gravely cautions them to look well to their own interest before attempting to do what would "insure complete success" only a few weeks previous. Now, I would ask, what has wrought this wonderful change in his mind? Have been changed in their habits?—or has Mr. B. got astride a new hobby?—or interested in the "Movable Comb Hive?" Certainly he has not had sufficient time to test the matter so as to recommend it unqualifiedly as the most successful mode of managing bees. He says:—"Had I last year

known what losses I sustained by driving, I should have done quite differently; now, instead of driving, I transfer;" and given as his reasons for so doing, the great advantages derived by transferring the old combs and honey from the old to the new, and would have bee keepers believe the old combs to be just as good and healthy as new ones. And further, to support this theory and strengthen his case, he says that twenty pounds of honey is consumed by the bees in constructing sufficient combs to contain that amount of honey, and finally concludes, after several "suppositions," that five dollars at least is saved on each stock transferred, by transferring the old combs and honey to the new hive.

Now the writer may believe all of the foregoing "suppositions," and all that has been told him by those interested in that theory. For one, I must beg leave to differ with him on this, as well as on some other points. During twenty years practical experience and close observation—in which time I have transferred some two hundred stock, and have in many instances transferred the old comb into the new hive, to be used by the bees for brood combs—I have almost universally found them to do the best, and prove the most healthy and productive, when I have transferred only a portion of the old combs, (or such as contained eggs and unmatured brood), into the top boxes of the Combination Hive, to be removed as soon as the brood matures,—which will be in the course of twenty-one days—by which time the bees will have a good supply of new, healthy combs constructed in the main hive, much more to their liking than if transferred there by the most skillful theorist in the

universe. In my opinion, the only advantage derived from the old comb is in saving the eggs and unmatured brood, and the influence it has on the bees in acclimating them to their new home.

And the "supposition" that so much honey and time are consumed by the bees in constructing the comb, some may believe, but those who have had experience in bee-keeping and paid attention to the subject I think will know better. It is well known that a new swarm will often fill a hive with combs and honey to the amount of from fifty to seventy pounds, while the parent stock will not have increased in weight ten pounds, and often not five pounds. The main reason of this difference in their working is the fact that the old colony have a hive full of comb and young brood to attend to, which occupies a good share of their time, while the new swarm have nothing to do at the commencement but collect materials and construct combs and store them, but after the first two weeks they will not store honey or construct combs as rapidly, and I have found that transferred stocks operate very similar. If the old combs are transferred, it occupies a great share of their time in attending to them, and the bees very seldom work as well after being transferred with the combs as before, while a stock that is transferred and have only a small quantity of brood combs in the top box will work much more industriously than before.

But if Mr. B. has as much faith in his suppositions and theories as he would have others believe, and is as anxious to inform the public on practical facts as he has been to misinform them by misrepresenting facts, I am ready and willing to test the matter with him, to the satisfaction of all concerned, in the following manner, viz:—He may transfer into the "Movable Comb Hive" five, ten or fifteen stocks of bees, with thirty or forty pounds of old combs and honey,—the combs shall be not less than four years old, (as he contends old combs are as good as new),—and I will transfer into the Combination Hive the same number of stocks, of the same age, and quantity of bees—as near as may be,—and transfer only a portion of the old comb (or such as contains eggs and unmatured brood) into the top boxes. I will however reserve the privilege (if I choose to do so) of feeding to each stock in the Combination Hive the same amount of honey that he transfers into his. The hives shall all be placed in the care of responsible, disinterested persons, who shall do justice to all, and at the expiration of six months or one year they shall report a true statement of facts; and if in their opinion five dollars, or one half that amount is gained by transferring the old combs into the new hive, then Mr. B. shall be entitled to the Combination Hives and their contents; but if, in their opinion, that amount is not gained by transferring the old combs—then the "Movable Comb Hives" and their contents shall be forfeited to me.

Again, he is extremely anxious to inform the public of all the good qualities of the "Movable Comb Hive," and even exaggerates them, and is just as anxious to misrepresent and injure the reputation of the "Combination Hive." In referring to the latter, he says:—"There is a patent hive in this section" [and he might with truth say, more by the "Concealed vendors" [he might also say, by those using them] "to be just the thing needed, so that we can change the combs every year or so, and also informing the public that if the combs are not changed every year or two the bees will become dwarfs." In reply to the foregoing we will state, for "the benefit of all concerned," that we do not recommend changing the brood combs every year or two, or every third year, merely on account of the cells becoming too small; but there are other reasons why the health and prosperity of a stock of bees is benefited, and frequently a stock saved, by removing the old combs from them. For instance, where the combs have mildewed or become mouldy, or infested with moths, or contain a diseased brood. But this we do say:—The hive is just the thing for removing the old combs, or a portion of them, or of the honey stored in the lower part of the hive, just as often and whenever we think the health and prosperity of the colony and the interest of the owner requires it, whether it is every year, or only once in five years, and do it, too, without exposure to the bees or injury to them. We also say it is "just the thing" to accommodate either large or small families of bees with as much or as little space as they actually need, at any season of the year. We also state, for the benefit of Mr. B., that we will make him a handsome present if he will prove that the said sections, or anything as convenient and well arranged, and answering as good a purpose, was ever known, or used "long ere, or even after, "PHELPS was born,"—until devised and arranged by PHELPS himself. And we will further state, "for the benefit of all concerned," that we have a claim for a patent on the sections and dividers duly filed on record in the Patent Office, and that we have the opinion of competent judges that a patent will be issued on the same whenever I choose to have it examined; and whoever makes or uses the same without authority will do it at their peril.

Mr. B. also considers himself in duty bound to notify the public that the hive is just as good without "the Moth Trap." Now, Messrs. Editors, one of two things are certainly true. Mr. B. is either entirely ignorant of the operations and advantages of the "Moth Trap," and states that of which he has no means of knowing whether his statements are true or false; or, if he is acquainted with them, he knowingly and wilfully misrepresents them, for I am prepared to prove his statements false by hundreds who have used them.

Now, Messrs. Eds., I hope I may be pardoned for occupying so much space in the RURAL, and I should not have asked the favor or taken the trouble to reply, had the writer been fair and stated facts only; but this it appears he could not do and accomplish the object aimed at.

N. B.—I hope publishers of papers who copied the article referred to, will have the goodness to copy this also.

Elizabeth, New Jersey, 1888.

WALTER BARLEY, CULTURIST, PRODUCER, &c.—Very many readers of the RURAL are anxious to hear concerning the results of the past season's experiments with this cereal—who will respond on the points in which information is desired?

A HOME PICTURE.

ONCE I built a house just to my fancy, and—but let me describe it to you, and tell you all about it. I owned fifteen acres just about a mile from a flourishing village in Western New York, and just a convenient distance from the New York and Erie Railroad. My land was very productive, and well cultivated. I had a great variety of fruit. In my garden were several kinds of strawberries, raspberries, blackberries, grapes and currants. In the orchard the best of apples, good peaches, pears, plums, cherries, and, besides, we had a superior vegetable garden, and a small spot devoted to flowers, and flowering shrubs in our yard. For shade, we had several varieties of our native forest trees, maple, mountain ash, basswood, &c.

Beyond my orchard, was a nice pasture for the cow, who yielded us abundance of cream and milk, and some butter. I also kept two good horses, which could be driven singly or together, as we chose. I had a plain, double carriage, a single covered buggy, and a small democrat wagon for business purposes, or muddy roads.

Now for my house. It was built of brick—part of it two stories. It was not very large, but we had plenty of room, and used it all. It was not placed in the road, but back far enough to be out of the dust and noise of travel. On the front of the main building, was a hall, and our sitting-room. We had no parlor to keep shut and open it on grand occasions—we used the best room ourselves. Our friends always found us there, when we were at home. The sitting-room was well furnished, and made in every respect as pleasant as it well could be, adorned with kindly faces, and loving smiles. We had a sort of rule, not to carry sour or gloomy faces into that room. On one side of this room, and adjoining the hall, was a small room where we kept a few books, and contained a writing desk, table and lounge, pictures, &c. Beyond this was our family sleeping-room, large, airy, pleasant. In this room there was a fire-place, as there was in the sitting-room. Then there was a dining room and kitchen,—not the least important department, by any means. This room was specially arranged for convenience and ease in labor. There was a box made in the wall, half of it being in the wood-house, which could be filled with wood without carrying it by armfuls in the door. Inside there was a cover which could be kept down in cold weather. There was also plenty of water to be had without going out of the room. The cellar-door opened out of the kitchen, as all cellar-doors should, or else in a pantry.

Why do people pay so little attention to the arrangements of the kitchen? What most miserably contrived houses most people live in,—not for the want of means, but from the inconsiderate, thoughtlessness of the builders. We spend the most of our lives in houses, or women do, and yet how little expense and pains are taken, to make them attractive, and pleasant, and convenient.—And do we not all of us live out more than half our days, before we begin to think, and compare, and study into the whys and wherefores of existence, and see whether we are living to some end, and having the full measure of enjoyment which is our house, would you like a picture of its inhabitants? My wife wore a rosy, healthful, happy face, and my children loved and trusted us, and each other, so that we were all united, industrious, contented. I always want to have a happy wife and children, if any. Why not? I was the head of the household, held the means in my own power, and I considered myself responsible for the well-being and contentment of every person and creature, who, through my influence, shared my life. In all my arrangements for business or pleasure, I considered my family first. In the first place, I had taken care to marry a kind, reasonable, sensible woman, and I knew, well, that to consult her taste and happiness was to augment my own, and to neglect or forget her, was the worst policy I could pursue. I found the study of the natures and needs of my wife and children most interesting as well as profitable.—Neither did I neglect to attend faithfully to my business, but I endeavored to do my whole duty, and the consequence is, I am walking down to the grave blessed with affection, respect, and am, I trust, still a useful citizen.

Who else will give us a picture of their homes and lives?

THAT "GOOD YIELD OF WHEAT."

MESSRS. EDs.—I saw a statement in the RURAL of August 21st, relative to a very extraordinary crop of Mediterranean wheat, grown on the farm of Mr. LAFAVETTE PITCHARD, of Chili. I was faithful, but resolved to satisfy myself as to the correctness of the story. Accordingly, I was soon on the farm of Mr. P., and had an interview with the gentleman himself. I had the precaution to arm myself with the number of the RURAL in question. After a self introduction, I called his attention to the paragraph, asking him if the statement was correct, or an exaggeration. His reply was, that in the main, it was correct; though the amount of yield per acre, he thought would exceed your statement. After allowing for the waste in harvesting and threshing, he did not doubt a yield of over forty bushels per acre.

This is, indeed, a most abundant crop, particularly when we take into consideration the unproductive variety of the wheat. He informed me that it was carefully though liberally measured as it came from the separator, and I saw that it was unusually clean, and of a superior quality. There were twenty-four large, very large loads, when taken from the field. I examined the quality of the soil, and found it to be principally clay, interspersed with muck and gravel. It is a very level field—rather low, I think, for a winter crop. It had been summer-fallowed the previous season, and I think lightly manured. There have been several very fair crops of this kind of wheat raised in that vicinity. Mr. RICHARD HARRIS of this town had a fine yield of twenty-eight bushels per acre, the past season, of this same variety; though there is a slight mixture of the Blue Stem in it. It does not, however, detract from its quality in the least, but is decidedly an advantage as that variety has a fuller and plumper berry.

As these grades of wheat are the most hardy, and the least liable to the attack of the weevil or

midge, I think it is useless to sow any other, except, perhaps, on some dry sandy soil. If farmers in this section would continue to grow these hardy varieties, they may, in the course of a few years, become so acclimated or changed in quality, as to be nearly if not quite equal to the whiter varieties formerly raised in this region.

Ogden, N. Y., 1888.

NORTHERN ILLINOIS CORRESPONDENCE.

EDS. RURAL.—You have heard "hard times" until it has got to be a worn out story, I suppose, but it seems the West has cried "wolf, wolf," when it was nothing more than a harmless fox. Last year our fields waved with golden grain of a luxuriant growth, our barns were full and running over, and though there seemed to be a dark cloud hanging over the commercial horizon that sensibly affected the farmer, yet he could feel a kind of self complacency in thinking that at least Providence had smiled upon his efforts and bountifully supplied his immediate wants. But there is a marked contrast this year. The crops are very poor on the rich prairies of Illinois.

First, about the wheat crop in this section of the country. A variety known as the "Canada Club" has entirely failed. As it yielded more than any other kind last year, farmers put in a great share of it for the crop of the present season, thus proving that the experience of one year will not always be successful the next. Many fields of this variety stand unharvested—some farmers out down their fields then left it laying in the gavel—others have stacked the wheat, but it will not yield more than two bushels per acre—some pieces may yield more, but five bushels is the most we can expect of poor shrunk wheat. Another variety, but recently introduced, is from Wisconsin. I believe but one piece raised in this town has done well. It has a nice, plump berry, and probably will yield from fifteen to twenty bushels per acre. This variety is known as the "Scotch Club." Both of these varieties are bald. Another kind, known as the "Rio Grande" (bearded) has done well. Many pieces will yield twenty bushels per acre, but in comparison to the amount sown, there is little of this.—Another sort the "Italian" (also bearded) I hear has done well, but I have not examined it. These varieties are all spring wheat. But very little winter wheat is raised on the prairie. Old settlers say that when the prairies first began to be settled winter wheat did well, but about eleven years ago there was an entire failure of the crop, since which time the farmers have not succeeded in raising good crops. In the Barrens, winter wheat does much better, and spring wheat is much better this season than on the prairie.

Oats, which may be said to be one of the principal crops of Illinois, are a bad failure—some fields are worth nothing. One of my neighbors threshed out what he got off of twenty acres and he had twenty five bushels. Some fields are worse than this, and some much better, but I assure you the oat crop is a complete failure—worse than the farmers ever experienced before, and it makes some look blue. They had seen wheat, corn, and potatoes fail, yet the oat crop stood by them like a faithful friend.

Corn here will be quite good, considering the season, unless we have an unusually early frost, which many farmers are afraid of. We have already had a rumor of a frost south of us, but I cannot vouch for the truth of it. The potato crop would be tolerable if it were not for the rot which threatens to injure it badly. Grass seed is quite a common crop among the farmers here. I believe it is pretty good this year, but brings a low price, twelve shillings per bushel. Grass is generally heavy, but as we have had so much rain it has filled the sloughs full of water so we cannot cut the grass only on the margin. Hay will bring a good price next spring, especially if we have a hard winter, which many prophesy from certain indications that they think infallible.

There is not much rye sown by farmers in this section, but the little sown has done well.

Barley is light where raised, but little sown and that mostly in the Barrens.

The farmers here are almost universally in debt, and they are doomed to disappointment. Many have run in debt to store-keepers and the merchants tell them they must pay. "We are owing," say they, "large debts in New York and you know these New York folks wait neither for time nor tide—they must be paid or we shall be ruined. If you can't do any better you must mortgage our farm—we must have our pay." Alas, too many mortgaged their farms in prosperous times in order to buy more land, and are now paying heavy interest for money that lies deep in the soil. We all see the evil, and would gladly apply the remedy, but we all feel our own weakness in the present crisis, and our only hope lies in the Superintending Providence who does all things well. If mankind would only learn by experience not to place too much dependence on the future probability of things, there would be more hope in their case.

Barrington, Ill., 1888.

DRESSING DEER SKINS, ONCE MORE.

In reply to your correspondent's inquiry for the Indian mode of dressing skins, I give him the method, as learned me by a person that obtained it from the Indians. It is as follows:—Place the skins in a barrel of water, with a sufficient quantity of ashes to make a weak ley. Let them remain till the hair will come off easily by scraping with the graining knife, then grain them with the back of a shoe, butcher, or graining knife,—graining knife is the best. Where shoe or other knives are used, drive the edge of them into a round stick of sufficient length to handle easily,—use a Buckeye log or some soft wood to grain on. When done hang the skins up and let them dry till they are hard and flinty, then soak in brain water with a little soft soap added. Have the water about blood warm. After they become well softened, wring dry by folding the ends of the skin together around some solid post, take a stick and run through the other end to wring with, and wipe off any water with a cloth that may remain in the folds while wringing. After wringing, pull the wrinkles out by stretching with the hands,—place your skins (hang loose) in an old barrel or dry goods box over the extremity

of a covered trench of suitable dimensions, leaving sufficient space for the smoke to pass to the skins. A trench twelve or fifteen feet long is best, so as to allow the smoke to pass cool. Rotten wood or sawdust is best to smoke with,—smoke well for a day or two,—wash through brain water as before. Repeat the operation of braining and smoking three times and you will have well dressed leather. To prepare the brains for use, take sheep, beef or hog brains, place them on plates, and roast them gradually before a fire or in a stove oven till brown.—Hack them fine while roasting. They will keep for a year or two. In using, place them in a small bag of thin muslin so they will wash through in the water by rubbing.

DRESSING DEER SKINS IN OIL.—Grain the skins well,—put them into a mash of sour wheat bran; let them remain three or four days; take them out, wring and let them get about half dry, then put them in oil,—pound well, bulk them, covering from the air till they are done heating,—wash in pearl-ash water,—hang up and let dry and they are done.

JOHN P. LIVING.

Perry, Pike Co., Ill., Aug., 1888.

MESSRS. EDs.—I see in the RURAL that A. T. NORTHER, of Olego, N. Y., wants a recipe for dressing deer skins according to the Indian, or smoked method. I have one I will send. Soak the skin in cold or warm water until the hair will scrape off, then scrape the hair, and grain, wash in cold water until it is clean—stretch the skin and hang it up and smoke it for one day,—take the brains of a deer or hog, or any kind of brains, and mix them in warm water; soak the skin in the liquor half a day—if a heavy skin all day. If you have not brains, strong soap suds will do. Rub the skin a considerable time in the liquor. Stretch the skin and rub it until it is dry and soft, then make a bag of it, dig a hole in the ground and make a smoke therein. Place the bag over the hole—turn so as to smoke both sides alike. The longer you smoke the skin the darker it will be. Corn cobs are good to make the smoke with.

Port Huron, Mich., 1888.

CONDENSED CORRESPONDENCE.

A REMEDY FOR HEAVES.—S. HALL, of Auburn, N. Y., says that the following prescription is a sure cure for the heaves:—One half ounce each of aloes, assafetida, four of lavender, fenyceek, rose-water, salt petre, sarsaparilla, spirits of nitre, anise seed, camphor gum, and three-fourths of an ounce Spanish flies, all put into a jug containing one quart of alcohol. The quantity to be given is one tea-spoonful every other morning—give nine times.

GAROLING OIL AND SOAP LINIMENT.—S. A. S., of Cayuga Co., an English Veterinarian, says that a gargling oil made of equal parts of Soap Liniment, Oil of Spike and Tincture of Aloes, is superior to anything else for rheumatism, bruises, chilblains and burns in the human subject, and for swiney, inflammation, sprains and swellings in horses or cattle. He arrives at this conclusion after sixty years experience.

SOAP LINIMENT is made thus:—Alcohol 1 pint; clarified soap 3 ozs.; aqua ammonia 4 ozs., oil of camphor 4 ozs.; proof spirits 2 lbs.; tincture of aloes as alcohol will dissolve—spirits of rosemary 1 pint. Mix, cork tight, and place in a warm room for seven days before using.

PRODUCT OF A STALK OF MILLET.—Seeing nothing on the subject of the raising of millet, and fearing from that fact that there was not due attention paid to its cultivation, I thought that I would give the product of one plant which grew in my garden, and which received no extra culture. The plant was five feet and nine inches high, with a head eleven inches long, containing three thousand six hundred and ninety-eight good, well-filled seeds, besides many which were not filled. The failure of a portion of the seed filling was owing to the fact that the stalk was taken up while green and set in a shop with a small handful of earth round the roots, to ripen. This may look like a large story, but it is nevertheless true, by actual count.—A SUBSCRIBER, Geneva, N. Y., 1888.

CLEARING OLD FIELDS AND PASTURE LANDS.—Our way of exterminating sprouts from old fields and pasture lands, or where fences have stood for a long period, is as follows:—Remove the fence, cut the brush, briars, or whatever it may be, let them lie a short time, and burn them off. To make an end of them, take one or two yokes of oxen, as the case may require, put them to the plow, and lay the land over in the fall, turning under all of the roots if possible. Let it remain in this condition till spring; don't put on a spring crop, but harrow and plow, as you would for summer fallow, and sow to wheat, or rye if most suitable. This is our experience, and we speak whereof we know. Where oak, hickory, hazel, witch hazel, or bar-berry abounds, our theory, if carried out, will use them up.—J. W. KIRKENDALL, Painted Post, N. Y.

INQUIRIES AND ANSWERS.

CEMENT PIPE.—Will some of your readers give their experience in leading water through cement pipe? What proportions of lime, sand, &c., what the cost per rod, &c.—G. GRAVES, Newport, N. Y., Aug. 19, 1888.

FOR A NAME.—I herewith send you part of a head of something,—you will please tell what it is, as I never saw the like before. My brother-in-law sent it to me from Indiana; he said he had received some Italian wheat, which he sowed, and found this amongst it. He says the head grows from six to twelve inches long; the stalk also forks often, which will make it a great yielder.—CONSTANT READER, Benton Ridge, Aug., 1888.

REMARKS.—The specimen enclosed was a head of the Couch or Quack Grass, or some allied European species.

PARCHMENT.—I wish to inquire through your valuable paper, if you or any of your numerous subscribers, can inform me how to tan parchment, such as drum heads are made of, and whether there is any particular animal, the skin of which is made into parchment? By so doing, you will greatly oblige a subscriber.—S. Shelby, Orleans Co., 1888.

REMARKS.—Parchment is made of sheep and goat skins. As some of our readers are so well posted on the Indian process of tanning, they can no doubt give the process of making parchment.

Rural Miscellany.

GO TO THE FAIRS!—Now that the season has arrived for holding Town, District, County and State Agricultural Fairs, we would urge every friend and promoter of improvement in Agriculture, Horticulture, Manufactures, Arts, &c., to attend and contribute some product of his or her industry and skill to augment the variety and interest of the nearest exhibition, at least, and as many others as can be consistently attended. We regard the Town and County Fairs as the most useful and important, and worthy of the first attention; but the State exhibitions should not be neglected by those who can conveniently attend as competitors, or even as spectators only, for much can be seen and learned that will prove beneficial to practical and progressive men. All our Fairs should be more largely attended, not only by those who exhibit, but by people who need recreation and entertainment, as well as instruction. Our people have too few holidays. "All work and no play" is not best for either health or prosperity, and we therefore favor the idea of combining innocent amusement with the useful and instructive features of our shows, thus rendering them emphatically Rural Holidays—days of celebration and rejoicing as well as of exhibits of the best products of the skill and industry of the people. The Practical and Useful should have the preference, but the attractive and even amusing may properly be included in every programme.

THE POTATO CROP IN IRELAND.—The potato crop in Ireland promises well. A letter from Dublin, dated Aug. 13th, says:—"According to the competent authority of the Banner of Ulster, the breadth of land under potatoes this year in the northern counties will be found, perhaps, to exceed 1,250,000 acres. Last season's crop turned out well, ample in yield, and, as a general rule, excellent in quality. Prices kept up to a high figure, and the export trade in that article of produce formed a most extensive branch of cross channel commerce. This season's crop of the early varieties is very superior. We are now only in the second week of August, and yet the prices for excellent potatoes in the Belfast market are under those which at a similar period of the season ruled the markets before the advent of the potato disease. Some solitary cases of the old disease are to be seen in a few fields in the country; those instances, however, are so trifling as not to be worth any serious notice. The sale of superior qualities at 4d. a stone will give some idea of the healthy and prolific state of the crop."

WHEAT GROWING IN NEBRASKA.—The last number of the Nebraska News has an interesting item on the yield and best time for sowing winter wheat in that climate. As to the time of sowing, it says: "The testimony of those who were the most successful this season is, that the proper time is about the fifteenth of September,—not later than the twentieth. Mr. T. P. Hall, who lives on the Cottonwood, raised a fine field of fall wheat this season which was sown in the middle of September, and which he sowed in the middle of September. He also had another field which he sowed about ten days later, which gave a much poorer yield than the first, did not mature so well, and was more affected by the frost and rust. Mr. Grimsley, living on Allen creek, raised about forty acres of excellent fall wheat this season, which was sown the middle of September. Both these gentlemen will sow largely this fall, and not later than the fifteenth. From indications we should judge that there would be a much larger number of acres of wheat sown this fall than last."

THE STATE FAIR.—We understand that preparations are actively going on at Syracuse for the State Fair, to be held in that city Oct. 5th to 8th, inclusive. The buildings, fences, &c., are nearly completed, and are said to be superior to those heretofore used. It is also stated that the applications for exhibition are more numerous than ever before at so early a day. All which we trust will be fully verified, and that the forthcoming Fair will be creditable to the Society and worthy of the Empire State. The location is very favorable for a large attendance and exhibition of the people and products of the State.

THE AGRICULTURAL EDITORS propose to assemble in Convention during the meeting of the American Pomological Society, to be held in New York next week. Regret that the holding of Monroe Co. Fair at same time will preclude us from attending. The RURAL will, however, be represented by our Horticultural Editor, who attends the Pomological Meeting as a delegate from the State Ag. Society.

POTATO ROT IN RHODE ISLAND.—The Providence Journal says the rot is making bad havoc among the potato fields in Bristol county, Mass., and in Bristol county, R. I. Some of the farmers in the towns of Bristol, Warren and Barrington, will not average half a crop, while not a few will scarcely save enough, of some kinds, for seed for another year.

ANOTHER UNION AG. SOCIETY.—At a meeting of citizens of the towns of Sweden, Clarkson and Union, held at Brockport on the 4th inst., preliminary arrangements were made for the formation of a Union Agricultural Society. The meeting adjourned to the 18th, when the organization is to be completed. Success to the new Union Society!

ADDRESS AT THE STATE FAIR.—It affords us great pleasure to announce that Hon. JOSEPH R. WILLIAMS, President of the Michigan State Agricultural College, has accepted an invitation to deliver the Annual Address at the New York State Fair. An appropriate and admirable selection.

THE Public Sale of Short-horns, advertised in this number by Mr. CHAPMAN, is worthy the special attention of breeders and others wishing to procure fine stock. Our advertising department also contains many other announcements of interest to Agriculturists, Horticulturists and others.

MONROE COUNTY FAIR.—For Programme of this Fair, see notice on advertising page.

Ladies' Port-Folio.

SHE.

"Twas then, one holy hour of even,
I roamed the hill, the vale pursued,
To where the softest winds of heaven
Came down, and 'th' fair flow'rs wooed.
Where one low cot peeped from the trees,
And birdlings sang their notes of bliss,
I woke to joy in scenes like these—
To rapture in a woman's kiss.

One lovely cot, and there a face
Form'd to enrapture, enchant, enchain,
A witching form whose fairy grace
Sped lightning currents thro' my brain,
The pouting lips lit by a smile,
Whose beauty it were waste to miss;
The heart that held no thought of guile
Pure as incarnate virtue is.

Alone, with nature's glorious throng
Of leaves, and trees, and birds, and flowers,
Saw breath'd where forests make their song,
And sipped the sunshine of the hours.
A wild and wayward, careless boy,
I was a man by love's sweet test,
And plucked and ever wore the joy,
A diadem upon my breast.

And time has yearly left a leaf
Upon the brow of me and mine,
Till whiten'd as the harvest sheaf,
We calmly wait the final chime.
For she has gild'd all my day,
As years laid snow upon my brow;
Her smile has been the blissful ray
To make my heart as calm as now.

Watertown, N. Y., 1868. I. M. B.

Written for Moore's Rural New-Yorker.

EVENING THOUGHTS.

Now comes on again, and silence, and deep
thoughts and sacred memories. Now are here the
treasured images of the past, which fly from the
jostling crowd of cares and busy life's employ-
ment, and returning with the evening shadows, fit
a moment round in forms so lovely and so real,
that we forget they are but shadows with the rest;
and, as the heart, delighted, seeks to retain the
charm, a train of thought rises within, and they
are gone. For while the chill and darkness of
night prevail over the broad domain of day—from
the point where the new light first beamed in rosy
beauty, to that where its latest gleam expired—we
remember in fear the clouds which may darken
life's morning, the changes which may obscure its
meridian effulgence, and that night of death which
must at last so surely seal, in long eclipse, the
springing hopes and ever-forming schemes of man.

It is silence all; yet a voice holds eloquent con-
verse with the spirit. The winds seem hushed to
listen and the stars, in their high spheres, to sparkle
with a new consciousness of a glorious presence
as if He who "walked in the garden in the cool of
the day," now again more manifestly reveals Him-
self, scattering from the fair earth and sky, the
pollutions which day has gathered, and imparting
His new and tender tokens of His love.—A Father's
love! Humility then may bow the spirit down and
tears suffuse the eye; but not in grief. Like the
dews of evening they but testify that His purify-
ing breath has passed, and called them forth; for
in the secret chambers of the soul there is a song
of gladness waking, and a softly breathed petition
still repeated—"Thy will be done."

Then, thanks for the night, its silence filled with
spirit melodies—for its deep thoughts, which warn
us of uncertain joys, and chasten the too presum-
ing plans of life by remembrance of a certain
death! Thanks, too, for those welcome visitants
which come when the full tide of business and ex-
citement has subsided, briefly to restore the past,
and brighten the beautiful links which hold us to
each other; but, more than all, thanks for the
grace which, in the contemplation of earth's
changes, and clouds of gathering darkness, brings
submission and assurance from on high!

New York, 1868.

ANNA.

Written for Moore's Rural New-Yorker.

ONLY A DEWDROP.

Do you mark you pretty sparkler, poised so
gracefully on the extreme verge of the tiny velvet
blossom, which, beautiful as it is, bows its fair head
humbly as it wags to its bosom the glittering
atom, reflecting back from its polished surface, in
a thousand brilliant colors, the rays of the rising
"day god," and sinking at last gently back into
the soft embrace of its purple-browed wooer.—
Quick, ere it fades from our admiring gaze, let us
imprison the glittering gem, which, brighter than
diamond or pearl, seems to obscure for a time
even the pure loveliness of spring's floral beauties.
Only a dewdrop—it is gone, and we look in vain
for the glowing beauty that a moment since en-
chained our admiring vision.

Another gazed fervently, yet oh, how lovingly,
upon the tiny form of her heart's idol, and twining
her soft finger in the sunny luxuriance of curling
hair, echoed back from her over full heart the rich
melody of baby laughter, that, springing from
those small red lips, filled all the room with a bird-
like music, more beautiful to that mother's ear,
than the most labored productions of art. Yet
again, she bowed above that slight form, but not
as then, with joy and hope lightening up each
glance, for the baby limbs lie motionless in their
little bed, the sweet tones are hushed, and the blue-
veined lids fall gently over the dim eyes, but now
beaming with childish love and intelligence. Only
a dewdrop! Ah, mourning mother, hast thou not
faith to see that the budding beauty of thy babe
has, like the dewdrop, returned unspotted to the
heaven from which it was taken.

A youth sought eagerly the blushing honors of
the world, and with wealth, ambition, and love
showering their gifts upon his favored head, he
mild in his heart, I am content, when to death
came boldly into the sacred precincts of his house-
hold. One by one, its dear ones "slept beneath
the violets," and a lonely man sat in the elegant
luxuriance of his desolated home, mourning over
lost joys. Yet not here paused the destroyer, his
sawd passed from him like a dream, and again
tolling and alone, he braved the world. Only a
dewdrop. Wealth, worldly honors—are they not

like to the dewdrop, exceedingly beautiful for a
season, and then gone, and like the meteor, leaving
no trace, save in the half-dazzled memory? Love—
art thou not also like the dewdrop, for thou art not
alone of earth, and he who in this world loveth
much, shall in the world to come receive even as
he hath given, with interest.

CLARA.

Written for Moore's Rural New-Yorker.

HAVE YOU A HOME?

HOME! How do you interpret the word? It is
plain English—you have heard it all your life.
Home! How does it sound? What does it mean?
Is the place where you eat, and drink, and sleep,
your home? Is it the space enclosed within walls
of wood, or brick, or stone? Is it the land within
your fences? Is it—? Where is it? What is it?
Home! Beautiful, but oft misinterpreted word.
One may have food, and shelter, and raiment, and
yet have no home—for no earthly outward seem-
ing, has power to make any one spot more dear
than another.

Home is not always amid pomp, or within palae-
ces. It may be in the secluded valley, and within
a narrow hedge, or anywhere, if the hearts who
live and best there are full of love and kindness.

Home is where angry words and contentions,
jars and misunderstandings are banished—where
cruel, unkind words, cannot enter, to pierce and
break the heart, or drive sleep from the pillow—
where all is concord, unity, oneness of purpose.
Home, in short, is not alone in things, but its true
meaning is a heart we can lean upon and trust with
unlimited confidence. Home is not any one thing,
but a combination of excellencies.

Reader, if you have a place you call your own—
no matter how humble if it is clean and adorned
with the comforts of life—and the hearts there
welcome your footsteps with joy, to whom your
presence is a delight, your voice music, then you
have indeed a home, and your happiness is but
little less than that enjoyed by angels. HARRIS.

DESCRIPTION OF A FLIRT.

Yours true flirt has a coarse-grained soul; well
modulated and well tutored, but there is no fine-
ness in it. All its native fineness is made coarse,
by coarse efforts of the will. True feeling is a
rude vulgarly the flirt does not tolerate; she
counts its healthiest and most honest manifestation
all sentiment. Yet she will play you off a pretty
string of sentiment, which she has gathered from
the poets; she adjusts it prettily as a Gobelins
weaver adjusts the color in his *tapis*. She shades
it off delightfully; there are no bold contrasts, but
a most artistic mellow of nuances.

She smiles like a wizard, and jingles it with a
laugh, such as tolled the poor home-bound Ulysses
to the Circean bower. She has a cast of the head,
apt and artful as the most dexterous cast of the
best trout-killing rod. Her words sparkle and flow
hurriedly, and with the prettiest doubleness of
meaning. Naturalness she copies, and she scorns.
She accuses herself of a single expression or re-
her schooling. She measures her wit by the tri-
umphs of her art; she chuckles over her own fal-
sity to herself. And if by chance her soul—such
germ as is left of it—betrays her into untoward
confidence, she condemns herself, as if she had
committed crime.

She is always gay, because she has no depth of
feeling to be stirred. The brook that runs shallow
over a hard pebbly bottom always rustles. She is
light-hearted, because her heart floats in sparkle.
She counts on marriage, not as the great absorbent
of a heart's love and life, but as a happy, feasible
and orderly conventionality, to be played with, and
kept at a distance, and finally to be accepted as a
cover for the faint and tawdry sparkles of an old
and cherished heartlessness.

She will not pine under any regrets, because she
has no appreciation of any loss; she will not chafe
at indifference, because it is her art; she will not
be worried with jealousies, because she is ignorant
of love. With no conception of the soul in its
strength and fulness, she sees no lack of its de-
mands. A thrill she does not know; a passion she
cannot imagine; joy is a name; grief is another;
and life, with its crowding scenes of love and bit-
terness is a play upon the stage.—*Ed. Marvel.*

YOUNG LADIES.

ONE of the great social evils of this age is ad-
mitted to be the reluctance of our young men to
early marriages. They won't marry now, we are
told, as they used to do, and ought to do, on \$300
a year. Depend upon it, in many and many a case
it is not the odd hundred or two that is wanting—
it's the attraction. We have lost that joyous and
familiar intercourse between neighbors' families,
where young people's individualities had space
and opportunity to develop themselves, and heart
to heart. Our meddling Cupid has overstrung his
bow—his arrows don't hit home. Young ladies
hide away the key of their hearts so carefully that
nobody thinks it worth looking for. Who is to
choose "the one" out of a bery of proper-behaved
damsels like a row of hollyhocks, differing only in
height and shape and color? They all look alike,
dress alike, talk alike, and walk alike; and, for any-
thing that appears to the contrary, think alike and
feel alike. Why, such a choice is an act of delibe-
rate intention—matrimony pretense; few men have
the nerve to venture upon it. No wonder they cal-
culate the probable butchers' and bakers' bills be-
fore they take such a plunge as that. Don't fancy
that I talk like a cynical old bird, not to be caught
with chaff. I talk as the exponent of what my own
feelings would be if I were young, and open as I
once was to the conviction of bright eyes. There's
my nephew, Jack Hawthorne, not long home from
the Crimea, six feet one, independent, hairy as a
Skye terrier, brave as a lion, (claps for Alma and
Balaclava) gentle as a greyhound, and I should
say, impressive, decidedly. "What I missed most,"
said he, in his open-hearted, unabashed simplicity,
"was the sight of a woman's face." Whereupon I
spoke:—"I wonder, Jack, you don't marry; it
would make you a happier man than living half
your days in the smoking-room of the club. Why
not pick up a nice girl, and set up the family name
again at the old manor?" "Well, so I would,"
said Jack, interjectively between the puffs of his
cigar; "but there are no girls now—they're all
young ladies! Catch me marrying a young lady!"

THE ATLANTIC CABLE.

BY J. HENRIKSEN.

The Cable in its ocean bed
Where atoms forget to rave,
And howling winds refuse
To urge the curling wave,
Beneath the strife of power,
The tempest's racking breath,
Has hid him down to slumber
Unmindful of their wrath.

Upon a bed of coral,
In "amber-dropping caves,"
O'er shells of brightest lustre
Which sparkle through the waves;
Along the caverned niches
Its lengthened form is laid,
Where echo mocks the ringing
Of the shout of happy Naïad.

No prince of eastern nation,
Where "showers barbaric pearls,"
And gems and diamonds rival
The glance of dark-eyed girls,
Can boast a couch more rich,
With wealth from every shore,
Than the one in whose embrace
It rests for evermore.

Wrapped in a sleep magnetic—
(The spark which science caught
Falling from the altar of Heaven,
And kindled into thought—)
The strange mysterious wire,
Within its twisted coil,
Shall dream of the pride of nations,
Their honor and their toil.

Through each metallic fibre
Made vital by "the spark,"
The wishes of a world shall pass
Unerring to their mark;
And such shall be the dreaming,
The visions which shall rise
Like meteors swiftly darting
Athwart the midnight skies.

Nor yet unwatched its sleeping
Beneath the flashing foam,
A silent band of seamen
Are there to guard their own.
The mane of the British Lion
Is lifted by the tide,
And hearts of oak, now wasted,
Are scattered by its side.

Columbia's "Spangled Banner,"
Within its twining folds,
In an embrace of honor
Full many a sailor holds,
Whose arms of Saxon prowess
Once bailed it to the mast,
To proudly wave above them
For the glory of the West.

And when the smoke of battle
Had lifted from the deep,
And the sailor's slight grew dim,
And cold and white his cheek,
His quick ear caught the flapping
Of "the stripes" still floating high—
Would't they might 'er enfold him
And gladly would he die.

Such were the men who feared not,
The dauntless and the free,
Whose white bones guard the Cable
In the deep bed of the sea.
And though the soul which moved them
No longer holds its way,
The spirit that infused them
Still warm their kindred clay.

LAMP MUSINGS.

ALONE, in a thinly settled portion of the Great
West, with the "shades of night" closing around me;
I look out on my window, and see upon every
side the dim outline of the "forest trees," like a
dark green belt encircling the clearing. I strain
my eyes at every point, to discover an opening—a
view of the world beyond—but I fail, save in one
place, (the road,) and even there the lines of per-
spective close so suddenly, that I would rather not
see them at all. Alone did I say?—not quite. It
is true that the shades have deepened into darker
hues—that the trees have grown more dim—that
the range of my vision has become smaller, and
that I have lit my evening lamp. Still, I am not
alone.

Out among the moon-lit trees—where the
shadows play with the young oaks—the wild deer
pauses in his course, to look with the earnest gaze
of his large hazel eyes, on the light of my lamp.
Then, the quiet stars twinkling in the blue sky,
just as they did above my City Home; and the
moon shines just as brightly as in other lands.
But there are other companions. In the large
oaks beside the gate, industrious insects contin-
ually assert that "Katy did," and that "Katy did-
n't," break some unfortunate bottle. And down
in the pond—among the green grass, and upon
the "wind-stirred" leaves—a thousand "voices of
the night" are swelling the chorus of Nature's
grand anthem. Splendid songs they sing! Songs
of gratitude—songs of love to the Summer Queen.

I must look again at the moon. How calmly
she sits in her car of white clouds, and how peace-
fully she glides along the blue path o'er which her
regal consort walked throughout the long hours
of the day. How my mind reverts to the hours of
my childhood, when my young eyes never grew
tired of gazing at the "big round moon." I had a
theory about her, that "have since looked on as
quite imaginary. I thought that when good
people died, they went directly to the moon; and
I fancied that it must be a very happy home, and
that those who were there ought to feel very con-
tented. They could sit along in the "stilly night,"
among beautiful clouds, with a thousand pale stars
to light their happy homes. No scorching heat to
distress them—no uncertainty of wind or weather.
I had read of comets, and thought how splendid
they appeared from the moon, and often (in my
courageous moments) have I longed to be there,
that I might see the great fiery things rushing
along through the burning air, swift as the light-
ning's flash, and terrible as a thunderbolt. When
my little sister died, and they laid her long golden
ringlets among the white drapery of the coffin, I
felt more sorrow than I could express; but I com-
forted myself with the thought, that when the
moon above she would look down upon me, and

that she would be very happy in her "Home of
Light." So I looked upon the "Queen of Night,"
with feelings of love. Ah, me! these childish
fancies are, after all, more sensible than some of
the theories of our maturer years.

There is a Whip-poor-Will. The little fellow has
"planted himself," (I wish that he would grow
there,) directly beneath my window. How ener-
getically he emphasises the "Will." I like some
birds more than others—this one especially. He
has such a prompt, business-like way of announc-
ing the fact that Poor Will must be whipped. But
I hate the black buzzards that live about this place.
They seem to me like uneasy spirits, clothed in
dark forms, and hung in the air above us, to cast
shadows upon the green earth beneath. It may
appear strange, but I think that the Creator of the
Universe has set apart some birds for the especial
purpose of singing for him. For instance, yester-
day I rose early. The stars were still shining, but
dimly. Through the chambers of the east came
the messenger, light. With a quick hand he
kindled the morning fire, and soon they began to
burn. At first, with a pale light that trembled for
existence in every breath of air; then with in-
creased brightness, until the stars were pale, and
the crimson flowers burst through the long line of
waving clouds. The sun was rising, and another
day was dawning. On the top of a tall tree sat one
of these favored birds. With his head turned to
the east, he gave to the morning air notes that
came as clear and distinct as the finest trillings of
a flute. At first they rose firm and loud, until his
little throat seemed to tremble with the volume of
sound—then they changed to a gentle whispering
of sweetest melody. Could any other bird equal
the exquisite variations of that song? Did not
his Creator compose the music of that piece?—
Was he not chanting a sweet anthem in accordance
with the will of the King of Kings?

Well, I must stop writing. The night is waning.
My lamp has begun to burn low, and its light
trembles like the hopes and fears of my day life.
These things are but the types and shadows of
greater realities, and nights and days are but
sundered links of the chain of life. More anon

THE POETRY OF THE PRESENT.

WE beg leave to differ with J. WHITMAN S.,
of Lima, in endeavoring to support the theory
that, for the present, the time of sublime poetry
and immortal names has passed. Indeed, there
was a time when darkness shrouded a living world,
and there reigned a night, entirely incompatible
with the nature of man. The necessities of a race
of progressive beings called for energetic, spirit-
stirring men, and they arose. Long pent-up light
burst the bonds that held in darkness the windows
of the soul, till, with the rapidity of that ethereal
substance, it covered the whole earth, and now is
shining forth as the noonday sun. Those days
called for great men, and the same raised them up.
In days when history was chronicled only in
traditional song, lived HOMER and OSSIAN—their
lives veiled in obscurity. Coming down to the
find him engaged in the cause of his country (the
defence of the English people) with an enthusiasm
which cost him the sacrifice of sight, shutting out
the glare of a dazzling world, and leaving the
mighty poet to mature within himself those won-
derful powers of conception and imagination
which, at the last, worked out that one great effort
of his genius,—Paradise Lost.

In the first place, the world has settled down
into a state of comparative security. Light has
struggled and conquered. It has ushered in the
noon of time. The days that tried men's souls
have passed away. The present state of things
does not demand the giant minds that did the days
of old, and adequate to the wants will be the
strength of man.

Again, the world has been blessed with master-
pieces of genius, which may be equalled but never
excelled. They have borne away the crown. The
idea prevails that, like other things, poetry must
progress in grandeur and sublimity; therefore the
expectations of man are excited to something
higher and better than the world has yet produced.
That of equal merit must fall below its intrinsic
worth.

In the third place, the great and wonderful
poems that have descended to us shine like so
many suns to illuminate the literary world, and
the light is sufficient. Within their angles of light
all our efforts appear mean and useless.

If we attempt to delineate the beauties of the
Sacred Scriptures, Milton's "Paradise Lost" is
before us; our pen drops from our grasp, and we
relinquish the effort. We attempt to enshrine on
the tablet of poetry the daring deeds of Roman
heroes, but SHAKESPEARE, in "Julius Cæsar," has
so graphically described the scene that we despair
of doing justice to our task. If we would pro-
nounce an eulogy upon the trials and noble perse-
verance of a native forefather, a MRS. HEMANS
has beautifully told it all in her "Landing of the
Pilgrims." The eternal seasons still roll on in
their unalterable courses, but THOMPSON has said
sufficient. If we could sing of the uncertain
future, ALFRED THOMPSON has sweetly sung of
what the world will.

"When the ye, have passed away,"
There may be a poetry: the future, but little of
the present. JAMES E. H.

BOOKS—Books are the voices of the distant and
the dead. Books are the true travelers. They give
to all who will faithfully use them, the presence
of the best of all that the society and the
race. No matter how poor I am, the greatest of our
the prosperous of my own time will matter tho'
obscure dwelling. If learned men and enterprising
up their abode under my roof—I Milton will take
my threshold to sing to me of Paradise; and thus
pears opens to me the worlds of imagination, and
Franklin the workings of the human heart; and Franklin
enriches me with his practical wisdom—I shall not
pine for want of intellectual companionship, and I
may become a cultivated man, though excluded
from what is called the best society in the place I
live.—*North and South.*

SECOND thoughts are the adopted children of
experience.

Sabbath Musings.

Written for Moore's Rural New-Yorker.

I HEAR THEM CALLING.

THE great and good who have had their birth
In the olden time gone by,
Have passed away from the sordid earth
And dwell with the blest on high.
But oft when the shades of eve are falling
From their starry home above,
I seem to hear them calling, calling,
In the sweet accents of Love.

They beckon me to follow them,
And hold up to my sight
A sparkling, beauteous diadem
And robe of shining white;
And when the shades of eve are falling
From their starry home above,
I seem to hear them calling, calling,
In the sweet accents of Love.

They tell me that time's work below
Nobly performed must be,
If I would eat the fruits that grow
On life's immortal tree.
Thus when the shades of eve are falling
From their starry home above,
I seem to hear them calling, calling,
In the sweet accents of Love.

Sandstone, Mich., 1868. ANNIE L.

Written for Moore's Rural New-Yorker.

WATCH AND PRAY.

MARINER on life's tumultuous sea, go watch and
pray. Though the blest boon of health be thine,
and thy prospect of life fair, thou knowest not how
soon thy pulse may cease its beating, and thy form
be laid lifeless and cold in the grave. Then, while
life still remains, put aside the vanities of earth
and lay thy treasure up above, "where neither moth
nor rust doth corrupt, and where thieves do not
break through nor steal." Go watch and pray.
Thou canst not know how soon thine hour will
come. The bell that is now tolling for a fellow-
mortal, may next toll its notes for thee. Thy life
hangs on a brittle thread, which may be broken by
a word from Him who giveth these breaths. This
day may be thy last—at thou ready to go at the
call of Death? Watch and pray, for soon thou
mayest be summoned to meet thy God.

And thou, gentle youth, whose little bark has
been launched so short a time, hast need to watch
and pray. Art thou still free from care? Are
hopes' fair visions spread before thine eyes? Do
thy pulse beat strong? Does life's sea seem
to be ever tranquil? Watch and pray. Thou
needest a strong arm to guide thy fall vessel, when
tempests rise, and the waves of sorrow roll. Pray
to Him who "heareth the young ravens when they
cry," and he will guide thee to the "Haven of
rest." Though all appears bright now, it will soon
change. Storms will arise, and the rough winds
rudely blow, and thou wilt be tossed to and fro
upon the billows. But if thou dost pray for his
guidance, thy Heavenly Father will watch over
thee through all changes. When temptations are
thick around thee, set up thy voice in prayer to
Him, and thou wilt have strength given thee suf-
ficient for thine utmost need. When God protects,
Satan cannot harm thee. Then watch and pray
through life's fleeting hour.

And thou, too, aged man, whose race is almost
run, dost thou watch and pray? The bloom of
youth has left thy cheek, thine eye is growing dim,
thy footsteps are slow and feeble, thou art tottering
on the verge of the tomb. Dost thou not need
some hand to lead thee through the "Dark Valley?"
Soon thy Master will call thee home. Can't thou
be led astray by false hopes of life? Nay, thou
knowest thine hour is near. Then go, weary pil-
grim, watch and pray. Thy SAVIOUR waits for
thee. Angels stand just on the other side of the
river, to guide thee to mansions fair. Then watch
and pray, that thou mayest be ready.

Inhabitants of earth, ye all have need to watch
and pray. The youth and the middle aged, as well
as the aged. None of ye have strength of your
own, to battle with temptations that are daily be-
setting. But there is One who will strengthen, if
ye will watch over your ways, and pray for that
guidance and help ye so much need. G. C. L.

Cottage Home, N. Y., 1868.

THE CLOSET.

No Christian can be comfortable or prosperous
without retirement. Popular ministers may preach,
converse, or pray in public, to the edifying of
others, and yet decline in their own souls for want
of examination, humiliation, and secret prayer,
suited immediately to their own case. Nay, the
most able ministers will generally cease to be very
useful if their religion is neglected, or hurried over
in a formal manner. This the fervent Christian
knows. He will, therefore, redeem time for retire-
ment at the expense of many inconveniences: and
the friends of popular ministers should remember
this, and not too much intrude upon the regular
needful hours for retirement of those persons in
whose company they most delight. In prosecut-
ing the word of God, our own inclinations must be
thwarted, we must not "spend our time" when
when duty call us another way, or with a pros-
pect is before us of doing essential good.—*Scott.*

THE OMNIPRESENCE OF GOD.—Lord, if thou art
not present, where shall I seek thee absent? If
everywhere, why do I not see thee present? thou
dwellst in light inaccessible; and where is that
inaccessible light? or how shall I have access to
light inaccessible? I beseech thee, Lord, teach
me to seek thee, and show thyself to the seeker;
because I can neither seek thee, unless thou teach
me; nor find thee, unless thou show thyself to me;
let me seek thee in desiring thee, and desire thee in
seeking thee; let me find thee in loving thee, and
love thee in finding thee.—*Arnselm.*

THE MINISTRY.—The office of the ministry re-
quires one, whom no prejudice, enmity, or gift,
who can divert from the path of rectitude,
to prove in labor, and whose whole desire is

SEEKING AN-
lag whom I sought.—The longer I was find-
him being found.—*ve earnestly I beheld*

The Traveler.

Written for Moore's Rural New-Yorker.
Sketches from the Alps to the Adriatic.

NUMBER THREE.

Distances among Mountains—Salt Mines of Hall—Ascent to the Mines—Scenery—Walking into the Mountain—Manner of Working the Mines—Fries of Labor—Hall.

I LEFT Innsbruck early one morning for the village of Hall, which is situated six miles further down the valley of the Inn. The road on the left bank of the river is level, and leads between rows of apple and cherry trees. The bottom land of the valley is about three miles wide—forests and pastures extend part way up the mountain sides, but the extreme summits are barren rocks. I must say a word about distances, which among high mountains are very deceiving to the unpracticed traveler. The distance between Hall and Innsbruck does not appear to me to be one-third of what it really is,—the three miles across the valley seemed not more than a rifle shot. But I was the most surprised on learning that it was five hours of hard walking to the top of the mountains, north of Innsbruck. If one looked straight to their summits, without taking notice of the intervening slopes, they appeared scarcely a mile distant. Perhaps you are walking towards a precipice, in which you believe you can see every cleft and shadow, and you think in ten or fifteen minutes to reach its bottom. If you are unpracticed in judging distances amid such situations, you will probably find, after walking steadily for an hour, that the space then remaining to be traversed, will require ten or fifteen minutes to accomplish.

I arrived in Hall at eight o'clock, and going to the *Gasthaus zu den Bären*, (Hotel to the bear,) ate my breakfast of coffee and bread with the keenest appetite, which the morning air and the six miles walk had given. Leaving my knapsack at the Inn, I put a lunch of bread and ham in my pocket, and started for the Salt Mines, which are up among the mountains, and six miles distant from Hall. The road ascends gradually for the first half hour, and exhibits interesting views of the valley. Innsbruck and the Castle Ambras seemed close by. Across the valley, pastures, intermingled with forests, extended up the mountain slopes, until they met the line of bleak rocks. The sun shone hot, obliging me to pull off my coat, and it seemed odd to feel a heat intense enough to make Indian corn grow rapidly, and yet see snow. When the road enters the narrow gorge among the mountains, it ascends steeper than before. On both sides are perpendicular, craggy precipices of rock many hundred feet high, and they stand so near together that in some places the sunshine can scarcely enter. The pass, for a considerable distance, is so narrow that when the sun shines on it sideways, the shadows darken the bottom. A large torrent roars down the gorge, broken into masses of foam by heaps of rocks that lie in its bed. Higher up, the valley becomes wider and greener, and there are many trees, and even small pastures.

After two hours walk, I came to several low buildings, standing some distance from one another, and surrounded by patches of snow. All around rose rocky peaks many hundred feet high. They looked as if inaccessible to the foot of man, and heaps of snow lay in the hollows of the rocks. There were no signs of life round about, and I climbed to the highest building, and then crossed a ridge into another valley, without finding any body to give me information about the mines.—Seeing that I was going in the wrong direction, I retraced my steps, and met a couple of laborers, who told me where I could find a guide. Entered a room in which two or three men were sitting, one of whom promised to accompany me. Before going, I drank a glass of beer, and disposed of the lunch I had brought along. I then put on a jacket, a leather cap, apron, and belt, and taking a heavy, iron-pointed staff, followed my guide into one of the low buildings that leaned against the steep acclivity. About the entrance lay a vast heap of snow, which was part of an avalanche that had shot down from the peak above, during the previous winter, and buried the building.

Unlocking a door, we entered a gallery which runs horizontally into the mountains. It is about six feet high, two feet broad at the top, and three and a half at the bottom. The broad shoulders of my guide, who went in advance with his lamp, almost touched both sides. The sides and top of the gallery are strengthened in some places by props and beams, but for the most part there is nothing but the soft rock. This presses in slowly, and the galleries have to be enlarged every few years.—Even the beams will not resist this pressure, and they bend inwards so that the narrowest part of the gallery is often half-way between the top and bottom. I did not learn the exact length of the main galleries,—the guide did not know,—but I am sure we followed one between two and three miles. There was no descent for the gallery is horizontal. The air was cool and damp, and the guide informed me that it held the same temperature both in summer and in winter. There are eight levels in the mine, and the galleries on each run horizontal. After walking a few minutes along this narrow passage, directly into the heart of the mountain, crystals of white and red salt began to glitter in the rock, which increased in quantity as we proceeded. There is but little solid salt procured in this mine, for it is mixed with a much larger proportion of earth and soft rock.

The method of obtaining the salt from the earth is simple and very effective. We entered a room excavated in the soft rock with which the salt is intermixed. The room was about six feet high, and contained, the guide said, sixty thousand cubic feet. By means of a set of pipes, this room could be filled with pure water, which, by remaining a few weeks, becomes strongly impregnated with salt. It is then let out by another set of pipes and carried through them down the valley to Hall, where it is evaporated. After the room has thus been filled with water two or three times, or until all the salt which its sides contain is exhausted, it is elevated into fresh earth by shoveling down the roof, and depositing the loosened earth on the bottom, so that when six feet of the roof are taken

away, six feet are added to the floor, and the height remains the same, though the space is in fresh earth. The room is thus filled with water, until the saline matter which it contains is removed, after which it is again raised. This method requires the aid of but little machinery. The water comes in great plenty from springs higher up on the mountains than the mines. The guide told me that three hundred and fifty laborers were employed, and that the lowest price paid for six hours labor is six cents, and the highest, twenty cents. The mine has been worked several hundred years. In one large room is a lake, made for the amusement of visitors. My guide lit several tapers, and then we entered a boat, which he poled to an island in the middle. The island is covered with images of the spirits which were supposed to haunt mines, and in that singular place looked weird enough. The water of the lake was clear as crystal, and perfectly salt.

I returned to Hall time enough to wander about the town an hour or two before dark. It contains six thousand inhabitants, and one sees more of the peculiar customs of the Tyrol, than in Innsbruck. What struck me most was the number of projecting windows that hang over the pavements. People can sit in them and have long views in the street on both sides. This manner of building windows is very common in all old German towns, but here it seemed to be carried to a greater extent than usual.

G. F. W.

THE DEAD SEA.

It is not mere fancy that has clothed the Dead Sea in gloom. The desolate shores, with scarcely a green thing in sight, and scattered over with black stones and ragged drift-wood, form a fitting frame for the dark sluggish waters, covered with a perpetual mist, and breaking in slow, heavy, sepulchral-toned waves upon the beach. It seems as if yet the smoke of the wicked cities was ascending up to heaven, and as if the moan of their fearful sorrow would never leave that God-smitten valley. It is a strange thing to see those waves, not dancing along and sparkling in the sun, as other waves do, but moving with measured melancholy, and sending to the ear, as they break languidly upon the rock, only doleful sounds. This is, no doubt, owing to the great heaviness of the water, a fact well known, and which we amply verified in the usual way, for on attempting to swim, we went floating about like empty casks. This experiment was more satisfactory in its progress than in its results, which were a very unctuous skin, and a most pestiferous stinging of every nerve, as if we had been flagrantly beaten with nettles. Nor was the water we took into our mouths a whit less vile than the most nauseous drugs of the apothecary. That fish cannot live in this strong solution of bitumen and salt, is too obvious to need proof; but to say that birds cannot fly over it and live, is one of the exaggerations of travelers, who perhaps were not, like ourselves, so fortunate as to see a flock of ducks quietly reposing on the water in apparently perfect health. And yet this was all the life we did see. The whole valley was one seething cauldron, under more than a tropical sun. God-forsaken and man-forsaken, no green thing grows within it, and it remains to this day as striking a monument of God's fearful judgments, as when the fire from heaven devoured the mighty cities of the plain.—*Correspondence of the Presbyterian.*

OUR CHANGING CLIMATE.

The following beautiful passage by Washington Irving might almost make a March day cheerful: "Here let us say a word in favor of those vicissitudes of our climate, which are too often made the subject of exclusive repining. If they annoy us occasionally by changes from hot to cold, from wet to dry, they give us one of the most beautiful climates in the world. They give us the brilliant sunshine of the South of Europe, with the fresh verdure of the North. They float our summer sky with gorgeous tints of fleecy whiteness, and send down cooling showers to refresh the panting earth and keep it green. Our seasons are full of sublimity and beauty."

Winter with us hath none of its proverbial gloom. It may have its howling winds and chilling frosts, and whirling snow storms; but it has also its long intervals of cloudless sunshine, when the snow-clad earth gives redoubled brightness to the day, when at night the stars beam with intense lustre, or the moon floods the whole landscape with her most limpid radiance. And the joyous outbreak of our Spring, bursting at once into leaf and blossom, redundant with vegetation, and vociferous with life and the splendor of summer—its morning voluptuousness and evening glory—its airy palaces of sunlit clouds piled up in a deep azure sky; and its gusts of tempests of almost tropical grandeur, when the forked lightning and bellowing thunder-volley from the battlements of heaven shake the sultry atmosphere; and the sublime melancholy of our Autumn, magnificent in its decay, withering down the pomp of a woodland country, yet reflecting back from its yellow forests the golden serenity of the sky. Truly we may say that in our climate, "The heavens declare the glory of God, and the firmament sheweth his handiwork. Day unto day uttereth speech, and night unto night sheweth knowledge."

ARAB PROVERBS.—If your friend is made of honey do not eat him all up. If you travel through the country of the blind, be blind yourself. When you are the anvil have patience; when you are the hammer, strike straight and well. He who cannot take a hint, cannot comprehend a long explanation. Take counsel of one greater and one less than yourself, and afterward from your own opinion.

HAPPINESS EVER DISTANT.—Youth beholds happiness gleaming in the prospect. Age looks back on the happiness of youth; and, instead of hopes, seeks its enjoyment in the recollection of hopes. Thus happiness ever resides in the imagination.—*Coleridge.*

QUARRELLOUS people are always ready to forgive themselves; but are very unwilling to pardon others. An honest man, and one who loves and follows peace, however, is always more ready to forgive others than himself.

ALABAMA.

MISSISSIPPI.

SEALS OF THE STATES.—NO. XXIII AND XXIV.

ALABAMA, one of the Southern States, is situated between 30° 10' and 35 north latitude, and 85° and 88° 30' west longitude. Alabama was originally included in the territorial limits of Georgia, except a portion which belonged to Florida. In 1802 Georgia ceded all her territory west of Chattahoochee river to the Mississippi to the United States, and in 1817 it constituted the Mississippi Territory. Alabama constituted a portion of this territory until it was admitted into the Union, and became an independent State in 1820. The population in 1800 was only 2,000, and in 1850, 771,671. The masses are divided into, whites, 426,507; free colored, 2,272; slaves, 342,892.

The surface of this State exhibits much variety,—bordering the shore of the Gulf of Mexico, and for some distance interior it is low, level, soil sandy, and the prevailing timber pine. The central portion is undulating, with a deep rich, and productive soil, especially on the margin of the streams. Approaching the north, it rises into a hilly region, and in the north-east corner of the State it becomes mountainous, caused by the southern termination of the Alleghany ridge. The climate, varying from the south to the north part of the State, is favorable for the production of its great staples—cotton, rice, sugar, sweet potatoes, and Indian corn, and in the middle and northern part, wheat and other cereals. Alabama has great mineral resources; the entire middle region is underlain by bituminous coal, and deposits of iron ore, and in different localities throughout the State, are lead ore, manganese, limestone, marble, &c.; in the north-east gold mines have been worked with some success.

The Executive power is vested in a Governor, who is elected biennially by the people. The Legislative power consists of a Senate and House of Representatives; the Senate consists of thirty-three members, elected for four years, one-half going out every two years; and the representatives number one hundred, elected for two years. The legislature meets biennially in Montgomery, on the second Tuesday in November. The judges of the Supreme Court and the chancellors are elected by the joint vote of the two branches of the legislature for a period of six years. The right of suffrage is possessed by every white male citizen of twenty-one years of age, who has resided within the State one year immediately preceding an election, and the last three months within the county, city, or town in which he offers his vote.

FRICTION MATCHES.

The truth of that trite old maxim, "All that glitters is not gold," is exemplified in reference to new inventions in mechanism and science, as well as the other phases of life to which it was originally designed to be applied. The Boston Herald, in turning over the pages of the Encyclopedia of Commerce, just published, remarks that many of the most important things in commerce are likely to be overlooked in the broad, comprehensive and magnificent examinations usually given to such matters.

In the same manner, inventions of the greatest importance for domestic purposes are frequently overlooked and unnoticed in their homely attire, when placed on exhibition and surrounded by works of polished art, costly machinery and gorgeous furniture, although of less actual worth and benefit. A humble inventor once placed in such an exhibition a few bunches of friction matches, which were unnoticed by those who passed. Visitors went there looking for some great thing, not realizing that the despised package of splints tipped with chemical fire was the greatest thing in that proud collection, destined to work a revolution in the means of procuring artificial light, and to become a universal necessity, to be deprived of which would be one of the greatest inconveniences that could happen. It is not more than twenty years since the tinder-box was in universal use; but it is abolished now, and its place taken by this simple, cheap and certain method of obtaining light. The introduction of friction matches spread slowly; but who now would like to do without them? Rafts of timber are annually cut up for this purpose.

PHYSICAL CULTURE.—"The fact is, children are sent to school too young. They are compelled to study too many hours, and too many things.—Teachers can do much—very much to eradicate these evils, by encouraging their pupils to exercise in the open air, and, if need be, joining with them in their sports. On a pleasant day no child should be allowed to remain in the school-room during the time set apart for exercise, neither should they be confined to close study for two or three hours at a time. I am persuaded that there exists no subject at the present time, in school matters, which has more urgent need of the attention of both teachers and parents than this of physical culture."—*Cranston (R. I.) School Report.*

SHOWY FUNERALS.—The trappings of the defunct are but the outward dressings of the pride of the living; the undertaker, in all his melancholy pomp, his dingy bravery, waits upon the quick, and not the dead.

The faculty of imagination is the great spring of human activity, and the principal source of human improvement.

MISSISSIPPI, also one of the southern United States, is situated between 30° 10' and lat. 35° N. and between 86° 30' and 91° 35' W. lon. It is 339 miles long from north to south, and 150 broad, containing 47,151 square miles. Population in 1816 was 45,929; and in 1850, 608,555.

The southern part of the State, for about 100 miles from the Gulf of Mexico, is mostly a sandy level pine forest, interspersed with cypress swamps, open prairies, and inundated marshes, and a few hills of a moderate elevation. This region is generally healthy, and by cultivation produces cotton, Indian corn, sugar, indigo, &c. As you proceed farther north, the country becomes more elevated and agreeably diversified, and the soil is a deep rich mould, producing abundantly cotton, Indian corn, sweet potatoes, indigo, peaches, melons, and grapes. The natural growth of timber consists of poplar, hickory, black walnut, sugar maple, cotton wood, magnolia, lime, and sassafras. The country in the north of the State is healthy and productive, and the lands watered by the Yazoo, in the north-west are very fertile.

The Governor is elected by the people for a term of two years, and cannot hold the office more than four years out of six, and in case of his death, resignation, or other inability, it is provided that the President of the Senate shall perform the duties of Governor until another shall be duly qualified. The Senators are elected for four years, one-half of the number being chosen biennially. There cannot be less than one-fourth, nor more than one-third of the whole number of Representatives. The Representatives are elected biennially, on the first Monday and day following in November, and each county is entitled to one member. The Legislature meets biennially at Jackson on the first Monday in January. Every free white male citizen of the United States, 21 years of age, and who has resided in the State one year next preceding the election, and four months in the county, city or town in which he offers his vote, is deemed a qualified voter. The High Court of Errors and Appeals consists of three Judges, elected for a term of six years,—one is chosen biennially.

In 1716 the French formed a settlement where the city of Natchez now stands. This colony was afterwards destroyed by the Indians in the vicinity. In 1763 the territory was ceded to Great Britain. In 1817 it was admitted into the Union as an independent State. The original constitution was formed in 1817, and revised in 1832.

Answer to Problem:—19 sheep, 1 lamb—\$2 for sheep, \$1 25 for lamb.
NEVER ridicule what you cannot comprehend; you thereby betray your own ignorance.

The Young Ruralist.

THE DIGNITY OF LABOR.

In some classes of society labor is considered as very degrading. They suppose it renders them coarse and vulgar.

God has commanded that man shall obtain "his bread by the sweat of his brow," and "he that will not work, neither shall he eat." Again, He has said, He is "no respecter of persons." Then, those who labor and those who do not are on a level in the sight of their Creator. What, then, is the use of making so much distinction in life when there can be none in Eternity, as regards labor? If there can be any, it will be in favor of those who have honestly toiled, because in so doing they have done their Master's will, and the others have need to ask forgiveness because they have not.

It matters not whether the bread is obtained by the sweat of the brow, or labor of the brain—only let all have some honest employment, and the world will be better; a good example will be given those who come after to imitate. The evil one always finds employment for idle minds and hands, and chooses such to accomplish his fiendish designs.

A man who keeps head, heart, and hands busy in some good cause is one of Nature's noblemen, and such, too, as the world delights to remember when he is in his grave. But where is there on record the name of an idle man? Honest labor makes a man independent. It cultivates his talents, which sometimes exhibit a brilliancy calculated to light other souls through the world, which, if not cultivated, lie dormant, and the world, as well as himself, is a loser thereby. Some make the excuse, that they have a sufficiency of this world's goods, and do not need to labor. Then let them take it and use for the further improvement of themselves and those under their immediate care, or those about them who would gladly and thankfully receive it, and perhaps reflect honor on their benefactor.

C. E. M.

LAWYERS vs. FARMERS' BOYS.

Messrs. Editors:—HARRY HARRIS, of Hume, N. Y., in Rural of Aug. 21st, takes particular pains to inform Rural readers, that he don't like farming, and don't fancy Farmers' boys, clerks, apprentices, &c. Thinks he should like the legal profession, and after making a strong appeal to those "who intend to enlist under the banner of 'Atty.'," to back him up, concludes by throwing down the gauntlet to Farmers' boys, and contemplates combating his "formidable antagonists with such a discharge of talent as they cannot easily withstand."

In reply, I am a Farmers' boy, and having no "natural repugnance to anything pertaining to farming," I am willing to do my share of whatever hard work is to be done. In short, I am one of the very boys this self-constituted leader of the "Atty's" is after. Perhaps he will see us on a full trot for the woods, at the first fire, and, perhaps not! Infer, however, from the character of the challenge, that this valorous leader, who, from his own showing, is too lazy to work, and too ill-bred to keep his ill-natured fancies to himself, expects us Farmers' boys, in the language of a poet, to

"Tremble, quake, quiver, quail,
For lo! I stride a Comet's tail,
And if the Farmers' boys show fight,
I'll smite it round with all my might!"

You, HARRY, virtually admit that farming is more conducive to health than any other employment. You are willing to sacrifice a portion of your health for comfort, but think other employments may be pursued, as conducive to health as farming. The logic of your argument may be "clear as mud" to your own mind—it certainly is no clearer to mine.

In conclusion, friend HARRY, if you are really *aching with strength*, for a brush with those you affect to despise—the Farmers' boys—you can doubtless be accommodated. Open your batteries, as you propose, with a "discharge of talent,"—pitch in "rough and tumble," just when and where you please, but bear in mind that it is a squabble of your own provoking. We are the last in the fight, and for one I shall be in no hurry to leave it. Erie County, N. Y., 1858. E. E. C.

THE CLERKS.

Messrs. Eds.:—Accompanying this note I send you a specimen of my *Excelsior Wine*, manufactured and put up by me in pints and quarts from the native *Isabella* grape. It will be two years old the coming ripening. I wish you to sample it thoroughly and acquaint a "clerk" who signs himself in your last week's issue of its properties, &c. I like his suggestions well respecting the filling up of a column in the Rural by clerks; and if they will only do so and send along some specimens of their labors, (not of counter-jumping,) I presume you, Mr. Editor, would appreciate them too.

The idea of any salesman or clerk in Rochester having anything to do with *Agriculture* or *Horticulture* may be considered a laughable one, yet I can assure you, Mr. Editor, of one whose hours are spent at early dawn, (not quite as early as the Robins begin to sing their beautiful songs,) but say from daylight to six in the morning, cultivating a very small piece of ground, besides pruning and tresselling one of the prettiest and most productive grape vines in Rochester. This is done more for health than profit, although this vine produces to me in wine alone nearly one hundred dollars net a year.

You may hear from me again, if anything comes up extraordinary. DAY GOODS CLERK.
Rochester, N. Y., Aug., 1858.

REMARKS.—With the above we received a bottle of very superior native wine. It had less of that sweet, cloggy taste so common with most home-made wines, and which makes them more like cordials than wines. Those who want to make good wine this fall must use less sugar and water, and more juice of the fruit than is recommended in the recipes. Water and sugar flavored with a little grape juice is poor stuff. Let us have the pure juice of the fruit, or pure water.

Foreign Intelligence.

Arrival of the Pacific and Africa.

The new steamer Pacific, of the Galway and New York line, arrived at St. Johns on the 2d inst, and the Africa at New York on same day.

GRAT BRITAIN.—The announcement of the collision between the Arabia and Europa, reached England per Atlantic Telegraph, on the 20th, and was the first public message sent East through the Cable.

The ship Esmer, with 75,000 ounces of gold, had arrived from Melbourne.

A project is on foot for running a railway to Valencia.

The fact that an inquiry could be sent from London, and a reply of some length be received from Newfoundland in two and a half hours, had been demonstrated in the matter of the collision between the Arabia and the Europa, and was regarded with great satisfaction.

The American barque Champion arrived at Gibraltar on the 12th, having on board Mrs. Stanback, the widow of the United States Consul, who was recently murdered by the Turks, at Jaffa, together with her family.

The messages which passed between the Queen of England and President Buchanan over the wires of the ocean telegraph cable, were published in London on the 23d August, and excited comment, especially the dispatch of Mr. Buchanan.

The Daily News says there is more of simple dignity in the Queen's message, but great grasp of thought in the President's response, with perhaps a dash of ambitious straining after effect. The News says, also, that it would have been better for the President to have omitted the last paragraph.

FRANCE.—The Emperor and Empress returned to St. Cloud on the eve of the 21st, for their tour in Brittany.

The bombardment of Jiddah is said to have taken the French government quite by surprise, and caused some uneasiness in Paris, but explanations which were made to General Pellissier in London, were considered satisfactory, and the uneasiness subsided.

Some Italians had been arrested at Cherbourg and Paris, and the Paris police were exercising a marked surveillance at the station of the Great Western Railway.

The Government had been informed that Mazas had left London.

The Monitor announces that a Treaty had been concluded with China. The ports are thrown open. The Christian religion is allowed to be freely practiced. Foreign Consuls and diplomatic agents are to be admitted to Peking. An indemnity is to be paid to England and France.

AUSTRIA.—The Emperor of Austria was safely delivered of a Prince on the 21st of August.

PRUSSIA.—The rumor is gaining ground that the debate abdication of the King of Prussia has become absolutely necessary. His disease is getting worse. There are some fears that the event will bring on a political crisis.

SPAIN.—The Spanish government has announced a decree that all merchant vessels, whether native or foreign, shall pay light-house duties only once.

CHINA.—The dispatch announcing the Treaty of Peace, as sent to this country by the ocean telegraph, and also by the steamer Africa, still lacks positive confirmation, but is generally credited in Europe.

It reached the French Government through its Embassy at St. Petersburg, where it arrived overland, being dated Tain-Sein, Aug. 7th—more than three weeks later than the dates received in England.

Commercial Intelligence.

BRADSTREET'S.—Richardson, Spence & Co. quote flour dull and low; Philadelphia and Baltimore 21.65@22.00; Ohio 21.65@22.00; New Orleans 22.00@23.00. Wheat firm, but quiet. Red Western 65.00@65.50; Red Southern 65.00@65.50; White Southern 65.00@65.50. Corn dull and nominal. Yellow 33.00@34.00; white 33.00@34.00.

PROVISIONS.—Liverpool provision market generally steady. Pork without alteration in rates, and steady. Lard firm.

Special Notices.

SPASMODIC ASTHMA.—The most severe cases of this dreadful complaint have been cured by a few doses of Jonas Whitcomb's Remedy for Asthma, and in no instance has it failed to give immediate relief. See advertisement.

PREMIUM LIST.

KETCHUM'S PATENT MOWING AND REAPING MACHINES. I am authorized, by Mr. E. L. Howard, to extend the time to those contending for the Premium offered by him to the 10th day of October.

T. C. PETERS,
Darion, Genesee Co., N. Y.

SOMETHING TO DO.

The subscribers will employ agents of either sex in every town and city, in a business which pays from \$20 to \$25 per week. Send stamp for return postage, for full particulars.

S. M. MYRICK & CO., Lynn, Mass.

CROVER & BAKER'S

CELEBRATED

FAMILY SEWING MACHINES,
495 BROADWAY, NEW YORK.

These Machines are now justly admitted to be the best in use for Family Sewing, making a fine, strong and elastic cloth, which will not run in every fourth stitch as cut-throat machines do on application of the foot.

H. G. GILES, Agent,
45 Nassau Street, Rochester, N. Y.

"Horse men numero nisi veritas."

I NUMBER NONE BUT SURETY HORSES.

The Sox Dial, the most accurate register of time, has hitherto been prevented from general use by the expense necessary to make them ornamental, accurate, and durable.

The undersigned has succeeded in making, at a very moderate cost, a dial of great beauty and excellent workmanship, and at a very low price. The dial is made of copper, plated with pure silver, with the equation of time engraved upon it.

It also has a mirror inserted, which reflects the clouds and marks their direction. A cast-iron Doric column painted like stone is furnished with the dial. Placed in front of a dwelling, on a lawn, or in a garden, it is more attractive and ornamental than any piece of costly statuary, and at the same time permanently useful. No suburban residence, farm, or factory should be without this classic register of time. They can be sent safely by any part of the United States, and are furnished ready for shipping at \$16.

This amount insured to subscriber will insure their prompt delivery. Directions for erecting and setting them are sent along Direct to

W. W. WILSON, Pittsburg, Pa.

The Great Fair of Western New York!

MONROE COUNTY AGRICULTURAL SOCIETY'S

ANNUAL FAIR AND SHOW,

WILL BE HELD ON THE GROUNDS, NEAR ROCHESTER,

Sept. 14th, 15th, 16th and 17th, 1888.

PROGRAMME OF THE FAIR.

TUESDAY.—Will be devoted to making Extraordinary Animals and Articles. All Animals must be entered on or before that day, and all Implements, Fruits, Vegetables, Domestic Manufactures, &c., during the first two days, or previous to the Fair.

The Flowering Match at 3 o'clock, P. M.

WEDNESDAY.—Will be principally devoted to the Exhibition and Examination of Stock, Cattle, Horses, Sheep, Swine, Poultry, &c. In the afternoon a procession of all the Horses entered for Exhibitions or Premiums will be made upon the Track, and also of Cattle, so far as practicable.

THURSDAY.—Agricultural Implements and Machinery, Fruits, Vegetables, Dairy and Domestic Products and Manufactures, &c. &c. will be exhibited, and the Judges will make their Examinations and Awards.

FRIDAY.—The Last Day, the Premium Animals will be formed into a Procession at ten o'clock, A. M.

The Annual Address will be delivered at 11 o'clock, A. M., on Friday.

The Equestrian Display will be at 2 o'clock, on Friday, and immediately after the Trial of Horses for STYLISH AND SPEED.

TERMS OF MEMBERSHIP.—Life Membership, \$10. Annual Membership, \$1. A Life or Annual Member ticket entitles the owner and his or her family (with carriage) to admission to the grounds during the Fair.

ADMISSION FEES.—All non members will be charged 15 cents admission.

ACCOMMODATIONS.—Refreshments can be obtained on the grounds. Hay and water will be provided for all animals entered for premiums. A portion of the grounds can be occupied by animals and articles designed for sale. Hay scales will be on the ground for weighing animals and articles, free of charge.

Pamphlets containing Premium List, complete Rules and Regulations, &c., can be obtained of the President, at the office of the Rural New-Yorker, or of the Secretary, at the Agricultural Rooms, 44 Arcade, Rochester, where entries can be made previous to the Fair.

SUPERINTENDENTS—OF Grounds, I. H. SUTHERLAND, of Canandaigua; OF HORSES, ASHLEY COLVER, of Fordham, N. Y.; OF Domestic Manufactures, &c., P. BRIDGEMAN, of Sheep, W. R. DODD, of Swice, R. H. BROWN, of Poughkeepsie, D. P. NEWELL.

OFFICERS.—D. D. T. MOORE, President, J. W. LAY, L. H. SUTHERLAND, R. M. BAKER, Vice Presidents, I. S. HOBBS, Secretary, E. S. HAYWARD, Treasurer, J. H. WARREN, D. S. BROWN, STEPHEN LEGGETT, S. H. GOULD, N. N. TREAT, P. BARRY, Directors.

KANSAS AND NEBRASKA NEWS.—The Pike's Peak gold excitement is on a rapid increase. Two old Californians are making arrangements for working the mines successfully. One company has left for the gold region, and others are now organizing.

Governor Richardson, of Nebraska, has called a special session of the Legislature for Sept. 21st, for the purpose of remodeling the laws of Territory, many of which he alleges to be in conflict with each other, and not offering ample security to life and property.

It is a grand peach year down in South Carolina and Georgia, and the finest specimens of that fruit are vended in Augusta at fifty cents to a dollar a bushel.

Markets, Commerce, &c.

RURAL NEW-YORKER OFFICE.

Rochester, Sept. 7, 1888.

Flour.—The various brands hold some prices as last week. Considerable is going forward and the market is firm.

GRAIN.—In Wheat we cannot alter rates although occasional parcels have brought higher figures than are quoted in our table of prices. We notice sales of 4,000 bushels, white Canada, from Wallingford Square, at about \$1.30, and 3,000 bushels, from same point, at \$1.28. The two lots were strictly prime. Corn is firm at 70 cents. Barley has taken another step of 50 per bush—first quality readily brings 62½c.

PROVISIONS.—Do not exhibit any marked change. Poultry is beginning to make its appearance on sale. See quotations.

FAIR PRODUCE.—Butter is up a little. Hens—box—is worth 10½c, as to quality. Potatoes are down to 25½c per bush.

FRUIT.—A few Peaches are on sale in our streets and are taken quickly at \$2 per basket—about one-half bushel—for No. 1. We note the receipt this A. M., from up the Genesee Valley—in the neighborhood of Cayuga—of 120 barrels of "Green Sweetings," for a Philadelphia house. There have been sent to same destination about 500 barrels this summer. A new and doubtless good market is now opened in the "Quaker City" for the products of our orchards.

PRODUCE AND PROVISION MARKETS.

NEW YORK, Sept. 6.—Flour—Market dull and prices are 40 cents lower. Sales at \$1.50@1.60 for common to choice.

Superior, \$1.50@1.60; extra, \$1.60@1.70; for export, \$1.70@1.80.

Wheat—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Barley—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Oats—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Corn—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Beans—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Peas—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Lentils—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Mustard—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Salt—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Sugar—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Honey—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Butter—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Eggs—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Chicken—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Duck—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Geese—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Swine—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Cattle—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Horses—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Sheep—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Poultry—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Produce—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

Provisions—Market steady and prices are 10 cents higher. Sales at \$1.25@1.30 for common to choice.

Superior, \$1.25@1.30; extra, \$1.30@1.40; for export, \$1.40@1.50.

NEW YORK, Sept. 1.—The current prices for the week at all the

markets are as follows:

WHEAT.—First quality, \$1.00@1.05; Ordinary, \$0.95@1.00; Common, \$0.90@0.95; Inferior, \$0.85@0.90.

CORNS AND CALVES.—First quality, \$0.45@0.50; Ordinary, \$0.40@0.45; Common, \$0.35@0.40; Inferior, \$0.30@0.35.

VALLEY.—First quality, \$0.45@0.50; Ordinary, \$0.40@0.45; Common, \$0.35@0.40; Inferior, \$0.30@0.35.

SHEEP AND LAMBS.—Prime quality, per head, \$4.00@4.50; Ordinary, \$3.50@4.00; Common, \$3.00@3.50; Inferior, \$2.50@3.00.

SWINE.—Best corn fed, \$5.00@5.50; Other qualities, \$4.50@5.00.

BRIGHTON.—Sept. 2.—At market—1000 Best Cattle, 400 Sheep, 8000 and Lambs, 6000 Swine.

PAID.—Feed (cattle) per head, \$1.00@1.25; First quality, \$0.75@1.00; Second, \$0.60@0.75; Third, \$0.50@0.60; Fourth, \$0.40@0.50.

MILK COWS.—\$1.00@1.25; First quality, \$0.75@1.00; Second, \$0.60@0.75; Third, \$0.50@0.60; Fourth, \$0.40@0.50.

VEAL CALVES.—\$1.00@1.25; First quality, \$0.75@1.00; Second, \$0.60@0.75; Third, \$0.50@0.60; Fourth, \$0.40@0.50.

RURAL NEW-YORKER

AGRICULTURE MECHANICS MOORE'S SCIENCE LITERATURE

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FIVE CENTS.]

VOL. IX. NO. 38.]

ROCHESTER, N. Y.,—SATURDAY, SEPTEMBER 18, 1858.

{WHOLE NO. 454.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ADE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purty, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductors devote his personal attention to the supervision of its various departments, and earnestly labor to render the RURAL an eminently Reliable Guide on the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it seasonally advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

Rural New-Yorker.

HOURS WITH THE FARMERS.

From other duties we have snatched a few hours to spend among the farmers. We love to read the doings of the greatest farmers in the world, such as we find reported in the books and the European journals—the results of their costly experiments are invaluable to the world of agriculturists. We like to examine, too, the theories of scientific men, especially when they give us the cause of certain well known results. But we never spend a few hours so pleasantly and profitably as when we walk and talk with intelligent, practical farmers, and learn their hopes and fears, their successes and failures—see this field of luxuriant fall-corn, and learn the treatment that has produced such a desirable result—that, short and stunted, and ascertain the cause of the failure. So we pass along, taking a look at all the fields, and the crops, (never forgetting the melon patch,) thinking and talking, teaching and learning, until a look at our watch apprises us that time pleasantly employed passes rapidly away, and we hasten on.

Of no one thing have we been more forcibly impressed, in our journeyings of late, than the importance of rightly instructing the youth in farming. Farmers should learn their boys to be neat and thorough in everything they do. Youth is the time in which habits, good or bad, are formed, and they are seldom changed. Many farmers that we know of—intelligent, reading, thinking, and in many respects valuable men—who can write fluently and talk wisely on agriculture, have slovenly farms, (and this they know, and regret,) just because they formed slovenly, careless habits in their youth, which they now find it almost impossible to overcome. Habit is strong, almost overpowering, and we are all more or less under the influence of habits formed in our youth. Example is all-powerful in its influence upon the young. Let all our readers with boys growing up see that they set them no bad examples. To leave sons with good habits is better than to leave them with farms or fortunes. We speak advisedly when we say that a prompt, energetic mechanic or merchant who knows nothing of farming, will make a better farmer in three years than the young man who has been brought up on a farm with a careless, thriftless father or guardian. This we have seen proved a score of times, and it was while standing on the farm of one who but four or five years ago first "put his hand to the plow," that these reflections were forced upon us.

CORN, as a general thing, is looking well, and the yield will be fair, as far as we have seen, though we have heard some complaint from the southern portion of this county, that the yield of grain will be light, though there are plenty of stalks. Many of the cornfields show the want of drainage. In the lower spots the corn is light, and in some cases almost entirely destroyed, while on high ground in the same field it is good. A very few days of this hot weather, (thermometer 90°,) will put the corn out of danger of frost, indeed much of it is already "glazed," and some of the Rhode Island Premium Corn, we see is fully ripe. The grasshoppers are troubling it somewhat, but they are not sufficiently numerous to do much mischief.

POTATOES are suffering very much from the premature death of the tops. Yesterday, (Sept. 18th,) we saw many fields where the haulms were entirely dead, from the effects of the insect described in the RURAL a few weeks since, or some other cause. On examining the roots we found the tubers small, not having made more than about half their natural growth. About three weeks ago we saw a fine field of English Flukes, vigorous and healthy, with the exception of occasionally a blighted and blackened top. Now the haulms are destroyed as effectually as though they had endured a week's frost. That insect, the *Phytocoris*, which Mr. Henshaw thinks causes the rot is found in every field, and in immense swarms and we saw hundreds of them feeding on the tender tops of the ears of corn. If this theory of the cause of the rot is correct our potatoes are destined to suffer more from the disease this year than at any previ-

ous time. DR. LANDLEY, in the *London Gardeners' Chronicle*, in three or four lines, scents the idea that this insect causes the rot, and Dr. Fitch is almost as brief and as equally decided on the same side. Now, we are open to conviction on this question, and we have very little respect for the *ipri dixit* of those who have the reputation of being "scientific men." They are apt to be conceited and dogmatic, and we are not willing to adopt their opinions without a reason. Science is a poor substitute for brains, and some of the great "professors" in the world are sadly deficient in common sense. The operations of the "scientific" men at the Dudley Observatory, Albany, should prove a useful lesson to common people. A little careful investigation, and a decent respect for the opinions of others would not hurt the wisest. This insect has commenced its ravages in a new direction, and is now destroying the Dahlia buds as fast as they appear. An extensive grower informed us that he would not have a dozen flowers, although he usually counts them by hundreds. Potatoes in some places are suffering badly from the White Grub, the larvae of the June Bug. On examination we found many hills where the tubers were almost entirely eaten up. On the grounds of H. N. LANGWORTHY, in the town of Greece, in this county, we caught nineteen in one hill.

SUGAR CANE is growing this season exceedingly fine, as the weather has been quite favorable for its full development. We notice, too, that there has been a good deal of rain, although there has not been much noise made about it this year. Whatever may be the result as to sugar, this must be a splendid crop for summer feeding, and for making fodder. One farmer, who has a fine crop growing, expressed doubts whether it was possible to dry the canes effectually so as to prevent heating, they seemed so full of sap. If the stalks were pretty well ripened before cutting, there would be no trouble in curing, we should think. Perhaps for the value of the fodder, just as the seed commenced to form would be the best time for cutting. We have seen several fields where the stalks were growing so thickly that it was impossible to see through them the distance of a rod, almost impossible to make headway in endeavoring to walk, and where we could not find a cane measuring less than nine feet. It would be somewhat difficult of course, to cure such an immense amount of vegetable matter, if cut in a green state. It seems to us that we never saw any other plant that would yield such an amount of green food, and it is eaten voraciously by all stock. In England, they cut it when about three feet high, and it then gives twenty-five tons of feed to the acre. It then makes a second growth, and is cut towards fall, giving about the same quantity of feed as at the first cutting. In the south of France and Italy it is said to give three good cuttings. This matter is worthy the consideration of farmers, who are now giving so much attention to the best means of feeding stock.

HUNGARIAN GRASS planted in drills, on a sandy loam on the sixth day of July, is now about three feet in height, and the proprietor thinks he could grow two crops in a season very easily. We have notes of some other matters, which we must defer for the present.

SHEEP: CHARACTERISTICS OF BREEDS.—NO. IV.

THE LEICESTER BREED.—The modern Leicester belongs to the division of long-wooled breeds. It was originated by ROBERT BAKEWELL, whose first attempts at its production commenced about one hundred years ago. The breed was first called the Bakewell, in honor of its founder; then Dishley, from the name of Mr. BAKEWELL's farm; then New Leicester, to distinguish it from the old Leicester; and when it had become so widely disseminated as to supersede the old breed, it was known simply as the Leicester.

It is a highly artificial breed, very different from any known before BAKEWELL's time. Its origin has been the cause of much speculation, in reference to the materials from which it was derived. BAKEWELL himself, it is said, sought to envelope the subject in mystery. Yet he could not wholly screen his operations from the public eye, and to particular friends he was not wholly uncommunicative. It is generally admitted that the parent stock of the Leicester was obtained from various breeds. But perhaps the most direct information on the subject is given by PITT, in his "Survey of Leicestershire," published by the British Board of Agriculture towards the close of the last century. He informs us that BAKEWELL formed in his own mind, in the first place, "an ideal of perfection," which he endeavored to realize. He then proceeded to select from the flocks around him, such sheep as came nearest his standard. Some of those which he obtained, were said to have descended from stock which had several years before been brought from a section of Yorkshire, and crossed with the common sheep of Leicestershire. He also bought sheep of jobbers, who brought them

from the Wolds, and it is known that he procured others from Lincolnshire. The author referred to says:

"Animated by his early success, he still went on, breeding from his own, or crossing with others that he judged most likely to bring his own nearest to his idea of perfection, by which means, and (in the opinion of one of the oldest breeders in the county,) by a cross with the Durham sheep, by slow degrees he produced a form against which he believed no possible objection could be raised."

These facts in regard to the origin of the Leicester should not be lost sight of, as they involve an important principle in reference to breeding, viz: the production of a distinct breed from two or more diverse stocks. BAKEWELL's breed gradually gained in popularity. He bred on a large scale, and after a few years formed an association with other breeders, by which he was enabled more fully to carry out his objects. Like other improvers, he had at first to contend against much prejudice, and 20 years elapsed before he fully overcame all opposition. The following extract well illustrates his progress:

"In 1760 it was with difficulty that he let three rams for the season, at 17s. 6d. each. In 1780 he received ten guineas each, for the hiring of some of his best rams, and in 1784 and 1785 some were engaged at the expense of one hundred guineas. In 1786 he let out one ram to a flock, one-third of the ewes being his own, for 500 guineas. In that year he received upwards of a thousand guineas for the letting out of rams. In 1799 he cleared 1,200 guineas by three rams, and 2,000 guineas by seven others, exclusive of a sum of 3,000 guineas for the use of the rest of his stock, received from the Dishley Society, of which he was the founder. One ram of first-rate excellence, he let out to two breeders, receiving from each 400 guineas, receiving one-third of the ewes for himself; the value of the ram for the season being estimated at 1,200 guineas."

The sheep were sought after not only from all parts of Britain and Ireland, but from distant countries. It may, in fact, be said that the Leicester breed has obtained a world-wide celebrity, and has immortalized the name of its founder. The improvement which BAKEWELL effected consisted in reducing the bone and oil and increasing the tendency to fatten. He regarded the animal as a machine for converting vegetables into flesh and fat, in the greatest quantity, and in the least time. The old stock was not fit for the butcher till 4 years old. The new gave as much meat in half the time; wethers weighing 20 to 30 lbs. per quarter, at two years old. The tendency to fat was astonishing. CULLINARY speaks of a three-year-old wether which measured seven inches and one eighth of solid fat on the ribs, "cut straight through without any slope." He says, "it is very common for two-year-old wethers to cut four inches thick of fat on the ribs, and from 2 to 3 inches all down the back."

The symmetry attained in the New Leicester sheep, their early maturity and tendency to fatten—qualities which became so thoroughly established as to constitute a new race (as we may say), of a peculiar fixity of type—rendered them well adapted to the improvement of other breeds; and notwithstanding the comparative lateness of their origin, they have, by an infusion of their blood, completely changed the characters of every British long-wooled breed. The Cotswold, the Lincolnshire, the Romney Marsh, and others, have received from Bakewell's Leicesters an improvement in form and disposition to fatten which, perhaps, they never could have possessed without this cross.

But in the Leicesters themselves, the qualities of early maturity and tendency to fatten were carried too far. The constitution of the animal was weakened, and the carcass was too fat. The error, however, was seen by some breeders, before it was altogether too late, and they have restored the hardihood and at the same time developed the wool-bearing habit. The characteristic of the Leicester, is, nevertheless, a faculty of making a large proportion of fat meat compared with the lean. The mutton does not sell as high in the English markets, by at least a cent a pound, as the South-Down, or the mountain breeds of Wales and Scotland. The advocates of the breed claim that this is overbalanced by the earlier maturity of the Leicesters. In America, little or no difference is made between the mutton of the South-Down and any other English breed; but it is probable that, as our people come to appreciate the difference in the quality of meat, the different breeds of cattle and sheep will stand in the markets in a similar position to what they do in England.

The wool of the Leicester is adapted to combing, and to all such fabrics as combing wool is used for. Well-bred and well-kept flocks average from five to eight pounds per fleece, washed.

In our next, the breeds of long-wooled sheep which have been derived, more or less, from the Leicester, will be spoken of.

• Martin on Sheep, p. 126.

ENGLISH DRAFT-HORSE.

THE above engraving is a very good representation of the Draft-Horse used in England. This horse is not an aboriginal breed in that country, but was originally imported from the Continent. WILLIAM "the Conqueror" is supposed to have first placed them upon British soil, as the war-horses of his Knights and men-at-arms—great strength being requisite (so long as armor was in fashion) to support the enormous weight of the steel-clad warrior, and to withstand the ponderous attack of a similar opponent. During the reign of the EDWARDS, repeated importations of these animals took place.

The prevailing color of this horse is black; so much so, that a distinct breed, under the appellation of the "old black cart-horse," is recognized. The breed is pretty generally distributed throughout England, and may be divided into three kinds—the heavy, massive animal, (as shown in our illustration,) reared in the rich marshes and plains of the midland counties, expressly for the London Brewers; the smaller sized, but still tolerably heavy horse, generally employed for agricultural purposes—a strong, compact animal, but slow in motion; and a lighter and more active animal, possessing some admixture of blood of a less heavy breed.

According to the *Cyclopedia of Agriculture*, "breeders usually sell them as two-year old colts, retaining, as much as possible, mares for their own work, and for the purpose of breeding. The purchasers of these colts work them moderately till they are four years old, feeding them well during this period; and, indeed, previous to their sale, they are often taken out of work and fattened in loose boxes, almost like oxen for the shambles, in which state they are supposed to please the eye of

the London brewers, for whose more particular use these pampered animals are bred. Thus the colt purchased, perhaps for £40, realizes in the course of two years, double this amount, besides working moderately during this period. Thus, if the horse does not fall a victim to the various diseases which a redundancy of fat is calculated to induce, he yields an ample profit to his feeder.—These ponderous animals are frequently seventeen hands high; and their sleek and glossy appearance as they move majestically through the streets of the metropolis, presents one of the most striking sights to the eye of the foreigner. That such large, massive animals are really required, or are the most profitable for their peculiar work, is a matter of considerable doubt; however, it is a species of pride which has long prevailed amongst our London brewers; and, whilst they continue the premium, in the shape of high prices for these massive animals, the breeding of them will continue a profitable pursuit, and the streets of the metropolis will continue to exhibit the largest horses in the world."

These heavy horses are much injured, as a breed, by a tendency to weak and convex feet, and to ossification of the cartilages and the pasterns; the former being the effect of their great weight acting on the soft horn induced by moist pastures; and the latter to their great predisposition to throw out bone, caused, perhaps, partly by the large amount of the phosphates in their food.—Very many of these horses are rendered useless from these morbid deposits, although the latter is so common that scarcely a dray horse in London but what possesses, in some degree, these side bones, which, in very many instances, do no injury.

THE CHINESE SUGAR CANE.

EXPERIMENTS OF JOSEPH S. LOVERING.

In accordance with the intimation contained in the last issue of the RURAL, we commence a detail of the experiments made by JOSEPH S. LOVERING, of Philadelphia, for the purpose of determining the value of the Chinese Sugar Cane as a sugar producing plant. It was the desire of Mr. L. to throw what light he could upon the subject, and, in the event of the result proving favorable, to give such a formula as would enable the uninitiated to proceed with confidence of success. To this end he devoted considerable time—from the 28th of September to the 20th of December, 1857—and brought into active use every appliance that science could suggest, in order that all his movements might be as accurate as the circumstances would allow. Whatever is to be the ultimatum in the case of this cereal, its cultivators are much indebted to Mr. LOVERING for the energy and tact he has displayed.

On the 10th of May I planted about half an acre, on upland of good quality, such as would yield, in ordinary seasons, fifty to sixty bushels Indian corn to the acre. The rows four feet apart, and the plants intended to be six inches apart in the rows, but which, on taking off the crop, proved to be a little over seven inches apart. When the canes were about eighteen inches in height, I had the suckers removed. During the month of June I passed the hoe-harrow through it twice, a man following with the hand-hoe, as in the case of Indian corn. It was then left to take care of itself. It grew rapidly and evenly, and attained the height of twelve to fourteen feet.

My apparatus and utensils for conducting the experiments consisted of the following, viz:—A pair of iron rollers, seven inches diameter and twelve inches long, set in a frame one-eighth of an inch apart, with spout to catch and collect the juice, and a crank turned by hand; a few sugar moulds and pots; some ivory black or animal carbon; two filters, made of common bed ticking, in the shape of an elongated pudding bag; a thermometer, Beaume's Pese-Sirup, or saccharometer, and a polariscope. All the other utensils I obtained from the kitchen, viz: a copper kettle of ten gallons capacity, a ladle, some tin pans, bowls, buckets, &c., to contain the juice.

FIRST POLARISCOPE OBSERVATION.—Sept. 28th, temperature, noon, 71° F., wind S. W., clear.—Of two canes took the first joints above the stay roots:

1st, 1st joint, 10 inches long, weighed.....	11.54 grammes
2d, 2d joint, 10 inches long, weighed.....	9.712
Weight of 1st joints of the canes.....	21.256
After passing these joints through the rollers, the bagasse weighed.....	6.359
Leaving, as weight of juice (69.7 percent).....	14.897

Measured the juice, and found 155 fluid grammes

specific gravity..... 1.063

After precipitation by basic acetate of lead, of a voluminous green colored flocculent substance, it filtered with difficulty, then completed the decolorization by passing it through animal carbon, and found by first observation in polariscope,

A deflection of the ray, right..... 270° 237 right.
Add 10 per cent. for deflection by precipitation..... 27

After inversion by H. Cl left..... 127° 127 left.
Add 10 per cent. as above..... 12.7

Sum of inversion..... 429

This sum of inversion, (429.9) at temperature 27°, indicates 64.35 grammes of pure dry sugar to the

litre of juice, and by reference to past results it is found that 204.24 grammes of sugar per litre, equal 18.82 grammes per 100, or 18.82 per cent. Then, as 204.24 : 18.82 :: 64.35 : 5.008 per cent of sugar in the juice, and as 100 : 5.008 :: 69.7 : 3.49 per cent of sugar in the cane. A second observation in polariscope, of the juice from the two joints of the same canes next above these, indicated 5.57 per cent. of sugar in the juice, proving them to be richer than those nearer the ground.

FIRST PRACTICAL EXPERIMENT.—Sept. 30, temp. 8 A. M. 40°, M. 66°.—The fact of the presence of crystallizable sugar in the cane being established, I proceeded to cut and grind twenty feet of a row, and passed the thirty canes which it produced three times through the rollers; about one-fourth of the seed had changed to a dark glistening brown color, but was still milky; the remainder was quite green; ground six to eight of the lower joints, which together yielded three and a half gallons of juice, weighing 9° Beams; neutralized the free acid by adding milk of lime; clarified with eggs and boiled it down to 240° Fahrenheit.

This first experiment looked discouraging and unpromising at every step; its product was a very dark, thick, viscid mass, apparently a caput mortuum; it stood six days without the sign of a crystal, when it was placed over a fire and kept warm four days longer, when I found a pretty good crop of soft crystals, the whole very similar to the "Melada," obtained from Cuba, but of darker color.

SECOND EXPERIMENT.—Oct. 13, temp. 8 A. M. 50°, M. 72°, S. E. cloudy.—About two weeks having elapsed since the first experiment, the weather in the interim having been quite warm, temperature at 8 A. M. 40° to 52°, and at noon 66° to 76° F.; and about one-half the seed being ripe, I determined to try it again, but not being very sanguine of success, no polariscope observation was taken.

Cut and ground fifty feet of a row, which produced eighty-eight canes, and yielded eight gallons of juice, weighing 10° Beams (one degree more than the previous cutting), from the six and seven lower joints; juice slightly acid. First clarification four and three quarter gallons, neutralized with three table-spoonsful of milk of lime, stirred in one pound fine bone black, and three eggs, and placed it over a slow fire; at 215° Fahrenheit took off a very dense, thick, green scum; when at 102° Fahrenheit it marked 74° Beams.

A second parcel of juice from this grinding (three and a quarter gallons) was treated in the same manner, and set aside, both having been first boiled down to 22° Beams.

Oct. 14, temp. 8 A. M. 54°, noon 70°, N. W. clear.—Cut and ground fifty feet; eighty-one canes, produced seven and a quarter gallons juice, 10° Beams, which was treated as above, except that the eggs were omitted.

Oct. 15, temp. 8 A. M. 50°, noon 70°, N. E. heavy rain.—Cut and ground fifty feet, produced eight and a quarter gallons juice, weighing 10° Beams.

Oct. 16, temp. 8 A. M. 46°, noon 60°, N. W. stormy.—Cut and ground fifty feet, eighty-six canes, eight and three-eighths gallons, 10° Beams.

The whole of the foregoing four parcels were at this stage of the process concentrated at 22° Beams, and set aside until I had completed the series on the 21st October; they were then collected together, and again clarified with eggs, and a second scum taken off; they were then again placed over the fire, and when at the temperature of 226° Fahrenheit, clear lime-water in small quantities was added to coagulate the vegetable albumen, which is not disengaged at a lower temperature, but which is then observed as a whitish scum, very tenacious and glutinous, and is very detrimental to crystallization. After the various delays, heatings and re-heatings consequent on my limited means of working, (the great disadvantage of which, those acquainted with the subject only can appreciate,) I commenced filtering the whole, but found it soropy and glutinous that it would not pass through; diluted it to 10° Beams, when it came through tolerably bright; then passed it through five feet of animal black; it parted with its coloring matter very freely.

Oct. 22, temp. 8 A. M. 32°, noon 50°, S. W. clear.—Divided the product into three parts, and boiled it as follows:

First part to 230° Fahrenheit. This stood an hour without crystallizing; found it too low, although the thumb and finger proof indicated otherwise.

Second part to 240° Fahrenheit; which was added to the first, and in a few minutes crystals began to appear.

Third part to 238°; being the mean of the other two. On finishing this, the two preceding had formed a thick, opaque mass of good crystals.

Filled one mould, weight 30 lbs. net weight 15 3/4 lbs.

Filled one mould, weight 14 1/2 lbs. net weight 10 lbs.

Total net weight, 25 3/4 lbs.

and the next morning set them on pots to drain. Also boiled down the juice from the tops, four and three-quarters gallons, which produced with the scum thirteen and a half pounds molasses.

Nov. 2, temp. 8 A. M. 46°, noon 60°, S. W. clear.—Knocked out the proceeds of this experiment with the following results, viz.:

1 mould, gross weight, 30 lbs.

tare, 4 1/2 lbs. net wt 15 1/2 lbs.

weight of molasses, 8 1/2 lbs. Sugar Molasses

1 - gross weight, 14 1/2 lbs. net wt 7 lbs. 5 1/2 lbs.

tare, 4 1/2 lbs. net wt 10 lbs. 5 1/2 lbs.

weight of molasses, 5 1/2 lbs. net wt 4 1/2 lbs. 5 1/2 lbs.

Add molasses made from the tops, as above, 13 1/2 lbs. 2 1/2 lbs.

Total weight of product of 300 feet of a row, 37 1/2 lbs. 11 1/2 lbs.

Fifty rows, four feet apart and two hundred and eighty feet long, constitute an acre, and two hundred feet of a row is less than one-fifth part of an acre by eighteen feet, therefore, add

per mile, 1.03 2.65

Product of one-fifth part of an acre in lbs. 1233 2870

Multiply by 5 100 50

Product of an acre in lbs. 61650 143500

A gallon of molasses weighs twelve pounds, therefore, divide 1,435 by 12, and we have, gallons, 123.75.

For the acre 6354 pounds sugar, and 1237 gallons molasses, produced from 18,148 canes, yielding 1,737 gallons juice, weighing nine pounds per gallon, or 15,633 pounds, being four per cent of sugar and 9.50 per cent. of molasses, or 13.50 per cent. together.

This sugar is of a yellowish brown color, about as dry as, and about the color of second quality Cuba sugar, such as is used by refiners.

THIRD EXPERIMENT.—Oct. 23, temp. 8 A. M. 36°, M. 55°, foggy.—The foregoing favorable progress induced me to make another trial, on a larger scale. The weather looked threatening, and as a precaution, I cut five hundred feet of canes, and stored it in the barn, to be used in quantities conforming to my means of working.

Nearly a month having elapsed since the first polariscope observation was taken, and two weeks since the second practical experiment, having had several heavy frosts, and three nights of ice, one-eighth to three-sixteenths of an inch in thickness, I concluded to have another examination by polarized light, to see the effect of these changes, when I was gratified to find the following result; juice weighing full 10° Beams:

First observation, right, 55° } temperature 259 2/3 left.

After inversion, 20° } temperature 259 2/3 left.

Add ten per cent. as above, 2° } temperature 259 2/3 left.

Sum of inversion, 60° } temperature 259 2/3 left.

This sum of inversion, (60° 7/10), at temperature 25°, indicated 79.06 grammes of sugar per litre of juice; then, as 204.24 : 18.82 :: 79.06 : 7.29 per cent. of sugar in the juice.

Oct. 24, temp. 8 A. M. 54°, noon 60°, fog and rain.—Ground 100 feet; canes 160; gallons juice 18 1/2; 10° B.

Oct. 25, temp. 50°, -60°, heavy rain.—Ground 100 feet; canes 159; gallons juice 18 1/2; 10° B.

Oct. 27, temp. 46° -52°, very stormy.—Ground 100 feet; canes 166; gallons juice 18 1/2; 10° B.

Oct. 28, temp. 40° -52°, Cloudy, N. W.—Ground 100 feet; canes 149; gallons juice 18 1/2; 10° B.

Oct. 29, temp. 43° -48°, clear, N. E.—Ground 100 feet; canes 148; gallons juice 18 1/2; 10° B.

These several parcels were clarified like the second experiment, boiled to 15° and 18° Beams, and set aside till November 2d, when I found all but the last day's work had changed to a thick, liver-like mass, resembling good soft soap, very acid, and totally ruined. The last parcel, having stood a much shorter time than the rest, was but partially affected. It was boiled to proof, and crystallized very well.

I regret this misfortune less for the trouble it cost me than for the failure of the experiment, for it worked beautifully in the first stages, and the last grinding crystallized freely. The juice weighed heavier than previous or subsequent parcels, and would probably have produced better results. It taught me, however, the danger of delay, and also that no injury had been sustained by the juice so long as the canes remained underground, the last parcel having crystallized perfectly.

[To be Continued.]

BEES AND BEE-HIVES.

MY EXPERIENCE.—NO. III.

HAVING now decided pretty nearly as to the size of the hive, (2,000 cubic inches) it remains to decide what shape we shall have. This is a question that many have decided for themselves, and among the infinite variety of forms, hardly one can be found without some one to advocate it—"that it is a little better than any other—a swarm in this hive will get more honey by many pounds than one in that." This we have heard until a great many sensible men have come to the conclusion that very little of the vigor with which a swarm labors, for the first season, at least, depends on the shape of the hive. Even after combs, bees, and honey have been transferred from the common hive to the moveable frames of Mr. LANGSTROTH, it might be attributed by some to imagination, when it was asserted that the bees labored "more vigorously than before." It will soon be time for patent vendors to adopt some other method—give some other reason for adopting a new hive than the one—"They will make more honey than on any other plan." Bees will store honey and work vigorously in a flour barrel, nail keg, a hollow tree—even a chicken coop will answer. All these will do for the first summer, if sufficient room is afforded—the quantity of honey will be nearly the same in all. Facilities for managing subsequently, are all important.

Many of our patent hives have gained one point that would be of some advantage, were it not that in gaining it they have added difficulties to more than balance all the good. In traveling through the country, we find the finished bee house and expensive fixtures accompanying a few empty patent hives—nine-tenths of all who have attempted to work with them have ended thus in about three years, showing, conclusively, that something is wrong. The only good to be discovered to balance this evil was, it gave the bee keepers the idea of obtaining surplus honey without killing the bees—as they all recommend something for that purpose. It is preferable to managing with the brimstone pit, and may be worth the sacrifice.

There are some enemies of bees, and some difficulties in managing, that we are all anxious to get rid of, as far as practicable. For instance, sometimes in cold weather the mice will enter the hive and commit depredations, destroying bees, comb, and honey. Hence the suspended hive to avoid them. The inclined bottom board in several forms was now added to this to throw out the worms; giving rise to several patents. Sometimes, in very hot weather, combs, full of honey, would break loose and settle to the bottom. To prevent it, the hive was made smallest at the bottom—WEEKS' patent. When a colony of bees loses its queen, and has combs containing eggs or young larvae, it will rear another. Here was a chance for several kinds of dividing hives. Brood combs, when used several years, become black and thick from the number of cocoons left by the young bees. Hence the necessity of changing the combs after a time. This principle has been profited in varieties. Colonies of bees, with room to extend their combs in a place perfectly dark, seldom swarm. Hence several forms of non-swarming. The depredation of the moth has brought out many hives that are offered to us as proof against them. Relative to the last, I would remark that no hive has yet been invented that is safe from the attacks of the moth, without a good colony of bees to defend it. When the bees get out, the worms get in.

It cannot be expected that I have used every

variety of hive that has been constructed, but the principle of each has been pretty well tested. Mrs. GRIFFITH, of New Jersey, is said to have invented the "suspended chamber hive, with inclined bottom board." Mr. WEEKS adopted Mrs. GRIFFITH's hive, "with the addition of making the bottom smaller than the top, to prevent the combs from settling down—a point on which he obtained a patent. Those that have adopted the suspended hive have copied Mrs. GRIFFITH more extensively than WEEKS, yet I find nearly all suspended hives called "Weeks' hives." It is frequently the case that a patent is obtained on a point so trifling that it is often left out as non-essential by makers in a short time. In purchasing a patent right, it has been recommended, first, to ascertain that the thing is patented, and then whether the part covered by a patent is worth the money asked for it.

The simple chamber hive is made with two apartments; the lower and largest is for the permanent residence of the bees; the upper, or chamber, for the surplus boxes. Its merits are these:—The chamber affords all the protection necessary for boxes of glass or wood—considered as a cover, it is never lost. Its demerits are inconvenience in handling, it occupies more room if put in the house in the winter—if glass boxes are used only one end can be seen, and this may be full, while the other may hold some pounds yet, and this cannot be known till it is taken out. Now, if it is returned to have the bees finish it, the disturbance will cause the bees to remove the honey into the hive below, whenever the flowers yield a scanty supply. If this chamber was simply a loose box, it would be out of the way when handling, or in the house, and can be raised at any time when the boxes are being filled without the least disturbance of the bees—the boxes examined on every side, and the precise time of their being finished ascertained, (that is when made of glass) when, if we want the combs in the utmost purity, they should be taken off.

M. QUIMBY.

St. Johnsville, N. Y., 1853.

MISSOURI STATE FAIR.

EDS. RURAL:—Thinking a short account of the Fair now in progress in this city might interest your readers, I take the liberty of sending you the following sketch. The grounds of the Society are situated about three miles from the center of the city and are the most complete in their arrangement of any it has been my fortune to see. One of the first things to attract the visitor's attention as he enters the gates, is the immense amphitheatre. I have not heard its capacity stated, but should think it would readily seat four to five thousand people. In the center is provided a stand for the judges, and also for a band which daily adds the charm of music to that of the smiles of the fair ones who occupy a goodly share of the long tiers of seats rising one above another. Around the amphitheatre are grouped the other buildings for the exhibition of the thousand different articles always found at a State Fair. These buildings, are many of them, "got up" in a substantial and tasteful manner.

Nearest the gate stands the edifice devoted to the Fine Arts. Here were some very well executed portraits of public personages, also a few fancy pieces and compositions of surpassing beauty and indicating real merit in the artist. There were also the usual number of daguerreotypes, photographs, and the like, plainly showing that St. Louis is not behind her neighbors in this line. A thousand things in this Department claim a word of remark and praise, but must be passed by, for the overwhelming attraction of Fruits and Flowers.

Floral Hall is a circular building, graceful and attractive in design. Standing in the eastern entrance, one would almost imagine he had found the reality of those gorgeous dreams of the Arabian Nights. Immediately before you is a fountain falling in a single jet some eight or ten feet, then falling into a picturesque basin of rocks half covered by rich green moss, which seems to grow luxuriantly on all sides. Just back of this miniature lake rises a rocky cliff, from a projecting point of which, drips a never-failing spring. Apparently growing from every crevice in the rocks, are splendid specimens of the Ficus and Laurel, also a fine show of coniferous plants—intermixed with these, and giving variety to the whole by their brilliant flowers and varied foliage, are Salvia, Bigonia, Petunias, Dwarf Phloxes, and Lycopodiums. On the side of the cliff, opposite to the fountain, are graceful festoons of Arbor Vita, encircled by ivy, seeming a fit dwelling for some fairy mistress of the grove.

Around this grand centre piece, which is gotten up by the Society, are the various shows of Fruits, Flowers and Plants. The exhibition of apples is very fine, among them I noticed very fine specimens of Maiden's Blush, which ripens here about the middle of August, also Summer Queen, very fine, and immense specimens of the Alexander, some of them measuring about five inches in diameter. The White Bellflower and Large Red Roman are favorites in this country. The Michael Henry Pippin and Rambo are highly valued for their long keeping qualities. Among pears, the favorite sorts appear to be much the same as in New York. They all mature much earlier here, however. The Seckel, for example, is now rather past its prime. The exhibition in this department is rather limited, though the specimens are almost unlimited in point of size. The show of peaches was very good indeed, considering that the season for them is nearly past.

This section of the country will, I think, in a few years vie with Western New York in the beauty and variety of the fruit it produces. Many fine orchards are now growing, and the number is being annually increased. The show of greenhouse and tropical plants was small, though it contained some interesting specimens, among which we noticed a very large plant of the Cycas Revoluta, or Sago Palm.

In the Agricultural and Mechanical department we noticed an uncommon variety of labor-saving implements, Sewing Machines; also very handsomely carved cabinet work. The show of Agricultural Machinery seemed, by mutual consent, to be voted small; there was, however, a goodly number of Threshers and Mowers. The display of Horses and Cattle, although small, contained some splendid animals. Black Hawk and Morgan stock, which seems to be a favorite one in this region,

was shown in perfection. Several of the young horses equaled, we venture to say, in style and symmetry of proportions, anything to be found in this country. There seemed to be a generally acknowledged want of a good course on which to try the speed of many of the horses entered, all the trotting being confined to the ring of the amphitheatre. The entries of blooded cattle were limited. There were a few fine Devons and some Brahman cattle. Of Native Stock, there were some very handsome cows, also some immensely fat specimens.

Altogether, I may say that the Fair has so far proved a brilliant success; it is estimated that there have been from twenty to twenty-five thousand people on the grounds daily since the opening. It is interesting to watch the crowd which nightly collect upon the pavement before the far-famed Planter's House to discuss the sights and wonders of the Fair as well as the price of stock and Government lands, for this spot seems to be selected by mutual consent as a Merchant's Exchange.

St. Louis, on the whole, seems to be the most prosperous and active city in the West. Business men here appear to have suffered less from the universal depression than in any other place I have visited. Splendid buildings are being erected on all sides; the city is growing rapidly,—the back country also, is being settled by cultivators of the soil. Here seems to be the place for an industrious young man, no matter what his business.

St. Louis, Sept. 9th, 1853. W. E. B.

CHEESE AND CHEESE-MAKING.

EDS. RURAL:—An April No. of your valuable paper contained an article on Cheese and Cheese-Making with a request that more might be furnished. I have waited long and patiently, but as yet have seen none. If some of the good cheese-makers East would give, through the RURAL, their mode of making, they would confer a great favor on many Western people who are ambitious to make a good article.

I would like to know the best way of preparing rennet?—how long the milk should stand after the rennet is put in before the "curd comes"?—whether it makes a difference what kind of knife is used to cut the curd provided it is smooth and long enough to cut to the bottom of the tub?—whether the curd should be broken with the hand after cutting?—how much and in what way it should be warmed or "scalded"?—how much salt used by weight; measuring in a teaspoon is hardly safe, they vary so much in size; how the curd is cut or prepared for the press?—how long a cheese should remain in press?—how we can decide whether or not we apply the proper amount of weight, (we use the old fashioned lever press.)

I am aware that it will tax the patience of somebody to reply to all these queries, but trust the consciousness of having performed an act of benevolence will be a sufficient reward if any one should take the trouble to do it. When I take the premium at the Mich. State Fair, (I intend to do it in less than ten years if life and health continue), I will let my "light shine" for the good of others, and will never tell a poor ignoramus, like myself, who is thirsting for knowledge that "it is nothing to make cheese if you only get your milk just the right heat, and just rennet and salt enough, scald the curd and press the cheese just about right"—and when asked how this is to be done, say "have the milk a little more than milk-warm, put in rennet according to your judgment, and salt according to your taste, but you can't tell by the taste of the curd how salt the cheese will be; the salt runs off some in the whey,—have the whey you scald with so that you can just put your hand to the bottom without burning it, (some hands will bear fifteen or twenty degrees more heat than others,) and tell by the looks of the cheese whether it is pressed right." No, I will know how good cheese is made and be able to inform others. I had no idea I was writing so much, and owe an apology to the RURAL for encroaching upon valuable time, but I can't make a good cheese, and I desire early information on the subject of cheese-making and the manner of keeping cheese from those who are possessed of experience. Will they give it? A SUBSCRIBER.

Coldwater, Mich., 1853.

INQUIRIES AND ANSWERS.

PLASTER ON MEADOW LAND.—I would like to derive a little information from farmers in relation to the benefit to be derived by sowing plaster at this season of the year on meadow land, some of it timothy, some clover, and some timothy and clover. The soil, some of it, is loam, and some a stony, hard, wet soil in spring, and fall, but dry enough now.—How many bushels to the acre if any at all? Like-wise for sowing it on wheat; whether to sow with the wheat and drag in or wait till the wheat is up, or not sow at all, soil same as above? Will lime pay to sow on wheat land of this description when it costs 18 cents per bushel and 5 miles to drag? If so, about what quantity to the acre, and how should it be put on?—C. A. RUSSELL, Oswego Falls, N. Y., 1853.

BEST TIME FOR SEEDING ORCHARD GRASS.—A friend of mine requests me to ask of you, or some of your correspondents, information as to the proper time and manner of putting in orchard grass seed.—O. J. P., Hesperian Plains, Ohio, 1853.

REMARKS.—In seeding orchard grass, it should never be put in alone, except for the sake of raising the seed—mix with clover when for pasture or hay. Seeded by itself, two bushels (twenty-four pounds) per acre is generally used—if with clover, one bushel is sufficient. It may be sown early in the fall, after wheat or rye, or in the spring, after oats. It is frequently sown in the spring on winter-wheat, but much of the seed never germinates.—When sown after oats, the litter should not be very thick, and should be cut early, if the main object is to have the ground well set with grass.

WINTER BARLEY.—I inquired, thro' the RURAL, about one year ago, for information in regard to Winter Barley, and from what was published on the subject, was induced to sow 28 acres of fallow. It was threshed by DANIEL SMITH, in about fourteen hours, and, according to our tally, there is 1,400 bushels of it—making the average 50 bushels per acre. From experience in this single crop, and what I hear from others in this vicinity, I think I can recommend it to those who are inquiring,—"What shall we sow?"—HUGH McVEAN, Scottsville, N. Y., 1853.

Rural Miscellany.

THE PROVINCIAL EXHIBITION.—All the arrangements for this great gathering at Toronto are approaching completion. The Canadian Agricultural states that the "Crystal Palace is finished, and the fittings up are actively proceeding with. All that now remains to look for is an adequate response from the country, by means of visitors, stock, and material, which it is believed the result will justify. The Show will commence on the 28th inst., and terminate, so far as the Live Stock is concerned, on the 1st of October, but it has been determined by the Board of Agriculture to keep open the Crystal Palace an additional week, in order to give the public ample opportunity of carefully inspecting the numerous productions of Canadian ingenuity and skill, with which the capacious building will abound. Exhibitors, therefore, are requested to leave such non-perishable articles as they can conveniently for another week. This arrangement will, it is hoped, prevent the usual overcrowding for a day or two, annually complained of, and afford ample opportunity for our manufacturers, mechanics, and artists to bring their productions in a favorable manner before the public."

MORE AMERICAN HORSES FOR NAPOLEON III.—About one year ago the Emperor of the French purchased, through an agent in Boston, a few specimens of Vermont Trotting Stock, and these gave such satisfaction that an order for additions to his stable was received recently, and, on the 4th inst., three Morgan three-year-olds, standing each fifteen hands three inches, and of a royally dark brown, were sent out by the Ariel, to be landed at Havre, and thence forwarded to the Emperor at Paris. Speaking thereupon, *Porter's Spirit of the Times* remarks:—"There is one good effect that will certainly attend this second imperial importation of American horses, and that will be, to draw the general attention of France to the qualities of this superb breed of roadsters, and to render their introduction fashionable. The horse business of New England may therefore be considered on the rise."

CANADA WHEAT.—PRODUCT, QUALITY.—Colborne situated just across the lake from Rochester,—is fast becoming the centre of a large grain trade.—The Transcript, of Sept. 10th, says:—"On Saturday last the largest purchases were made of any day since harvest. It was a continual stream of teams nearly all day, and the quality of the grain we have never seen equaled in this region. Three or four American gentlemen who are engaged in the wheat trade, unanimously pronounced Colborne wheat the best average sample they had seen between London, C. W., and Kingston. The price today is about a \$1 for Spring and about \$1.25 for ordinary Fall wheat, while occasionally a very superior load was taken at a \$1.30."

CROPS IN IRELAND.—The Cork Examiner, in an article upon the harvest in Ireland, says:—"The sickle is already busy on all sides, and a truly golden harvest is falling beneath its stroke. The crops of all kinds are so abundant and so entirely free from even the appearance of disease or failure, that this may be called the first year of plenty since the famine. The yield of all produce is far beyond the measure of the best years we have had for a long time, and the country may at length congratulate itself in the assurance that the trials are at an end. Even the potato seems all at once to have recovered the firmness and sweetness of its best days. In point of prosperity Ireland need envy no country in Europe at the present moment."

SORGHUM IN ILLINOIS.—Some of the Illinois farmers agree in saying that the amount of sugar raised in that State this year from the Sorghum cane, will exceed in amount—including, of course, the molasses made in the same process—that of any other one product or article of export grown and manufactured in the State. The Cincinnati Times thinks this is an exaggerated statement, but adds, "there can be no doubt the amount is really very considerable, and that sugar may hereafter be regarded as one of the staple productions, not only of Illinois, but of most of the Northwestern States."

AN OLD VETERAN.—Says the Burlington Sentinel, "the 'Royal Morgan,' well known as the 'Steels' or 'Cream horse,' is 37 years old. He is owned by John Gregory, of Northfield, Vt., who has declared his intention to exhibit the old veteran in harness at the State Fair, to be held in Burlington the present month. He eats no hay, but subsists chiefly on meal, oats, shorts, potatoes, &c., and appears in a thriving condition. His step is still quick and nervous, and he trots as square as ever. He will be quite a curiosity, as he is the oldest horse known to be living."

POULTRY IN ENGLAND.—In the Liverpool market, as stated by Mr. Howard in the Boston Cultivator, live poultry of all the noted breeds is abundant. A Dorking cock and two hens, good ones, were held at £2. Like lots of Spanish fowls, gold-pencilled, silver-pencilled and silver-spangled Hamburgs and Games of different sub-varieties were from 15s. to 10s. each. Shanghais were considerably lower, and some Jersey Blues from America were held at higher prices than the pure Orientals, as they should be.

OHIO STATE FAIR.—A telegram from Sandusky, on the 13th inst., says:—"The city is full of strangers, and the arrangements for the State Fair are complete. The number of entries already made is 2,000, and the Fair will be the finest ever held in the State. The exhibition of horses and cattle will be superior in every respect to any that has before taken place in Ohio."

LEE COUNTY (ILL.) FAIR.—The First Annual Fair of the Lee Co. Ag. Society will be held at Dixon instead of Amboy, as heretofore announced. Time, Oct. 20th, 21st and 22d.

FULTON AND HAMILTON COUNTIES.—The Annual Exhibition of the F. and H. Co. Society, will be held at Johnstown, Tuesday, the 28th inst.

THE CHAUTAUQUE CO. AG. SOCIETY, holds its Annual Fair at Fredonia, Sept. 21st, 22d, and 23d.

Orchard and Garden.

THE AMERICAN POMOLOGICAL SOCIETY.

THIS Society holds its next meeting, as we have before announced, in New York, on the 14th inst. Our journal, which is dated on Saturday, goes to press on the Tuesday previous. Our large circulation renders this necessary. This will be on the first day of the meeting, and, of course, we shall be able to give no report this week. On Monday morning we start for New York to take part in the Convention as well as to report the proceedings for our pages. The New York State Agricultural Society has appointed the following delegates:—CHAS. DOWNING, GEORGE ELLWANGER, E. C. FROST, LOUIS MENAND, HERMAN WENDELL, JOHN C. JACKSON, R. H. LUDLOW, L. G. MORRIS, JOSEPH FROST, and JAMES VICK. The Genesee Valley Horticultural Society appointed H. E. HOOKER, CHARLES M. HOOKER and JAMES VICK, delegates; and the Fruit Growers' Society of Western New York the following:—P. BARRY, ROCHESTER; H. E. HOOKER, Rochester; T. C. MAXWELL, Genesee; Dr. SYLVESTER, Lyons; J. B. EATON, Buffalo; W. B. SMITH, Syracuse; W. P. TOWNSEND, Lockport.

HORTICULTURAL GOSSIP.

THE weather for the past week or two has been extremely warm, and for the last three or four days the thermometer has reached ninety degrees. The result is that all our fall fruits are ripening very fast—the pears, perhaps, a little too fast, for unless they are closely watched, where a good many varieties are grown, some specimens will be found fallen or spoiled on the trees. We never saw so great a progress in the ripening of fruit, in so short a time, as has been made in three or four days of the past week. Isabella Grapes are now as near maturity as they were last year at the setting in of winter. There will be no difficulty in ripening Isabellas perfectly, and Catawbas would ripen this season, we think, with fair treatment. We did think of describing a few varieties of pears now in perfection, but as the list is a long one, and this fruit will be pretty freely talked about at the Pomological Convention, we forbear. A. FROST & Co. presented us with several fine specimens grown on their beautiful dwarf trees, and ELLWANGER & BARRY did the same. Pears are now plenty in our market, but we cannot say they are cheap. They sell readily for from three to four dollars per bushel; peaches are scarce, and bring about the same price.

More than a dozen varieties of plums are now ripe, and among them we notice the Victoria, Cor's Golden Drop, and Pond's Seedling—the latter a mammoth, as will be seen by the engraving:

POND'S SEEDLING.

In making our visits to the fruit gardens last week, we found ourselves, one warm afternoon, at the grounds of H. N. LANGWORTHY, about five miles from the city, on the Ridge Road. This place consists of about ten acres, and when it came into the possession of its present owner, about three years since, it was in a very dilapidated condition, as it had been for a long time, although some very good things had been planted, and in spite of bad treatment bore tolerable fruit. Not having visited the grounds under Mr. LANGWORTHY's administration, we were surprised and pleased at the wonderful change. The house had been repaired or rebuilt, carriage house erected, new fences made, and all painted, and as neat as possible. The old Isabella vines that had rambled unchecked for years were pruned and trained, and loaded with magnificent clusters; the old apple orchard had been renovated, and the trees appeared to have taken a new lease of life. Here, too, we found a vigorous young peach orchard, an orchard of dwarf pears consisting of about two hundred trees, and a good many standards, some of them loaded with fruit, and this was particularly the case with the Bartlett and Flemish Beauty. We don't wish the fact to be generally known, for fear it might cause too great a rush of visitors, but we will just say that if any one who can appreciate a good melon wants a feast, just let him call on H. N. LANGWORTHY. We don't know any one that gets up melons in so good a style. He don't allow his friends to eat anything but the "best," and his White Imperials and Black Spanishs are unequalled, to say nothing about the Nutmegs. Then the elegant manner in which your host will dilate on their qualities will cause you to relish a few more slices of the same sort after you have had enough, as he will very confidently assure you that a good melon never hurts any one—a doctrine not hard to believe. Among the many new things we found here, was the Fulsan Cucumber, a very large, nearly white cucumber, very sweet and good for eating in the ordinary way, but solid and rather difficult of digestion. It makes an excellent preserve, much better than the Citron, being clear and transparent.

We have not space to notice many other things, but we will call attention to the mode adopted by Mr. L. for training Tomatoes, which is very easy and simple, keeps the fruit from the ground, and exposes it to the sun and air, thus securing early ripening. It is simply four forked stakes, less than three feet long, driven into the ground. Across these are laid two round poles. These poles run parallel, and are about eighteen inches apart, and of course the stakes are driven so as to accommodate the length of the poles. Between the poles the tomatoes are planted, and supported by a stake until they reach the poles, when the branches are laid over them, in the manner shown in the engraving.

Mr. L. for training Tomatoes, which is very easy and simple, keeps the fruit from the ground, and exposes it to the sun and air, thus securing early ripening. It is simply four forked stakes, less than three feet long, driven into the ground. Across these are laid two round poles. These poles run parallel, and are about eighteen inches apart, and of course the stakes are driven so as to accommodate the length of the poles. Between the poles the tomatoes are planted, and supported by a stake until they reach the poles, when the branches are laid over them, in the manner shown in the engraving.

LANGWORTHY'S METHOD OF TRAINING TOMATOES.

Speaking of training Tomatoes reminds us of one trained in this city so as to make it a very ornamental object. Taste will show itself, in some way, and we have seen the old gardener, or the lady with a love of flowers, when confined to the city by uncontrollable circumstances, raise in a flower-pot, or even a broken tea pot, flowers that would not disgrace the most costly conservatory. The gentleman that raised this plant is confined to a small city lot shaded by old trees—a most unfavorable place for growing an object worthy of notice, and yet he has succeeded with the unpretending tomato in growing a plant so beautiful that it has been viewed with astonishment and delight by hundreds. Indeed, great has been the demand for seed of this new variety. But, alas! in the hands of the careless and unskillful it will be only the poor old trailing plant, covered with tomatoes that will never ripen, and the few that do ripen coated with dirt. We have had our artist take an engraving of this plant, which we present to our readers as a model. We counted one hundred and thirty tomatoes, of various sizes, over twenty had been picked and about a dozen more were fully ripe, while a score or so more were coloring. The plant covers a space ten feet in height and about nine in width.

A MODEL TOMATO PLANT.

One of our market gardeners informed us that he had picked 450 bushels of tomatoes from the plants grown on three-quarters of an acre.

The White Grub is doing a good deal of mischief to strawberry plants in some locations, as well as to potatoes. We fear we must give up all hopes of a show of Dahlias this fall, as the insect that injures the potato tops is killing the buds as fast as they appear. At first the mischief was charged to the grasshoppers, but a close examination proved the enemy to be the *Phytocoris*, which has been charged in the Rural and other papers by Mr. HENDERSON with being the cause of the potato rot. This little mischievous insect, we think, is beginning to tread on dangerous ground. The florists will find something to give him "dts" if he persists in destroying their flowers. Mr. JEFFREYS, of Canandaigua, informs us that the borer is destroying the Mountain Ash trees in that village; that of late they are suffering more than the locusts.

THE LARGE WHITE GRUB.—Will you be so kind as to inform me through your paper if there is any means by which the large white ground grub can be destroyed? They have been very destructive for the last two years to the strawberry plants in this vicinity. Last spring I set out some choice varieties, for which, it would seem, they show a decided taste. They work under the ground, eating off the roots of the plants. I have thought that they live on the roots of weeds also, and therefore the cleaner the ground is kept, the more they will concentrate about the plants.—C. CLARK, Turner, DuPage Co., Ill., 1868.

REMARKS.—This large white grub has been quite troublesome here in some places. Last week we saw a plantation of strawberries of about an acre, in which three-fourths of the plants were destroyed by the grub. Potatoes, also, in the same lot were much injured by them. They are difficult to destroy. Salt, or anything that will kill them will also kill the plants. When anything is placed on the surface that they dislike they go deeper in the soil. Has any of our readers succeeded in destroying them?

APPLES.—THEIR NAMES.—I am somewhat in the nursery business, and have the following apples in my nursery that I am entirely unacquainted with: Crow Sweet, Orange Russet, Red Cheek Pippin and Saxton. Now, if through the Rural, I can be made acquainted with their character you will confer a favor upon your subscriber.—J. R. Hocking Port, Ohio, 1868.

REMARKS.—Don't know the Crow Sweet. There is an old sweet variety called the Crow Egg. It is a fall apple, not very good, oblong oval, greenish-yellow, tender, large core. Another apple is called by the same name in Kentucky. It is a winter fruit, sub-acid, conical form, yellow, striped with dull red. Know no Orange Russet. There is an Orange Apple, with skin of an orange-yellow, sometimes partially covered with blotches of russet. Red Cheek Pippin is a synonym of Monmouth Pippin. We never before heard of a Saxton apple.

DO QUINCES PRODUCE BLIGHT?

MESSES. EDITORS.—Having seen in the Rural of the 11th inst. the observations of one of your correspondents in respect to whether blight upon quinces produces a similar effect upon pears, and as my experience partly resembles that of Mr. CLARK, and from your solicitation in the matter I will endeavor to bring forward my case as intelligibly as my humble powers of description will permit.

The case is this:—At each end of my garden I have a quince tree, both of which this spring had their annual visits from an insect which attacks the extreme points of the young shoots. The effect is at the point of the shoot, which shrivels up and acts as an encasement for the egg deposited therein, where it finds protection until the process of life and maturity shall have ripened the inhabitants' instinct to "move on." This blight, as many know, is quite distinct in appearance and effect, from the one of which Mr. CLARK finds his quinces affected; for the attacks of the latter does not make its appearance until the fruit has set, while the other takes place just previous to the expansion of the blossom buds.

However, to come to the point, I may say that both these quince trees have been attacked this year with the blight your correspondent has been troubled with. And now for their position.—Quince tree No. 1 is within two paces of a fine thriving Siberian crab apple which has evidently been infected with the same blight. This tree was attacked six or eight weeks since, and but little notice taken of it until lately, when the blight was making rapid progress to the main stem; the side branches were, therefore, immediately cut out, and on examination the discoloration had almost reached the point referred to. I have also a young standard Sheldon pear scarcely two paces from the same quince tree, and I have had the greatest difficulty to preserve its wood of this year's growth.—This tree I have very closely watched, and have nipped off (to a healthy bud) all the young shoots twice, and in some cases three times. These shoots had evidently been punctured by some insect near the extreme point of the shoot, and the discoloration made rapid progress to the base of the shoot, but whether this may be attributed to the same cause as that in which the quince suffers, it did not occur to me at the time. Within the past two or three weeks, however, I have more matured evidences of the same discoloration precisely, upon a dwarf Doyenne and Steven's Genesee; and on a close examination, I find the same punctures previously mentioned in the case of the Sheldon pear, while on other shoots could be traced specimens of the insect work in various stages of progress;—on others neither insect or punctures could be seen. These observations, it will be seen, are necessarily incomplete, as my attention has not probably been called to it until the various stages of the blight had progressed too far. Thus far, however, they coincide with the experience of Mr. CLARK. But when I turn back to quince tree No. 2, which has been most seriously attacked with the blight, and which I have had the greatest difficulty to preserve, I find the same punctures previously mentioned in the case of the Sheldon pear, while on other shoots could be traced specimens of the insect work in various stages of progress;—on others neither insect or punctures could be seen. These observations, it will be seen, are necessarily incomplete, as my attention has not probably been called to it until the various stages of the blight had progressed too far. Thus far, however, they coincide with the experience of Mr. CLARK. But when I turn back to quince tree No. 2, which has been most seriously attacked with the blight, and which I have had the greatest difficulty to preserve, I find the same punctures previously mentioned in the case of the Sheldon pear, while on other shoots could be traced specimens of the insect work in various stages of progress;—on others neither insect or punctures could be seen. These observations, it will be seen, are necessarily incomplete, as my attention has not probably been called to it until the various stages of the blight had progressed too far. Thus far, however, they coincide with the experience of Mr. CLARK.

On another examination, since writing the above, I find the standard Bartlett punctured on several shoots, but on the second growth of this season. The discoloration does not, however, make its appearance. Probably the wood is too ripe for its downward progress. WM. CREED.

QUINCE AND PEAR BLIGHT.—The observation of your correspondent, J. S. CLARK, in relation to the blight in quince trees being transferred to pear, is new to me, but I must say, very probable. As facts, not theories, are wanted in this matter, I would state that during the past three years, I have set out 25 dwarf pear trees in a small city lot.—They all thrive well, and some are bearing very well. One, however, which was planted near a quince bush afflicted with the blight, has been attacked by the same disease. All the others, being further distant, have escaped. If the experience of others coincides with this view of the matter, a knowledge of the facts will be of the utmost importance, both theoretically and practically. J. P.

FRUIT FOR THE WEST.

It is very easy to jump at conclusions and say this or the other fruit will not do for the West, just because somebody failed in the attempt to grow it, when perhaps the treatment was such as to cause almost anything to fail. On this subject we are pleased to give all reliable information. VERRY ALDRICH, of Arispe, Bureau county, Illinois, in *Emery's Journal*, gives the following list of apples "best adapted to that locality, and most profitable for family use or market—all hardy and productive."

Six best apples for orchard of 100 trees.—SUMMER—10 Red June, 10 Summer Pennock. FALL—16 Snow. WINTER—20 Dominie, 20 Wagener, 25 Willow Twig.

Twelve best apples for orchard of 100 trees.—SUMMER—10 Red June, 5 Sops of Wine, 10 Summer Pennock. FALL—5 Tompkins, 5 Snow, 5 Cloth of Gold. WINTER—16 Dominie, 16 Wagener, 16 Willow Twig, 5 White Bellflower, 5 Yellow do, 5 N. Y. Pippin.

Twenty best apples for orchard of 100 trees.—SUMMER—5 Red June, 2 Sops of Wine, 5 Summer Pennock, 3 Red Anstrachan, 2 Early White (Coopers'), 2 Lefseifer Sweeting. FALL—3 Tompkins, 5 Snow, 2 Fall Wine, 3 Hawley, 2 Sweet Wine, 2 Cloth of Gold. WINTER—10 Dominie, 10 Wagener, 10 Willow Twig, 2 White Bellflower, 2 Yellow do, 10 N. Y. Pippin, 10 Red Seeknosurther, 10 Swaar.

1,000 trees for market will depend on how near it is. If near by and large,

SUMMER—200 Red June, 100 Summer Pennock. FALL—50 Snow. WINTER—100 Dominie, 150 Wagener, 200 Willow Twig, long keepers; 200 N. Y. Pippin, long keepers.

When the orchard is located too far away from market for summer fruit, diminish the summer and add more winter.

Of pears, have not had experience enough yet nor varieties sufficient to make out a list. Among

what I have, the Onondaga, Flemish Beauty, White Doyenne, Louise Bonne of Jersey, Dearborn's Seedling, Buffum, Heathcoat, and Steven's Genesee, all promise well, both as standard and dwarf, (Onondaga excepted.)

TREE MIGNONETTE.

HAVING been very successful for some years in growing fine specimens of this, the result of my experience may not be unacceptable to your readers.

I generally sow in four-inch pots about the end of March, or beginning of April, according to the number of standards required. The soil I use is maiden loam and leaf-mould in equal quantities, with a little well-rotted manure and sand added.—I drain and fill the pots in the usual way, but do not press the soil too firmly. I smooth the surface, and put a pinch of seed in the centre of each pot. I cover thinly with fine sifted soil, water gently and remove the pots to the stove, or, if that is not available, to a hot-bed, and the plants soon make their appearance. As soon as they have grown a little I pull out all but three of the strongest near the centre of the pot. After all danger of their damping off has in a great measure passed I remove the two weakest, and tie the other to a neat stake. I report as the plants require it, and remove the lateral buds as soon as they make their appearance in the axils of the leaves, at the same time preserving the leaves on the stem carefully. The flower will soon make its appearance on the top of the stem. I remove it once, and allow the highest lateral bud to grow to form the next leader to be tied to the stake as soon as possible. I remove the lateral buds as before, and so on, till the stem is the desired height.

When the stem is the height required, I cut off the top and allow four or five of the highest lateral buds to grow. As soon as they have pushed a little I pinch them, leaving only two buds on each; I allow them to start a little and then remove the plants to a cool green house where they get plenty of air. I continue to pinch regularly as the plants grow till the heads are the desired size (which will be about the end of September or the middle of October), when they will require their final shift, using 8 or 9 inch pots, according to the size of the plants. I procure some iron wire for supports, or neat wooden stakes. After being inserted into the pots they must stand two or three inches above the head of the plant, to allow all the laterals forming the head to be suspended from them with small pieces of bast. If they are not tied up carefully they will as they grow droop down and break, as Mignonette is a plant of straggling habit. Treated in the above way Mignonette will flower freely till the time when there is plenty to be had out of doors, when the plants may be thrown away. I prefer growing from seed every season. The little extra trouble required is amply compensated by the neat compact form of the heads of the young plants.—M., in *London Gardeners' Chronicle*.

A CHINESE GARDEN.

make the following extracts:

"The plants consist of good specimens of southern Chinese things, all well known in England—such, for example, as cymbidium Chinese, olea fragrans, oranges, roses, camellias, magnolias, etc., and, of course, a multitude of dwarf trees, without which no Chinese garden would be considered complete. In the alcove alluded to, there are some nice stone seats, which look cool in a climate like that of southern China. The floor of this building is raised a few feet above the ground level, so that the visitor gets a good view of the water and other objects of interest in the garden. That this is a favorite lounge and smoking place with the Chinese, the following Chinese notice, which we found on one of the pillars, will testify: 'A Careful and Earnest Notice.—This garden earnestly requests that visitors will spit betel outside the railing, and knock the ashes off pipes also outside.' Several fine fruit trees and others are growing near the walks, and afford shade from the rays of the sun. On one of these we read the following: 'Ramblers here will be excused plucking the fruit on this tree.' How exceedingly polite!"

"Near the centre of the garden stands a substantial summer house or hall, named the 'Hall of Fragrant Plants.' The same notice to smokers and chewers of betel-nut is also put up here; and there is another and a longer one, which I must not forget to quote. It is this:—'In this garden the plants are intended to delight the eyes of all visit-ors; a great deal has been expended in planting and in keeping it in order, and the garden is now beginning to yield some return. Those who come here to saunter about are earnestly prayed not to pluck the fruit or flowers, in order that the beauty of the place may be preserved.' And then follows a piece of true Chinese politeness:—'We beg those who understand this notice to excuse it!' Passing through the Hall of Fragrant Plants, we approached, between two rows of Olea fragrans, a fine ornamental suite of rooms, tastefully furnished and decorated, in which visitors are received and entertained. An inscription informs us that this is called the 'Fragrant Hall of the Woehee Tree.' Leaving this place by a narrow door, we observed the following notice:—'Saunterers here will be excused entering.' This apparently leads to the private apartments of the family. In this side of the garden there is some artificial rock-work, which the Chinese know well how to construct, and various summer houses tastefully decorated, one of which is called the 'Library of Verdant Purity.' Between this part of the garden and the straight walk already noticed, there is a small pond or lake for fish and water lilies. This is crossed by a zig-zag wooden bridge of many arches, which looked rather dilapidated."

FRUITS OF THE CRIMEA.—New apples of extraordinary excellence, have been discovered in the Crimea, which will, no doubt, find their way to Europe and America. Pallas speaks of one called the Shop Alma, which keeps till July, and only acquires its excellence before the new year.—Wagon loads are annually sent to Moscow, and even to St. Petersburg. There is also an autumn apple, thought to be the best ever tasted in any country. A list of about ten heretofore known, is also recorded. Twenty-four varieties of grapes are cultivated, either for wine or the table. None of them appear to be of importance.—*Edinburgh Phil. Journal*.

Domestic Economy.

CAKE RECIPES.—GOOD VINEGAR.

EDS. RURAL.—Having read many valuable recipes for cooking in your excellent paper, I thought I, too, might contribute my mite in sending a few that I have found to be good:

SOFT CAKE.—One cup of sugar; 1 egg; a piece of butter the size of an egg; 1 of a cup of sweet milk; a teaspoon of cream tartar; half as much soda.

ANOTHER.—One cup of sugar; 1 egg; 1 cup of butter; 1 cup of buttermilk; a teaspoon of soda.

COOKIES.—One and one-half cup of sugar; 1 cup of butter; 1 cup of buttermilk; teaspoon of soda; roll them rather thick and bake quick.

JUMBLES.—Two cups of sugar; 1 cup of sour cream; 1 cup of butter; 3 eggs; 1 teaspoon soda.

CAKELINGS.—One pint of milk; 2 cups of sugar; 1 cup of butter; 3 eggs; 1 teaspoon of soda; 2 of cream tartar; salt and spice to your taste.

If J. S. M., wishes to know how to make good vinegar that will cost less than 25 cents per gallon, please try the following:—One quart of molasses; 3 gallons of rain-water; 1 pint of yeast;—let it stand four weeks. C. S. W. Mexico, N. Y., 1868.

CREAM TARTAR BISCUIT.—TO COLOR DRAE.

EDS. RURAL.—I have read with great interest the column devoted to Domestic Economy in your paper, as also every other part of it, and have noticed of late the increased interest manifested in it by all, in contributing something to it; so I thought I would cast in my mite, and perhaps some one might be benefited by it.

CREAM TARTAR BISCUIT.—Take a pint bowl two-thirds full of sweet milk, add to it a tablespoonful of soda; then take a small pan half full of flour, and add to it two tablespoonfuls of shortening; 1 of cream tartar, and one half do. of salt; mix well and add the milk. Make it hard enough to roll out good, and cut in cakes about 1 1/2 inches thick. Bake very quick. Try it, and if you make them right, you will never want to make any other kind.

TO COLOR DRAE.—Take plum tree sprouts and boil them an hour or more, then add copperas according to the shade you wish your articles to be. White ribbons take a very pretty color in this dye. I would like to be informed through your paper how to take out ink stains from wood and cloth. Tecumseh, Mich., 1868. A FARMER'S DAUGHTER.

TO MEND BROKEN GLASS AND EARTHEN WARE.—I see in the Rural an inquiry for a cement to mend glass and earthen-ware. Broken glass may be mended quite securely with white paint, such as is used for painting buildings. Put it neatly on both edges and press them firmly together. Put them away until the paint becomes thoroughly dry and hard. To mend broken glass and earthen-ware, take a cord, you can by boiling the piece in sweet skim-milk, mend it so that it will never come apart by using. The fractured edges must not be wet with water before mending, and after boiling, put away the dish until it shall become thoroughly dry before taking off the string.—M. E. P., Palmyra, N. Y., 1868.

CAROLINA CAKE.—Two coffee cups of white sugar; 3 of flour; 1 of sweet cream; 2 tablespoons of melted butter; whites of 5 eggs, well beaten; 1/4 a teaspoon of cream tartar; 1/4 do. of soda; 1 teaspoon of extract of lemon.—It is an improvement to add citron,—put about half of the mixture in the baking dish, out the citron in thin slices and lay them over the mixture pretty plentifully, then pour the remainder upon the citron. I think Mrs. A. P. G., of Janesville, Onondaga Co., N. Y., will acknowledge this to be as good a recipe for cake as her recipe for lemon pie, which is equally delicious. If any doubt, let them try it, and they will find it is worth a year's subscription to the Rural.—M. C., Oak Orchard, N. Y., 1868.

GOOD DUMPLINGS.—AMILLA, of Cayuga, N. Y., wishes for a recipe to make Good Dumplings. Here is one that we call a good one. Take 1 1/2 pounds flour; 6 ounces of beef suet, chopped fine; 1 teaspoonful saleratus; 1/4 pound raisins—mix these together with water as stiff as can be stirred with a spoon. Put the mixture in a bag, securely tied, and boil 1 1/2 hours. To make of preserves instead of raisins, leave out the raisins and mix with the hand the same quantity of flour, suet, &c., roll like pie crust to the thickness of a quarter of an inch and spread on preserves, roll the whole together and put into a bag and boil as above.—A. E. C., Chicago, N. Y., 1868.

PRESERVING CUCUMBERS FOR WINTER USE.—Some time since I saw in the Rural an inquiry as to how we shall preserve cucumbers for winter use? I will send you my mode. Put one pound of alum and three quarts of salt to one barrel of pickles—water sufficient to cover them, and lay a cloth on top. There will be a scum rise on top, which take off with the cloth and rinse it in cold water. When you wish to use them, soak over night, or, if you like them pretty salt, just rinse them off, scald the vinegar and pour upon them.—C. M. C., Fulton, N. Y., 1868.

TOMATOES AND MELONS.—I'm potatoes largely, both at breakfast and dinner: take hot or cold, cooked or raw, with vinegar or without vinegar, fried in sugar and butter, or stewed, with salt and pepper. Their healthful properties consists in their being nutritious, easily digested, and promotive of that daily regular action of the system, without which, health is impossible. Their ant-constipating quality is in the seeds—on the same principle that grapes, raisins and white mustard seed have stood high in this respect the attraction of the seeds on the mucous surface of the alimentary canal exciting its peristaltic motion, thus causing regular daily action.

As to water-melons, they are the only things we know which can be eaten with impunity until we cannot swallow any more. The best time for taking them is about eleven o'clock in the morning, and about four in the afternoon. They are not safe for very young children—the seeds are especially injurious to them.—*Holt's Journal of Health*.

Ladies' Port-Folio.

Written for Moore's Rural New-Yorker.
THE LAST TIME.

I HAVE climbed up the rock for the last, last time,
And I sit on the moss alone,
How my heart's deep love is still twining around
The brow of this gray old stone.
How my thoughts leap up, and my heart throbs fast,
As I sit on the moss alone,
How the tear-drops fall in a glittering chain
Down, down to the cold gray stone.

Far down in the vale by the river's side
I can see my own dear home,
But the vine is torn from the roof-tree now,
And the loved ones, scattered, roam.
There the violets weep on their grassy beds
As the stranger passes by,
And the lilies bend 'neath the careless foot
With a sad but fragrant sigh.

O, what will they do with my sister's grave:
Will they tear the roses away?
And what will they do with the bench at the door
Where my father once knelt to pray?
There's a cold, pale face by the hearth-stone now,
And hands never crossed in prayer,
Will the God of the fatherless lend him his smile?
Shall the White Angel still hover there?

I roamed through the woods for the last, last time
Ere yesterday's sun was low,
And the brow of the earth wore a glad, sweet smile—
O, my heart, it was thus long ago.
But my father's lands are the stranger's now,
And he bade me not linger there,
But I whispered—"Peace, 'tis the last, last time,"—
Dare he scorn the orphan's prayer?

I stood 'neath the tree like a lion chained,
O, fierce was my spirit then,
But I saw thee, my rock 'neath the setting sun,
And a voice cried—"Peace be to man."
When the stranger came to the orphan's home,
He told me this rock should be mine,
He told me in mockery, I answered him thus—
"Keep sacred that promise of thine."

So I come to thee now, my own old rock,
I climb to thy friendly seat,
I come to thee now for the last, last time,
Ere the cold, rough world I meet.
I am not ashamed to show thee my tears,
Let them fall on the cold gray stone,
God give us strength, let him list to me now,
As I kneel on the moss alone.

MRS. KETCHUM'S SHAWL.

BY ANNA LINWOOD.

Mrs. KETCHUM had long been intending to purchase an expensive shawl. To see her come into meeting with her melancholy bonnet and faded old cloak, one would never have suspected her of cherishing such an ambition. All her exertions for years had been tending to this same purpose, but it was only this winter that she "got to it," as she phrased it. She meant to have the nicest shawl she could get, to much better advantage than she had even hoped, and with more than forty dollars in her purse she entered the merchant's store. A variety of broche shawls was shown her, and at last her eyes fell on one which exactly suited her—pattern, color, and quality. She saw it in all possible lights and at all distances so as to get the general effect. She asked the clerk all sorts of questions, such as what would be his lowest cash price—if it would wash and if he would warrant it to be every thread wool—which he did not hesitate to do. Its price was just thirty-five dollars. She at last concluded to take it and now behold her again in the green democrat, in jubilant spirits, on her way homeward. As she rode along she could not help expressing her happiness by humming snatches of old songs that she had learned at singing-school long before she was Mrs. KETCHUM. All at once the thought flashed upon her, what if she had been cheated? There was nothing like those city clerks and for all she knew, her shawl was half cotton. Poor Mrs. KETCHUM! She could not help unwrapping that little package and picking away at the fringe to see if it was all right. It felt like wool, but the more closely she examined, the more she fancied that she detected the merest speck of cotton. By the time she reached home, her face was truly woe-begone. She immediately sent for a neighbor—who had the reputation of being very sharp-sighted—and to her she communicated her suspicion.

"It looks well," said that lady, gazing on the shawl with unfeigned admiration, "but you can't depend on nothin' now-a-days," and forthwith she proceeded to pick it to pieces. "You can't tell by breakin' the threads so well as by burnin' 'em," said the wise neighbor. "There's a certain smell to cotton."

A candle was lighted and if the shawl had been tried for witchcraft, it could not have been put to severer tests. The result was that both came to the same conclusion, that "there might be cotton in it, or there might not." Not satisfied, however, they convened a council of their neighbors—various broche shawls were borrowed as standards of excellence—and now a dozen hands were busy picking away at the unfortunate shawl, doing it with acids and breaking and burning the threads. It really began to have a faded look as though resolved to keep company with poor Mrs. KETCHUM's face. The best judges decided that though it seemed to be all wool, there was still some room for doubt and when their opinion was asked, they gravely shook their heads and declined an answer. By this time, the story had been generally circulated that Mrs. KETCHUM had been to the city of B. and paid thirty-five dollars for a broche shawl, and that she had got dreadfully cheated as it proved to be half cotton. Poor Mrs. KETCHUM was terribly

mortified. She wore it once to church, but it seemed as if every eye was upon her, squinting to find the cotton, and as she passed out of the church-door, she could feel more than one hand at work on the fringe. These all pronounced it a splendid humbug. At last she traded it off to a pedlar, taking in its place a variety of shammy articles, such as table linen, which proved to be cotton, suspicious jewelry, &c., and now seems destined to wear forever the faded old cloak, which she wraps around her with unwonted tenderness and affection.

JOTTINGS.

'Tis May. You sit by the open window and, in the still hush of twilight, gaze out upon the landscape. There is a breath of flowers upon the air, a sound of joyous bird-songs, and a balmy stillness that soothes the heart and drives away the day-care, while purer thoughts steal over the mind. Mark the softly tinted clouds, yonder, where the sun is setting,—it needs no great stretch of the imagination to fancy you catch a glimpse of angel-wings behind their roseate luster. You think of Eden, and almost fancy you are there; and thinking of Eden, reminds you of ADAM and EVE, and you wonder if their atmosphere could have been more soft and balmy than this,—if their bird-notes could have been sweeter? You think it doubtful, for it would be strange indeed, if our birds, in this this advanced age, couldn't sing better than old ADAM's did!

Next, you fancy what a happy, loving couple those two must have been—before EVE ate that apple. Can you imagine anything happier? We recollect reading, somewhere, sometime ago, somebody's opinion as to how much they missed by never being children; but we beg leave to assert, as our opinion, that what they lost was more than made up by what they gained. If ADAM never did know what fun it was to play marbles, roll hoop, or ride down hill on a sled, he never knew what it was to be a poor baby, tossed and trundled by a doting mother, an anxious grand-mother, and two or three dozen loving aunts—smothered in blankets, lest he should sneeze, and fed eternally on Godfrey's cordial.

And if EVE never did have a mother to comb her hair, and make her rag-dolls, she never had anybody to box her ears when she tore her frock, or muddled her pantalons; nor any great ugly brothers to cut off her doll's head, and tear down her play-houses. And what are the few joys of childhood, when compared with the trials it necessarily brings with it? No! We think ADAM and EVE superlatively happy, in jumping into life full-grown!

But EVE missed it mightily once, when she ate that apple! You wonder what on earth possessed her to do it. Oh, yes. You recollect—it was that Old Serpent. And that sets you wondering what sort of a snake SATAN chose to creep into,—if it wasn't one of those little gray "varmints," out here in the woods. They look as if he wasn't out of them yet.

strate the march of improvement, for you rather guess it would take something more than a snake to fool us women now-a-days. But it seems misery loved company then as well as now, for when EVE found she had got herself into a scrape, she must needs have ADAM in it, too. That seems rather unamiable at first, but when you come to look at it, it was good enough for him, after all. You remember how MILTON describes it,—the angel coming to visit them, &c. Of course you don't know how MILTON found it out, but if it was so, what business had ADAM to send EVE bawling off around the garden, in the hot sun, after fruit for dinner? He'd better have gone himself, and then, perhaps, his superior discernment, and entire lack of curiosity (?)—(which predominant quality in EVE, SATAN probably took advantage of)—would have prevented any such calamity! But you don't believe that ADAM was so entirely wanting in curiosity, do you? No, sir! If he had been, he would never have eaten that apple, if EVE did coax him, though doubtless many "lords of creation," were ready to aver, that any woman is worse than SATAN—in that respect, at least.

Well, if EVE had never eaten that apple, what glorious times we would have had! No baking, churning, mopping, washing dishes, &c., &c.,—and all that, is to be done to-morrow! Oh! dear! don't you wish she never had. Its dark. BETTY, bring the lights in!

Webster, N. Y., 1888. NELLIE.

PARENTAL EXAMPLE.—Example is a living lesson. The life speaks. Every action has a tongue. Words are but articulate breath. Deeds are the fac-similes of the soul: they proclaim what is within. The child notices the life. It should be in harmony with goodness. Keen is the vision of youth; every mark is transparent. If a word is thrown into one balance, a deed is thrown into the other. Nothing is more important than that parents should be consistent. A sincere word is never lost. But advice, counter to example, is always suspected. Both cannot be true; one is false. Example is like statuary. It is reality. The eye dwells upon it; the memory recalls it; the imagination broods over it. Its influence enters the soul. Parental example becomes incorporated with the child's understanding. He cannot forget it if he would. If it is good, it blesses. If it is bad, it curses. The parent may die, his example cannot. Let life, then, be an unblemished picture, a consistent whole.

GARDENING FOR LADIES.—Make up your beds early in the morning; see buttons on your husband's shirts; do not rake up any grievances; protect the young and tender branches of your family; plant a smile of good temper in your face, and carefully root out all angry feelings, and expect a good crop of happiness.

CONVERSATION.—The most casual remark lives forever in its effects. There is not a word which has not a moral history. And hence it is that every "idle word" which men utter assumes a character so important, that an inquest will be held on it in the general judgment.—Harris.

There is a paradox in pride—it makes some ridiculous, but prevents others from becoming so.

Choice Miscellany.

POESY.

BY H. M. PHILLIPS.

I HAVE a garden, hidden from the view
Of all the busy world, a garden fair,
With shady nooks and sunshine rippling thro'
In golden waves down the crystal air.

There merry blossoms greet me when I come
With friendly smile, those bright, perennial flowers,
And stinging bees fly, heavy laden, home,
And store me honey in those hidden bowers.

And there are rocky paths and rushing streams
That give diversities to this retreat;
And quaint and curious grottoes, where in dreams
I hear strange eld music, soft and sweet.

And there I gathered jewels, rich and rare,
Or such in life's young morning light they seemed;
And once I thought I saw the glitter there
Of golden ore, but then, perhaps, I dreamed.

The world, I fear, my garden will deride;
They'll count but worthless all the flowers I prize,
And though a few, I've culled, and shown, I hide
The taught garden from their scornful eyes.

Thus many a one has treasures all his own,
Beyond the busy highways of his brain,
Hid in the valleys where he walks alone,
Where none can enter to dispute his reign.

"THERE'S SOMEBODY DEAD IN THERE."

"THERE'S somebody dead in there," said one little boy to another, as I passed a house, on the bell-knob of which hung a little piece of black crape. My heart repeated what the little boy had said—"there's somebody dead in there,"—as I walked slowly and thoughtfully down the street. All who passed and saw the emblem, learned the same sad story, that "somebody was dead." But who, few cared to ask, or know.

A few short months since, when the cold winds were drifting the snow through the streets and piling it on side-walk and roof, a little stranger with a face—O, so little!—and eyes that looked wonderingly around on the new world it had discovered, made two hearts glad. And by-and-by it grew so strong that it made brief journeys from a chair to mama's outstretched arms, laughing the while as hard as it could. Often as I passed the house, a sweet baby face turned toward me, and little eyes peeped out at me through the half closed blinds, and my heart blessed the little child. But a few days ago it sickened, and last night, when the sun went down, it died.

I miss a sweet face at the window to-day, and the little carriage is empty; and as I pass the house, I am repeating sadly, with the little boy, "there's somebody dead in there." The heart knoweth its own bitterness, and that young mother knows better than anybody else, that "there's somebody dead in there," and only child. God help thee, young mother! This afternoon, while the Sabbath lingers, and the holy hours are full of rest and stillness, they will carry thy little one to its quiet home in Mount Hope, to await the coming of its Redeemer.

They have buried their dead out of their sight, and still it seems as if somebody was dead in that house. Oh, those are sad hours at the fireside—and only they who have felt them know how sad, when it is said, "there's somebody dead in there." How the sorrow settles down like a dark cloud above and around us! The sunshine seems all withdrawn and verily we should die, did not God send it back to us again.

By-and-by, dear reader, of your house and mine will it be said, "there's somebody dead in there." Perhaps that somebody will be you, or me; perhaps the sweet wife that journeys by our side, or the little one that nestles close in a corner of our heart. God help us in that hour, for all human help will fail. Of every earthly house will it, sooner or later, be said, "there's somebody dead in there;" but there is a house not made with hands, of which this shall never, never be spoken. Down through the ages sounds the glorious, everlasting proclamation, there shall be no more death.—If you and I, dear reader, have a mansion in that house, let death come to our earthly house, if God send it. It can trouble us but a little while, and then, at last, standing within the fold of the Good Shepherd, all tears shall be wiped from off all faces.

THE MOUNTAINS.

How grand, how gloomy, how eternal are the mountains! Their veteran heads, hoary with Nature's symbolic snows, tower towards the vast concave of Heaven, and in their proximity to the sky even forget that their foundation is on the humble earth. The mountains are the sentinels of the land. Far away towards the heavens they rise, and stern and immovable as earth itself, watch over the ant-hill battle at their feet. Never shall I forget the noble range of Catskill's that bounded my youthful vision, and for many a childish year daily charmed me and taught me to love my native place. Away to the south and south-west they stretched, an unbroken chain, their undulating outline sketched in bold relief against the sunset sky, and their forest-mantled sides blended in one haze of blue, that darkened into more sombre shades as the sun withdrew its smile, and when by moon-light's mystic beam the mountain tops were gilded, dark and gloomy shadows lurked at their base, like the overhanging ban of an evil spirit. What a teacher is Nature—and the mountains are her children.

Go and trace to its rocky fountain the crystal stream let that, from the dark caverns of the mountain, comes dancing and leaping as in joy at its freedom from its prison of stone. Go where never human foot has trodden, and midst the wild ravines and gigantic forest monarchs, study the lessons that the grandeur and simplicity of Nature present to us. Search where never sunlight strayed, and find the tiny flowers whose scented petals were never kissed by the sunbeam, and which, "wasting their sweetness on the desert air," bloom

and die unseen by human eye. Go to the mountains, ye misanthropic dwellers in the dusty city, and there, where form and fashion, and hollow-heartedness cannot follow you, make your home with the happy creations of Nature—the birds, flowers, and trees—the rocks, winds, and storms. Commune with the voices that whisper from the tremulous pines, and ask the murmuring rill for its talisman of happiness.

St. Johnsville, N. Y., 1888. LANSIE.

NATURE LEAKING THROUGH CITY WALLS.

THE Autoist talks pleasantly at the September table set for him in the *Atlantic Monthly*. Here is a truthful record of how Nature leaks through city walls, right into its huge stone heart.

What a blessing it is that, with all our cement and close mason-work, we cannot make the town country-proof. But here is what every one has seen, and hardly any one thought worth telling, and we beg our readers to believe that a good deal of the chinking of the solid walls of work, that makes a dyke against the dumps and the devil, is composed of what the world would echo Mr. Toots, and say, "of no consequence."

I don't know anything sweeter than this leaking of Nature through all the cracks in the walls of cities. You heap up a million tons of hewn rocks on a square mile or two of earth which was green once. The trees look down from the hill-sides and ask each other, as they stand on tip-toe,— "What are these people about?" And the small herbs at their feet look up and whisper back,— "We will go and see." So the small herbs pack themselves up in the least possible bundles, and wait until the wind steals to them at night, and whispers,— "Come with me." Then they go softly with it unto the great city,—one to a cleft in the pavement, one to a spout on the roof, one to a seam in the marbles over a rich gentleman's bones, and one to the grave without a stone, where nothing but a man is buried,—and there they grow, looking down on the generations of men from mouldy roof, looking up from between the less trodden pavements, looking out through iron cemetery-railings. Listen to them, when there is only a light breath stirring, and you will hear them saying to each other,— "Wait awhile!" The words run along the telegraph of those narrow green lines that border the roads leading from the city, until they reach the slope of the hills, and the trees repeat in low murmurs to each other,— "Wait awhile!" By and by the flow of life in the streets ebbs, and the old leafy inhabitants—the smaller tribes asleep in front—saunter in, one by one, very careless seemingly, but very tenacious, until they swarm so that the great stones gape from each other with the crowding of their roots, and the feldspar begins to be picked out of the granite to find them food. At last the trees take up their solemn line of march, and never rest until they have encamped in the market-place. Wait long enough and you will find an old dotting oak hogging a huge worn block in its yellow underground arms; that was the corner-stone of the State House. Oh, so contented!

NATURAL BEAUTY.

WHAT an inconceivable wealth of beauty must reside in the mind which, without copy, first called forth these numberless hues and shades that relieve each other and melt into each other in the vast whole of Nature—which devised these countless forms of vegetable life, from the wayside flower that blooms to-day and withers to-morrow, to the forest giant which outlasts the rise and fall of nations and of empires—which meted out the heavens, measured the courses, and arranged the harmonies of the stars, spread the ocean, poured the river, torrent and waterfall! What an infinity of resources do we behold in the alternate phases of the outward universe, each of which seems too beautiful to be replaced by one of equal loveliness, and yet yields at once its fancied pre-eminence to its successor!

Thus, who can say which is the more replete with beauty—day, with its all-revealing light, or night, with its countless centres of fainter radiance;—spring, with its outgushing from every fountain of life, its promise half hidden, half disclosed, its fresh, thin field and forest drapery; summer, with its richer, deeper verdure, its gayer forms, and more festive aspect; autumn, with its harvest wealth, its party-colored foliage, and its piles of gold and crimson in the western sky; or hoary winter, in its simpler, purer robe, with its delicate frostwork and its icy stalactites? Go where you will, you escape not the reign of beauty. During the long polar night, the northern fires bathe heaven and earth in splendor more gorgeous than day. The torrid sand-waste still lies beneath a glorious sky, and is studded with oases rich in all the tokens of creative love. Wreaths and fillets of azure mist, belt the bare mountain crags, while about their summits the

Signs and wonders of the element
Utter forth God, and fill the hills with praise.

UNCONSCIOUS INFLUENCE.—The very handling of the nursery is significant, and the petulance, the passion, the gentleness, the tranquillity indicated by it, are all reproduced in the child. His soul is a purely receptive nature, and that for a considerable period, without choice or selection. A little further on, he begins voluntarily to copy everything he sees. Voice, manner, gait, everything which the eye sees, the mimic instinct delights to set over. And thus we have a whole generation of future men, receiving from us their very beginnings, and the deepest impulses of their life and immortality. They watch us every moment, in the family, before the hearth, and at the table; and when we are meaning them no good or evil, when we are conscious of exerting no influence over them, they are drawing from us impressions and molds of habit, which, if wrong, no heavenly discipline can wholly remove; or, if right, no bad association utterly dissipate. Now it may be doubted, I think, whether, in all the active influence of our lives, we do as much to shape the destiny of our fellow-men, as we do in this single article of unconscious influence over children.—Bustell.

If we justly look upon a proneness to find faults as a very ill and mean thing, we are to remember that a proneness to believe them is next to it.

Sabbath Musings.

Written for Moore's Rural New-Yorker.
ALONE.

GOD pity me, I am alone,
In this wide world there is no heart
To beat responsive to my own;
No tender hand, with magic art,
To soothe life's griefs, and pains, and cares,
Or point to weary feet the hidden anars.

No smile-wreath'd lip, no love-lit eye,
E'er wait to greet me as I come;
No voice calls to the wanderer by,
Bidding me find a welcome home
Beneath Love's sheltering wing. I am alone,
Friendless, unloved, unloved, and unknown.

Earth is a desert drear; no flowers
Exhale their sweets, or bloom for me;
No birds beguile the weary hours
With songs of joy or melody;
No fount, no shade where I may rest by day;
At night, no star-gleam to illumine my way.

Mine evermore with blighting feet
To tread these burning sands, in haste
To reach, what seems mine eyes to greet,
As an oasis 'mid the waste—
Mine evermore to find these visions fair,
Were but a mirage on the desert air.

Thus as my hopes fade one by one,
The hopes I've loved to cherish,
My heart gives way, my strength is gone,
I faint—save me, or I perish.
Oh, Father in Heaven, hear this, my prayer,
And grant me strength 'e'en still the cross to bear.

My earth-worn spirit flits to Thee,
Oh, God, for aid—be thou my guide,
And though alone, yet still I shall
Press boldly on, what'er befalls,
No more to be oppressed, dismayed, cast down,
My watchword 'e'er thro' life, "no cross no crown."

Rush, N. Y., 1888. E. L. P. A.

TRUTH.

If there is anything noble in man—anything that lifts him above the degraded, and places him by the side of the worthy and honorable—anything that lives within his heart a pure, priceless gem, it is truth.

If we wish to be honorable—if we deem it a privilege and duty to preserve our names and character—and look forward to the day when something of worth will be left in our footsteps, truth must have a place in our hearts, and we cannot blind our own deeds and attempt to fix a foundation upon the sandy and unsafe grounds of falsehood and deception.

It is never injured by the false-hearted; and when "Crushed to earth, shall rise again, and appear more beautiful than before. Even should it be trampled upon and disgraced by those who have no soul or feeling for the "good and beautiful," by its own strength it will lift its head and stand even more beautiful for its oppression. So long as truth is our guide the "world will see and to lead us from the right, truth, the pure and noble, will stand by us and whisper—"The path of honesty is the only path of right."

Truth carries with it prosperity, happiness, and a conscience inoffensive. It leads to enjoyments which nothing else can give. Falsehood is but the first step to crime, which produces misery and want. It cannot mate with the virtuous and good, but seeks the abode of vice and wickedness. It propagates crimes without number, and like a fiend, laughs at its victims who have been ensnared by its cunning. Truth, then, is a priceless gem, and all who choose it for their guide may well feel proud of their choice.

Harford, Wis., 1888. E. W. D.

OPPOSITE CHARACTERS.

It is very instructive, often, to observe the fitness of opposite qualities for different circumstances. A person who appears to great disadvantage in one place, acquires himself to his honor in another. Perhaps no two sisters were more unlike than Martha and Mary of Bethany. The former was a stirring, bustling, resolute, and perhaps irritable woman. The latter was moderate, quiet, diffident, and amiable. When Jesus visited them at their home, both welcomed him with glad hearts. Martha was inclined to prepare the meal, while Mary was more inclined to talk with her Lord. But the former became weary and irritated about her housework, while the latter sat meek and lovely at the feet of Jesus. How greatly to her disadvantage did Martha appear, when she yielded to the leading elements of her character, and rushed into the presence of Christ, saying, "Lord, dost thou not care that my sister hath left me to serve alone? bid her, therefore, that she help me!" "Passionate woman!" we are ready to exclaim; and, as we turn away to Mary, she seems more lovely than ever.

But now behold them in different circumstances. At a later period, their brother Lazarus died, and the Savior visited them in their sorrow. Martha was calm, and went out to meet Jesus as he approached the house. She was so composed that she could converse about her deceased brother, and thus appeared well. The elements of her character fitted her to pass through such scenes more calmly than Mary. Even without grace, such elements enable a person to meet bereavement better than their opposites. But Mary was too much overwhelmed with grief to leave the house. She did not make her appearance till Christ sent for her, and then she could only say, prostrating herself at his feet,— "Lord, if thou hadst been here, my brother had not died." Her gentle spirit was well able to crush under the sorrow. We can almost see the workings of an unconquered feeling in her heart. Martha exhibits much more Christian fortitude and submission to the severe dispensation. And Christ appears to have recognized this difference of character. For to Martha he discoursed for her comfort; but to Mary he brought a fountain of tears. As he looked upon her at his feet, convulsed with agony, he had no words suited to her case. He stood speechless, and "wept." Martha found consolation in his words—Mary in his tears.—*Congregationalist*.

USEFULNESS.—Blessed are they who see the day of glory, but more blessed are they who contribute to its approach.—*Secker*.

The Educator.

Written for Moore's Rural New-Yorker.

THE LOVE OF TRUTH.

Education is constantly and almost universally eulogized. But why? Not as an end, but as an instrument. Not for itself, but because knowledge is power,—it is respectable,—it is an important means of success in the world.

Such views, although by no means without their use, are, nevertheless, of themselves, utterly inadequate. They can never result in that symmetrical and harmonious development of the whole nature of man, which is implied in the word *Education*. The foundation is too narrow for the superstructure. Something else is needed. The need is the love of truth in the mind of the person to be educated. Implant in the mind of any youth a sincere and ardent love of truth—a love of truth for the truth's sake,—a love which will lead him to seek for truth wherever it may be found, and to follow it wherever it may lead, and you have done more for the education of that mind than can possibly be done by the communication of any amount of mere information. Such a mind will be educated. It may have more or fewer facilities and advantages, but where there is a will, there is a way; and where there is a living, active love of truth, there will be an educated mind.

The influence of this principle may be seen in brothers or sisters of the same family, in scholars of the same class, in school, or in college. Of those whose natural abilities are equally good, you will see some making rapid progress,—growing up into the fullness of the stature of perfect manhood, while others grow in nothing but that which is corrupt. The same thing is also seen in those sudden transformations which sometimes occur in intellectual character, by which persons who have heretofore been considered dull and stupid, become fired with zeal for knowledge, and ever after go on to make great attainments.

It is said that the celebrated Dr. BARROWS was so very dull when a youth at school, that his father used to say, that if it should be the pleasure of Providence to deprive him of any one of his nine children, he hoped it would be Isaac. Yet Isaac was the only one of the nine of whom anything is now known. Becoming possessed of this new motive to study,—the love of truth,—he made attainments in learning, and in command over language, which have been rarely, if ever, surpassed. So great were these attainments, that Lord CHATHAM, as a means of perfecting himself in oratory, copied with his own hand, eight times, his published works. Nothing can prevent the progress of a mind possessed of this principle. It matters little who or where its possessor may be. It is awake and open to those impressions of truth, which are ever coming to such a mind from the whole range of existence.

WISCONSIN STATE TEACHERS' ASSOCIATION.

The State Teachers' Association of Wisconsin held its Sixth Annual Meeting at Portage, commencing on the 3d of August and continuing four days. The *Wis. Journal of Education* says "it was an interesting and profitable session; the attendance was quite large. The lectures and essays were of a high order, and were characterized by breadth, directness, and practical common sense, and, as a whole, were superior to those usually heard on such occasions." The President of the Association, Prof. O. M. CONOVER delivered the opening address; subject:—"A Perfect School System." On Wednesday, A. M. Rev. A. L. CHAPIN, Pres. of Beloit College, spoke concerning "The True End of the Work of Education, and the Reciprocal Relations of its Several Departments." "School Government" formed the theme of Prof. N. BATEMAN in the evening. On Thursday, Prof. J. W. HORT, of Madison, read an essay upon "Public Education: The Needs of the People, and the Duty of the State."

A committee appointed to revise the School Laws of the State, reported, and after some amendments, the report was adopted, and an addition of five made to the committee for the purpose of submitting the report to the Legislature.

The following individuals were chosen officers for the ensuing year:—President—A. PICKETT, Horicon. Vice-Presidents—J. E. MUNGER, Oshkosh; T. C. BARDEN, Portage; W. C. SANFORD, Watertown. Secretary—James W. Strong, Beloit. Treasurer—J. C. PLOKAR, Madison. Counselors—J. B. PRATT, Sheboygan; A. J. CRAIG, Palmyra; L. JOHNSON, Janesville; B. T. LOCKWOOD, Burlington; A. M. MAY, Ripon.

NATIONAL TEACHERS' ASSOCIATION.

The Annual Convention of the National Teachers' Association, convened at Cincinnati on Wednesday, Aug. 11th, has been an occasion of unusual interest. Eminent educators from every quarter of our country were present. The discussions were spirited and harmonious. In response to calls for reports on educational matters, Mr. Adams, of Montpelier, spoke for Vermont; Mr. Philbrick, of Boston, for Massachusetts; Dr. McJilton, for Maryland; Mr. Bagg, for Alabama; and Mr. Devoll, for Missouri. Favorable reports of the cause were also made from New York, New Jersey, Pennsylvania, and Connecticut. Prof. Daniel Reed, of Wisconsin University, delivered an address "On the Educational Tendencies and Progress of the last Thirty Years." Mr. Philbrick delivered an address on "Manual Education;" the President, Z. Richards, one on the "Province and Agency of the National Teachers' Association;" and Horace Mann, one on the "Motives of Teachers." This last was characterized by the graphic style, copious illustration, profound thought, and earnest spirit which distinguishes all the author's productions. It commanded close attention, and at its close was loudly applauded. A copy was requested for publication. A similar compliment was paid to Mr. Philbrick.—*Providence Journal*.

We may seek costly furniture for our homes, fanciful ornaments for our mantel-pieces, and rich carpets for our floors; but, after the absolute necessities for a home, books are at once the cheapest, and certainly the most useful and abiding embellishments.

HINTS TO NEW TEACHERS.

The *Michigan Journal of Education* contains some important Hints to New Teachers—some that will prove of service to those just entering on the duties of their responsible profession.

1. Meet your school at the outset with a quiet and natural demeanor. Affect neither sternness nor affability. Feel and say, in a few simple words, that you hope to do them good, and will try to do the best you can for them. 2. If whispering or disorder occurs, pause at once, and do not proceed till order is restored. The mere pause is generally sufficient for this. 3. Remember that good discipline is the principal thing; without this there can be no successful teaching. 4. Govern yourself. Do not fret or fly into passions; never stamp or scold; do not threaten or talk too much. Let a kindly interest in your pupils temper all your actions. 5. Have the school-room kept tidy and comfortable; wash off scribbles and ink-spots, and hang up charts and maps, to give the room an attractive appearance. 6. Let the lessons be short, but thoroughly mastered. Go over the same ground again and again in review. No lofty superstructure can rise except on solid foundations. 7. Foster in your pupils a spirit of justice and generosity, kindness and forbearance, reverence for truth and duty. 8. Make daily preparation for your work; the oldest and ablest teachers do this. You will thus be able to give clear explanations, and to infuse life and spirit in your instructions. 9. Remember that your every act is closely watched, and that example teaches more powerfully than precept. That teacher who is a gentleman in dress and demeanor, whose language is simple, pure and truthful, whose deportment is gentle, graceful and kind, will awaken a respect in both pupils and parents, that will make his task easy. 10. Put yourself into communication with neighboring teachers. If there is no Teacher's Association, organize one as soon as possible. 11. Take an educational journal; you cannot afford to do without its suggestions.

HOW TO SPEAK.

The faculty of effective expression, which, like all others, depends upon training, is not made a distinctive object of culture in our schools and colleges; on the contrary, how often is it found that to be a scholar is to become a creature who expresses himself in public more awkwardly and with less effect than many a sturdy ploughman's son, who never darkened the walls of either school or college? The consequence of this in the church and in the lecturing-halls of our universities is often most lamentable. Where earnestness, vigor, and impressiveness are most necessary, a sort of tame propriety and a cold dignity have become the rule; and nature, the great charmer, is as much afraid of showing herself in our Christian pulpits as amid the conventional decencies and cold proprieties of a fashionable drawing-room. The prevalence of this artificial feeling is one of the chief reasons why uncultivated Methodists and wild untutored apostles of all kinds have so much more influence with the masses than the regularly trained English clergyman. It is not that the scholarly vicar is too high for his audience, but that you have stamped on him a type of scholarship, divorced from life and ashamed of nature. He who would speak to his fellow-beings with effect, must, above all things, have three qualities—freedom, fire and force; and these are precisely the three qualities which our scholastic and academical habits and our narrow bookish notions tend systematically to repress rather than to evolve.—*Prof. Blackie*.

SIR MATTHEW HALL'S PLAN OF INSTRUCTION.—The great lawyer, Sir Matthew Hale, in his "Advice to his Grand-children," and "Counsels of a Father," has left the following course of instruction for sons. Till eight, English reading only.—From eight to sixteen, the grammar-school Latin to be thoroughly learned, Greek more slightly.—From sixteen to seventeen at the university, or under a tutor; more Latin, but chiefly arithmetic, geometry and geodesy. From seventeen to nineteen or twenty, "logic, natural philosophy, and metaphysics, according to the ordinary discipline of the university;" but after "some systems or late topical or philosophical tracts," the pupil to be chiefly exercised in Aristotle. Afterwards, should he follow no profession, yet to gain some knowledge of divinity, law, and physics, especially anatomy. Also of "husbandry, planting, and ordering of a country farm." For recreations, he advises "reading of history, mathematics, experimental philosophy, nature of trees, plants, or insects, mathematical observations, measuring land; nay, the more cleanly exercise of smithery, watch-making, carpentry, joinery work of all kinds."

MISSOURI STATE TEACHERS' ASSOCIATION.—The Third Annual Meeting of the above Association was held at Jefferson City on the 6th, 7th and 8th ult. A lengthy report of the proceedings appears in the St. Louis Republican of the 24th. There was a fair representation in attendance from different parts of the State, and much zeal and mutual good feeling were displayed. The chief topics of discussion were a State Normal School, Agricultural Education, the co-education of the sexes, a uniformity of text-books, and the phonetic system. The agricultural question was decided in favor of State endowments of Agricultural Departments in the principal Universities and Colleges. On the question of the education of the sexes there were several speakers, all in favor of such co-education. No special action appears to have been taken on uniformity of text-books, or on the phonetic system, though there was some discussion. The Association decided to meet next year in St. Louis.—*North-Western Home Journal*.

NEITHER SCHOOLS NOR NEWSPAPERS.—Sir William Berkeley, one of the early Governors of Virginia, in 1671 wrote to King Charles II., "I thank God there are no free schools nor printing presses here, and I trust there will not be this hundred years; for learning breeds up heresies, and sects, and all abominations. God save us from both."

He that studies only men, will get the body of knowledge without the soul; and he that studies only books, the soul without the body.

GEORGE WHITEFIELD.

This great and devoted itinerant preacher was born in Gloucester, England, Dec. 16, 1714. Being naturally of a studious and serious turn of mind, he was early put to school, where he made striking proficiency in his studies. His father, dying when he was a child, left his mother in charge of an inn, to the care of which he was called from school as soon as he could be of any use to his mother. This life of a publican was, however, by no means suited to his taste, and at the age of eighteen he entered Oxford.

While in college, young WHITEFIELD made the acquaintance of the brothers WESLEY, JOHN and CHARLES, whose pious zeal and pure lives attracted his love and admiration. These young men adopted certain strict rules and methods of life, which reached at their habits and duties. They became the nucleus and founders of a religious sect, which, from the rigid habits they adopted, received the sobriquet of Methodists, a name afterwards adopted and gloried in by the sect, and continued in both hemispheres to this day. Young WHITEFIELD joined heart and hand with these youthful zealots, and on leaving his college he took orders. In 1736, and immediately commenced preaching. His first sermon was delivered in the church of the Bishop of Gloucester, and produced a powerful effect. Complaint was made to the bishop that a number of persons were driven mad by it. "I only wish," he replied, "that the madness may last."

In 1738, Mr. WHITEFIELD came to the United States, whether one of the WESLEYS had preceded him. He landed at Savannah, Georgia, where he labored with unremitting zeal and diligence for nearly a year, preaching and traveling night and day, and meeting with abundant success. Returning to England, he received ordination as a priest, by Bishop BENSON, in January, 1739. In November following, he again arrived in America, and traveled through the Southern and Middle States, preaching the word and baptizing thousands who were converted by the eloquence of his appeals.—All classes were drawn to his ministry. His rare and peculiar eloquence seems to have been magical, and it was nothing uncommon for him to

preach in the open fields to audiences varying from one to ten thousand persons. He visited New England and New York, and established churches everywhere.

Repose was never sought by Mr. WHITEFIELD.—He followed the impulses of his generous nature, never doubting that he was listening to the teaching of Providence and the voice of conscience.—This forbade him to remain long in any one place or one country. In 1741, he sailed again for England, returning to this country in 1744. He remained here this time between three and four years, his popularity abating not a jot, and the violent persecution which had been coeval with his ministry keeping due pace with his popularity. Nothing troubled, he labored on, rewarded by the apparent fruits of his preaching, and "the consciousness that he was serving God and saving sinners."

Mr. WHITEFIELD crossed the Atlantic nine times, and landed on our shores for the last time, Nov. 30, 1769. During all this time, both in England and America, as well as on shipboard, his zeal and his exertions flagged not for an instant, and he actually "died in harness," at Newburyport, Mass., on the 30th of September, 1770, aged 56 years.

Perhaps no public speaker has lived within the last ten centuries, who has had such immense power over the hearts and passions of his auditory as this eccentric preacher. KEAN, the celebrated tragedian, used to say of him, that "he was the only man who knew the straight way to the very depths of the human soul;" and he once told WHITEFIELD that he would give him a thousand pounds if he would teach him to pronounce the interjection "O!" with his own effect. His benevolence and personal goodness were sincere. COOPER thus commemorates these traits of his character, with as much justice as beauty:

"He loved the world that hated him; the tear that dropped upon his Bible was sincere; Assailed by scandal and the tongue of strife, His only answer was a blameless life; While he that forged, and he that threw the dart, Had each a brother's interest in his heart."

per second. The springs are therefore chosen and regulated by sound. This instrument, it is evident, economises both time and electric power. Its exceeding sensitiveness to the least perceptible pulsation of the electric currents adapts itself especially for long lines and submarine cables. It is capable of writing forty words a minute, with about one-tenth the battery power of other instruments, and sends messages both ways at once! At least, so its inventor claims, and it is to be tested on the Atlantic Cable.

THE USE OF COAL—A CURIOUS DELUSION.

THE anthracite coal of Pennsylvania has been used for only thirty-one years, and yet the consumption amounts already to the enormous figures of 3,600,000 tons each year. The Philadelphia correspondent of the New York Tribune relates the following most extraordinary fact respecting the persecution which the person suffered who brought the first sample of coal to Philadelphia.—It is hardly credible:

"Thirty-one years ago the first coal came to Philadelphia—being ten wagon loads hauled over the mountains by George Shoemaker of Pottsville. Very few persons could be induced to purchase it, and most of these were wholly unsuccessful in their attempts to make it burn. Everybody considered it a mere stone. Mr. Shoemaker was denounced in all quarters as a cheat, and measures were being taken to arrest him for swindling; but he escaped arrest by leaving the city by a circuitous route.

The most remarkable feature in this extraordinary speculation was that Mr. Shoemaker did not himself know how to make the coal burn. He was therefore unable to convince the public that it really would ignite. Had he experimented at home, and brought with him a grate or stove, in which to kindle a successful fire, the exhibition would have no doubt hastened full ten years the development of the coal business. He reached his home, disgusted at the belligerent temper of our citizens, and heart sick at the ill success of his adventure. His reputation as an honest man was rescued, however, by an iron master in Delaware county, into whose hands some of the repudiated mineral fell. He tried the coal, caused it to burn freely, with an intense heat, and was so pleased with it that he proclaimed the fact in the newspapers. This led others to try, and they also succeeding, the prejudice was removed, and consumption went on from this beginning, until it last year reached the enormous quantity of 3,470,862 tons."

The Young Ruralist.

LABOR AND THE LAW.

MESSRS. EDS.:—Although quite a *Young Ruralist*, I have perused every number of the *RURAL*, you have issued from the press; and should have been content to peruse the thoughts of others without obtruding any of my own, had I not noticed an article from the pen of HARRY HARRIS. In that article he gives the challenge—throws down his iron gage, like RICHARD COEUR DE LION—and dares the farmers' boys to raise it; threatening to annihilate them with a display of talent; and at the same time calling upon those who "intend to enlist under the banner of att'y" to rally to the combat. Well HARRY, you have donned your helmet and like DON QUIXOTE, are out in quest of adventures. Like that renowned knight you don't seem to be at all particular who or what shall be the object of your attack; whether it be a falling mill or a flock of sheep; a travelling barber or a windmill. For your "Dalcenia" you have chosen "a professional life" and seem to be a little anxious to "flash your maiden sword" in the side of any young farmer that may not be of your own way of thinking. As you wish for it, if Mr. MOORE will kindly give space, I, as a representative of the *Rural Districts*, have no objection to measuring weapons with you.

Before entering the lists for a tilt, allow me to say a word in reference to your style. A person who writes for the public must expect to be criticised; and, as LORD BYRON says:

"A man must serve his time at every trade, Save censure; critics all are ready made."

The only fault I find is the two frequent repetition of the personal pronoun *I* in its various cases and cases. In classifying your style you would hardly find a name in BLAIR or any of the other rhetoricians. Egotistic is the only name that occurs to me as being appropriate.

But, to waive all criticism and come to the main ideas of your piece, you have made two great mistakes. According to your own account you have arrived at a proper age for you to determine in what character you will appear on the stage of life. In looking over the long list of employments, your eye meets the word farming, and you turn from it in disgust and without hesitation pronounce it the worst that could be thought of. In thinking over the possible position you may occupy in life, it is with you, "Take any shape but that," viz.: a farmer's life. Now HARRY, I have spent seventeen years on a farm and am practically acquainted with everything which pertains to it, and must say that a farmer's life when regulated as it might, and should be, is the most independent and happiest that can fall to the lot of man. There is my assertion and if you deny it I will defend it against you, though backed by all the young attorneys, dry goods' clerks, tinkers, tailors and tanners you can press into the service. Another mistake is this:—In making choice of profession you seem to be governed solely by a desire to select that one which shall subject you to the least possible toil; as if you could accomplish anything in any vocation without labor. Speaking of this matter of toil, let me ask you one question. Did you, Sir, ever know a man, (I care not what his talents,) who in any profession accomplished anything worthy of note, without severe, steady, long-protracted toil? If you know such a man, I wish you would show him up, for he is certainly a "rare avis in terris." Granted, then, that labor is a necessary concomitant to any profession, which do you think the most fatiguing, mental or manual labor? rooking of the baby or rooking of the mind? If you think the temple of the law is a place of placid repose, where men recline on easy couches and gain honor and distinction without effort, you have only to cross the threshold to learn your mistake. Although ignorant of the laws, I am acquainted with many lawyers, and I never knew one worthy the name who was not diligent to labor.

CLERKS UNSUITED TO THE WEST.

EDS. *RURAL*:—The article copied into your paper from the New York Commercial Advertiser, a short time since, is not wholesome in many essential particulars. It is said therein, that the editor had received many applications for situations from young men in the country; he advises them not to relinquish the farm for a situation in the city, should they manage to obtain one. He further turns off, and admonishes the poor, sickly clerks in the city, working for a "pitiful salary," to leave the "busy haunt" and plunge into the West, buy a farm, and after a few years clearing and preparing the land, they will secure for themselves a competency for life: that by so doing they will do a great deal for their moral as well as physical existence, &c.

This latter advice is, in my opinion, very absurd, and shows that it emanates from a weak mind.—To suppose that clerks, brought up in the city, with a natural repugnance to all kinds of real manual labor, or an inability to perform it, could embark on a wilderness of land, probably unhealthy, is a most ridiculous idea. Would they have strength enough to wield the axe for one single season? No. It is enough for the strongest constitution to brave the Western wilds, and none but a man of an iron constitution could endure it. The suggestion probably is a very good one, were it feasible, but let us not hear any more such "old granny" talk in future.

MOORE COUNTY, N. Y., 1858.

REMARKS.—The youth should learn moderation. The pen is as dangerous as edged tools in careless hands. There is a good deal in the above, that will not bear criticism.

BOOKS.—Books are standing counsellors and preachers—always at hand, and always disinterested; having this advantage over oral instructors, that they are ready to repeat their lesson as often as we please.

MODESTY OF LEARNING.—Learning gives us a fuller conviction of the imperfections of our nature; which, one would think, might dispose us to modesty; for the more a man knows, the more he discovers his ignorance.

What About the Atlantic Telegraph?

The Atlantic Telegraph Cable has been successfully laid—the "Celebrations" have had their day—we have ceased to burn powder and public and private property in glorification thereof, and, in the calmness which has succeeded so fierce a storm, questions which the hey-day of success put aside for a brief moment—again assume a prominent position. The perfect continuity of the cable is chief among these. Is it likely to last for any length of time? Upon this point the London *Enquirer* argues favorably. It has already been proved that submarine cables run but little risk of injury near the shore—shipping constituting the greatest danger, and in the case of the Eastern terminal of the Atlantic, everything is exceedingly favorable, owing to the almost entire absence of shipping on that portion of the Irish coast. The Newfoundland end is also supposed to be well selected. In reference to the deep-sea portion, although nothing but surmises can be drawn, the *Enquirer* can see no reason for apprehending its destruction, and remarks:—"It has already existed for two weeks, and this affords excellent ground for confidence in its durability, at least for a considerable period. It is, of course, impossible to predict how long the insulation of the wires may remain intact, after the many forces and novel circumstances to which the cable has been subjected. There are good reasons for believing that the conditions of water low down in the deep seas are highly favorable to the durability of a cable. We may confidently believe that the greater part of the Atlantic cable is now surrounded by water which is so still, and so low in temperature, as to retain it in security for a long time to come." Thus much for the bright side of the subject. The action of the company, in placing the control of experiments in the hands of those who are incompetent electricians—persons who are the inventors of "systems," and of transmitting instruments which are incapable of performing what is required, together with the secrecy that enshrouds all movement, has very much weakened the faith of the American public. Indeed, many seem inclined to the belief, that a certain something has occurred fatal to the enterprise. We ask the question—Has there not been a suspension of the cable, as well as "suspension of dispatches?" At the celebration in New York, on the 1st inst., Cyrus W. Field said that the "Directors of the Company were going to Valencia, and that the line would be immediately thrown open to the public." Fourteen days have passed, and the line is still closed! This state of affairs has called out, from both press and people, a great deal of remark, not of the most favorable character, either as regards the action of the Directors, or the ultimate success of the enterprise. Mr. Field, under date of Sept. 8th, has attempted an explanation in the *New York Tribune*, which we give below:

What may be the cause of the cessation, I do not know, but conjecture that it is the change of the shore end at Valencia, which I was informed was to be made. It should also be stated that Prof. Thompson was to succeed Prof. Whitehouse in a series of experiments upon the cable; and, although his system was regarded by all practical telegraphers in England as perfectly childish, it is quite possible that the present delay in transmitting intelligence is attributable to Prof. Thompson's experiments.

It was also known at the sailing of the Africa that the Directors, despairing of satisfactory results from the systems of Professors Whitehouse and Thompson, had arranged with Professor Hughes to take charge of the electrical department of the company's business, and it was expected that the Hughes Printing Telegraph instrument would be placed at Trinity Bay and Valencia, on or about the 20th or 25th inst.—and from the experiments made while the cable was at Plymouth, there is no reasonable doubt that Professor Hughes will be able to transmit intelligence through the cable reliably, and at the rate of about three hundred words per hour.

CYRUS W. FIELD.

We hope for the best, but when men are given control, whose "system is regarded by all practical telegraphers as perfectly childish," we, in common with others, can but have our fears.

Railroad Accidents.

In our last issue we chronicled the fatal results of two Railroad accidents—one on the Allegheny Valley Railroad, near Pittsburgh, Pa.; the other on the Northern N. Y., near Albany—and since the occurrence of these, the telegraph is daily making additions to the fearful list. It would almost seem as if these shocking catastrophes, passed over the country in a circle, and that the date of their return had again arrived.

The last steamer brings intelligence of a terrible accident on the Oxford, Worcester and Wolverhampton Railway, England. It occurred to a cheap Sunday School Excursion train, on which some 2,000 persons were passengers. The train of forty-five coaches was divided into two trains, one having twenty-nine closely packed cars, and the other sixteen. At Round Oak station, which is situated on a steep inclined plane, thirteen of the coaches of one train became detached from the rest, by the breaking of coupling irons, and these cars at once ran backward down the incline, with gradually increasing velocity, until it met the second train, which had started out fifteen minutes behind the first, and was moving towards the station. The two trains came into collision, with a shock which split the two rear cars, (the guard's van and carriages next to it) into matchwood, and badly shattered another carriage of the train. The scene that ensued is impossible to describe. Fragments of the crushed and broken cars, mutilated human forms, some still in death, some writhing in their last agonies, others seriously but not fatally injured, shrieking with pain and terror; were commingled in a general *maelstrom*, hardly distinguishable amid the darkness and the dust occasioned by the collision. It was soon apparent that the loss of life was lamentably great. Eleven lifeless forms were discovered among the rubbish, in addition to many frightfully mangled and disfigured.

On the morning of the 7th inst., a shocking catastrophe occurred on the Hudson River Railroad, by which two persons were killed and others injured. A freight train, laden with cattle, stopped near Fishkill to cool a hot axle, when another cattle train ran into it, smashing two locomotives and several cars, running into a machine shop and knocking down an immense chimney; killing some, wounding others, and destroying a large number of cattle.

On the 7th inst., B. P. Feasenden lost his life on the Hamilton and Dayton Railroad, and his wife and two neices were much injured. The same day, a young man named Rither was killed on the Dayton Western Railroad, and his brother injured. Both of the cases were the result of attempting to drive across the track when a train was approaching.

The 2:30 P. M. train from Fall River, Mass., on the 10th inst., ran into a freight train, slightly injuring James Simmons, engineer, Benjamin Gleason, baggage master, and one or two others. Three freight cars and a number of cattle and hhd. of whale oil were smashed. Loss \$10,000.

On the night of the 10th, a terrific accident occurred upon the Stenbenville (O.) and Indiana Railroad, about seven miles from Stenbenville. A telegram from the scene of disaster, states that "while crossing the bridge, a car and the rear engine jumped from the track, knocking out some of the main timbers, when the bridge gave way." The baggage car and front passenger car went down with the bridge, twelve feet, the rear end of the train remaining on the abutment. The first car was completely broken up, and the seats in the rear of the car were broken from their fastenings. Strange as it may seem, according to the dispatch no one was killed, but there were a large number more or less injured, some very severely.

SALT LAKE MATTERS.—The Salt Lake mail had arrived. It was 21 days en route. The Mormons and U. S. officials were attending to their business. The trials for treason would commence as soon as the Associate Judges arrived. No arrests had yet been made. The Indians were troublesome about the city, and had killed several Mormons. One family was massacred while moving South. Dr. Forney, Indian Agent, was among the tribes making treaties, and had been successful thus far. Engineers were locating the four posts on the western division of the mail route.

KANSAS NEWS.—Leavenworth dates of the 7th inst. are received. Orders had been received for two companies of the 1st cavalry under Col. Somers. The command under Maj. Ewing was to proceed to Fort Arbuckle. At the municipal election at Leavenworth on the 5th, L. B. Denmann, Free State Democrat, was elected by about 200 majority. Lyman Scott, Republican and Know-Nothing, and Adam Fisher, Republican, were the opposing candidates.

Political Intelligence.

REPUBLICAN STATE CONVENTION.—The Republicans of this State met in Convention, at Syracuse, last week, and put the following ticket in nomination:—Governor—E. D. MORGAN, of New York. Lieut. Governor—Robert Campbell, of Steuben. Canal Commissioner—Hiram Gardner, of Niagara. State Prison Inspector—Jon. P. Everest, of Clinton.

AMERICAN CONVENTION.—The American party of the State also met at Syracuse, on same date with the Republicans, and nominated a ticket, as follows:—Governor—LORENZO BURROWS, of Orleans. Lieut. Governor—N. B. Benton, of Herkimer. Canal Commissioner—James B. Thompson, of Genesee. State Prison Inspector—Wm. A. Russell, of Washington.

STATE TEMPERANCE CONVENTION.—The State Temperance Convention met at Syracuse on the 7th inst., and the following candidates were nominated:—Governor—GERRIT SMITH, of Madison. Lieut. Governor—Sidney A. Bears, of Kings. State Prison Inspector—Silas T. Flyer, of Madison.

MASSACHUSETTS REPUBLICAN CONVENTION.—The following is the Republican ticket for Massachusetts:—Governor—N. P. BANKS. Lieut. Governor—Eliphalet Trask. State Treasurer—Moses Tenney. Secretary of State—Oliver Warner. Attorney General—H. Phillips. Auditor—Charles White.

The returns of the Vermont election exhibit largely in favor of the Republican party. Hall's majority for Governor will probably exceed 16,000. Returns from 144 towns show Representatives to be elected as follows:—Republicans, 118; Democrats, 21; no choice, 5. Returns of the Governor vote from 89 towns put thus: Hall, Rep, 13,256; Keyes, Dem., 6,359; scattering, 81.

THE FRAZER RIVER GOLD MINES.—The Rev. Bishop Scott, of the Methodist church, who is now on an official visit to the Pacific, has recently visited the neighborhood of the newly discovered gold mines. The last California Advocate contains an interesting letter from the Bishop, written at Esquimault Harbor. He says everything is in a state of glorious uncertainty—gold products, and all—"I found," he remarks, "the people at Bellingham Bay and Victoria in great painful suspense in regard to the future, but the prevailing feeling is that of discouragement. Many have spent all their funds, have nothing to do, and know not how they are either to live here or to get away. So it is also, I am told, on Fraser River. If the trail can be cut through, if the water fall sufficiently in the river, if the mines prove rich and sufficiently extensive, if and if—it is all if. I am not, you know, a miner, and my opinion is not worth much, but at any rate I have no motive to be partial; and my opinion is, that this Frazer River excitement will prove to be the greatest humbug of the age, and that many people will suffer even to the last extremity. This was my opinion before I left California, and I have seen no reason to change since I came here, but much to strengthen it. I fear that some parties will have an awful account to settle in regard to this matter in a coming day."

THE PRODUCE TRADE OF BUFFALO.—The Buffalo Commercial Advertiser has been summing up the grain trade of the season, in its issue of the 9th inst., and remarks:—"The first of September may be considered as the dividing point between the harvest of different years. From this time forward so far as flour and wheat are concerned, we shall be in receipt of the harvest of 1888. The trade in this new installment of nature's bounty opens briskly. Since noon of the first of September we have received 46,935 barrels of flour, and 227,564 bushels of wheat. The amount of wheat now in store in Chicago, is a million and a half bushels, most of which must come this way. We propose to place a few figures before our readers, confident that their cheerful character will gratify every lover of our noble city. The following table will express briefly the comparison of our produce trade in 1888 with that of 1887:

	Receipts.	Wheat, bu.	Flour, bbls.
To Sept. 1, 1888.	6,382,551	734,584	
To Sept. 1, 1887.	1,971,911	260,982	
Increase.	4,399,740	473,602	

The above table, compiled from the figures preserved in this office, is strictly accurate."

FROM ARIZONA.—Col. Sayles, agent of the Post-office Department, arrived at St. Louis, on the 10th inst., from Arizona. He reports the existence of a very lawless state of things in that country—the pistol and bowie-knife being the only laws recognized. Indian depredations were very frequent—Mr. S. speaks favorably of the mineral resources of the Territory, but deems the annexation of Sonora of the utmost importance to their successful development. The El Paso and Fort Yuma wagon road expeditions will complete their work in due season. The agents of the overland mail to California were found busily engaged in establishing stations, &c. Col. Sayles reports that the difficulties with the Navajo Indians were still unsettled.—Gen. Garland had assured them that the murderers of Maj. Brooks' servant must be given up, and in view of pending trouble, had ordered Col. Miles from Fort Fillmore to Fort Defiance.

FROM SANTA FE.—A despatch from Independence, dated 5th inst., per U. S. Express to Boonville, says that the Santa Fe mail, with dates to the 16th ult., has arrived, and the news is unimportant. Dr. Conolly, who had arrived at Santa Fe, from Rio Abajo, reports that a large number of emigrants passed through Albuquerque, this summer, en route to California, via the 35th parallel. They report the grass between Fort Smith and Albuquerque in excellent condition, and the wood and water abundant. The mail party saw very few Indians on the plains. Col. Sumner's command was on the Arkansas river, about 20 miles below the crossing. All well.

NEW YORK SABBATH SCHOOL TEACHERS' CONVENTION.—The Sabbath School Teachers of New York State are to hold a Convention in the Pierpont St. Baptist Church, in the city of Brooklyn, commencing on Tuesday, Oct. 5th, at 10 o'clock A. M., and continuing through Wednesday and Thursday. Each Evangelical Sabbath School in the State is requested to send at least one delegate to the Convention.

News Paragraphs.

A SUBSCRIPTION is circulating in Hawaii, Sandwich Islands, headed by the King and Queen, for the purpose of raising funds to establish an Episcopal Church at Honolulu.

Common people are hung for committing murder, and imprisoned for minor offences, but "respectable" people are not held answerable to the same rule. A man in Connecticut recently "amused" himself by putting arsenic in his wife's coffee, which, however, did not prove fatal in its result. On account of the great "respectability" of the parties the matter was hushed up.

It is estimated that from 250 to 300 head of beavers were lost by the recent disaster on the Hudson River Railroad. Some few wandered into the woods and pastures in the neighborhood, having escaped from the cars with slight injuries. Many cattle did not suffer from the collision, but were almost suffocated in the general smashing and mixing up.

CAPTAIN CHAUNCEY, Lieutenant Mollany, Barnett, Nelson, Mitchell and Drake, together with Purser Upham, have been ordered to the steamer Niagara, which is to be ready within seven days to proceed to Charleston and receive on board the captured Africans. They are to be taken to the coast of Liberia, under the charge of a special agent, and kept and supported there by our Government until they can be otherwise provided for.

The Court Journal relates with naive pleasure, the fact that on the recent visit of Queen Victoria to France, the Empress and Prince Albert were seriously affected with sea-sickness, while sailing in the royal yacht, and Victoria and the Emperor, exempt from such weakness, enjoyed the sufferings of the other twain hugely.

The American Consul at Maderia, Mr. March, declares that not five pipes of wine are now made in a year, in all the inland of Maderia. Yet there is never a lack of Maderia in the United States.—Where is it manufactured? and what are its ingredients?

The receipts of flour at Buffalo on the 10th inst., were large, reaching 16,856 barrels. The receipts for the week ending the evening of the 9th were 76,493 barrels; or an average of over 12,700 barrels per day.

Some excitement has occurred in Catalonia, Spain, with reference to the discovery of two very rich mines—one of gold, and the other of lead.—A quintal of the lead ore is said to contain three ounces of silver.

It is estimated that the Yang-tse-Kiang, the largest river of China, is larger than our Mississippi. Their comparative length is 3,300 miles to 3,200; at New Orleans, the breadth of the Mississippi is 900 yards, depth 100 feet, velocity of current, 1½ miles an hour. At Kiangyin, 100 miles from the sea, the Chinese River is 1,900 yards broad, 99 feet deep, with a current of two miles per hour.

In Paris, in a late attempt to remove a cancer, the lady sufferer was so stupefied by Chloroform, that breathing ceased and life appeared to be extinct. The physicians immediately expanded her lungs several times by breathing into them, as into those of a person drowned, and she was resuscitated.

A UKASE has been promulgated prohibiting the teaching of the Latin tongue in all the Colleges of the Russian Empire. The hours hitherto devoted to that study, will be devoted to the positive sciences.

On Wednesday, forty-nine slaves, having been granted their manumission by a Kentucky lady, passed through Covington, Ky., on their way to Green Co., Ohio.

The balance wheel of John Fitch's Model Engine, for the first Philadelphia steamboat, in 1786, twenty-one years before Fulton's New York boat, in 1807, is on exhibition in Philadelphia.

The ships of the American navy are entirely clothed with sails made of hemp duck, of Scotch or Russian manufacture, notwithstanding the fact that the cotton duck, now made in this country, is, upon the whole, decidedly superior to the foreign hemp duck, as is shown by the fact that for the last six or eight years all the vessels in our merchant service and whale fisheries use it in preference to the foreign article.

The first case of the discharge of a debtor from durance, under the new Canadian statute abolishing imprisonment for debt, occurred at Hamilton last week.

The Boston Traveller says:—"Our manufacturers of domestic goods are already realizing the beneficial effects of the China treaty. One house in Boston has received orders for 3,000 packages, and another is reported as having received orders for 1,500, making in the aggregate 4,500 packages.

BARON HUMBOLDT has predicted his own death. A letter written by him lately read in one of the Prussian law courts, caused a sensation from its containing the declaration—"My death will take place in 1889," and urging that it would be better to postpone a certain publication of his work till then.

The winter of the Southern Hemisphere has been one of the coldest ever known. Immense bodies of snow have fallen in Chile, and all Valparaíso letters speak of the excessive cold of July.

AN Illinois correspondent of the New York Tribune, says:—"One thing appears encouraging to the farmers of Illinois—that is the prospect of raising our own sugar and molasses. The Chinese sugar cane has been tested, and remains no more an experiment. The prospect is, that there will be made in this State more sugar and molasses than will be consumed here. Molasses will be an article of export."

THE AMERICAN BOARD.—The Annual Report of the Treasurer of the American Board of Commissioners for Foreign Missions was read at the Annual Meeting, at Detroit, on the 7th inst. The expenditures amounted to \$374,889 35—receipts, \$334,018 48. Balance, \$40,870 87.

MACKEREL.—The Portland Advertiser says the mackerel men begin to come in, but generally with aim farer. The fish are plenty, but they obstinately refuse to be caught.

The News Condenser.

—Great Britain has now an army of 80,000 men in India.

—Cape May county, N. J., is said to be without a lawyer.

—Ninety clerks are employed in the Chicago Post-Office.

—The yellow fever has almost depopulated Vicksburg, Miss.

—There were 1,007 bounty land warrants issued during August.

—The actual length of the Great Wall of China is 16,000 miles.

—Corn in Central Wisconsin has been much injured by frost.

—There are about fourteen thousand British subjects in California.

—Joseph P. Ross, of Bainbridge, Ohio, has a pair of Cashmere kids.

—It is said that superior wine can be manufactured from the tomato.

—The Pennsylvania R. R. Company issues tickets to the clergy at half price.

—"Oshkosh," an aged Menomonee chief, died in Wisconsin on the 29th ult.

—A monument is to be erected in Mississippi to the memory of Gen. Quitman.

—During the last year the Government expended \$19,000,000 for military purposes.

—The British soldiers, stationed in New Brunswick, are deserting in large numbers.

—Three horses have just been purchased in New England, for the use of Louis Napoleon.

—Twenty thousand dollars a week are paid out for labor at the Philadelphia Navy Yard.

—Mr. Giddings is engaged in writing a "History of the Anti-Slavery struggle in Congress."

—During the last two months, 1,666 people have been swept off by yellow fever in New Orleans.

—State sausages are said to produce precisely the same effect on the system as mineral poison.

—The number of deaths from yellow fever in New Orleans, this season, thus far, is about 1,700.

—A woman, seven feet in height, was at the American Hotel, Indianapolis, on Thursday week.

—Ohio, in 1857, exported to New York, Philadelphia, and Baltimore mone, 70,000 head of cattle.

—The New York and Erie Railroad Company have resolved to use coal on all their locomotives.

—It is said that China is to pay England and France thirty million francs, as indemnity for the war.

—The Chicago Press states that there are nine men awaiting trial for murder, in the jail of that city.

—The horse of Mr. Wm. G. Fowler, of Wilmington, N. C., was so severely stung by bees that he died.

—The "Rainbow," a steel ship of 160 tons, has just been launched from Mr. Laird's works on the Mersey.

—Liverpool is the unhealthiest town in England, having an annual average of thirty-six deaths in the thousand.

—Rev. Eleazar Williams, the "Dauphin," is dead. Does the occupant of the throne of France sleep easier?

—The New York Commercial says it knows a gentleman who gave \$6,300 for a pair of horses now in use.

—The Miners' Journal makes the deficiency of anthracite coal at tide water, thus far, this year, 425,000 tons.

—There is stored in Chicago a million bushels of wheat, and this, too, right in the face of an incoming crop.

—It is expected that at least 350,000 gallons of wine will be made from the native grapes in California this year.

—An inconsiderate cow at Nantucket switched her tail around a post, and starting suddenly, broke the end in two.

—The receipts of flour at Buffalo have averaged 12,700 barrels per day, during the week ending Thursday last.

—Hon. Frank Blair, of St. Louis, Mo., will contest the seat in Congress of Mr. Barret, on the ground of fraud.

—An effort is being made to secure Dr. Kendrick, of Rochester, for the Chicago University, as Greek Professor.

—There has been a manifest fall in the price of wheat throughout France. The new crop is housed in good condition.

—An anti-Mormon paper is about to be established in Great Salt Lake City. This is "bearding the lion in his den."

—The Liberals in Mexico have captured Tampico. A force of 10,000 men is concentrating to march on the capital.

—The Queen's Bench in England have decided that ill health is sufficient excuse for a breach of promise of marriage.

—A new route for an Atlantic cable has been already pointed out: it is through the Bermudas and Fayal to Portugal.

—There are only two cities in Germany, or the world, which contain more Germans than New York and its environs.

—John C. Bishop, an able lawyer in Chicago, has been arrested for committing land frauds to the amount of \$100,000.

—The stump of the old Charter Oak has been dug up, and sold to a speculator, and the piece is cut up for building lots.

—Hon. E. Ellis, for forty years a member of the British Parliament, is on a tour through the U. S. Mr. E. is 78 years of age.

—An exchange says that it has "reason to believe that Charles Dickens contemplates an early visit to the United States."

—The planters of Georgia have commenced harvesting their rice, and there is a flattering prospect of an abundant yield.

—It is proposed to vary the size of bank notes, according to their denominations, as a preventive against the alteration of the same.

—A machanic at Newtown, Pa., has invented a machine which he claims will be useful in clearing the country of the grasshopper pest.

—W. C. Bond announces that two faint telescopic comets were discovered at the Cambridge Observatory, on the night of the 5th.

—The American Consul at Maderia, Mr. March, declares that not five pipes of wine are now made in a year, in all the island of Maderia.

It may, perhaps, appear inconsistent to the casual observer, to find 7.33 per cent of sugar obtained when the juice only contained 7.29 per cent as shown by the polarimetry. This is readily explained by the known fact that the polarimetric measurement is made on the clear portion of the juice, while the sugar obtained is from the whole juice. The polarimetric measurement is made on the clear portion of the juice, while the sugar obtained is from the whole juice. The polarimetric measurement is made on the clear portion of the juice, while the sugar obtained is from the whole juice. The polarimetric measurement is made on the clear portion of the juice, while the sugar obtained is from the whole juice.

den and unfavorable change in the working of the juice. Instead of clarifying perfectly and with great facility, as at first, the defecation was difficult, the color many shades darker, the juice gradually fell off in weight from full 10° Beaumé to 9° Beaumé, and required ten feet of granulated black or bring it to the same color as that made six days previously with five feet black. I, however, proceeded (keeping this separate) to the crystallization.

Boiled it to 242° Fah., when it produced good, hard, sharp crystals; but finding the quantity, by measurement, had decreased very considerably, I took no further note on that head, but gave it white liquor until it was neat, (about the usual quantity,) and produced the sugar—being white sugar—directly from the cane, without refining or re-melting.

SIXTH EXPERIMENT.—Nov. 27.—Since the canes for the fourth and most successful experiment were cut, on the 6th inst., the weather has been very changeable. We have had warm Indian summer weather, with heavy rains, also very cold weather making ice two inches in thickness—thermometer having varied from 16° to 60°. To try the effect of these changes, I cut one-hundredth part of an acre, which produced 11 15-lb. gallons of juice only, instead of nineteen or twenty gallons, as before. It had, however, regained its former weight of full 10° Beaumé, but was much more acid, rank, and dark colored than previously. It clarified without difficulty, but raised a much thicker and denser scum, and when concentrated, was very dark and molasses-like; it, however, produced good, hard, sharp crystals, but the quantity being much reduced, there was no inducement to pursue it further. This experiment proves, however, that this cane will withstand very great vicissitudes of weather, without the entire destruction of its saccharine properties.

SEVENTH EXPERIMENT.—Took the proceeds of the experiments that were considered failures, viz., all the third and the poorest portion of the second, viz.: thirty-four pounds very indifferent sugar; refined it in the open kettle, by the old process, and produced fifteen pounds loaf sugar, which is a very full yield for the quality used.

The foregoing are all actual results produced by myself, (the polariscopic observations having been taken on the spot, under the supervision of my partner, Mr. William Morris Davis) with no object in view but the truth, and a desire to contribute whatever useful information I could towards the solution of this interesting and important question. They are, I think, sufficiently flattering in themselves to warrant renewed exertions on the part of our agriculturists of the Northern and Middle States especially, and perhaps those of the South also, in the pursuit of this promising branch of industry, to the full and profitable development of which it is certainly capable, and which it is destined ultimately to attain—(as before mentioned they have been accomplished without the advantages of the powerful sugar mill, the vacuum pan, and the many other improved implements and apparatus now in general use in Louisiana and elsewhere)—and they are also very important and interesting in many respects, not apparent to those unacquainted with the subject; it may therefore not be superfluous to make some further explanatory remarks:

1st. The mill used and the power employed in these experiments were much less efficient than those in general use on sugar plantations, and the waste proportionally greater; the loss from which causes I estimate at not less than ten per cent.

2d. It is well known to all who are acquainted with sugar and saccharine solutions, that, by frequent heatings and coolings, a considerable portion of the crystallizable is converted into uncrystallizable sugar, and is consequently lost as sugar. In these experiments every parcel was from necessity heated and re-heated from eight to twelve different times.

3d. It is impossible to produce as good results, whether as regards quantity or quality, from small as from large quantities.

4th. This sugar, (Sample No. 4,) is quite dry, and will lose comparatively nothing by drainage; the yield would be considerably greater, if it contained the usual quantity of footing that is contained in the bogahead when sold at the plantation, one of which being weighed there and re-weighed in Philadelphia, in the month of July, will be found to have lost by drainage from 100 to 150 lbs., or from 10 to 15 per cent.

Assuming these propositions to be true, I make the following estimate of the probable yield of an acre of canes of ordinary growth, such as I have experimented upon, viz:

	Sugar.	Molasses.
Actual yield as per Experiment No. 4.	1221.55 lbs.	74.30 galls.
Add for inefficiency of mill, 10 per cent.		
For heating and re-heating, &c., 5		
For footings, say but	5	

Probable yield per acre

20 per cent. 244.37

1466.22 74.30

Further, it will be observed that my acre produced but 1,847 gallons of juice. I have, however, seen published accounts of far greater yields than this; one, for instance, in this county, apparently well authenticated, reaching 8,800 gallons per acre, which, according to my actual results, would produce 4,493 lbs. of sugar, and 274 gallons molasses—and according to the foregoing probable results, would yield 5,389 lbs. sugar, and 274 gallons to the acre. I do not pronounce such yield of juice impossible, but it will certainly be of rare occurrence—a mean between this and my yield would be a large return.

Another subject worthy of notice is the nature of the season. My impression is, that owing to the lateness and coldness of the spring, and the continued wet weather, the last has been quite an unfavorable season for the ripening and development of the sugar in the juice, to which cause I think a deficiency in the yield of at least ten per cent. may be attributed, which would further increase the quantity to 1,612 lbs. of sugar, and 81 8-10 gallons molasses, a yield very nearly corresponding with that of the best conducted plantations of Louisiana, as will be seen by the following figures, which I have collated from a minute statement furnished to me by the enterprising proprietor of one of the most complete and costly establishments in that region, (it being furnished with vacuum pans, and all the most approved machinery of later times,

* These two latter gains in sugar would be made at the expense of molasses, taking from it the gain which would be secured by the use of a better mill, and therefore leaving the quantity of molasses unchanged.

and conducted under his own personal supervision) of the actual product of one of his plantations of 266 acres for 8 consecutive years. These figures will also furnish useful data for the estimation of the cost of production here, viz:—Aggregate yield of juice from 266 acres for eight consecutive years, 4,757,700 gallons. Aggregate yield of sugar, 3,626,425 pounds. Aggregate yield of molasses, 217,585 gallons.

COMPARISON.		PENNSYLVANIA.	
Yield of juice per acre.	2,336 gals.	1,847 gals.	1,847 gals.
Density of juice, (Beaumé) 6.640		100	100
Yield of sugar per gallon of juice.	.076 lbs.	1.2215	1.2215
Yield of sugar per acre.	1,704 "	1,612.00	1,612.00
Yield of molasses per acre.	103 gals.	81.80	81.80
Wood consumed per acre, 357 cords at \$2.50 per cord.			
Coal for engine, 0.41 tons at \$2.50 per ton.			
Labor, per acre, 370 days.			

These details have been extended to a much greater length than was at first intended, but perhaps not beyond a useful limit for those interested. To the working farmer they may appear formidable and prolix; but he may, nevertheless, gain some grains of useful knowledge from them to repay for their perusal. The conclusions to be drawn from them will be seen by the following

SYNOPSIS.

1st. That it is obvious that there is a culminating point in the development of the sugar in the cane, which is the best time for sugar making. This point or season I consider to be, when most if not all the seeds are ripe, and after several frosts; say when the temperature falls to 25° or 30° Fah.

2d. That frost, or even hard freezing, does not injure the juice nor the sugar, but that warm Indian summer weather, after the frost and hard freezing, does injure them very materially, and reduces both quantity and quality.

3d. That if the cane is cut and housed, or shocked in the field when in its most favorable condition, it will probably keep unchanged for a long time.

4th. That when the juice is obtained, the process should proceed continuously and without delay.

5th. That the clarification should be as perfect as possible by the time the density reaches 15° Beaumé, the syrup having the appearance of good brandy.

6th. That although eggs were used in these small experiments, on account of their convenience, ballock's blood, if to be had, is equally good, and the milk of lime alone will answer the purpose; in the latter case, however, more constant and prolonged skimming will be required to produce a perfect clarification, which is highly important.

7th. That the concentration, or boiling down, after clarification, should be as rapid as possible without scorching, shallow evaporators being the best.

With these conditions secured, it is about as easy to make good sugar from the Chinese sugar cane as to make a pot of good mush, and much easier than to make a kettle of good apple butter.

WINTER BARLEY.

In reply to an inquiry in a late RURAL concerning Winter Barley, I would say that it is quite extensively raised in this county. Three years ago I sowed one acre about the first of November, after potatoes. The following spring it was so badly winter-killed, that I plowed up all but a narrow strip of it, which I left to ascertain its time of ripening. I harvested it about the first of July.—On the 12th of September following, I sowed two acres on a sandy loam soil, after beans, plowing in a light coating of barn-yard manure. This lot yielded 70 bushels—35 bushels per acre.

Last year, on the 2d of September, I sowed a quantity of Winter Barley in a sward, plowed the lot into five-pace "lands" and after sowing, rolled it with a field-roller. This crop, harvested on the 5th of July, yielded 45 bushels per acre, and the grain weighed 50 lbs. to the bushels. Some of my neighbors have raised this season, 50 bushels per acre.

Winter Barley, to be profitably cultivated, should be sown early—say from the 25th of August to the middle of September. The great drawback to raising it, is its liability to winter-kill; to prevent which it should be managed the same as winter wheat—viz., sowed early on rich land thoroughly drained. It requires from two to two and a half bushels per acre for seed.

Many of those who have raised winter barley for the past two years, have given up sowing spring barley. The average yield per acre this season of the winter variety is full 10 bushels greater by measure than the latter—having also a preponderance of about six pounds per bushel.

It has no enemy but the frost—is not liable to "lodging," and is ready to be harvested before any other grain is ripe.

I would not recommend rolling the ground after sowing, unless it is in sheltered localities, as the roughness of the surface caused by the harrow, will better retain the snow, thereby protecting the roots of the barley from the action of the frost.

The price of winter barley at present is the same as that of spring barley, although malsters know that it is worth at least 12½ cents more per bushel, and I have no doubt that hereafter, in market, it will sell for that amount in advance upon the spring variety.

GEO. B. LEONARD.

Kendall, Orleans Co., N. Y., 1858.

EDS. RURAL.—Noticing in a late issue of your journal a request for information with regard to the raising of Winter Barley, I propose to contribute my mite. I sowed one field Sept. 26th, 1857, which produced me a little over forty bushels per acre—field was slightly manured and had a crop of wheat taken from it the July previous. Another field, clover sod, turned over nicely, nine inches deep, and sown 27th Oct., produced 24 bushels per acre. This lot, I think, was in better condition for a crop than the first one sown. Had it been sown as soon as the first lot, the yield, I think, would have been considerably over forty bushels. I believe about the 20th Sept., is the right time to sow it to have it get just about growth enough to winter well. I do not think it is quite as hardy as winter wheat, but will produce very abundantly on any dry, first rate wheat soil—I think sandy, or gravelly soil best suited to its growth, or full development. I sowed two bushels per acre and judge the quantity about right. It produces very abundantly from a given amount of straw. When I

commenced to thresh I thought I should have about 500 bushels, but had about 700 of very nice barley, indeed. I think it is the most profitable crop I can raise. It grows very stiff straw, does not lodge, is harvested with reaper and barley-forks with much less expense than any crop of grain I ever raised, and if sown the 20th of September will be ripe the last of June, consequently avoid of damage from wheat midge.

Moscow, Liv. Co., N. Y., 1858.

JOHN SHELTON.

P. S.—I should perhaps state that I sowed one field of 13 acres to Winter Barley on the 13th of April, for an experiment. Soil was in better condition than either of the other lots and harvested about 12 bushels per acre by measure, and 10 bushels by weight. In its early growth it did not come forward as rapidly as spring barley, and for some time I had fears that it would not head out this year, but in the last one-third of its growth it much resembled spring barley and looks like it when threshed. If I had sown spring barley I think it would have done as well.

J. A.

SORGHUM—MANURING GRASS LANDS.

EDS. RURAL.—What has become of the Sorghum advocates? Not a lip do we hear from any of them about the crop of 1858. So far as I have heard there was none planted in all this region—the last season's experiment sufficing—and of course we are in blissful ignorance as to the prospect for cheap sugar, and whether "full panicles of bright seed have yet burst the upper joint" of any of the stalks. Gentlemen Sorghum defenders of 1857—Messrs. S. W., Doolittle, &c.—do tell us how the thing is getting on! We are in a real fidget to know.

As to applying manure to grass lands, the writer has done very little of it, but his father's life-time practice was to haul from the barn-yard in October, dumping a load in a place, and spreading just before the winter set in. Then, as soon as frost was out in the spring, pulverize and make smooth and even with a hand rake. The effect was generally marked and lasting in the increased yield of hay, frequently causing it to lodge for several years—the exceptions being grounds which were naturally very dry and having old and tough sward. But the results were so uniformly good that I propose this fall to imitate his practice both as to time and way. If there is a better method, I should be happy to know it.

Of course, spreading upon the surface will not be appreciated by the advocates of turning under. "Haul out and plow in at once, or your manure will waste," say they. But land in pasture is certainly enriched, and the application is always to the surface. The soil of forests does not degenerate though there is no provision in nature for turning under. The leaves fall upon the surface, the rains rot them, and a perpetual growth is maintained. In both cases your theorists would say there is great waste—that the plow should be brought into immediate use, or some application made to "fix the ammonia" of these exposed fertilizers—but so says not the Author of vegetable growth. To make a barren fig tree fruitful, you are not to "dig about and dung it," but dung about it, and then dig. Are we not getting wiser than in written?

Until some parallel in nature, or positive proof from experience is brought forward more conclusive than I have yet seen, I shall reject the dogma that fertilizers—crude, rotted, or concentrated—are misapplied when they are spread upon the surface of the soil.

W. B. P.

Prattburgh, N. Y., 1858.

PERMANENT MEADOWS—STOCK FEEDING.

EDS. RURAL.—I have been much interested in an account of the farm management of an English farmer on the "Wealde of Sussex," who follows the routine practiced by his forefathers for two generations. His lowland meadows have not been broken up, at least during the last hundred years, and ought never to be hereafter. The soil is a tenacious clay—stiff and wet—the meadows are never fed in spring, and when mown, give two to three tons per acre. In the fall, from a large fair of cattle held in the vicinity, the farmer selects at his leisure, and often at his own price, as many head as his means of pasture and winter provender will warrant. These all go into his second crop of grass, and in a few weeks are so improved as to admit a rise in price, and many are then sold to purchasers who are always numerous and urgent. The reserved stock, after clearing the meadows of the great yield of second crop, are taken to their winter quarters and fed chiefly on hay of the first crop, which is of the finest quality. The roots grown upon the farm are devoted to the feeding of cows with calves fattening for sale, no dairying being done upon the farm; fresh calves being bought at Smithfield market to supply the place of those disposed of when fattened. In the faculty of buying and selling to advantage, long experience and a tact for the business, gives him great success—every operation of the kind bringing in more or less clear profit.

It is not to be supposed that farmers in this country, except, perhaps, in rare instances near large cities, can follow the same plan, but it is interesting to know the methods by which people achieve success, and some valuable hints may be drawn from this brief narration.

Niagara Co., N. Y., 1858.

BURYING POTATOES.

MESSRS. EDS.—I saw, in the RURAL of Sept. 4th, an inquiry by "W. G." about burying potatoes. I can describe to him a way that I have found by experience to be safe. Select a spot where water will not stand in the holes—sandy land is the best. Dig holes that will contain about thirty bushels—not more—fill to within four inches of the surface; place across the centre of the hole a stick of wood six inches through; place short pieces of boards, one end on this stick, the other on the earth, each side of the hole; over these, put a good coat of straight straw that will keep out all the water. At first put a light coat of dirt over all, except a small place in the centre of the hole—this is to serve as a ventilator. Before winter sets in, put a good coat of dirt over, and I think you will not have any frozen potatoes. The frost will not pass through the space between the covering and the potatoes.

While I am writing, I will tell you how I break heifers of kicking. My practice is to stable the heifers the winter before they come in—there is no trouble then in getting them in at any time. When I want to milk them, I make them fast by the head so they cannot run back. Before commencing operations, get a good, tough gad, then, while one milks, have one stand behind her, gad in hand, and, every time she kicks, give her one good, smart blow around the leg that she kicks with, and she will soon give it up. I never knew it to fail.

Ronald, Ionia Co., Mich., 1858.

S. D. ARNOLD.

WHEAT IN WISCONSIN.

MESSRS. EDS.—We have in this portion of our wheat-growing State, a light wheat crop. It is true that many fields have yielded one-third of a crop—that is such as we term "a good yield"—and some crops have been so extremely light that they would not warrant pay for harvesting—consequently have been left to go the way from whence they came—back to earth. Other fields in close proximity, upon the same quality of soil and under no better state of cultivation and attendance, bring forth good yields. These things may seem strange to some—in fact to all such as place the cause of our failure in the season, wet and drouth, &c. But these things are plain when looked at comparatively and connected with facts that meet the observing. That our season has been unfavorable—that we have had the extremes of wet and drouth—and that these have been an injury to all kinds of wheat I do not deny; but that these are the only or even the principal reasons, I can in no wise admit, for facts are against it. Wheat here, as in many other places, has been our staple product—the cash product—the one upon which too many farmers have almost solely depended to meet their cash obligations. Many have been so intent upon and bound up in wheat-growing that they have literally run the thing into the ground—they have neglected to give heed to the laws that govern and which must be complied with in order to secure a fair recompense for labor. Rotation in crops and change of seed have been placed among things of the past. The Club variety of wheat has been sown in this vicinity for a term of eight or nine years in succession, and has, I believe, given universal satisfaction until this year; and here lies the cause,—it is fairly run out.

We find that the Fife wheat (a new variety with us) has almost invariably yielded a good crop, even this year, while the Club sown side by side with the Fife, was an entire failure. I am firmly of the opinion that if the Fife or some other new variety of wheat had been sown last spring instead of the Club, we should have been favored with a good yield, and the cry of poor wheat we should not have heard. Experience is a thorough teacher.

Palmyra, Wis., 1858.

C. P. D.

AGRICULTURE IN ALLEGANY COUNTY.

EDS. RURAL.—As I have never seen any communications from farmers in this section, I thought I would venture to address a few lines to you, presuming that you are friendly to every man that holds the plow or drives. You will see by my address I am one of the class formerly called "leek-diggers" but since the products of our county have been seen coming down the Genesee Valley Canal—such as butter, cheese, pork, flour, &c.—I think some people have had reason to alter their minds as to our occupation.

I have been a resident of Cuba most of the time since 1824, and I think I am pretty well prepared to judge of its agricultural products. I do not think Cuba the best town in the State, but I do think it as good as they will average. All we want is to suit our business to our county. I think dairying is the most profitable for us in the Southern Tier, though we can raise grain. I will give you some specimens. I have grown wheat on one lot of twelve acres eight years in succession. The smallest yield was twelve and a half bushels per acre, and the largest twenty-one bushels, winter wheat, sown on summer fallow. The other seven crops, spring wheat, land plowed once, generally in the fall. Our climate is improving for corn. Twenty years ago, people told us we could never raise corn in Cuba; the reply was, we know it, but we know differently now. Experience has shown us that we can grow fifty bushels per acre.

Cuba, Alleg. Co., N. Y., 1858.

ANSEL L. BLOWER.

WHEN AND WHERE DEEP PLOWING IS BENEFICIAL.—An English paper discusses this subject at some length, and the points brought out will interest and instruct American readers. We condense them in the paragraphs below:

Deep plowing is most effectual in autumn, exposing the soil to the influence of frost, rain, and air, during the winter, which act upon the mineral ingredients of the soil, rendering them available for succeeding crops; also, pulverizing the soil, and thus facilitating the passage of the roots into the subsoil. As regards the period of the rotation, it should precede root crops, (or, in this country, Indian corn,) or maybe the first plowing for fallowing preparatory to the wheat crop.

Deep plowing is most beneficial to stiff clays, and, as a rule, we may plow deep when the subsoil is of the same character as the surface, if both are tenacious, or when the subsoil is composed of good clay, only requiring atmospheric influences to sweeten it. Deep cultivation should be avoided in nearly all very light soils, and in plowing for crops after large applications of manure, thus burying it too deeply; or in turning under clover or other green crops. Deep plowing in autumn, on most clays, is equal to a half dressing of manure. Clay from which the air is excluded, exhibits a dark bluish color. After draining, it is not advisable to bring to the surface more than two inches of clay subsoil at a time, otherwise more is brought up than the frost, &c., can fit for growing good crops.

DOOR-YARD FENCE.—Inquiry.—I want to build a door-yard fence. With some one would give plans, with expense, &c. Would not iron be cheaper in the end than wood?—have seen advertisements in the RURAL of iron railing for cemeteries, but nothing said in particular about fencing. If they have any for that purpose, wish they would send me circulars with designs and prices.—E. H. WRIGHT, Milton Conn., 1858.

Rural Miscellany.

MONROE COUNTY FAIR.—The Annual Fair of the Monroe Co. Ag. Society, held last week—Sept. 14th to 17th, four days—opened with favorable weather and a good attendance, promising a satisfactory display and successful result. The entries were large, about 1,500, and the exhibition unusually fine in many departments. But a storm occurred on Wednesday, the first regular exhibition day, which caused many exhibitors to remove their animals and articles from the Fair Grounds, and materially lessened the variety and interest of the show, as well as the attendance. The forenoon of Thursday was also unpropitious, the clouds and wind indicating bad weather. The third day likewise opened unfavorably, the wind and clouds portending bad weather—preventing many from attending, and also the return of stock and articles which had been removed. Thus the Fair was interrupted, and its interest and success greatly lessened, on what had promised to be the best days. Yet, notwithstanding the unpropitious weather, the Fair was numerously attended throughout, the exhibition large and fine in most classes, and the result a decided success, peculiarly—in all respects better than could reasonably have been anticipated. Of the management it does not become us to speak; and we refer those interested to the local papers for accounts of the various features of the Fair, premiums awarded, &c. The Address by Hon. T. C. PETERS, of Genesee, on the last day, was heard by a numerous and intelligent audience with great apparent satisfaction, and universally pronounced able, practical and appropriate to the occasion. We understand Mr. P. is prepared to deliver addresses at other Fairs, and think any Society securing his services will be peculiarly fortunate.

The aggregate receipts were about \$2,700, which will leave a handsome surplus over the expenses, to be appropriated towards paying for the Society's Grounds and improvements. This is a most gratifying result, and certainly exceeds what was expected under the circumstances.

"SPELT" WHEAT.—Mr. GEORGE B. LEONARD, of Kendall, Orleans Co., N. Y., during the past season grew some of this variety of wheat, which is said to be proof against the insect now destroying the prospect of wheat growers in this section. Chance sown heads of common wheat growing in the field with the "Spelt," were ruined, while the latter was untouched. The name "Spelt" is given generally to all wheat in which the grain adheres to the chaff. There are two or three varieties of this character. We should judge that of Mr. LEONARD belongs to the order *T. BICORNE*—the *Larger Spelt*—or *Zea* of some authors, *T. Spelta* of others, and is thus described:—"Spikellets on alternate notches, at a considerable distance from each other, and smaller than in *T. vulgare*, each with two or three, or rarely four perfect florets, besides the barren terminal one; the outer glume and pales very broadly truncate at the top, and notched or angled on each side of the point or awn, which is very slender; the grain when ripe, adhering closely to the chaff or pales."

ANOTHER HORSE FAIR.—The "Young Men's Club," of Elmira, announce a "Great Horse Fair," to be held Sept. 29th and 30th, and Oct. 1st. They offer \$1,000 in premiums, and open competition to all the U. S. and Canada. Those who remember the result of the Exhibition of the "Young Men's National Ag'l and Mechanics' Society," at Elmira, last year, will not be likely to favor this project. It is proper to state, however, that the new Club is composed of responsible citizens of Elmira, who guarantee the payment of the premiums offered, and repudiate the management of the National Society.

LIQUID MANURE.—FINLAY W. FRASER, of Trenton, Oneida Co., writes to the *Journal of the N. Y. State Ag. Society* as follows:—"No less than seven thousand barrels of Liquid Manure was distributed over meadows in this county last spring; and in no instance but it has doubled the growth of grass, and in fact there is not a farmer round here but has his stable fixed to collect it. I have no doubt but next spring there will be over twenty thousand barrels used." The Oneida farmers have taken a step in the right direction, and the movement is worthy of imitation by the agriculturists of the entire country. May they take pattern from the Oneidas, and that right quickly!

A "CENTURY" TEAM.—At the National Horse Show, held at Springfield, Mass., Sept. 14—17, a four horse team—the combined ages of which are one hundred and two years, were on exhibition. The oldest of the four is thirty years, and the youngest twenty-two. This team is the property of Lewis B. BROWN, of New York. The Boston *Traveller* remarks concerning them, "they are still far from unserviceable, and apparently as fresh as when exhibited one year ago."

STATE AG. COLLEGE.—According to the Ovid *Bee* the contract for building the two south wings of the Agricultural College, (the transverse wing 58 feet by 128, and the lateral wing 60 by 84 feet) has been agreed upon between the Building Committee and THOMAS CRAWFORD, of Geneva. The *Bee* states that it is the intention of the contractor to commence the work immediately, and drive it on to completion.

IMPROVED AMERICAN BLACK RASPBERRY.—We have received from H. H. DOOLITTLE, the Black Raspberry grower of Oaks Corners, an illustrated pamphlet, giving "the principles that governed him in attempting a positive and permanent improvement of the American Black Raspberry." In a few weeks we will give a synopsis of this work. Mr. D.'s advertisement will be found in the present number.

THE ILLINOIS STATE FAIR.—held last week, at Centralia, was a great success. A glowing account of it, from an attentive correspondent, was received, while closing this number of the RURAL for press, and is necessarily deferred until our issue of next week.

Orchard and Garden.

THE AMERICAN POMOLOGICAL SOCIETY.

The American Pomological Society held its Seventh Session in New York, commencing on the 14th inst., and continuing three days. Three sessions were held on each of the first two days, the last one protracted until quite late, and two on the last day, so that with examinations of the fruit on exhibition, in a hall in the same building, all the time was completely employed, and very little opportunity afforded for necessary rest or refreshment. This was emphatically a working Convention—there was no *soiree*, or anything of the kind to call the attention of members from their proper work—and nothing short of eleven or twelve hours hard labor each day would satisfy the President, who has a very superior faculty for leading a gang of workers.

The attendance was not large, numbering at no time more than two hundred, and these were principally members and delegates from the country, and a few men of taste from around New York. The city people seemed to take no interest in the exhibition, and we do not think one in a thousand heard of it, and certainly not one in twenty thousand thought enough of the matter to take a look at the exhibition of fruits or a seat in the Convention. At one time we saw three ladies in the fruit room examining the specimens, and at another, two. At a "Hop," at the St. Nicholas, we saw a hundred, perhaps. Among the delegates and members in attendance, we observed many of the most intelligent horticulturists of the country, and many of the more distant States were represented—North Carolina and Georgia, Ohio and Michigan, very ably. We do hope that at the next session, two years from the present time, the West will be well represented. It is not asking too much of the fruit growers and nurserymen of the West, to give us the light of their countenances and their knowledge, once in two years. And then, should they attend, in large numbers, and ask it, we have no doubt the session for 1862 would be appointed at the West, either at Detroit, Cleveland, Cincinnati, or Chicago. Among the many excellent men present was the venerable NICHOLAS LONGWORTH, of Cincinnati. The announcement of his name by the President was received with loud and long-continued applause, which showed how strong a hold this devoted pomologist has upon the hearts of the fruit growers of the country. He shows signs of feebleness. May the evening of his life be as peaceful as its noon has been useful.

There seemed but two drawbacks to the usefulness and interest of the meeting, which we hope to see corrected in future, and that was the extreme modesty of those who had a good deal of knowledge of the subjects discussed, and the extreme want of modesty of some who had but very little knowledge, and seemed anxious to make a great show of that little; and, therefore, thought it necessary to rise and bore the Convention with remarks at every convenient and inconvenient opportunity. These new hands, who seem desirous to show themselves, should learn that forwardness is a poor substitute for sense, and that it is bad policy to spread a very little knowledge over so large a surface.

The exhibition of fruit was said to be the best ever made in New York, and it was certainly very fine. As we expect to be furnished by the officers with a list of the fruits exhibited, our notes on this point may not be entirely full, though they are very nearly so. The collection of apples from North Carolina was exceedingly fine and fair.

Messrs. Ellwanger & Barry, of Rochester, exhibited 200 varieties of pears and 37 of pears. Fine specimens of some of the pears have seldom been exhibited.

Messrs. Hovey & Co., of Boston, made their usual fine display of pears, but we have no note of the number exhibited.

The Hon. Marshall P. Wilder, of Boston, exhibited 144 varieties of pears, of the most beautiful size, shape and color.

Wm. Reid, of Elizabeth, N. J., exhibited specimens of 104 varieties of pears.

Mr. Wm. L. Ferris, of Throgs Neck, exhibited 56 varieties of pears.

Mr. Sheldon Moore, Kensington, Conn., exhibited 5 varieties of apples.

E. M. Warren, Chelmsford, Mass., 8 varieties summer and fall sweet apples, 10 fall and winter sweet apples, 24 fall and winter sour apples, 80 early and summer sour apples.

Messrs. Thorp, Smith & Hanchett, Sprague, exhibited 124 varieties of pears.

J. D. Ingersoll, Illion, Berkshire Co., N. Y., 3 species of Delaware grapes, 2 Logan, 1 unknown.

Dr. J. P. Boynton, Syracuse, 14 varieties of pears.

Mr. Lyon, Plymouth, Mich., 27 varieties of pears and apples.

Mr. W. H. Mitchell, Harlem, 13 varieties of pears and 14 varieties of apples.

Mr. C. H. Moore, New York, 1 seedling pear.

Mr. E. W. Sylvester, Lyons, N. Y., 3 varieties of pears.

Prof. Hayes, 13 varieties of pears.

Messrs. Westcott & Henshall, Greenboro, N. C., 77 varieties of apples and 11 varieties of pears.

many of us once more to assemble for the advancement of the earliest pursuit of man.

As the original law of labor required man "to dress and keep the garden," so his primitive food was the fruit of his trees—of all its trees save one; and the Divine Benediction, when it declared, "I have given you every tree in which is fruit yielding food," with inimitable wisdom and love, provided for the extension of this art, and the multiplication of its blessings through every period of time. With such a Divine charter—with such a rule of duty, is it not a little surprising that the honor should have been reserved for the present century, for our own time and country, of giving birth to the first Pomological Society in the world? But from this fact let us not infer, that our ancestors and the generations which preceded them, did little or nothing to improve this part of their inheritance.

The representative arts of ancient Egypt, contain delineations of delicious fruits afterwards cultivated in the hanging gardens of Nineveh, the interval lands of Babylon, in the vales and on the mountains round about Jerusalem. In Greece, Homer sung of the cultivation of fruit-trees; Xenophon, Cato, and Virgil mention among other varieties of fruit, the pear; and Pliny in enumerating the fruits cultivated at Rome, mentions twenty-two sorts of the apple, eight kinds of the cherry, more than thirty kinds of pears; a large number of plums and grapes to which the soil of Italy was then, and is still specially adapted. He also speaks of several other kinds of fruits, and of the perfection which the art had attained in his period; but it is a significant comment on that perfection, when he adds, that it was then, a long time since the production of any new variety.

To trace the progress of Pomology, is not our present purpose. Suffice it to say, this science having reposed in the gardens of the monasteries during the dark ages, came forth from those cloisters with modern civilization and the Reformation; and has now attained an elevated position among the most refined and honorable of human pursuits. Associations for the promotion of Pomology, as a distinct science, date back only to the middle of the present century. It was previously embraced in the objects of Horticultural and Agricultural Associations, and has been greatly advanced by the individual enterprise of a Quintinye, Duhamel, Van Mons, Knight, and other scientific men, both in Europe and America. But the efficient cause of our progress is the power of voluntary association—the great engine which propels the car of modern improvement. Its wonder-working agency appears in the action of mind on mind, not only in the intercourse of individual pomologists, but in the various periodicals devoted to this object. Among these, our country can boast of some more enduring and voluminous than any that can be found in Europe.

Since the organization of this Society in 1848, its example has been followed by the establishment of the British Pomological Society in London; the Société Pomologique de Belgique in Brussels; and of other similar organizations located at almost every point of our Union—all working in harmony for the attainment of the most reliable and important results. These are aggregating the experience of the wisest and best cultivators, creating a taste for this useful and divinely appointed art, proving what varieties are suited to each particular locality; and what, to general cultivation. These, through the influence of the Horticultural and Agricultural press, are introducing fruit culture from the Canadas to Mexico, and from the Atlantic to the Pacific, bringing its numberless enjoyments within the means of the most humble cottager, and multiplying the luxuries which crown the tables of the opulent. The large, luxurious and abundant fruits in the State of California, in the Territories of Oregon and Washington, already ripe, and, in many instances, surpass those of our older States, indeed of the countries of Europe.

Upon these favorable omens I may well congratulate you; as I certainly do, on the cheering prospects before us. Pomology is yet in its infancy. We have but just entered the field which we are to cultivate, and gathered a few first fruits of the bountiful harvest, which encourages and is to reward our endeavors. But, when we reflect upon the success which has attended the growth of particular fruits upon a few acres, under judicious cultivation—upon the obstacles which science and practical skill have already triumphed—upon the industry, intelligence and enterprise of our people, which has been and will continue to be more and more devoted to this branch of terra-culture—upon the vast amount of our territory equally well adapted to fruit culture as that now in use—and upon the ever increasing demand for the same—who can predict the future importance of this science? who can foretell the extent to which it will hereafter contribute to personal and domestic comfort, to national wealth and prosperity? And can any man doubt whether the assembling of these rural comforts around the family mansion does not strengthen local attachments and multiply the joys of home, whether they promote industrial happiness, the love of kindred and country, and sweeten the social relations of life?

Such, gentlemen, is the trust which Providence has confided to your care. Such is the magnitude of your mission. By your instrumentality, an extensive and laudable spirit of enterprise has been awakened through our own and foreign lands. The transactions of our last session have been published generally by the periodical press of the United States. They were also translated and published in some of the languages of Europe; and your Catalogue has already become a standard in American Pomology. This it should be your object, at each biennial session, to revise, perfect and promulgate, as the best means of preventing those numerous impositions and frauds which, we regret to say, have been practised upon our fellow citizens by adventurous speculators or ignorant and unscrupulous vendors, who sometimes use recommendations, hastily and injudiciously given, or surreptitiously obtained, greatly to the injury of the purchaser and fruit grower, to the dealer and nurseryman, and to the cause of Pomology. Let us, therefore, exercise increased caution as individuals and as associates how we lend our influence to encourage the dissemination of now fruits with extravagant pretensions; sovereign remedies for diseases, patented nostrums for the destruction of insects; worthless fertilizers; and secret arts of cultivation.

There are many other topics most intimately connected with our common cause. On some of these subjects it was my intention to have addressed you; but they will no doubt, be discussed during the present sessions of the Society; and then I may be indulged with the privilege of expressing a personal opinion. I have resolved, however, to devote the few remaining moments which it will be proper for me to occupy in this opening address, to some suggestions relative to the Pear, one of the most important and delicious of our fruits.

The question has recently been raised and very extensively discussed in our public journals, "Can pears be grown for the market?" at a profit? In the progress of this discussion, those who have espoused the negative, we fear, have undesignedly, perhaps, awakened distrust as to the success and profit of pear culture in our country; a distrust which, if not removed, may prove injurious to this branch of pomology. Many able, and to my mind conclusive replies have been called forth, affirming both the feasibility and the profit of pear-growing. In consequence of personal devotion to this art, and my official relation to you, I have been requested by members of this Society and other cultivators, to submit the results of my study, observation and experience on this subject.

It is obvious that a similar question may be raised in regard to any other branch of terra-culture. Where one cultivator succeeds, another fails. Why? Not because Providence does not

fulfill the Divine promise, "that seed time and harvest shall not fail," but because in instances of failure the conditions of success are not complied with. Perhaps there was a want of intelligence, of judicious cultivation, or of that vigilance which takes hold of an enterprise, with a determination to surmount all obstacles and to "hold on." Some pomologists have justly ascribed to us in Massachusetts what they have been pleased to denominate a "mania" for pear-growing. They have also made honorable mention of the success which had attended it. But it should be borne in mind, that neither the soil or the climate of our Commonwealth, are as well adapted to this fruit as those of most of the other States of the Union; and if the fruit-growers in this region have acquired any such celebrity, it is to be ascribed to their intelligence, indefatigable industry and perseverance, more than to any other cause.

When the Almighty commanded man to replenish the earth and subdue it, he also gave him dominion over nature, and required him to subordinate her to his use. The cultivator should not wait idly for nature to work out what God intended him to perform. He should learn to work in harmony with nature. He should plant trees with a proper regard to soil, sowing, and the arts of judicious cultivation, and should never leave them, as is often the case, to a fatal predestination, believing they were foreordained to take care of themselves. He should not be discouraged by a single failure, but should persevere.

"Work on and win;—
Preach no desponding faithless view;
Whate'er he wills, his WILL may do.
Work moves and molds the mightiest birth,
And grasps the destinies of earth!"

We do not deny that vicissitudes attend the cultivation of fruit-trees, as well as forest trees, and other vegetable products. How often a severe winter proves injurious to the peaches of the North, to the oranges of the South. Within the knowledge of many present, our hardest varieties of the apple, as well as of the pear, have been injured by sudden reversals of climate. But these should no more discourage the pomologist, than the occasional failure of a farmer's crop by frost, drought, or other causes, should prevent his planting the succeeding spring. Without detracting from the merit of any American pomologist, it is our firm persuasion that the failures which have occurred in pear-growing, whether on the quince or its own stock, are attributable to improper soil and varieties, to injudicious treatment, or to neglect of cultivation. Hence, these failures, wherever they exist, show the importance of the prominent object of this association, which is to develop and promulgate the scientific principles and the personal experience, that shall reduce the number of such failures, and in the end prevent their recurrence.

One of the chief causes of failure is the non-adaptation of the tree to the locality. Some varieties are constitutionally delicate and feeble; and, of course, more subject than others to climatic influences. They may be of exquisite flavor, but are not well adapted to general cultivation. These would only be grown by amateurs in favorable positions. Others are robust, vigorous, hardy as the oak, resisting the extremes of cold and heat, of tempest and storm, retaining their luxuriant and persistent foliage to the end of the season. Such are the Fulton and McLaughlin, of Maine—the Buffum, the Abbott and Knight's Seedling, of Rhode Island—the Andrews, Harvard, and Meriam, of Massachusetts—the Dallas and the Howell, of Connecticut—the Lawrence, Onondaga and Sheldon, of New York—the Brandywine, and Kingessing, of Pennsylvania—the Urbaniste, Beurre d'Anjou, Doyenne, Bousquet, Vioir of Winkfield, St. Michael Archange, Nouveau Poiteau, and last but not least, the Bartlett, of European origin. The latter, which was introduced into Dorchester, Mass., before the beginning of the present century, and which has borne regular crops of delicious fruit for more than fifty years, is still vigorous, hardy, and prolific.

True, these are not all of exquisite flavor; but all of them have valuable qualities. With a proper knowledge of the art of ripening, they are very useful sorts and generally acceptable to the public; and if amateurs who are sometimes in danger of being too fastidious, could obtain no other, they would pronounce them most excellent kinds. Not that we would detract from the cultivated taste, which finds its gratification in the delicious Seckel, but as a national organization, we are sacredly bound to consider the wants of the million—the facility and practicability of supplying them. Give us pears! the most exquisite sort, where we can grow them—but by all means give us pears! pears for ourselves, for our families, for the millions who are about us, and who are to come after us!

Another cause of failure in the growth of the pear tree, has been a competition or increasing number of varieties, rather than a satisfaction with a few of known worth and excellence. Within the last twenty-five years, this passion has led to large importations of trees from foreign countries, of the characteristics and habits of which we have not had sufficient knowledge. During this period, many of those on our list for general cultivation have been obtained; but to secure these, and satisfy ourselves of their excellence, we have been obliged to grow a multitude of kinds, which have proved inferior and worthless. More than one hundred now stand on our list of rejected sorts; and the Committee on this class of fruits, I understand, are prepared to recommend the expulsion of a still greater number.

Without discouraging the introduction from Europe of new varieties for trial, in the hope of obtaining valuable sorts, there can be no doubt that a prejudice has been created in this country against the cultivation of the pear, by the importation of trees not thoroughly proved by foreign nurserymen, which, in far too many instances, have not here answered the recommendations given of them at home. This has been still further augmented by the frequent heating, and great consequent injury of such trees on the voyage; by their sale here at auction to inexperienced cultivators, who purchase a medley of worthless sorts and damaged trees, in expectation of valuable fruit.

The diseases of the pear, like those of most other fruits, result from definable causes. For many of these, we have already acquired sufficient knowledge to apply the appropriate remedies; and it is to be hoped, with the progress of science, we shall ere long be able to prevent even the blight, that fearful destroyer of this tree in some localities.

Much has been said against the longevity of the pear tree; particularly when grafted on the quince. In reference to the latter point, I need only reaffirm the sentiments contained in my last address, and subsequently corroborated by the most distinguished cultivators. One of these remarks, "My best trees are on the quince. The best fruits of our exhibitions are from the quince stock, and our profits in fruit raising are from the same source. Let others have their own way in staking experiments based upon improper or bad management, drawing from these unsatisfactory conclusions. By a judicious selection of varieties and proper cultivation we shall fill our shelves, and walk among our well-shaped pyramids with a blessing from the unknown genius who first tried the quince as a stock for the pear, and made, really, in pear cultivation, the same revolution as steam in traveling." Another gentleman, the editor of our oldest horticultural journal, sustains these declarations, adding,—"The attempts to write down the pear upon the quince stock, are examples among a thousand others in the literature of gardening, to assail some of the soundest principles of physiological science and practical art." The additional experience during the last biennial term,

* See Transactions of Sixth Session, 1860, p. 22.

confirms my previous convictions of the truthfulness of these statements; and such is believed to be the sentiment of the best pomologists throughout the country.

Of the longevity of the pear upon its own stock, there can be no doubt. In favorable circumstances, the pear outlives most other fruit-bearing trees. Witness the old pear trees on the bleak and rock-bound coast of Puritan New England; on the site of the old Dutch Colony; at the mouth and along the banks of the Hudson; in the territory of the ancient French Colony about Detroit, and in other places too numerous to be named—trees, some of which have flourished from the settlement of the country, and which are at this very moment bending with the weight of their golden fruit.

PROFIT OF PEAR CULTURE.

But the immediate question under consideration is, "Can Pears be Grown at a Profit?" We advocate the affirmative, premising that the conditions of success to which we have already referred must be complied with. This inquiry has been satisfactorily answered by pomologists, some of whom I am happy to recognize in this assembly, yet the responsive facts and arguments deserve to be embodied and published under the sanction of this National Assembly. To a record of these as collected from various authorities, so far as they are confirmed by personal observation and experience, I now invite your attention:

The Fruit Grower's Society of Western New York, composed of gentlemen of devoted integrity and celebrity, some of whom are on this floor, and competent to defend their report, furnish the following instances from that section of the State:

Three White Doyenne Pear trees, owned by Mr. Phinney, of Chautauque, one of them small, produce annually fifty to sixty dollars worth of fine fruit.

A tree of the same variety, owned by Judge Howell, of same place, seventy years of age, has not failed of a good crop for forty years, averaging, for the last twenty years, twenty bushels annually, and sold on the tree at sixty dollars per year. This tree has produced for the New York market three thousand seven hundred and fifty dollars worth of pears.

Three large trees owned by Judge Taylor, of same kind, yielded in 1854, eleven barrels, and sold for one hundred and thirty-seven dollars.

A young orchard, owned by Mr. Chapin, of four hundred trees, eight years from planting, which produced, in 1853, fifteen barrels, selling in New York for four hundred and fifty dollars, and, in 1854, fifty barrels, yielding him one thousand dollars.

Similar results have been realized in the State of Massachusetts. Bacon, of Roxbury, has about one acre devoted to the pear. The oldest trees were planted eighteen years since, but more than half within a few years. From two trees, the Dix and Beurre Die, he has realized more than one hundred dollars a year, and for the whole crop, over one thousand dollars a year.

John Gordon, of Brighton, has three and one-fourth acres in his pear orchard, which was commenced in 1841, there being only eight trees on the ground. There are now twelve hundred trees, planted in various years, more than one-half of which since 1854. The amount received for his crop from that date to the present, has been from five to six hundred dollars a year, but he remarks, "If I had confined myself to a judicious selection of varieties, it would now bring me two thousand dollars per year."

Wm R. Austin, of Dorchester, Treasurer of the Massachusetts Horticultural Society, has an orchard of between five and six hundred pear trees, mostly on the quince stock. These trees are about twelve years of age. One hundred are Louise Bonne de Jersey's. They commenced bearing about three years after planting, and have borne regular crops ever since. They are very healthy, and only eight of the whole number have died since the orchard was commenced. No account of the crops were kept until the year 1851, but Mr. Austin's sales for the next six years amounted to three thousand four hundred and eight dollars.

The Messrs. Hovey's, of Cambridge, have a very large collection of bearing pear trees. From two rows, two hundred and ten trees, grafted on the quince, the crop has amounted, some years, to twenty-five barrels.

John Henshaw, of Cambridge, planted about an acre of land, principally with pears, on the quince. On the fifth year thereafter, he gathered one hundred and twenty bushels of pears, seventy bushels of which he sold at five to six dollars per bushel.

A Buffum pear tree at Worcester, belonging to Mr. Earle, yields annually from five to six dollars worth of pears. Mr. Pond, of the same city, planted in 1850, three hundred and fifty Bartlett pear trees, one year old from the bud. In 1857, he sold from these trees, fifty bushels of pears, at five dollars per bushel, or two hundred and fifty dollars for the crop.

Similar instances of success, in these and in other States, might be multiplied, if time would permit, to prove the age, health, and profit of the pear tree. So deep has the conviction of this truth become, and so uniform the success, that instead of planting trees as in former times, by the single tree or the dozen, cultivators now plant orchards of hundreds and thousands, in firm and reasonable expectation of large income.

Such facts are conclusive, and ought to rectify the false theories which have been advanced on this subject. But it may be objected, that these are instances of success developed by accidental adaptation of kinds, of soil or climate; that such results are neither uniform or common; in a word, that there are counter facts sufficient to justify an opposite conclusion, and therefore to sustain the opinion that pears cannot be made a reliable and profitable crop.

While I distinctly recognize here as in every other branch of terra-culture, what are called occasional revelations of nature, resulting from sudden alternations of temperature and other causes, yet I desire publicly to record as the result of long observation and experience, that I have never known an instance of failure, which on examination was not attributable to an improper selection of varieties, or to injudicious cultivation. In harmony with this judgment is believed to be the sentiment of the best pomologists in this country. Therefore I am constrained to regard success as the general law of cultivation in this, as in every other department of this science; as truly with the pear as with the apple.

What if we have instanced but a few cases, and named but a few varieties? They illustrate our argument. If the Bartlett in Massachusetts, the Buffum in Rhode Island, and sorts equally successful in other States, have not failed of an annual crop from twenty-five to fifty years, surely the product of the pear is not only as reliable as any other crop, but even more so. To these and other approved sorts which we now possess, we are constantly making additions by hybridization and other arts. What if at this time there are but a limited number of such varieties, enterprise and experience are rapidly multiplying them, and it is the particular province of this Society to dispense them through our land.

What if pomology, as a science, is comparatively of recent date; what if our knowledge of vegetable physiology generally is very limited? What if the various sorts of fruit trees do require different systems of pruning and cultivation, facts now generally conceded by experienced men? The laws which govern such treatment, and which, with the ordinary exceptions, insure a crop, are as certain as any other scientific principles. Our mission is to investigate these laws to settle the characteristics of each variety; to ascertain what soil is best adapted for supplying its appropriate food; to learn how and when it should be pruned, and to discover the best method of cultivation.

Thus far we have spoken principally of the pear. But much of what we have said is equally applicable to other fruits. The great duty which we would enforce, and which every pomologist owes to himself and to this science is,

"To study culture, and with arduous toil,
To till and fertilize the stubborn soil;
To give dismission, yet fruitful lands,
The tree, the vine, the plant that each demands."

Our reasoning applies peculiarly to the grape—I hail with great pleasure the wide-spread interest of cultivators in producing new and choice varieties of this fruit, which, ere long, will put us in possession of kinds not inferior to the best European sorts. On this subject I had hoped to enlarge at this time, and to have shown its importance, as a means of increasing individual and national wealth. The time is within the recollection of some present when our first native grapes were brought into cultivation, as the Catawba and Isa-

bella. These are now so common in some sections, that any man, if he chooses, may sit beneath his own vine and pluck its rich clusters. Honor to the memory of those who introduced these valuable sorts! Success to those who are multiplying new and improved varieties from them! We know gentlemen in Massachusetts who have thousands of seedlings under cultivation. The same may be said of other sections of our fair land; and the day is fast approaching when from our eastern to our western shores, the tops and slopes of our hills shall be covered with clusters richer than those of Eschol, and like them, giving assurance of a land of promise. May that day soon come, when our markets shall vie with those of Italy, Sicily and other grape-growing countries, where this luscious fruit is not only a luxury for the opulent, but the food of the humblest peasant.

What an inviting field of labor does the science of pomology present! Our country vast in extent, containing every variety of soil and climate, fast filling up with an intelligent and enterprising population, is already a pioneer in other useful arts, and is doubtless destined to sustain a corresponding superiority in the cultivation of fruit. The cause we seek to advance, will ere long adorn our hills and vales with the choicest fruits of earth, and tune to grateful lays, the voice of happy millions who shall succeed us. These blessings were designed to please the eye and gratify the taste, to multiply the comforts and elevate the social and moral condition of man. Fruits were the primitive food of our first parents, and for aught we know, their only food in Paradise. Fruits have too often been considered the condiments and not the necessities of life—but "man does not live by bread alone,"—and the more we use them, the more we shall approach a refined and healthful temperament both of body and of mind. It is, therefore, our duty, as benefactors of our race, to develop these wonderful resources of our land, and to increase them to their utmost extent.

And how delightful is the employment of the pomologist, going forth among his well-trained trees,

"To visit how they prosper, bud and bloom."
His love is always young and fresh, ever approaching them with keener relish and increased affection. They, in return, recompensing every kind attention, "clap their hands for joy," and like those flowers of Paradise touched by the fair hand of Eve, more gladly glow.

This art is second to no other in rank, in utility, and pleasure. No calling is more consonant with the refinement and happiness of a rational being; none better calculated to develop the purest sentiments of our moral nature. "The garden," says Lord Bacon, "is the greatest refreshment to the spirits of man, without which buildings and palaces are but gross handicrafts." "Nothing," said the immortal Webster, "is too polished to see its beauty, nothing too refined to be capable of its enjoyment. It attracts, gratifies and delights all. It is a constant field where all sexes and ages, where every degree of taste and refinement may find opportunity for gratification." So thought Cyrus of Persia, when he boasted that he planted his trees with his own hands; so Pliny, when he gloried that a Roman cherry was named in honor of his family; so Solomon, guided by Divine wisdom, made for himself as a source of his purest pleasure, "gardens and orchards, and planted trees of all kinds of fruit." So Dioclesian, sated with the highest honors of regal power, when he wrote to Maximian, "Were you to come to Salona and see the fruits which I cultivate with my own hands, you would no longer talk to me of empire." So say we and all others, who, having retired from the thoroughfares of the busy mart, and from the conflicts of political ambition, have drunk from these pure fountains of social joy, and eaten these ambrosial fruits of rural life.

No wonder then that the praises of this pursuit have been celebrated in prose and verse; from the humblest peasant to the highest potentate; from the heathen mythologist to the sweet Psalmist of Israel.

From scenes in the garden, from Eden to Gethsemane, have been drawn the most exalted and sublime conceptions, the most sacred and divine communications that have ever moved the human heart. The good Wilberforce, long after he was unable to walk, was drawn daily in his carriage to his favorite grounds, where he could commune with his Creator and admire the beauty and glory of his works. "I am," said he, "very fond of the garden. The corn and vegetables I look upon as the bounties of Providence, but the fruits and flowers as his smile." This sentiment animates the breast of childhood, grows with our growth, and strengthens with advancing years:

"Maintains its hold with such unfeeling sway,
We feel it 'e'en in age, and at our latest day."

The more I investigate the laws of vegetable physiology, the more I am filled with wonder and reverence at the benevolent provisions of nature—at the instructive lessons which she teaches. Our trees—from the opening bud to the golden harvest,—from the laying off of their gay autumnal livery, and during their rest in winter's shroud, waiting a resurrection to a new and superior life, are all eloquent preachers, proclaiming to our inmost soul,

"The hand that made us is Divine."

Taught by their counsel, who does not admire the wisdom, perfection and beauty of this fair creation! The tiny bud, encased in coats of mail so that the rude blasts may not visit it too roughly, rivaling in its mechanism the human eye, and destined to perpetuate its own species distinctive as the soul of man!—the enamelled blossom, unfolding her virgin bosom to the warm embrace of vernal air, bespangling the orchard with starry spray scarcely less beautiful than the glittering snow above, dancing in rainbow hues, and flinging on the breeze a fragrance richer than the spices of Ceylon's Isles; sweet harbinger of bountiful harvest!—the luscious fruits, God's best gift to man, save woman—the melting pear, rough or polished rind, with sweetest honied flavor—the burnished apple, tempting human taste from the mother of our race to her last fair daughter—the royal grape, clustering beneath its hower of green, making glad the heart of man—the brilliant cherry, suffused with loveliest tints of rose and white or dyed in deepest incarnadine—the velvet peach, mantled with beauty's softest blush and vying with the oratory of the morning—the delicious plum, veiled with silvery bloom, over robes of azure, purple, or cloth of vegetable gold! But what imagination can conceive, what pencil sketch the changing hues, the varied magnificence and glory, when Pomona pours from her overflowing lap, the ripened treasures of the year! These, all these, are original designs, such as the genius of a Corregio, a Claude Lorraine, and the oldest masters could only imitate.

Here are creations, originally pronounced *very good*. Here are inexhaustible sources of pleasure, beauties which fade only to appear again. Here "life flows pure, the heart more calmly beats." Here, like the foliage and fruit falling from trees of favorite care, the true pomologist, after a well-earned day, lies down to rest in the hope of a fairer to-morrow—in the glorious hope of partaking of the fruit of that tree, which "yieldeth its fruit every month, and whose leaves are for the healing of the nations."

In our next we will give a report of the discussion, varieties of fruit recommended for general cultivation, list of officers, &c.

TO CORRESPONDENTS.—For a week or two, details of the transactions of the National Pomological Society will require considerable space thus preventing our furnishing the usual variety of matter. We have many "good things," however, and they shall be spread before our readers in due season.

Ladies' Port-Folio.

A MOTHER'S KISS.

A CHILD whose infancy was joy,
A little boy of noble mien,
Now tottering gaily many a toy,
Now romping through the garden green—
His parents' blue-eyed little pet,
He tripped one morn, and down he fell;
His mother cried, "Come, Willie, let
Me kiss the spot and make it well."

A mother's kiss hath power to cure;
Her love is balm for every wound;
Her gentle smile, her words so pure
Can heal the bruise and make us sound;
And if there come a bruised heart,
And bitter tears arise and swell,
A mother's love still soothes the smart—
A mother's kiss will make it well.

What matter if the world forget
To praise us for the good we do,
Or, if it never pays the debt
Which to our truthfulness is due!
A mother's sympathy is ours
Wherever on the earth we dwell;
Though gone forever childhood's hours,
The mother's kiss still makes us well.

My mother's hair is grey, and mine
Is slightly touched with silver streaks;
I am a full-grown man—but Time
Has deeply marked my mother's cheeks;
Yet still her thrilling kiss is warm
Upon my brow imprompted well;
Through all my life it bath a charm,
My mother's kiss! to make me well.

From infancy until to-day,
In sickness, sorrow, and mistrust,
Her gentle words drive care away
And lift my spirit from the dust;
She tells me that the angels call,
That she must go with God to dwell;
My broken heart if such befall,
No mother's kiss will make it well.

THE TRUE WIFE OF THE FARMER.

Yea, the farmer's true wife—for what class of wives is more worthy the appellation of true? or what class of men more deserving the warm love and tender affections of a true-hearted companion than the faithful agriculturist, who, by honest toil and steady application, supplies not only the wants of his own household, but places the staff of life within the reach of all classes of mankind throughout the world? But, in speaking of true wives, we do not wish to be understood that the farmer alone is capable of giving comfort and happiness to the better half—on the contrary, we heartily congratulate all, in whatever profession or calling they may be laboring, because of their good fortune in obtaining loving and cherishing wives. From the daily vicissitudes of farm labor, and the anxiety and fatigue of the field, there is something within the farmer's bosom that seems to demand a cordial response from the heart of the one who has sworn to love, cherish, and obey. And, as we contemplate her willingness, and the pleasure she experiences as she engages in the routine of household duties, how genial seems the chord of love that binds two mutual hearts in one.

Much depends on the energy and perseverance of the wife. How hallowed the influence she is wont to diffuse throughout the family circle; and through her instrumentality how the husband's heart is cheered as he retires from the toil and heat of the day to taste the bounties of his own table, made thrice welcome from the fact that they have been prepared by the one in whose society he so much delights to dwell. During the long winter evenings, as he is permitted to sit by his own fireside and peruse the contents of useful books and read the news of the day from his family paper; or as he playfully indulges the little ones in child-like glee, he looks around him, and, as he beholds the perfect neatness and order that prevails throughout the entire dwelling, he is again filled with gratitude, and is once more constrained to revert with pleasurable emotions to her in whom all his affections centre. Then it is he is ready with willing hands to render any assistance or comfort that she needs, for the true-hearted farmer knows how to esteem her excellence and appreciate her worth. Then why so many discontented and unhappy wives? It cannot be owing to their aversion to the toil and patience incumbent on them as wives? It is no less a pleasure to the true wife than a duty to direct all the affairs of the house, as well as it is his to preside on the farm and toll on from day to day, not only for his own interest, but also for hers. True, the happiness of the wife depends much on the encouragement and kind indulgence of the husband. He, too, must show due respect to her, and be kind and obliging in giving assistance in every possible way. But when each labors with an eye single to mutual happiness, nothing is wanting to render a lasting fraternity complete.

Among the many attributes characteristic of the true wife, we will only stop to mention the following. Above all, she loves home and cares for her children. Unlike many who are inclined to regard home merely as a drudge, and the theater of disquietude and irksome toil, she loves her own fireside, and delights in educating herself for the proper training of the offspring which God has given her, and by her mild and temperate example strives to influence them in paths of rectitude and honor. Thus her heart is ever enlisted in endeavoring to make the associations of home "ways of pleasantness and paths of peace," and as husband and children cluster around, forming one grand fraternity of love, they have not the least inclination of leaving their own roof-tree to seek recreation in the tavern or stores of the village when leisure moments or long winter evenings come. Of such material is composed the affectionate mother, the successful housekeeper, and the true wife of the farmer.

Alton, N. Y., 1855.

Simplexity is an exact medium between too much and too little. Grace is the medium of motion; beauty is the medium of form; and gentleness is the medium of fashion.—*Reynolds.*

Give your children an education, and no tyrant will trample on their liberties.

MY GRANDMOTHER.

"Farewell, farewell, we meet no more
On this side Heaven."

Softly, mournfully proceeded these words from the choir in our quiet church, while a large circle of sorrowing friends were gazing, for the last time, upon the cold and lifeless form of my Grandmother. Gently those sweet harmonious strains fell upon our ears, but how heavily came they upon our agonized and grief-stricken hearts—filled with anguish too deep for utterance,—when we realized that the waxen lids had closed forever, and we should behold no more the love-light of those mild eyes beaming upon us. The gentle hands that had performed many good deeds in life, were meekly folded over the pulseless heart that had ceased to beat in unison with our own. Death had hushed forever the soft, musical tones of that voice whose gentle admonitions had often stayed childhood's wayward footsteps—footsteps that would have strayed from the path of rectitude. The kind cheering words, which, in adversity's darkest hours, like rays of sunshine penetrated our souls, urging us on to duty and making smoother the rough and ragged pathway of life, were forever silent. She had gone; and though earth was bright and joyous, and rife with the songs of merry birds, we participated not in its gaiety; for deeply our hearts responded to the solemn strokes of the tolling bell as they bore her from the church to the quiet graveyard, where Mother Earth opened her bosom to receive her, and when she had wrapped her mantle about that precious form hiding it forever from our view, with sorrowful hearts we turned away and sought our homes.

There was *One*, a white haired, aged man, whose home was far more desolate than the rest. The light of his household had gone out,—he had lost the companion of his bosom, the participant of his joys and sorrows, and now he must tread life's dreary path alone. O, to think of loved ones gone and know we shall see them no more on earth!—'Tis a sorrowful thought that strains the heart's fibres, but the blest assurance of a reunion beyond the grave, like a joyous stranger, breaks the strings; permits us to gaze on the other side of the picture, and through the misty veil of tears catch a faint glimpse of that brighter world. Ah! methinks, that while we wept o'er my grandmother's departure from earth, Angels welcomed her in Heaven, and while the choir in our church were singing a sad farewell, she, with the heavenly choir, was chanting the praises of JESUS. Then let us cease to mourn, and may her gentle spirit ever be to us as the polar star to the wanderer, shedding a holy light upon our darkened pathway, guiding to that land where we shall feel no more sin's galling chain.

Carlton, N. Y., 1855.

RECOLLECTIONS.

MEMORIES of days which have fled come to me as I sit musing in the deepening twilight, like bright-winged messengers richly laden with cherished scenes from the "dim halls of the shadowy past," and I live over again the sunny days of youth's gay morn. Again I clamber up yonder precipitous hill, long ere the glittering stars have fled before the refulgent light of day, and watch them as they disappear one by one from the sky. Then, as bright, rosy streaks of light began to start athwart the heavens, diffusing a flood of glory over the drowsy earth, and crowning the mist-enshrouded hills with a coronet of gold, my youthful spirits readily drank in the ideal fancy that in a world so beautiful there could be naught but joy and happiness.

Ah! how soon my dreams of perfect bliss were dissolved in the bitter waters of sorrow, when Death with icy fingers touched the heart of a loved sister—the youngest, fairest, dearest of our household band. Well do I remember the hour—that hour of untold anguish—when we were summoned around her death-bed. With what breathless anxiety we watched as her breathing grew shorter and shorter—then ceased entirely. So calmly and quietly the pure spirit—too pure for earth—left its clayey tenement it seemed it could not be she could never smile on us again; but as that pallidness which indicates that the "King of Terrors" has done his work, began to creep over her once smiling face, the heart-crushing truth that my sister, my only sister, was dead came home to my heart with a weight of sorrow before unknown to me. Little did I think how much I loved her, or how closely my affections were interwoven with her very being, till the waxen lids were forever closed over those eyes of heaven's own purest, brightest blue—that form, once so active, cold and motionless.

After theasket which once contained the spirit of my loved sister was borne to its long, undisturbed resting-place, as the still hours of twilight drew on I would sit for hours gazing far away into the depths of the azure sky, till I fancied the spirit of my angel sister was hovering over me, and then I would listen to hear the rustling of her wings as she soared away again to her home among the seraphs. I have since thought it might not have been all fancy; then I think if angels are not susceptible of sorrow, they would not witness some of the scenes of earth without shedding tears over the erring ones. Be that as it may, it is a pleasant fancy—one to which I readily yield, for it restrains from wrong-doing and from the utterance of thoughtless words which would cause many hours of bitter reflection.

Oxford, N. Y., 1855.

TALENTS NO PROTECTION.—Were they so, Bacon would never have taken a bribe, nor would Dodd have committed forgery; Voltaire might have been another Luther; David Hume another Matthew Hale; and Satan himself might yet be in the canopy of heaven, an orb of the first magnitude. Indeed, high talent, unless early cultivated, as was that of Moses, and Milton, and Baxter and Edwards, and Wesley, and Robert Hall, is the most restive under moral restraints; is the most fearless in exposing itself to temptation; is the most ready to lay itself on the lap of Delilah, trusting in the locks of its strength. And, alas! like Sampson, how often is it found blind and grinding in the prison house, when it might be wielding the highest power, or civilizing and evangelizing the nations!—*Dr. Murray.*

Choice Miscellany.

Written for Moore's Rural New-Yorker.
OUR PILGRIM FATHERS.

THE winds of December were scattering the snow,
From the dark waving trees to the valleys below,
And Ocean's rude waves, with their deep sullen roar,
Were dashing their crests 'gainst the ice-fettered shore—
Old Winter had breathed out his frost-laden breath,
Enshrouding the earth in a mantle of death,
When the gallant "May Flower," with her patriot band,
First parted the waters of Plymouth's wild strand.

O'er her tempest-tossed deck the fierce billows had passed,
While through her torn sails swept the wild, howling blast,
And tears of deep anguish had frequently flowed,
As slowly o'er ocean's dark waters they rode.
From the green shores of England—from kindred and home—
To the land of the forest and savage they come
To rear there an altar for Liberty's fire,
And offer their hopes on its hallowed pyre.

There were maidens as pure as the morning's first beam,
On whose beautiful brows gems of intellect gleamed;
And matrons whose hearts were as bold and as true
As warrior, or knight, or king ever knew—
There were husbands and fathers, whose courage and might,
No hardships could fether, no dangers could blight,
As for freedom and virtue, united to stand,
They pledged the warm heart and the unflinching hand.

And the tyrants might strive, with their cruel behests,
To crush the free spirit that glowed in their breasts;
Yet deep in their souls but the brighter it burned
As from their loved country their footsteps were turned.
And, when from America's wilderness sped,
Their prayer for direction ascended to God,
High throbbled their brave hearts, beating nobly and true,
As faith the bright future unrolled to their view.

And as years fled away, when oppression's dread blight
Spread o'er their loved country the darkness of night,
Above the fierce storm-burst of carnage and blood
Sweeping over their hearth-stones a life-crime-doomed flood,
High rose their stern cry, with unflinching breath,
For God and our Homes, give us freedom or death!
And when tyranny's light fled back o'er the sea,
Dawned Liberty's light in the homes of the free.

Oh! sons of such sires, shall the record of fame,
By your forefathers written, die out in your name?
Shall tyranny's minions on freedom's fair plains
Still rivet their fetters, and fasten their chains?
Shall the star-spangled banner in mockery wave
On the hills of Columbia—o'er Liberty's grave?
While the blood of her freemen enriches the soil,
Bequeathed by those heroes to honesty's toil.

Ah, not by the reverence we bear to illustrious dead—
By the blood of our fathers so fearlessly shed—
By the hopes of the future, the deeds of the past,
We'll cheerfully struggle and strive to the last!
And though fortune may frown, by the clear eye of faith
We'll pierce the thick storm-clouds of darkness and death;
And see Liberty's light beaming out o'er the sea,
Awaking the earth to her grand jubilee.

Somerset, N. Y., 1855.

LEAVES FROM MY PORT-FOLIO.—No. II.

LIFE AND DEATH.

THERE are two angels who attend the steps of every mortal, and although closely allied, and often wandering hand in hand, yet we view them not in the same light; for we call the one, warm, glowing, beautiful *Life*, and with a shudder and a sigh we, name the other, cold, relentless *Death*.

When one is seated at our hearth-stone, all around are gay and joyous. Eyes sparkle, lips smile, cheeks blush, and Life irradiates each countenance with happiness. Sweet, silvery voices respond to our own in tones of love, and hand clasps hand with the ardor of friendship.

Death enters the circle; and eyes, perchance the very ones that beamed most brightly, are closed, the lips are cold and motionless, the cheek is pallid, the voice is no longer heard, the hand presses ours no more. We gaze with anguish upon the loved face which seems as tho' chiseled from marble; in an agony of grief we kiss those silent lips for the last time; and then we make the resting-place of the dear one among the trees and flowers, and above the hallow'd turf we shed bitter tears.

Gloom and darkness fall like a pall upon our home, and not until years have passed away can we utter the name of the departed without a sigh and tear. Ah! were it not for the tears that dim our eyes we should know that we have naught to fear from that Heavenly Messenger—Death. We see not the celestial beauty of her countenance, the holy, star-like radiance of her eyes and her loving smile, as she beckons with gentle hand to the children of earth to follow her to the Paradise above. Oh! Death is no grim warrior, no insatiable tyrant; but a fair and lovely spirit who opens the portal of Eternity to the homeward bound pilgrim.

Life and Death! The one leads us through green vales and flowery dells, beneath the azure dome of Heaven, but hourly do we see those flowers fade, that sky darkened by clouds. She calls fond and trusting friends to our side, but estrangement often divides their hearts from ours. Doubts, and cares, and fears meet us at every step; our pathway grows rough and wearisome; still we cling to *Life*. We believe her to be our most faithful guide.

But Death comes. No bright roses garland her brow, but pure, snowy blossoms mingle with her tresses. She takes our hand in hers, and leads us on. We pause not upon the hillside, nor in the glen; seek not the sparkling rill, nor gushing fount; through the narrow gateway of the grave she makes us pass, and into the glorious realms beyond—that land of fadeless beauty, where the River of Life flows with a never-failing current. She restores to us our "loved and lost," and they never leave us more. From whom do we receive the most precious heritage—Life or Death?
Rochester, N. Y., 1855.

THE HEART'S DESIRES.—The heart of a man is a short word—a small substance, scarce enough to give a kite a meal, yet great in capacity—yes, so indefinite in desire, that the round globe of the world cannot fill the three corners of it! When it desires more, and cries, "Give—give!" I will set it over to the infinite good, where the more it hath it may desire more, and see more to be desired.—*Hall.*

SIGNS OF THE GOING YEAR.

HOWEVER heedless man may be, Nature has taken "note of time," since our last country gossip, two weeks ago. That twittering people, the Swallows, who flashed in more diamonds than all the beauties of the West, held a grand mass meeting upon the ridge of the old gray barn, the other day, and after much talk and more flutter, went up in a cloud, and commenced their southern flight. It was as if fifteen or twenty notes of the tune you are singing, should rise in a flock and fly away just before you get to them; a pleasant chorus has fallen out of the music of summer, and the hamlet of mud-cottages along the rafters, is already that emptiest of all things, "last year's birds' nests." Heap, as you will, the broad "hay" of the barn, like Fondy in high tide, with the fragrant drift from the meadow; let it swell above "the big beam" that never blossoms with anything but memories; and yet without swallows enough to make a summer, how desolate and dumb it all seems. The fellows, too, in red epaulettes, that swung on the reeds in the pasture, and the Bob-o-links, that rang their sweet bells in the morning, are soldiers and sextons "off duty;" they will not leave us until October, but they are already breaking up housekeeping, and will lead idle, gipsy lives for the remainder of the season.

The Butternuts are among the first trees that render tribute to Autumn; they have begun to pay down through the still air, many a bright double-eagle of a leaf, and the paths are strewn with the yellow coin. Here and there a flowering shrub has grown weary of holding up its bright chalice of beauty, and whole families of violets have shut their blue eyes for the year. But the little ponds are spangled over with lilies; their leafy islands make an Archipelago of beauty, each with its fair white temple of a flower. But what timid things they are, always keeping just out of reach from the shore; and in attempts to secure them, lives, before now, have been lost to gain lilies. The Katy-dids have come, too, and wrangle the night out with the same old story.

Let the grain crop be as vulgar a fraction as you will, nobody can say he ever beheld a ranker luxuriance of vegetation; vines and grasses, weeds and corn have fairly leaped into life; they grow over the old paths; they tangle all the fields; you must work your way through them, like a fly thro' a green veil. But you do not feel quite so merry, though, as you did in "leafy June," when you were as frisky, if not as innocent as a lamb. The truth is, you have not drank so much oxygen of late. The leaves—many of them—are beginning to close up the season's business; they liberate more carbonic acid, and yield less of Nature's true "be joyful."

The thoughtful sadness that Autumn induces, is not altogether the spiritual effect men like to fancy it; it is rather because their rations of *drink* are diminished, than that they are listening to Nature's preaching. So, a man needs a great stock of cheerfulness for Autumn use; laid away like the marrow in his bones, for a time of need. Show us a woman who is as merry in "the melancholy days," when the hoarse winds have caught cold, and the withered leaves rustle about sprinkled with frost, and the bare grape vine, that shingled the arbor with green, looks like an anaconda trying to swallow a summer house—who is as merry then, as when there is a "sweet south" and a "bank of violets" to make love to, and we will show you a woman that will gracefully bend to misfortune like a flower to the wind, and when the blast has gone by, will stand as erect and as lovely as before.

Nature indeed has a great many pleasant things to say; many "a sentiment" does she propose as she bids us "fill up," but how often is it that we drain the cup without hearing the toast. Let a man who thinks he loves Nature and listens to its teachings, first take an inventory of his stomach. Give us a look at his cash-book, tell us which way the wind is blowing, and we can better determine the genuineness of his affection. If the fine gold of his grain field has grown dim, and he had lead for breakfast, and a stiff north-easter carried away his chimney tops, and yet with a quick ear and a loving faith, he repairs to that same Nature for consolation and repairs, you may be sure he regards it with a sentiment "passing the love of woman."—*B. F. Taylor.*

STORY OF A WORKING POET.

MR. J. G. WATTS, an English writer, who has just published a volume of poems marked by refinement and feeling, gives the following account of himself:—Ten years ago I could scarcely write a half dozen lines correctly, and six years since I wore a canvass smock, and worked hard, physically hard, as a porter in Billingsgate market. True, I have not made a fortune, nor have I a tithe of the knowledge which many a man has, without one-fourth the aids possessed by the present generation; nevertheless, I have succeeded in shaking the porter's knot from my shoulders (not necessarily a badge of degradation, but terribly irksome when surmounted by a couple of hundred weight) and I hope that I have learned to pen my native tongue, if not elegantly, with something like respectability. Instead of toiling from four o'clock in the morning until as late as four or five in the afternoon, I commence my fish-selling—for I have now a standing of my own in the market—about five o'clock A. M., and finish business at ten. Thus I am in the possession of a comfortable living, with an amount of time at my disposal, which, at one period of my life, I little dreamed of. Need I say I am more contented? My leisure moments are employed alternately in reading, stringing verses, writing stories, cultivating my garden—Occasionally—twice a week, perhaps—I have a gathering of two or three literary working men, as well as others of a higher social position, at my house, when we talk of poetry, politics, and sometimes theology, the night often waxing late ere we adjourn.

THE great see the world at one end by flattery, the little at the other end by neglect; the meanness which both discover is the same; but how different, alas, are the mediums through which it is seen.

WORDS indeed are but the signs and counters of knowledge, and their currency should be strictly regulated by the capital which they represent.

Sabbath Musings.

Written for Moore's Rural New-Yorker.
ANGEL LISTENERS.

When the night her plumes are spreading
Slowly o'er her sable nest,
And the weary and the careworn
Sink in quietude to rest,
The delightful, then, to fancy
When the evening prayer is said,
That the Angels gladly listen
Hovering near us, overhead

Every feeble faint petition,
Finds a welcome 'mid the throng,
And they bear it gently upward,
Praising as they float along,
That the power to them is given
Thus to minister to man,
Sweetly singing richest praises
For the world's redeeming plan.

Though the shadows round us gather,
Still the angels bask in light;
Aye! we hear them chant of Heaven,
Where is neither shade nor night.
If the heart be faint and weary,
Angel voices murmur low
Of a land all free from sorrow—
Of a rest we soon may know.

List! they whisper words of promise
As they linger near at even,
Waiting to be joyous bearers
Of repentant thoughts to Heaven;
And it soothes the heart to fancy,
That, 'mid shades of life's dark night,
They will bear the spirit heavenward
To the realms of endless light.

L. H. W.

PRAYER.

"HUNGRY PERSONS," says Rev. H. W. Beecher, "who come to my door for bread, do not descend on the beauty of waving wheat-fields, the value of grist-mills and bakeries; nor do they preach homilies on the general goodness of God and the excellence of Christian beneficence. 'Bread, if you please, do give us bread?' O, when shall we have less of formalism and more of the spirit of prayer; less of preaching and more of pleading in prayer; more scriptural prayer, and, as the result, showers of spiritual blessings."

If a person has a real burden upon his heart to lay before God, his prayer will almost of course be short. Any subject exciting strong feelings fills the attention to the exclusion of all irrelevant matter. This is frequently seen in our intercommence in the world. Who has not seen a person so full of a subject that he will speak of nothing else? If the conversation be changed, he will bring it back; if silence happens, he will break it with the same subject. A person in such a state never plays with the subject which occupies him. He uses no preface, expletives or circumlocution to get at a point, but goes directly to it.

O, my reader, let your prayers be the real expression of the desire of your heart—nothing less and nothing more! Be real at the throne of grace, for remember "God is not mocked." And pray in faith and the Holy Ghost, and you shall the very petition you desire of God.—*Morning Star.*

FAITH.

God has marked implicitness and simplicity of faith with peculiar approbation. He has done this through the Scriptures, and he is doing it daily in the Christian life. An unsuspecting, unquestioning, unhesitating spirit, he delights to honor. He does not delight in a credulous, weak, and unstable mind. He gives us full evidence, when he calls and leads; but he expects to find in us a disposed heart. Though he gives us not the evidence of sense, yet he gives us such evidences as will be heard by an open ear, and followed by a disposed heart. "Thomas, because thou hast seen me, thou hast believed; blessed are they that have not seen, and yet believe!" We are witnesses what an open ear and a disposed heart will do in men of the world. If wealth is their pursuit; if a place present itself before them; if their persons and families, and affairs are the object; a whisper, a hint, a probability, a mere chance, is a sufficient ground of action. It is this very state of mind with regard to religion, which God delights in and honors. He seems to put forth hands, and to say,—"Put thy hand into mine; follow all my leading; keep thyself attentively to every turn."—*Cecil.*

PROVIDENCE.—No inferior hand hath sketched even so much as the most minute parts of Providence. It was all, from its Alpha to its Omega, from its divine preface to its solemn finale, marked out, designed, sketched, and planned by the mind of the all wise, all knowing God. Hence not even Christ's death was exempt from it. He that wings an angel and guides a sparrow, he that protects the hairs of our head from falling prematurely to the ground, was not likely, when he took notice of such little things, to omit in his solemn decrees the greatest wonder of earth's miracles, the death of Christ. No; the blood-stained page of that book, the page which makes both past and future glorious with golden words—that blood-stained page, I say, was as much written of Jehovah, as any other.—*Spurgeon.*

HOLINESS.—No gifts, no duties, no natural endowments will evidence a right in heaven; but the least measure of holiness will secure heaven to the soul. As holiness is the soul's best evidence, so it is a continued spring of comfort to it on the way thither. The purest and sweetest pleasures in this world are the result of holiness. Till we come to live holily, we never live comfortably. Heaven is epitomized in holiness; and, to say no more, it is the peculiar mark by which God has visibly distinguished his own from other men.—*Psalm 6: 3.*—"The Lord hath set apart him that is godly for himself." As if he had said, This is the man, and that the woman, to whom I intend to be good forever! this is a man for me. Oh, holiness, how surpassingly glorious art thou!—*Flavel.*

We say of the blind man from whom the visible world is shut out, that he is poorer by half the world than the man who sees. O, ye spiritually blind, ye indeed are poorer than we by a whole world!—*Tholuck.*

The Traveler.

Written for Moore's Rural New-Yorker.

Sketches from the Alps to the Adriatic.

NUMBER FOUR.

A Handwerksbursch—Large Wagons—Productions of the Valley of the Inn—Raising Indian Corn in the Tyrol—Entrance to the Ziller Valley—Eugen—Customs—A Musical Landlord.

LEAVING Hall, I held my way down the valley of the Inn. It rained a little, and the clouds enveloped the mountains so low that if I had not seen a rocky peak now and then through an opening, looking as if isolated from the earth, I could have imagined myself in a fertile and only moderately undulating country. I shortly fell in with a *Handwerksbursch*, or traveling mechanic. He was a native of Prussia, a joiner by trade, and a good specimen of that class of wandering journeymen in Germany who manage to perfect their trades and see the world at the same time. He had worked eight months in Vienna, and from there had traveled to Trieste and Venice, then through the Tyrol to Innsbruck. He was going to Munich, where he intended to work at his trade during the winter. He carried a short staff in his hand, and a few clothes and tools in a bundle on his shoulders. One meets many such workmen in Germany, and they scarcely ever hesitate to ask for a few kreutzers to help them on their journey, and nobody refuses to give. They are a free, hardy-looking class, and one frequently meets with those who have wandered through most of the countries of Europe.

I parted from my workman, and went into a church by the river, which is one of three in the Tyrol containing remarkable frescos painted in the middle centuries, by a native of the country. After resuming the road again I met several enormous wagons, used to transport goods across the Alps. They were drawn by eight horses each, and some of them must have carried fifteen or twenty tons. The tires of the wheels were six inches broad. Near the town of Schwaz, where I stopped for dinner, are some silver mines, which formerly yielded profitably, but are now entirely unproductive. There are iron and copper mines in the vicinity which are worked to some extent. Three hours of further journeying brought me to the end of my wanderings in the *Innthal*, and I turned into the side valley of the Ziller.

Before quitting the valley of the Inn, which is one of the largest in the Tyrol, I will say a word about its productions. They are similar to those of the Northern and Middle States, and so, indeed, are the productions of all the North Tyrol. Indian corn is the chief crop, and I saw much rye and grass, and some wheat. There is no wine raised, but the wine there is both good and cheap, and is brought from the South Tyrol and Italy. The fruit is of the hardy sorts, mostly apples and cherries. One of the most singular peculiarities is the raising of Indian corn, which is very successful and profitable in all the Tyrol, until within a few hours' journey of Salzburg, when it ceases. There are many countries in Europe where corn cannot be successfully grown, yet they have a milder climate than the Tyrol. While conversing with some men in Hall, one of them gave a reason, which, whether it be true or not, is at least singular, and perhaps worthy of attention. "The reason why we can raise corn," said he, "is because the *stocco* or warm wind that blows from Africa over to Italy, reaches us. When it comes it sometimes melts several inches of snow in one night, and it always gives us the headache, too. It does not reach further than the valley of the Inn, and beyond that they can raise no corn." Whatever the reason may be, it is certain that the climate of the Tyrol is favorable to the production of Indian corn, and it is the most valuable bread crop which is raised there. I suspect, however, that the chief reason of its success is, that the summer in the valley of the Tyrol, though short, is very hot. Bread made of rye and corn intermixed, and potatoes and milk constitute the main part of the food of the inhabitants. Among the common people wheat is but little used, and never without being mixed with other grain, unless as an article of luxury. Milk and cheese are abundant, though the mountains do not afford as extensive pasturage as those of Switzerland.

The entrance to the valley of the Ziller is one of the most attractive spots I saw in the Tyrol. On the left side are two round peaks that are striking features in the scene. On the right is a perpendicular precipice, with clumps of green bushes clinging to its crags, and a chapel standing in a cleft on the top. The road leading up the valley passes on this side, close to the precipice. I walked along for five minutes, and then sat down to view the scene more leisurely. Just behind me, standing on a spot of the greenest grass, and embowered among densely foliaged fruit trees, was a cottage—a real Tyrolean peasant house—low, with widely projecting eaves, and balconies under them. The lower part of the house was of stone, and was nearly concealed by corded piles of wood, benches, &c.; the upper part was wood, unpainted, and of course brown from exposure to the weather. Back of the house rose a steep hill-side, covered by a dark, dense forest of fir trees, among which sounded a continual tinkling of cattle-bells. The view from the house was a rich combination of the sublime, the picturesque, and the beautiful. The rocky mountains on the opposite side of the Inn, their sides shaven-hewn by torrents, and broken into precipices, lifting their snowy peaks among the clouds, were sublime. The village in the valley, with its low, quaint cottages among fruit trees, and the taper spire of its white church rising above, together with the towers and battlements of a castle, situated on a height in the distance, were picturesque—and the green, level meadows, and greener fir forests at the base of the mountains—the pastures, intermingled with patches of timber extending part way up the slopes, where flocks and herds were feeding—were beautiful. Nor did the scene want life and sound. The peasants were working in the fields, and presently the bell of the church rung, and the sounds floated away over the meadows and forests up to the mountains, going higher and higher, and sounding fainter and fainter, until they seemed to enter the clouds.

It was Saturday night when I reached the village of Eugen. Dark clouds had gathered over the heavens, and a drizzling rain began to descend, but my comfortable room at the "Post"—with the windows just under its widely projecting roof—made me unmindful of the storm which I heard beating overhead.

SUNDAY, May 31.

It rains hard to-day. The clouds are floating round the mountains, sometimes enveloping them completely, and then parting and showing their dark masses. My window looks into the street, and over part of this quaint mountain village. There is a yard on one side of the street, with a fountain playing in it, but to-day all the sky is pouring down jets of water. It is some kind of fast day, and the people hurried to church when the bell rang. The women wear broad-brimmed black hats, with taper crowns, and colored kerchiefs round the neck, and crossed over the bosom. Some of the costumes of the men look just as I have seen them represented in pictures. They have the same style of hats as the women, linen shirts with broad turn-over collars, and colored neckcloths that are sometimes fastened together with a gold ring; roundabout jackets, and long vests of velvet with rows of large silver buttons; tight breeches that reach only to the knees, where they are adorned by brass buttons and knots of ribbons; and long stockings and heavy shoes. Each man invariably wears a belt, sometimes ten inches broad in front, and tastefully embroidered.

The landlord of the "Post" went over the United States in 1851-'2, giving concerts in company with some other Tyrolese. He said they were very successful, and mentioned giving a concert in Corinthian Hall, Rochester. After the services of the church were over, many of the villagers came to the inn, to drink beer and wine and play cards. I find that the same customs regarding the Sabbath prevail in the Tyrol as elsewhere in Germany, and the people regard it as a day of amusement. There is but little drunkenness or quarreling, however. Everything goes on in a jolly spirit, but orderly, for the better classes as well as peasants resort to public places for amusement. If it is in a city, they will be in a garden, and a brass band will make music.

G. F. W.

PEKIN, AS SEEN BY AN AMERICAN.

A CORRESPONDENT of the Philadelphia Inquirer was at Pekin, the Capital of China, a short time ago, and what he saw of it, and how it impressed him, he thus describes:

"On arriving at the Capital of the Chinese Empire we find a city containing about two millions of inhabitants. Such is the estimate, but doubtless the calculation is made in the usual spirit of Eastern exaggeration. Be that as it may, the walls are fourteen miles in circumference, twenty-eight feet high, twenty-four feet thick at the base, and twelve feet at the top. There are spacious towers all around, at seventy feet distance from each other, and at the gates are look-out barracks for the soldiers, nine stories in height. The metropolis is divided into two parts, one inhabited by Tartars, and the other by the Chinese. In such there is a street four miles long, and one hundred and twenty feet wide, and the Emperor's palaces and gardens occupy two-thirds of the Tartar's city; and all this besides suburbs, which are nearly as populous as the city proper.

"Pekin is located sixty miles south of the famous Chinese wall, and therefore much exposed to northern and hostile neighbors; yet its fortifications are strong, and, until the vast machinery of modern artillery, was perfectly secure in its palatial halls, the walls, bastions and towers being impregnable in ancient times. Although the country about Pekin is sandy and unfertile, yet provisions abound, being brought by canals from all the great rivers; and also with its commerce, the merchants being paid in money, as the capital is the chief recipient of the revenues of all China. It has ever been regarded as a very exclusive place, the presence of no foreigners being permitted within its walls, but now the outside barbarians are in a fair way of overleaping the sacred boundaries; and it is probable that this act, together with the opening of Japan, may prove an important step towards the inauguration of Christianity among the millions who are now benighted in Pagan idolatry and superstition."

MOSCOW.

No other city in the world presents so cosmopolitan an aspect. The gilded domes of Lucknow—the pagodas of China—Byzantine churches—Grecian temples—palaces in the style of Versailles—heavy, inexpressive German buildings—wooden country cottages—glaring American signs—boulevards, gardens, silent lanes, roaring streets, open markets, Turkish bazaars, French cafes, German beer cellars and Chinese tea-houses—all of which are found here, not grouped exclusively into separate cantons, but mixed and jumbled together, until Europe and Asia, the past and the present, the old world and the new, are so blended and confounded, that it is impossible to say which predominates. Another city so bizarre and so picturesque as Moscow does not exist. To call it Russian would be too narrow a distinction; it suggests the world. Its position, near the imaginary line where one continent is merged into the other, accounts for this. The waters of the Moskva seek an Asiatic sea, yet its nearest ports are those of Central Europe. Its fibres of commerce branch eastward across the Tartar steppes to Mongolia and China; southward to Samara and Bokhara, to Cashmere and Persia; northward to Archangel and the Polar Ocean; and on the west, to all the rest of Europe. The race who founded it came from the southeast, and brought with them the minaret and the swelling Oriental dome, the love of gilding and glaring colors; its religion came from Constantinople, with the Byzantine pillar and the Greek cross; and the founder of Russian power learned his trade in the west. On every one of its thousand spires and domes glitters the crescent, surmounted by the triumphant cross. At its southern end the Tartar mosque calls to prayer from the roof of his mosque, while at the northern, the whistle of the locomotive announces the departure of the train for St. Petersburg.—*Bayard Taylor.*

NATURAL BRIDGE, VIRGINIA.

IN Rockbridge county, Virginia, is to be found one of the greatest curiosities in the United States. Spanning a small and unimportant creek (the Cedar) is this world's wonder—the Natural Bridge. This bridge consists of a stupendous arch of limestone rock, over a chasm 50 feet wide at its base, and 80 feet at the top. The height of the bridge above the stream, to the top, is 215 feet; its average width is 80 feet; its extreme length at top, 93 feet, and its thickness, from the under to the upper side, 55 feet. A clayey earth covers it to the depth of from four to six feet, and it possesses a natural parapet of rock at the sides, rendered firm by rocks and trees. The view from above, for those who dare to take it, is awfully grand, but the best prospect is obtained from beneath, where the astonished spectator has full scope to grasp, at a single glance, this magnificent work of nature. If a survey from the top is painful and intolerable, that from below is pleasing in an equal degree. The beauty, elevation and lightness of the arch, springing, as it were, up to heaven, present a striking instance of the graceful in combination with the sublime. A lady, writing to the Newark (N. J.) *Courier*, gives the following graphic description of a visit to this place:

"Our first point of observation was the rock on whose edge hung the celebrated cedar stump. This rock is more properly a gigantic pillar, standing out from the main wall, and nearly cleft from it by deep fissures on either side. It would seem that nature herself had erected it here, as an observatory, from which to contemplate her mighty work. The ravine, on whose very brink we were standing, is enough to check the pulsations of the strongest heart, and the mighty mass of rock thrown across it, so grand, so perfect, so exactly like art, fills the soul with emotion which defies expression or analysis. There is no consciousness of any particular feeling; I doubt even whether one is sensible of his own existence—he knows nothing, he sees nothing, but that mighty arch, and those solid walls hewn out of the living rock. It is frightful to look down—the people in the channel below are but pigmies—yet he does not think of being giddy; the spell of majesty is on him, and he is safe.

Of course we ladies were not permitted to go to the brink alone; yet, having a very good opinion of my own steadiness, and impelled by a sort of reckless daring, which, by the way, has got me into a good many scrapes, and as often procured for me the consoling and unequivocal compliment, 'They who know nothing, fear nothing,' I afterward ventured out upon the very verge, and after gazing as long as I wished, and gathering some flowers which grew quite over the edge of the rock, returned to the company, in time to receive my share of the arbor vitæ, which every visitor feels himself in duty bound to obtain from the trees that grow on and about the bridge.

After half an hour we started out to obtain another view of the bridge; this time, from beneath. A winding path leads down the side of the hill, and reaches the bed of the channel some distance below the bridge. For a moment the trees partially hide the arch, but as soon as these are passed, stream, walls and arch burst in full view upon the bewildered sight. No words can express the awe, the solemnity, painful even in its oppression, which that first upward look inspires! Imagination is crushed beneath the weight of reality, and the mind staggers as it endeavors to grapple with the overwhelming grandeur. I recall, as vividly as if it were but yesterday, the painful oppression which I experienced during that first protracted gaze. It was as if the weight of that whole mass of rock was resting upon my shoulders; involuntarily I bent beneath the burden, and it was not until I stood fairly under the arch, that I could breathe freely, or stand erect.

I have heard of people who were so overcome that they could give vent to their feeling only in tears, of old men who had wept in silent awe; and I can appreciate their feelings. Unused as I am to impulsive expressions of feeling, the tears yet

sprang all unbidden to my eyes, and I could have wept like a child; not wishing, however, to incur the imputation of romantic affection, or to get up a 'scene,' I restrained the up-gushing tide, and allowed my feelings to find relief in their usual vent—silence. Gradually the feeling of oppression gave way to admiration, and I might add devotion, and then I could not gaze long enough. Never before had I so realized the immediate presence of the Creator; never before had I so felt what is implied in 'unapproachable majesty;' never had I seemed to stand so near the portals of the Invisible. All over those mighty walls was inscribed, in characters of living light, the name of the Great Architect, and I felt that I was in the presence-chamber of the King of kings. How man can stretch forth his puny arm beneath the over-arching rock, and boastingly declare that there is no God, He alone, who knows the heart's dark secrets, and its deep deceit, can tell!"

THE ASHES OF COLUMBUS.

A CATHEDRAL in Havana claims the honor of sheltering the remains of the great navigator. A recent traveler thus describes the place:

"A mural tablet in the choir, on which is a bust of the illustrious Genoese in alto-relief, informs the public that all that is mortal of him reposes there; that whilst he has left the country he discovered to be the home of prosperous millions, he has made a voyage to a still more distant land, from which no traveler returns. One of the officials, who had an eye to business during the services, presented me with a printed card, telling the story of the begonia of these illustrious bones. Though Columbus died at Valladolid, in Spain, his remains were not permitted to rest there. They were first transported to a Carthusian monastery at Seville; next they were removed across the seas to St. Domingo, and finally they were disinterred and brought to Havana. Here in the Antilles, with which the discovery which has rendered his name immortal, has so intimate a connection, it is fitting that his dust should repose. The land which his heroism revealed to an astonished and admiring world, may well afford him room enough wherein to sleep his long sleep."

MISCELLANEOUS ENIGMA.

I AM composed of 11 letters.
My 1, 5, 6, 10 is a part of the human body.
My 7, 9, 6, 10 is used in building.
My 4, 5, 6, 10, 9, 11, 2 is a command.
My 7, 9, 10 is to be gloomy.
My 11, 9, 7, 8, 2 is sometimes used for experience.
My 3, 5, 8, 9, 6 is a kind of cane which grows in India.
My whole is a city in Europe.
Rochester, N. Y., 1858.
Answer in two weeks.

A PUZZLE.

SET down any number of figures, and then add them; subtract the amount from the number first written, then add together the remainder, omitting one of the figures, and tell any one the amount, and, if they know how, will tell you the figure omitted.
Beaver Dam, Wis., 1858.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN NO. 463.

Answer to Miscellaneous Enigma:—Mrs. Jane Churchdasher.
Answer to Problem:—A circle. 33.83 + rods.
Answer to Historical Enigma:—All the world's a stage, and all the men and women actors—acting for eternity.

The Young Ruralist.

WOULD NOT BE A FARMER.

Messrs. Editors:—You seem to take it for granted, because I say I have a repugnance for farming, that I am lazy. At least I think you insinuated to that effect in your note. Not so; you would have to travel more than the famous BAYARD ever did to find the man who would call me lazy. I do not *like* to work, that is true, but I come up to the rack and do my part of the labor without *shirking* at all. There are some things I like to do; propelling a rocking-chair is my favorite amusement. Some persons pretend they like to work, and I pretend to assert that that is absolutely false. Those whom I have heard say so happen to be independent, and are not compelled to work; but let them take my place during the haying campaign, and if they do not change their tactics then my name is not HARRY. They also assert that farming brightens the intellect. I would as soon spend a furlough among the aborigines of the Western wilds to brighten my intellect.

It seems to be customary among the *Young Ruralists* to write to you for information in regard to hens, geese, &c. I wish to ask for information in regard to a hereditary disease in my constitution. I think editors term it *constitutional weariness*. If you or any of your numerous list of correspondents have an infallible remedy for that common disease they will oblige me, as well as the rising generation in general, by imparting the knowledge.
HARRY HARRIS.
Hume, N. Y., 1858.

LOOK ON THE BRIGHT SIDE.

Yes, look on the bright side always. Never let your thoughts rest for a moment on the dark spots, for if you allow yourself to brood on the ills and trials of life, your existence will be a bitter one. There is not a cloud, however dark and gloomy it appear, but has its silver lining; and no afflictions come upon us which might not have been worse, when viewed with impartiality. But all do not see the same side to the picture. While some, in affliction, are always looking on the silver lining of the cloud, others see only the dark and gloomy prospect revealed to their distorted imagination, and sink into utter despair, unable to grapple with the difficulties that attend this life; not only making themselves miserable, but all with whom they have intercourse; and the man who thus looks on the dark side is full of complaints against Providence, or, as he will call it, "his bad fortune," or "ill luck," and thus adds sin to the charge. Then, ever look on the bright side, 'tho' you may see dark storms rising, and your way may be dark, and the path before you be hidden in obscurity, and dark clouds hang over you, yet look on the bright side, for rest assured not a cloud ever rose on the horizon of man's vision, but had its silver lining.
J. M. T.
Assyria, Mich., 1858.

GENIUS OF INDUSTRY.

THERE is no genius in life, like the genius of energy and industry. You will learn that all the traditions so current among very young men—that certain great characters have wrought their greatness by an inspiration, as it were—grows out of a sad mistake.

And you will farther find, when you come to measure yourself with men, that there are no rivals so formidable as those earnest, determined minds, which reckon the value of every hour, and which achieve eminence by persistent application.

Literary ambition may inflame you at certain periods; and a thought of some great name will flash like a spark into the mind of your purposes; you dream until midnight over books; you set up shadows, and chase them down—other shadows, and they fly. Dreaming will never catch them. Nothing makes the "scent lie well" in the hunt after distinction, but labor.

And it is a glorious thing, when once you are weary of the dissipation, and the ennui of your own aimless thoughts, to take up some glowing page of an earnest thinker, and read, deep and long, until you feel the metal of his thought tinkling on your brain, and striking out from your flinty lethargy, flashes of ideas, that give the mind light and heat. And away you go, in the chase of what the soul within is creating on the instant, and you wonder at the fecundity of what seemed so crude. The glow of toil wakes you to the consciousness of your real capacities; you feel sure that they have taken a new step toward final development. In such mood it is, that one feels grateful to the dusty tomes, which at other hours stand like curiosity-making mummies, with no warmth and no vitality. Now they grow into the affections like new-found friends; and gain a hold upon the heart, and light a fire in the brain, that the years and the mould cannot cover nor quench.—*Ik Marvel.*

THE SECRET OF SUCCESS.

WHEN NEWTON was asked how he came by those discoveries which looked like the institutions of a higher intelligence, rather than the result of a mere research, he said he could not otherwise account for them, unless it were that he could pay longer attention to the subject than most men cared to do. In this way he became the most renowned of British sages. The discovery of gravitation, the grand secret of the universe, was not whispered in his ear by any oracle. It did not drop into his idle lap, a windfall from clouds. But he reached it by self-denying toil, by midnight study, and by bending all the powers of his mind in the one direction, and keeping them thus bent.

Whatever be the subject of your pursuit, if you have any natural aptitude for it, there is no limit to your proficiency, except the limits of your own painstaking. There is no wishing cap which will fetch our knowledge from the east or the west. It is not likely to visit you in a morning dream, nor will it not drop through your study roof into your elbow chair. No lucky hit will make you an orator, an artist, or a scholar, on the spot. To attain any excellence, you must make up your mind to work, and then march steadily towards your goal, not counting that day's work hard, or that night's watching long, which advances you one step.—*Selected.*

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
Agricultural, Literary and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
WITH AN ADEPT CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductors devote their personal attention to the supervision of its various departments, and earnestly labor to render the RURAL an eminently reliable guide on the important practical, scientific and other subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

For all communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

Rural New-Yorker.

THE RURAL AND ITS RURAL READERS.

THE subjoined article from a long-time reader and able correspondent, is worthy the special attention and profound consideration of those to whom it is chiefly addressed—the Practical Readers of the RURAL. We have deferred its publication for many weeks, in order to give it at a time when its arguments would be most likely to induce proper reflection and action on the part of those engaged in Rural Pursuits—when the coming on of autumn evenings, and the season of comparative leisure for farmers, would enable the parties most interested to devote more thought to the subject discussed, in the confident belief that the suggestions of the writer would thus lead to practical, useful results. The article should be read and pondered by thousands of our readers—men of long experience in farming, possessing good sense and sound judgment, but who are too modest or indolent to give their just criticisms upon what may appear in the RURAL, or communicate through its pages the results of their observation and experience for the information and benefit of its numerous readers throughout the country.—This is the class of men whose aid we have desired and solicited from the commencement of the RURAL, and hence we are glad to give the remarks of one who evidently appreciates our wants and knows by whom they can best be supplied. We are fully aware that "the RURAL is not what it ought to be"—far from it—yet the fault is not alone attributable to the editor and his associates. We use the best material at our command—and if many communications given in these pages lack the sense, judgment and practical results which more experienced men could communicate, the reason is because the latter do not perform their duty to the RURAL and its Readers, as we always give preference to practical articles from this class.

As we have remarked on a former occasion, the primary object of this journal is to discuss and impart information upon practical and useful subjects—Agriculture, Horticulture, and kindred topics—to gather, arrange, condense and publish all the facts, results of observation, experience, &c., which comprise reliable knowledge or important suggestions for those engaged in Rural Pursuits. This has ever been and will continue to be our first endeavor; and we invite the aid and co-operation of all practical, experienced and scientific cultivators in furtherance of an object so laudable, and of such vast consequence to the great mass of our large and constantly increasing parish of readers. We wish this class to manifest an interest in the RURAL and the welfare of its readers—to give as well as receive useful and reliable knowledge—to write for as well as read its pages, and thus "teach one another." As our correspondent suggests, the RURAL has become a "National Institution." It has tens of thousands of stockholders, all of whom, we trust, receive ample dividends annually—but these would be far greater and more satisfactory, were the large class now addressed to make proper investments, in the shape of contributions comprising the reliable results of their careful and accurate observation and experience in various branches of Culture and Husbandry.

TO THE READERS OF THE RURAL.—The present position of the RURAL NEW-YORKER affords material for the soberest consideration of thinking men. This paper, since its first appearance, has risen rapidly into popularity and prosperity. From a local, it has passed into a National Institution, and now stands at the head of the Agricultural Journalism of this Country. Its position demands that it not only be the promoter of our general and individual interests, as farmers; but that it stand the true type and representative of the character, progress and spirit of our Republic's Agricultural Science and Industry. In the infancy of this paper, its welfare depended solely upon the editor and

proprietor. He gave to the young enterprise the aid of the best talent and skill he could command. He appealed justly to the wants of the farming community for support. At first it was looked upon as a pecuniary enterprise. By the attractions of a pleasing dress, and varied, genial and instructive contents, it has attained its present high position. It was worth the subscription money, and people were satisfied. But now, such an estimate of this paper's value, told in dollars and cents, would be regarded as short-sighted. Who does not attach to it a higher significance, a nobler mission? As the RURAL has been elevated in station, its responsibilities have increased. And has not the change in its condition changed our relations with regard to it?

Several practical questions suggest themselves, during the progress of such a train of thought. In the hope of arousing, here and there, some serious thought which may be the forerunner of action, the writer addresses the readers of the RURAL at this time. By way of preface, I will say, that, tho' the best of papers of the kind, the RURAL is not what it ought to be. Where lies the fault, and where the remedy, I leave the reader to discern for himself. An agricultural paper may be aptly likened to a bee-hive, and its editor to the queen bee.—The queen does not make all the honey, but all who, themselves or offspring, share in the gathered store, are expected to unite in the labor. Nor does the honey come from foreign fields, but from territory of greater or less circuit about the hive. So the RURAL hive is placed in a large, flowery field, and the RURAL bees are to gather the sweet materials for their queen. Dropping the figure, the RURAL, in its wide circulation, comprises all varieties of soil and situation, and its readers are possessed of all kinds of talent, observation and experience. And here the RURAL must find its stock and its subscribers are duty bound to resolve themselves into a furnishing force. Now, a journal promulgator of the interests of carpenters and architects has stores of scientific information at hand. There are books in abundance, treating of the science from its rudimentary principles to the most complicated and perfect achievement. Therein the carpenter of a barn and the architect of a cathedral may find complete directions. All that is required, is that the editor be a well-versed, scientific man. But the editor of an agricultural paper finds that his province is not that of theory. Mathematics cannot demonstrate his problems. No library furnishes systems of Agriculture, where he can draw forth directions for his rustic disciples. More truth of this kind resides in the brains of living, observing men, than was ever written. Farming depends upon experiment and observation.—The fields are its laboratories—there the discoveries are made, and if ever this noblest of sciences, which is universally admitted to be in its veriest infancy, shall grow to vigorous manhood, it must be fed by those who are intimately conversant with the soil, and all the forms and circumstances of vegetation. The earth is neither miserly nor prodigal of her secrets. Every thinking, working man has wrong many precious truths from her, but men have to dig for them, for even the ancients had found out that "truth resides in a well," or a mine.

We would have RURAL subscribers feel that they are a mutual aid society,—that they are life-members of an agricultural association, whose motto is, "Every man does his duty,"—and that the NEW-YORKER is their organ, containing their experiences and observations, and being ever their text-book of agricultural study. Is it too much to expect of every reader, that he shall contribute at least one truth, or one record of a new experiment, yearly? Does any farmer do his duty, if he lives on from year to year, without one careful, earnest search for a new method of preserving or increasing his grains and fruits? Conclusions drawn from experiments are liable to be hasty, premature, sometimes quite ill-judged. There are so many accidents, so many varying circumstances, that a man might attribute an effect to a wrong agent. Another man, trying the same experiment, might think he had found the producing cause in another object or circumstance. If they were dogmatists, they might each assert forever, that they were right—and both be wrong; or they might compare, and thus look upon both theories, as at least not proven. A better way would be to record in writing such experiment, and then modestly and qualifiedly append your own deduction drawn from the premises and send the statement to your paper. Others who have engaged in a similar study will do likewise, and if the result is not the discovery of truth, it will at least narrow the limits which bound it, and make its attainment more easy and certain for another attempt. It will do more; it will stir up investigation among many who had never turned their attention in that direction. I have heard men criticize with great judgment, and utterly refute theories and principles promulgated in our public prints, who never had written a line for the public benefit—men who, perhaps, with a sense of their ignorance thought themselves incapable of teaching others; but should they not reflect that their

fields and opportunities of observation, differ from all other men in some respects, and that consequently they ought to know some things unknown to others?

If men would feel themselves so obligated—especially the older class of men, by whose conversation and judgment we are often made to feel ourselves great debtors—if they felt that they had an ownership in the RURAL more valuable than any acre on their farm—if they would estimate its worth as an educator in their family circle, they would then be prepared to exert and enjoy a new and extended influence, and an impetus would ere long be given to Agriculture, which would give promise of soon turning farms into gardens, and agriculture into a synonym of all that is healthy, noble, and mind-expanding in human labor.

A READER.

INDIAN CORN—HARVESTING.

THE comparative success of the corn crop this year, notwithstanding the many fears of its failure, will do much toward establishing it in the public favor, as the crop of the country—(if any thing was needed for that purpose)—and we shall see our best farmers giving it a greater share of their attention, hereafter. We believe that corn, properly cultivated, is "the sheet anchor of American Husbandry," as turnips have been declared to be that of English farming; and if we employ this grain as our trans-Atlantic brethren do roots—feeding it out upon the farm—thus keeping more stock and making more manure—we shall find our farms constantly growing more productive, and better fitted for wheat and other grain crops.

In speaking of this crop, &c. its culture, less than three months ago, we remarked, that the yield per acre is almost uniformly in proportion with the attention given to the preparation of the soil—that less depended upon uniformly favorable weather, blights, insects, and the like, than is the case with most other crops. If we have a rich soil, and time be given for maturing before heavy frosts, a good crop is as near a certainty as the farmer often finds himself in his agricultural operations. But it was our present purpose to speak more particularly of the corn harvest.

"Topping vs. Cutting up Corn," was argued pro and con some years since in these columns—we believe the latter "took the case." Topping secures the better portion of the stalk before it is injured by frost; and, allowing free access of sun and air to the crop, may hasten its ripening. It requires less labor, as less fodder is secured, and—but we must leave the advocacy of the practice to other pens—we always cut up our corn. And allow us here to state a fact, observed last winter. A neighbor, raising as much corn in proportion to his stock as we did, topped his corn—he began to feed hay six or eight weeks before we did, and kept his cattle in no better order. His top stalks were all gone, and his butts and husks left in the field, eaten or wasted, much sooner than they would have been under the cutting up system.

When corn is fairly glazed, it is fit to cut up at the root, and thus all the fodder is secured—that portion "only fit for manure" included, but it is in its place—the barn-yard—and of some value there, which can hardly be said of stalks left in the field to plow under. If a severe frost comes before corn glazes, or if one is apprehended, the sooner it is cut up the better, but a slight frost often occurs, of little injury to the fodder, during the time of glazing. We would cut up frosted green corn, to save it from that total drying out of juices, which seems to take place if allowed to remain as it grew, and which immediate cutting up prevents in greater or less degree. If not hurried by fear of frost, we should allow corn to stand until the husks began to loosen, to facilitate their removal in securing the crops.

The implement used in cutting up corn, has been much improved and cheapened of late, and we now have them of fair character—light, efficient, and durable. Taking two rows at a time, about six hills are placed together for a bundle—tops to the left is most convenient. The binder follows with a small bundle of rye straw, from which he selects a band, and, stooping, ties the corn as it lies, if the cutter has taken the care he should to lay the stalks evenly in the bundle, otherwise they should be raised erect to bring them even and may be tied and left standing. Where one has small boys out of school, it is a convenience to the binder to have the bands carried, or dropped upon the bundles before him, and we own to thus spending some days every year of our boyhood. The bundles should be placed in stacks of from six to ten bundles—set up firmly and bound with two bands, double, and a single one near the top. Thus stacked, they will cure in good order, and may stand for weeks, or even months without injury.

Another method is to cut and set up some twenty-five or thirty hills around one, without binding into separate bundles. This saves time in cutting, but the stalks are not so convenient, either to husk or feed out, as when bound in the manner noticed

DESIGN FOR A PIGGERY.

Messrs. EDS.—The most of my life (twenty years) has been devoted to mercantile business—the last few years, however, I have given some attention to the more pleasant duties of an agriculturist. I find your excellent paper an indispensable source of knowledge to a young farmer desirous of availing himself of all the recent improvements in this noble science. I have noticed many excellent plans for Barns, Cottages, laying out of Grounds, &c., in the RURAL, and some of them I have adopted. I am now preparing to erect a Corn House and Hog Pen, designed for fattening as well as for store hogs. I do not recollect of seeing any plan of the kind in any paper. Can you give me one, and perhaps benefit many of your other subscribers at the same time?—D. M. Fox, Lyons, Iowa Co., Mich., 1858.

In answer to the above, and several other inquiries on the same subject, we give the accompanying engravings and description of a Piggery, from Allen's Rural Architecture, which were published in the RURAL several years since. If any of our readers can furnish a better or cheaper plan, we will give it a place in our columns, for we know many would like a good and convenient piggery at less cost.

The design here given, is for a building 36 feet long, and 24 feet wide, with 12 feet posts; the lower, or living room for the swine, 9 feet high, and a storage chamber above, for the grain and other food required for their keeping. The roof has a pitch of 40° from a horizontal line, spreading over the sides and gables at least twenty inches, and coarsely bracketed. The entrance front projects 6 feet from the main building, by 12 feet in length. Over its main door, in the gable, is a door with a hoisting beam and tackle above it, to take in the grain, and a floor over the whole area receives it. A window is in each gable end. A ventilator passes up through this chamber and the roof, to let off the steam from the cooking vats below, and the foul air emitted by the swine, by the side of which is the furnace chimney, giving it, on the whole, as respectable an appearance as a pigsty need pretend to.

INTERIOR ARRANGEMENT.

At the left of the entrance is a flight of stairs, b, leading to the chamber above. On the right is a small area, c, with a window to light it. A door

above. If any of the many husking machines are to be made use of, this would be the better mode, as they all take the stalks separate and unbound, and they can be bound after husking as easily as before.

In husking corn by hand, a very convenient implement is a peg of hard wood about four inches long, sharp at one end, and fastened to the hand by a soft leather strap passing over the two middle fingers. The point comes up between the thumb and fingers, just right to use instead of the thumb-nail in tearing open the husk, and out of the way in handling and breaking off the ear. It is of special use if the corn has been cut a little green

from this leads into the main room, c, where stands a chimney, d, with a furnace to receive the fuel for cooking the food, for which are two kettles, or boilers, with wooden vats, on the top, if the extent of food demands them; these are secured with broad wooden covers, to keep in the steam when cooking. An iron valve is placed in the back flue of the furnace, which may fall upon either side, to shut off the fire from either of the kettles, around which the fire may revolve; or, the valve may stand in a perpendicular position, at will, if both kettles be heated at the same time. Over each kettle is a sliding door, with a short spout to slide the food into them, when wanted. On three sides of this room are feeding pens, e, and sleeping partitions, f, for the swine. These several apartments are accommodated with doors, which open into separate yards on the sides and in the rear.

Construction.—The frame is of strong timber. The sills should be 8 inches square, the corner posts of the same size, and the intermediate posts 8 by 6 inches in diameter. In the centre of these posts, grooves should be made, 2 inches wide, and deep, to receive the plank sides, which should be 2 inches thick, and let in from the level of the chamber by a flush cutting for that purpose, out of the grooves inside, thus using no nails or spikes, and holding the planks tight in their place, that they may not be rooted out, or rubbed off by the hogs, and the inner projection of the main posts left to serve as rubbing posts for them. These planks, like the posts, should, particularly the lower ones, be of hard wood, that they may not be eaten off. Above the chamber floor, thinner planks may be used, but all should be well jointed, that they may lie snug, and shut out the weather. The centre post in the floor plan of the engraving is omitted, by mistake, but it should stand there, like the others. Inside posts at the corners, and in the sides of the partitions, like the outside ones, should be also placed and grooved to receive the planking, four and a half feet high, and their upper ends be secured by tenons into mortices in the beams overhead. The troughs should then, if possible, be made of cast iron, or, in default of that, the hardest of white oak planks, strongly spiked on the floor and sides; and the apartment may then be called hog-proof—for a more unquiet, destructive creature to a building in which he is confined, does not live, than the hog. The slide, or spout to conduct the swill and other feed from the feeding-room into the trough, should be inserted through the partition planks, with a steep slant the whole length of the trough, that the feed may be readily thrown into any or all parts of it. This slide should be of two-inch white oak plank, and bound along the bottom by a strip of hoop-iron, to prevent the pigs from eating it off—a habit they are prone to; then, firmly spiked down to the partition planks, and through the ends, to the adjoining studs, and the affair is complete. One to three hundred dollars, according to the price of material and labor, will build this piggery, besides fitting it up with furnace and boilers.

and the husks are thick and tight. A "husking machine" equally simple, is a hand hatchet and a block of wood handy to sit or stand at. Hit each ear a blow as nigh the butt as may be, and as it is done with more or less exactness, so will the ears fall out more or less completely husked—and, perhaps a little shortened if the hit was on the corn instead of the stalk, as it should be.

But to return to our corn-stocks. After husking, re-place the bundles in larger stocks than at first, until that portion of the work is completed. On a dry day draw and stack near the barn-yard, in small stacks—of not more than two loads each—and it is well to place a pole in the centre of each

stack, with two others leaning against it, so as to furnish an air passage, should they be any tendency to heating. Stalks had better remain well stacked in the field, until wanted for feeding out, than to be stored in large stacks or close mows, where they are certain to suffer from heating or mould, or both combined.

We cannot close without earnestly advising farmers to take special care of their corn fodder; for when well cured, it is of high value for milch cows and other stock, and we would be equally in earnest in denouncing the practice of feeding out along the roads and lanes, wasting the refuse stalks as well as the manure made by the animals thus fed everywhere but the right place—in the barnyard. If the yard is muddy it surely wants the litter—and sheds and racks are in the end never expensive.

Facts warrant the assertion that corn fairly ripened on the stalks is heavier than that husked before it becomes properly dry, and that there is some gain in grain—accompanied with a loss in the value of the fodder—when the corn is well dried on the hill before cutting. The farmer must decide for himself—more frequently, however, circumstances decide for him, and he cuts his corn when other work and the weather allow him to get at it—

THE ILLINOIS STATE FAIR.

EDS. RURAL:—Perhaps a few lines from the Illinois State Fair may be of interest to you. This is the Sixth Annual Exhibition, and is held at Centalla, or, rather, Central City, though the two places are almost one. These towns are 252 miles from Chicago, and on the line of the Illinois Central Railroad, a short distance below the junction of the two branches. Above here, at various distances, cross-roads from East and West, from North and South, intersect, and thus Centalla is open to all the State and States adjacent. It is worthy of mention here, that the Illinois Central Railroad passes over as many degrees of latitude as one would traverse in going from Albany to Norfolk. Thus you find in Illinois the productions of a wide region, and the climate of several degrees in extent.

The Illinois State Fairs have been heretofore held in the Central and Northern parts of the State. This is held in "Egypt," as the Southern portion of Illinois is called. It was so held, in order to bring out the productions of Egypt, to interest the citizens, and to commend the improvement in Agriculture and Mechanics to a people, who, by location and association, are not regarded as particularly alive to Progress. Egypt was settled by Southern people. It has a rich soil and mild climate, and its people, gaining a livelihood with ease, are content with the ways of their fathers, and willing to remain in the condition of their Virginia and Kentucky ancestors. The wave of Progress moves on, but Egypt has hardly heard the echo of its roar. The "Sucker" here vegetates in immortal bloom, addicted to indolence, to hunting and sporting, and easily winning from the soil the means of livelihood.

Southern Illinois has much of the prairie in it, but it has a larger proportion of forest and of broken and hilly country, than may be found in any other part of the State.

The present Fair, at which \$15,000 is offered in premiums, has surpassed the anticipations of the Society, and may be regarded as a grand success. In the Stock Department, there is a splendid show. At first, 353 stalls were made, but the demands of the first day required an addition, and now more than 400 stalls and pens are lining the grounds, while scores of cattle are tethered in the open air, beneath the shade of the grove. The display of Horses and Cattle is particularly fine. Sheep are numerous and look well. Swine are few, but very good specimens are seen. The race of Western Swine is not particularly remarkable for its superior qualities. Of Mules and Jacks there is a large show, and it would do an Eastern man good to see what fine Mules can be produced. The Jacks speak for themselves, as our ears testify, after sleeping two nights on the grounds. They make night more than hideous with their vociferous brayings.

In Fine Arts, the display is only moderate. In Dairy products very slim. In Domestic Fabrics, tolerable; nothing remarkable, but I know very little of this sort of comforters. The Mechanical Department is good, but not very large. This Department is, however, very attractive. Reapers and Mowers, Scales and Plows, are surrounded by crowds. Bee-hives come in for a large share of attention.

The Fruit show is good, considering the fact that Illinois is not a great fruit State, but a simple Rochester show would make a larger display. Apples and Pears do well in parts of the State. Grapes succeed in Egypt and the lower Central portions. Peaches thrive along the Mississippi and at the South, and the Melons are unequalled. I find that Hooker & Co., and Ellwanger & Barry have both representative men and representative pears here, and their beautiful varieties are truly luscious to behold, and, undoubtedly, "not bad to take." Of this I cannot speak professionally or experimentally. Mr. KIDZIE is here with his Filters, and S. B. HITCHCOCK and Mr. FITTS are on hand from their Soil Works and Horse Powers, in Chicago. Otherwise I am the only entry in Class—"Rochester Men."

Now, my friend RURAL, a word for your private ear, and "prout" it, too. Read, mark and inwardly digest, and then operate on the officers of the New York State Society. They have an Editor's building here, in the middle of the grounds, "contiguous" to the eating department, in full view of the horse-ring, and "mighty convenient" to the most of the grounds. This edifice is of plank, thirty feet by thirty, with a long table of rough boards, and benches, to occupy a part of the same. The rest is "our" quarters by night, and general reception, writing and talking room by day. Part of this building is divided off into a Telegraph office and Superintendent's office. The Editor's room is a new feature in Illinois, and I believe an unknown one in New York, where let it be established and flourish. Its erection is due mainly to the efforts of Mr. DUNBAR, a well known agricultural writer of this State, the "RURAL" of the Chicago Tribune, and the proprietor of a nursery at Urbana. To him be

the praise, and may his shadow never be less, for am I not indebted to him for sundry favors?

The Agriculturalists of the State are here, and most of the leading men in politics. Mr. DOUGLAS is not present, but his wife is. Mr. LINCOLN, the Republican candidate for the Senate, is present, the State Treasurer, Auditor, Judges, Generals, Colonels, Majors, and all their subordinates, Honorables of every degree, Editors, a Circus, and over 20,000 people, who crowd the Fair Grounds to repletion. Then, women and children are here, and if the Egyptian females did not dispense with hoops after the manner of the "Siggers" on the Hieroglyphics, there would be such a crash as would cause immense sacrifice of steel and whalebone. As it is they overrun everything, and settle down on every place like an army of locusts. Even the sacred precincts of the Editor's room are not exempt from these forcible entries. One thing is certain, the Destroying Angel has not passed over this Egypt and taken the lives of the first born, or the last born either. There is a display of infants, at the breast and in arms, which would do credit to the most notable baby-show yet offered to an intelligent and discerning public.

Now, Messrs. Editors, you know I am not an agriculturist, and do not pretend to give you all the solid facts which present themselves at these shows. But such facts as I have, I give unto you, and as far as they go they are accurate, especially so far forth as the infants are concerned.

Centalla, Ill., Sept. 16, 1858. C. P. D.

THE HARVEST IN NORTHERN MINNESOTA.

EDS. RURAL:—Another season, with its toils and anxieties, has passed, harvest time has arrived again, and the tired farmers are gathering a reward for their labors. And, although the times are hard, very hard, they feel in much better spirits, and encouraged to wait for the "good time coming," much more patiently than last year, after having their crops destroyed by the grasshoppers. They have something to live on the coming winter, which many of them had not last season.

A rather wet and cold May, an unfavorable seed time, was followed by hot, dry weather during June and the first half of July, and that by cold and wet in the latter part of July and throughout August. Notwithstanding these disadvantages, vegetables of all kinds came forward—especially in June—with a rapidity that I never witnessed elsewhere. Our soil is very warm and quick, and always gives a good account of itself when it has a chance. The prairie land is a dark colored sandy loam; the oak openings the same, but lighter, while the soil of the timber and bottom-lands consists of a black vegetable mould, with a subsoil of mixed clay and sand. We find all of them excellent for producing any of the staple crops.

Indian corn takes the lead as the main article of produce as yet, and we have a most bountiful yield of it. The loss we experienced last year from the grasshopper pest, (none have been seen this season,) taught us the true value of our farm products, and, therefore, last spring we put in all the seed we possibly could. Corn being more easily obtained than any other seed, was planted to much greater extent than it otherwise would have been, and though we lost much by bad seed and the ravages of blackbirds and ground squirrels, yet, twenty, thirty, and fifty acre fields, are quite common, and it does one's heart good to look on them now, as they are turning golden in the light of these pleasant September days.

Wheat would have been very good but for the rust, which damaged it much in some localities. It probably will not average more than fifteen bushels to the acre—about half a crop. Oats and other small grains are excellent. Potatoes, a large yield and first rate quality, as they always are here, the rot being unknown. In one thing I am inclined to think that Minnesota is without an equal, and that is in the production of melons. For a long time past every body has been enjoying them, and I should hardly dare to tell the size of some of them—it would undoubtedly injure my reputation for veracity with some.

Considerable Sorghum was planted here last spring, and the planters felt very sure that they should have a large amount of sugar making to do this fall, but lately they have had but very little to say on the subject. Its growth has not met their expectations at all, and but little of it will mature. I think that we shall have to depend on our maple groves for a supply of home-made sweets for a while longer. Cranberries, in large quantities and of the very best quality, are now being gathered from the marshes and meadows—they make an excellent substitute for apples.

Of course it will be no news to you, to tell you that we are "going ahead," even now. This place perhaps presents a fair sample of North Western progress. Three years ago there was not a dozen acres of plowed land within twenty miles of here. Now there are cornfields of thirty and fifty acres, and to judge by the way the prairie has been "broken" this summer, it will not be long before we shall have them of a hundred acres. Still there is plenty of government land, subject to pre-emption, within a few miles of here.

I fear this letter is already too long, but in closing allow me to say that we find the RURAL a faithful counselor in our Prairie Homes, and a very pleasant fire-side companion. Long may it visit us.

Princeton, Monroe Co., Minn. HOWARD M. ATKINS.

HEAVY FLEECES.

EDS. RURAL:—I have lately seen in your very useful paper, several statements concerning heavy fleeces that were taken from Spanish Merino Sheep, and I should like to give a statement also, of the weight of the fleeces that I am taking from my flock. I keep none but the Spanish Merino, and I generally winter about 200, in all. I formerly thought that if my ewes and ewe lambs averaged 4 lbs per head, I was doing well; but they now average 5 lbs. My entire flock, at last shearing, averaged 5 lbs 11 oz. Some of my ewes and also ewe lambs gave 7 lbs per head—my stock buck gave 8 pounds when a yearling, 10½ pounds when two years old, 13 pounds when three years old, 15 pounds when four years old, and all so well washed that those who have purchased my wool have never found any fault, but have been pleased with it. I winter my sheep on hay, which I put in banks under open sheds, and when my hay is good I do not feed much if any grain, except to my

stock buck. I, of course, grain him well in the fall, and a little all winter, just to keep him in good condition till grass comes, and then he has no more grain till fall. My other sheep, if I find that they are not keeping in good order on hay alone, and especially my lambs, I give a gill of oats, or half gill of corn, per head daily.

I have tried what is called close breeding with a part of my flock, two years in succession, and the lambs were much weaker than common, while those of the other part were strong as usual. All my buck lambs that I think will not make first-rate bucks, I yard about the first of October and sell them. I keep no wethers, as I think it more profitable for me to keep ewes than wethers. I also cull my ewes in the fall, taking out all such ewes and ewe lambs as do not suit me, put them by themselves, and sell them for what I can get—I sold my entire clip of wool last June, for 36 cents per lb, but it was the top of the market here for full blood Merino.

REED BURRITT.

Bardett, Schuyler Co., N. Y., 1858.

CHEESE, AND CHEESE-MAKING.

EDS. RURAL:—I am not willing that our RURAL should lack in any particular, and as a subscriber inquires respecting cheese-making, allow me to contribute my mite—if you do not believe it is a good rule, please give us a call and taste for yourself. In preparing rennet, take two lemons and one-fourth of a tea spoon of salt-petre to one rennet, put in a small jar and fill up with water, also throw in a cup of salt. Use the least quantity possible,—only sufficient to bring the curd,—as you use, put in more water and salt. Let the milk stand till the curd comes at night, then cut it down with any knife that has a blade. In the morning dip carefully into the strainer, laid over the basket—set the morning curd—by the time it comes, have the whey out of the other by shaking the strainer, and laying a flat stone on it—take that up and press in the same way. Prepare water, not quite scalding hot, pour on to the curd, whether you have two or four—those that are the oldest first, as they need more scalding. Stir them, and when they will squeak like Indian rubber in your teeth, it is scalded enough. Take into your bowl or tub, after dipping into the strainer for the water to drain off, and chop fine. Our only rule for salt, is it must taste a little too salt—better thought to have too little than too much. Put in the press after it gets cool—if put in too warm it does not do so well—put no weight at all at first—in an hour or two a little, and more as your judgment will teach you. Press from one morning till the next night, if the cheese is good size. After following these directions, which resemble very much "the story" of going "round and round the barn," if you do not have cheese that will melt when you look at it, I am much mistaken.

Cayuga, N. Y., 1858.

AMELIA.

PIG PASTURES.

EDS. RURAL:—In the Cultivator for 1838-9, I find the following letter from the pen of S. W. JEWETT. How far it will conflict with the patent, or copyright, alluded to by H. T. B., I know not—but deeming it a valuable suggestion I send it as a sort of addenda to the "weekly rotary pig pasture" system.

ROTARY PIG PASTURE.

JESSE BUEL.—The following is a description of a clover pasture for swine, which, in my opinion, where a situation is convenient for the same, with a warm soil, a portion of the farmer's interest cannot be placed in a more profitable manner than by having each successive year a fresh clover ley for his hogs.

A	B	C
Wheat or Rye.	Peas or Corn.	Clover Pasture.
D		

A, represents a field of grain, of one acre or more, well stocked with clover. B—a field of the same size, of corn or peas. C—a clover pasture for hogs. D—a lane leading from the hog-pen.

The following year the lot A will be the range for the hogs, and so on, by a rotation of crops, the whole is constantly improving, with the addition of the manure from the pigery. New improvements in rotation I frequently hear of, such as stoves, steam-boilers, &c.; their success has induced me to send you the above plan of a Rotary Pig Pasture.

S. W. JEWETT.

Waybridge, Vt., 1858.

CEMENT PIPE.—In the RURAL of Sept. 11th, Mr. G. GRAVES asks, "Will some of your readers give their experience in leading water through cement pipes? What proportions of lime, sand, &c.,—what the cost per rod?" I have used one-third of lime to two-thirds of sand, but find that much less lime is preferable, even one-fourth or one-sixth, if it is good, and none but such should be used. In plastering cisterns, more lime is needed to make it adhere, but it weakens the cement. Mr. G. will find that a pipe of sole tiles and cement is cheaper than one wholly cement, and can be made of any size desired. In the RURAL of July 17th there is a description of a pipe equal to HOBBS & Co's wooden water pipe in its capacity, and of imperishable materials, costing for the same, twenty-five cents per rod.—H. J. F., Palmyra, N. Y., 1858.

CATTLE IN HUNGARY.—The London (Eng.) Times in a sketch of the movements of Prince DE JOINVILLE, states that on the occasion of his visit to the estate of the Duke of CORRUO, at Pozza di Vaca, in Hungary, he had an opportunity of convincing himself of the immense scale on which the breeding of cattle is carried on in that country. The Duke assembled before his visitor all the cattle on his estate. They formed a procession of 380 oxen yoked to cars, and ornamented with ribbons and flowers, 10,000 sheep, and all the horses of the breeding stud. The grooms and the shepherds were all dressed in their national costume, giving to the procession (which took three hours in marching past) a most picturesque appearance. Many other land-owners in Hungary, however, could marshal a procession which would reduce the foregoing to insignificance. Pretty good Cattle Show for the Hungarians.

INQUIRIES AND ANSWERS.

BEST MILL FOR GRINDING SUGAR CANE.—Now that you are upon the sugar cane, please give us further information about the best mill—cheap and efficient—a good worker at small cost.—MILTON BRADLEY, Kalamazoo, Mich., 1858.

BEST KIND OF TIMBER FOR PUMP LOGS.—Please inform me, through the RURAL, which is the best kind of timber for pump logs, or rather water pipes, for conveying spring water two or three hundred rods under ground. Which will taste the water the least, pine, spruce, oak, cedar, or hemlock?—and what would be the cost of each per thousand feet?

INQUIRIES ABOUT VIRGINIA.—Seeing it stated in a late issue of your journal that some of the shoe-makers of Danvers and Haverhill, Mass., had purchased land warrants for land, in Virginia, paying for them in shoes, can I and others hereabouts be informed through the RURAL where, or of whom these warrants may be obtained?—what would be the discount for cash? Further, if purchasers may locate anywhere in Virginia west of the Allegheny, and outside of "Thayer's domain"—what are the precise boundaries of this new domain?—An answer to the above queries would greatly oblige a constant reader. Can any description of the capabilities of that section of country be given?—E. P. RUSSELL, Princeton, N. J., 1858.

REMARKS.—We are not sufficiently posted upon the points Mr. R. desires to have elucidated to give perfectly reliable information—perhaps some of our readers can answer to his satisfaction.

CHINESE SUGAR CANE.—I have about half an acre of Chinese Sugar Cane, and would wish to inquire at what stage of maturity it should be cut? How manufactured? If you can give me the above information, please do so.—WATERMAN JOHNSON, Depauville, N. Y., 1858.

REMARKS.—When the seeds of the Sorghum are at least three-fourths ripe, or when a hard frost has come, cut the canes just above the ground; strip off the leaves and seed heads, and it is ready for the mill. The practice of J. S. LOVERING, Esq., (whose experience in manufacturing has lately been published in the RURAL, to which we refer Mr. JOHNSON, for manufacturing process,) was to cut the cane into two parts, separating the eight lower joints from the upper ones. The upper joints contain little sugar, but will make good molasses.

HOW TO CURE AND FEED CORN STALKS.—As I wish to feed corn stalks to some road horses during the winter, I would thank you or some of your correspondents to tell me how I can best cure them. What is the best manner of feeding them—whether cut up or not? What is their value as compared with hay?—D. C. Clyde, N. Y., 1858.

REMARKS.—As regards the comparative value of hay and corn stalks, experiments made by writers upon agricultural science place them as 1 to 4—taking the best of each into the calculation. Such is the difference in value of hay, that 100 lbs. of first quality will equal 120 lbs. of the second, 140 lbs. of the third, and so on. A very coarse, hard hay, not well made, will rate as low as half the value of prime, and a double quantity will not equal in results. Will RURAL readers give us their experience on this topic?

FANCY PIGEONS.—In the RURAL of 28th ult., I saw an engraving of a variety of pigeons I never saw before, and it has roused a desire to see them. I further would ask for a short description of each distinct fancy pigeon, name and peculiar marks, with price and where to be bought.—If possible all in one number, so as to be a guide readily examined. I have three pigeon houses, two well filled with the common pigeon; the other a handsome affair, in my yard, intended alone for fancy pigeons. We have been trying for years to procure good specimens of some twenty or more varieties, and as yet have only some seven or eight. I have seen some thirty or forty varieties, but cannot find them now. I have no idea of depriving myself of such pretty things, serving to please the eye and attract our attention. We can call ours to our feet any moment during the day—try to keep them as house pets. Can I get twenty varieties for \$20.—How much? I have several pairs which cost me \$1 per pair. Freight on such things is so high it deters me from buying.—M. W. PHILLIPS, Edwards, Mass., 1858.

INFLUENCE OF THE MOON UPON VEGETATION.—By your permission, I would like to inquire, thro' the columns of the RURAL, whether it makes any difference what time of the moon seeds or roots are planted? Some think the new moon a bad time, for the reason that there will be greater growth of vines or stocks, and less of fruit. Some of your experienced subscribers will be able to answer this, no doubt, and oblige many, and particularly—W. R. B., Wampanag, Minn., 1858.

REMARKS.—The "Moon theories" entertained by some of the tillers of the soil, are all moonshine and nothing else. We know of those who defer seeding in the time of the new moon, and others who as pertinacious wait for that period before committing to the soil the germs of future crops. When a load of cobble stones drawn at the new of the moon, will make twice as many rods of fence as those drawn while LUNA is on the wane—when "Free Love Associations" cultivate and cherish the pure and holy in woman—when Spiritualism evolves a truth calculated to dignify and ennoble man—then, and not till then, will we be ready to accept the tales concerning this peculiar influence of the moon as truth undefiled.

BLOOD SPAVIN.—Will you, or some of your numerous readers, inform me through the columns of the RURAL if there is a remedy for blood spavin? If there be one I should like to hear of it.—P. H., Wayne Co., N. Y., 1858.

REMARKS.—Many veterinarians are disposed to consider "hog" or "blood" spavin, a serious disease, attended with no great, but often permanent lameness—very apt to return after the enlargement subsides under medical treatment. The cause of the disease—the enlarged mucous sack—lies deep, and is with difficulty operated upon. The desire of the practitioner is to produce the absorption of the contents of the sack, and this is sometimes done by long applied pressure. A bandage may be contrived to take in the whole of the hock except its point, and a compress of folded linen placed upon the spavin, confining the principal pressure to that point. A work entitled "Every Man his own Farrier," recommends the following compound:—Soft soap, 2 oz.; spirits of hartshorn, 4 oz.—str well in a marble mortar—spirits of turpentine, 4 oz.; oil of origanum, 1 oz.; strong camphorated spirits of wine, 3 oz. Mix all together and bottle. Rub on the spavin every night and morning for a fortnight or three weeks. Do not require any violent exertion on the part of the horse while under treatment.

Rural Miscellany.

THE STATE FAIR.—Our readers will bear in mind that the N. Y. State Fair opens at Syracuse on Tuesday next, Oct. 5th, and continues four days. The amount of Premiums offered exceeds \$8,000. The first day will be principally devoted to making entries and arranging animals and articles for the exhibition. The judges will commence their examinations on Wednesday morning—it being especially enjoined that no persons whatever, except those having charge of articles, shall be present at the examinations or deliberations of the judges. The exhibition will be open to the public on Thursday and Friday. The Plowing Match will take place on Thursday. The Annual Address will be delivered on Friday by Hon. J. R. WILLIAMS, Pres't of the Ag. College of Michigan. A sale of Improved Stock will take place during the Fair.

We are glad to learn that the indications favor a good exhibition, though we think the Fair has not been properly advertised (by the circulation of Premium List, Programme, &c.) in Western New York. The buildings are already completed and the whole grounds ready for the exhibition.

THE FAIRS.—Several County, District and Town Fairs were held in this State last week, but we are unable to give the results with any definiteness. We presume the Livingston, Genesee, Jefferson, Onondaga, Steuben and Yates Shows were creditable and successful. The Cortland Co. Fair is said to have been a perfect success, as was that of the Tonawanda Valley Ag. Society, at Attica. A large number of Co. Fairs are held this week—among others, Ontario, Cayuga, Erie, Niagara, Oneida, Orleans, Schuyler, Tioga and Wyoming. We hope to hear favorable reports from all these, and others—and exceedingly regret that we cannot accept numerous invitations to attend Fairs in various parts of the State.

NEW WORK ON DAIRY FARMING.—It affords us pleasure to announce that CHAS. L. FLINT, Esq., the accomplished Secretary of the Mass. Board of Agriculture, has prepared a work on Dairy Farming, which will soon be published. It is to comprise over 400 pages, fully illustrated. We learn that it will embrace a sketch of the different breeds of stock, especially the dairy breeds; the principles of breeding; the selection of milch cows, with a full and complete explanation of GUBERNON's method; the feeding and management of dairy stock; the raising of calves; the culture of grasses and forage plants; the diseases of stock; a chapter on Dutch dairy farming, with the dairy management of HOBSPALL, not before published in a form available to the American public. A chapter is devoted to "A Letter to a Dairyman," containing many valuable suggestions, and another to the details of the milk, the butter and the cheese dairies. We are assured that no labor or expense have been spared to render the work complete, and it will embody the most recent information on the Dairy.

A complete work on Dairy Farming has been a long-sought desideratum in this country, and if the one now announced proves as valuable as is indicated from the table of contents, and the reputation of the author, it will have a large sale.

UNION AG. SOCIETY.—The people of Sweden, Clarkson, Union and Ogden, completed the organization of this Society on the 18th inst., by adopting By-Laws, &c., and electing the following officers:—President—E. B. HOLMES, of Sweden. Vice Presidents—J. H. Davis, Sweden; Wm. Brown, Ogden; A. Baldwin, Clarkson; H. Murdock, Union. Secretary—H. N. Beach, Sweden. Treasurer—Thomas Cornea, Sweden. Directors—Dudley Locke, Sweden; J. Hill, Jr., Ogden; J. C. Clarke, Clarkson; H. Redman, Union. Town Committees—Sweden—John Reed, Edward Taylor, Justin Cook; Clarkson—Adam Moore, Nelson Moore, Oliver Phillips; Ogden—W. Brown, A. Cady, J. R. Ross; Union—S. Banker, Sumner Austin, B. Harmon.

The first Fair of the Society is to be held at Brookport, on Tuesday, the 12th inst.

AMERICAN HERD BOOK.—We are in receipt of a circular from the Editor of this work—Lewis F. ALLEN, Esq., of Black Rock, N. Y.—announcing a fourth volume in preparation, and requesting Short-horn breeders interested to properly arrange their pedigrees. All pedigrees must be sent in previous to Dec. 1st, 1858, in order that the volume may be issued by May 1st, 1859. The Editor says every pedigree must be made out at full length, and each complete in itself. The price for recording pedigrees is 50 cents each; good portraits of animals, (cuts being furnished by the owners,) will be inserted at \$5 each. The price of the work to contributors and subscribers, will be the same as the last volume, \$5 a copy. It is to be of the same style and material as the third volume.

CONVENTION OF AGRICULTURAL EDITORS.—Some fifteen or twenty persons responded to the call for this Convention, which assembled in New York during the meeting of the American Pomological Society. Though no business of importance was transacted, an organization was formed, officers elected for the ensuing year—with H. P. BYRAM, Esq., of the Valley Farmer, as President—and a committee appointed to select the most suitable time and place next season, and issue a call for a General Convention of the entire Agricultural and Horticultural Press of the country.

A GOOD LOT OF HORSES.—At the recent National Horse Show, in Springfield, Mass., four premiums (two of \$100 and two of \$50) were offered for teams 16 hands and over, and 16 and 14 hands, and twenty-six pairs were entered. The Committee, in their Report, after awarding the premiums, recommended two gratuities, and remarked "that of the 28 pairs entered, 25 of which were for premiums, 23 were every way worthy of awards."

THE OHIO STATE FAIR.—held at Sandusky, Sept. 14th to 17th inclusive—is said to have been a complete success. The exhibition was decidedly superior, and the attendance and receipts unusually large—rendering it the best Fair ever held in the West. Regret that we have only space to make this mere mention, and congratulate Ohio Ruralists upon the satisfactory result.

Orchard and Garden.

AMERICAN POMOLOGICAL SOCIETY.

FIRST DAY—AFTERNOON SESSION.

In our last, we gave a few remarks on the character of the meeting, lists of fruits exhibited, and the able address of the President. The address, with the appointment of committees and some other preliminary matters, consumed the first session. The first business in the afternoon was the report of the committee appointed to nominate officers, which was as follows:

President—The Hon. MARSHALL P. WILDER, of Mass.
Vice-President—S. L. Goodale, Maine; H. J. French, New Hampshire; Samuel Walker, Massachusetts; Fred. Holbrook, Vermont; Stephen B. Smith, Rhode Island; J. B. Monson, Connecticut; Charles Downing, New York; William Reid, New Jersey; Hartman Kuhn, Jr., Pennsylvania; E. T. Atwell, Delaware; Charles B. Calvert, Maryland; Yardley Taylor, Virginia; Walter L. Steel, North Carolina; A. G. Sommer, South Carolina; Richard Peters, Georgia; Joe L. Moultrie, Alabama; Dr. M. W. Phillips, Mississippi; J. S. Downer, Tennessee; Lawrence Young, Kentucky; A. E. Ernst, Ohio; J. C. Holmes, Michigan; J. A. D. Nelson, Indiana; J. W. Felt, Louisiana; Thomas A. Fack, Texas; R. C. Overman, Illinois; N. J. Colman, Missouri; George Worthin, Arkansas; Robert Avery, Iowa; J. C. Brayton, Wisconsin; Simpson Thompson, California; J. Pierce, District of Columbia; Edward Hunter, Utah; Amasa Stewart, Minnesota; C. B. Lines, Kansas; William Davenport, Oregon; Hugh Allen, Canada East; James Dougal, Canada West.

Secretary—P. Barry, Rochester, N. Y.
Treasurer—Thomas P. James, Philadelphia, Pa.
Executive Committee—The President and Vice-Presidents ex-officio; W. D. Brinkley, M. D., Philadelphia, Pa.; T. W. Field, Brooklyn, N. Y.; M. B. Bateham, Columbus, Ohio; L. E. Berckmans, Plainfield, N. J.; F. R. Phenix, Bloomington, Ill.

The report was unanimously adopted. Mr. Wilder remarked that he had hoped to be relieved from the office he now held. He felt embarrassed at the repeated expressions of confidence and esteem which he had received from the members of this Society—felt bound, by a sense of gratitude, to bow in submission to the will of the meeting, and would bring to the duties of the chair such powers as he possessed.

Mr. Barry having peremptorily declined to serve as Secretary another term, on motion of Mr. LAWTON, of Westchester, T. W. FIELD was elected to that office.

The President then appointed the following gentlemen as the *Native Fruit* Committee for the ensuing year:—BRINKLEY, of Pa.; BARRY, of N. Y.; HOVEY, of Mass.; WARDER, of Ohio; WESTON, N. C. Hon. S. WALKER, Chairman of the General Fruit Committee, made the annual report.

Mr. BERCKMANS, of New Jersey, and J. J. THOMAS, of New York, presented valuable papers on fruit culture, particularly of the pear, and the value and treatment of dwarf. T. W. FIELD also read a long paper on the same subject. These papers were referred to the Committee on Native Fruits.

Dr. BRISTOL, of Danville, N. Y., offered a resolution for the appointment of a committee, composed of several members from each State, to inquire into the cause of the numbers of diseases that are now injuring the fruit trees in all parts of the country, and ascertain, if possible, some remedies. This was afterwards referred to the General Fruit Committee, composed of members from each State.

SAMUEL WALKER, of Mass., read a paper urging the Society to publish a catalogue of all the fruits ever grown in this country, with proper descriptions; and also a catalogue of the fruits adapted to each State and Territory of the country, so that any person, settling in any State, may know just what fruit to take with him, or just what to plant. The propriety of this course was urged by Mr. WALKER, with zeal and ability. He proposed to employ a general superintendent of the work, who, with the officers of the Society, and properly selected committees in each State and Territory, he thought could prepare a catalogue that would be almost invaluable. This subject was referred to a committee who subsequently reported that the Society was not yet prepared to undertake such a work.

The Business Committee recommended three Sessions in the day—the day sessions to be devoted to the revision of the Catalogue of Fruits recommended for General Cultivation, as *Promising Well*, &c., and the evenings to the discussion of practical questions in fruit culture. One of the questions proposed by the committee, and the only one discussed, was

THE PEAR—Training, Mulching, and General Culture.

EVENING SESSION.

THE PEAR—Training, Mulching, &c.
 The President called on Dr. WARDER, for his experience.—Dr. WARDER, of Ohio, had but little experience and was well prepared to learn. Had planted 2,000 trees and been successful. No cause to complain, except of blight.

T. W. FIELD, of New York, had some experience in mulching. It did not prove as beneficial as he had expected. A great many evils result from the practice. When the mulch became thin, as it was apt to, in the latter part of summer, the trees were very likely to cast their leaves. It induces a succulent growth that will not endure the rigors of winter. Where trees are mulched many of the specimens will be found wormy. The mulching makes a good harbor for insects as well as for mice and moles.

P. BARRY, of N. Y., said the subject proposed, the pear tree, training, &c., embraced a very wide field to which he could not do justice in a few brief remarks. It included the stock, budding, planting, and after-training and culture. In certain cases mulching is very advantageous—as, for instance, to newly planted trees, where there are but few branches, to prevent the scorching of the ground. When trees are established, with abundance of foliage they afford sufficient protection to the soil. Mulching is rather in the way, and prevents the frequent stirring of the soil, and in some cases may do injury by affording a convenient harbor for insects. In regard to *Training*, Mr. B. knew of no form more beautiful or better than the *pyramidal*. This form is not difficult to obtain.—A little care at the beginning will cause the tree to form a good base, and after this form is once established it is as natural for the tree as any other. From the manner in which trees are grown in nursery rows, a large growth of top is induced, and therefore, some cutting for a few years will be necessary to secure the desired form. For amateurs, and all gardens would recommend the *pyramidal* form both on the pear and quince stocks. This is somewhat a matter of taste. On the quince stock, however, something like the *pyramidal* form is necessary, to prevent injury from the wind. If dwarf trees are grown with a heavy top they are apt to be swayed over and injured. He was surprised lately on reading an article in a Horticultural Journal, stating that the *pyramidal* form was bad, as it prevented the use of the plow in cultivating the trees. This is a mistake. The ground can be cultivated as near as the branches will admit of, and that is near enough. If trees are pruned up four or even six feet from the ground the branches of most sorts will hang down so that horses can not work under them. For orchard culture would not aim at the exact *pyramidal* form but would cut back well for three or four years, and after that let

them take nearly their natural course. Very little use of the knife would be required. Some people write and talk as though the great point in culture was to keep a little circle of a foot or two in diameter cultivated around the trunk, while it is far more important to keep the ground stirred outside of the extremities of the branches. That afternoon Mr. B. had visited the grounds of a gentleman in the city, where he saw some pear trees growing on a lawn, with the grass removed from a neat circle about eighteen inches in diameter around the trunk. The trees were languishing.—In the kitchen garden he found pear trees making a fine growth in cultivated ground. On asking the gardener if he knew the cause of the difference, he was told that the trees came from a different nursery. It never entered his head that different treatment had anything to do with the matter.—Others write and talk as though the culture of the pear was a mystery, while it is very simple. He knew of no case of failure where persons had given to the subject ordinary information, intellect and care. Those who love trees and fruit and rural pursuits, and are industrious, always succeed. But some persons would rather write about trees than work among them. A lazy man has no business with a pear orchard, or an orchard of any kind.—Fruit and tree culture is a system of details, and he would rather trust an industrious laborer of good common sense with a pear orchard than a man who would read and write, but never work. It is useless to charge failures to climate, for there is no climate in the world superior to ours for growing the pear. To this some of the best Pomologists in the world who had visited this country would agree. No other fruit can be grown as profitably as the pear, and none is as certain. The present season we have neither peaches nor apples in Western New York, but our pear crop is fair, as it always is. Much is said about a *proper soil* for the pear. Any soil that will grow good wheat and corn will grow the pear. It must, however, be drained for the pear, as it should be for the other crops named. There is no mystery about pear culture—it only requires the exercise of a little common sense.

C. M. HOVEY, of Boston, said that at the East they had good collections of trees—the *pyramidal* form on the quince root was the favorite tree. In the orchard culture of the pear they had not done as much as had been done in Western New York. In regard to pruning for the orchard he thought a moderate height better than allowing the branches to grow to the ground. The temperature near the ground was lower than a few feet above, so that with late spring frosts the blossoms or young fruit on limbs near the ground might be injured, while those a little higher would escape. Had seen this result in his own grounds. In damp weather the leaves on the lower limbs had rusted, and he had them sawed off so as to leave none within six or eight inches of the ground. This was a moist soil. On high land and dry soil the lower limbs the better. His advice would be, in low situations, to prune up a little so as to allow a circulation of the air under the branches, and in dry locations to encourage the growth of branches as low as possible. His views of mulching were somewhat similar to those expressed by the two last speakers. On low, damp soils, mulching was not only unnecessary, but injurious; on dry, light soils it was a benefit.

THE PRESIDENT said all who had spoken thus far were in favor of pear culture and of dwarf pears. If there was another side in this Convention he would like to hear from it. After some moments of suspense, in which no one responded to this invitation.

L. E. BERCKMANS, of New Jersey, remarked that he was not on the other side, but the right side. He cultivated a good many pear trees in the South (Georgia). All the mulching he gave trees, even in the South, and all he thought necessary was to throw the weeds collected from the grounds around the trees two or three times a year. Heavy mulching prevents the benefit of light showers, as the water will not get through the mulching to the roots. Pruned invariably in the *pyramidal* form. It was the only way to get a good strong trunk at the base.

R. B. SCOTT, of Philadelphia, as no one else had appeared, would say a word on the other side.—Dwarf pears in some cases had failed around Philadelphia, and some practical men had entertained doubts as to their value and durability. Still he must say that in most cases he had been able to discover very easily the cause of the failure. We have of late heard of the difference in the nature of pear and quince wood. Mr. B. presented two specimens, one of pear grafted on pear wood, the other pear on quince wood, and challenged any one in the room to distinguish the one from the other.

S. WALKER, of Mass., considered mulching under some circumstances beneficial. The largest, oldest and most fruitful trees in the country are found mulched with a growing sod. This showed us that mulching is necessary, and nothing is better for trees than sod. Above all things, keep grain out of the orchard, particularly rye. Have seen good results from mulching, and have never seen the contrary.

Mr. BARRY was surprised to hear such a recommendation from such a source. As soon as we commence to imitate nature in our culture we may expect that our fruit will also imitate natural fruit.

A. SAUL, of Newburgh, was never more surprised in his life than to hear such a statement from Mr. WALKER, whom he always considered correct in his system of culture, and very careful in his statements.

Mr. WALKER wished it to be distinctly understood that it was only with large trees capable of taking care of themselves that he recommended this course, as a protection against the hot sun.—The grass should be mowed, and broken up every six or eight years.

Mr. HOVEY did not consider the scorching rays of the sun, about which we hear so much, an injury, but rather a benefit to the pear tree. It is supposed to have had its origin in a hot country. The English pears are not as high flavored as those of American origin. Is not this because our sun shines more brightly?

Mr. WALKER said the previous speaker and others, recommended the branching of trees low, for the purpose of shading the ground, and yet they now say there is no necessity for this shading.

Mr. HOVEY recommended the *pyramidal* form for its beauty, and other reasons, and not for the purpose of shading the ground. Trees, he knew, would take care of themselves in grass, if they had at first acquired sufficient strength to enable them to do so,—but that is not the best way.

THE PRESIDENT thought that Mr. WALKER had been a little misunderstood. Did not understand him to advise growing or planting trees in grass. Mr. WALKER did not advise any such course.

M. B. BATEHAM, of Ohio, had practiced mulching, and had not derived from it that benefit which he had been led to expect. In Southern Ohio, and in all dry localities, it is of benefit to small and newly planted trees. Not only the fruit crop, but the fruit trees also of Ohio are suffering fearfully. Peaches and apples are a failure all through the State. There is some difference of opinion as to the cause, whether it is severity of the winter, or the frequent changes and the extremes of early spring. The pear trees are much more healthy than the apple trees, and there was a better crop of pears than of any other fruit in the State of Ohio, consequently the people of that State felt more hopeful of pears than of any other fruit crop.—They grow in heavy soils where apples do not succeed, and Mr. B. hoped that Ohio would soon furnish pears for the million. Their strong clay soils were admirably adapted to dwarf pears.

Mr. BRISTOL, of N. Y., said so far as his experience went he preferred to cultivate the soil around trees to secure a good growth of wood, but for fine

fruit would let the sod grow around trees. Got his best Bartlett pears from large trees growing in grass. Had fine pear trees on his place one hundred years old. Had one healthy tree growing in grass. It made some difference, he thought, what kind of grass was grown. Did not like Timothy or blue grass. A brother of Mr. B.'s had some fine pear trees growing in grass for a number of years. The sod was broken up, and the trees made a healthy and vigorous growth, but the fruit was not as good as before.

R. G. PARKER, of N. Y., said his father had very old trees growing in grass, which was broken up, when the trees died. Tho' there was a time when trees had arrived at maturity or were rather on the decline, that it would not answer to disturb the roots. The fine old pear trees of Wayne county, with which many were acquainted, were mostly growing in the grass.

Dr. BRISTOL, of Danville, N. Y., thought that the trees described as being injured by plowing had been, after all, been injured by dropping. The sod was broken up, probably, for the purpose of getting in some grain crop, and this is certainly going from bad to worse.

T. S. GOLD, of Connecticut, said it was impossible to find good healthy trees in very old orchards that had been kept in cultivation. All the old orchards were in grass. Deep plowing injures a fruit tree when it becomes large.

THE PRESIDENT said he could point to an old orchard in Massachusetts that had been kept in cultivation for 40 years certainly, and perhaps 80; the trees were all that could be desired, and the fruit the very finest brought to the Boston market. Dr. SYLVESTER, of Lyons, N. Y., thought we had fairly arrived at the point *grass or no grass*. He was satisfied himself, how the matter stood, but he wished a little explanation for the benefit of the meeting. In the first place he would ask Mr. PARKER and Mr. BRISTOL if the trees they spoke of as flourishing in the grass were trees growing in the orchard or trees standing in doorways or stable yards?

Mr. PARKER said they were single trees he referred to.

Mr. BRISTOL said his were single trees, growing irregularly in a small lot, which for convenience had been kept as a calf pasture.

Dr. SYLVESTER resumed by saying that he was acquainted with the trees in Wayne county referred to by Mr. PARKER. They stood in the doorways, where they receive the slope and soap suds from the houses. Mr. BRISTOL's trees it seems are manured by the calves, and the turf no doubt is kept pretty well broken up by these animals.

A. SAUL had trees on his place, when he commenced, a hundred years old. Some of these had been allowed to remain as they were, while others were so situated that the ground was broken up around them and well cultivated. The trees thus treated commenced making a rapid growth, putting out shoots the first summer eighteen inches long, while those in the grass remained stationary. He had no doubt the trees cultivated had made more wood in the last ten years than in fifty years before.

Mr. BERCKMANS confirmed the statement made by Mr. SAUL. His attention was called to the fact at the time, and he examined the trees.

Mr. BARRY asked the President to put the following question:

"Has any person present ever noticed a failure with the pear, on quince or on its own roots, where a proper selection of varieties had been made, and planted on a proper soil, with intelligent after culture?"

No one responded.

SECOND DAY—MORNING SESSION.

PEARS—Revision of Society's Catalogue.
 The list recommended as promising well was taken up, and as the name of each variety was called by the Secretary, changes were proposed and made.

Adams.—Mr. CABOT, of Mass., thought it worthy of general cultivation—a very good pear.

Buere Giffard.—Dr. BRINKLEY, of Philadelphia, wished it to be promoted, and added to the list for general cultivation. Mr. CABOT hardly thought the growth of the tree was good enough to warrant this mark of merit. The President said it made a fine growth on the pear. R. B. SCOTT found it to grow equally well on the pear and quince.—Added to list for general cultivation.

Buere Clairgeau.—Mr. SAUL thought worthy of promotion. It was generally admitted that it would not grow well on quince root. Several gentlemen had succeeded well with it double worked. Mr. PARSONS, of Long Island, had grown it well on the quince. R. B. SCOTT thought its principal fault was that it decayed so rapidly after becoming ripe. Mr. WALKER thought it a very good pear, though not first rate, and that it would become a general favorite. Carried for general cultivation.

Buere Sterckman is known in Europe as the *Buere Hardy*, and its name was therefore changed on the catalogue.

Buere Superfin.—W. P. TOWNSEND, of Lockport, thought it should be promoted. Mr. BARRY considered it one of the finest pears in cultivation.—Grows well on the pear and quince. Mr. SAUL had it on pear and quince, and knew of no better pear. The President had grown it for ten years—always fine. Mr. WALKER had no hesitation in saying it was one of the best in the catalogue. There may be as good, but no superior. Passed for general cultivation.

Brand's St. Germain, by general consent was stricken from the list of varieties promising well.

Brandywine.—Mr. HOVEY moved for general cultivation. Adopted.

Conseiller de la Cour.—The President thought well of this pear. It had many good qualities, and was almost worthy of promotion.

Delice d'Harcourt d'Angers.—Mr. SAUL moved it be stricken from the list promising well, as it certainly did not promise well. It was a poor pear, small, and a poor grower. Mr. HOVEY tho' it too good to be rejected. Stricken off.

Doyenne d'Alencon.—W. R. PRINCE thought this pear one on which we would depend as a market fruit—a good bearer and fine. L. E. BERCKMANS found it good, both at the North and the South—a great bearer. R. BISTOL, of Philadelphia, also found it uniformly good, making a fine growth and productive. Mr. WALKER thought it had as many good qualities as usually falls to the lot of one pear. Adopted for general cultivation.

Doyenne Goubault was by unanimous consent stricken from the list.

Emile d'Heyst.—The President felt constrained to say a good word for this pear. It is a child of Mr. BERCKMANS, and a worthy one. Mr. B. liked the fruit, but not the growth of the tree—it is too straggling. Mr. COIT said it grew well double worked. The President had no other desire in recommending this pear for general cultivation than to benefit his fellow men.

Epine Dumas.—H. E. HOOKER, of Rochester, said this was a good pear, and always gave an abundant crop. The President found the tree very hardy, and so productive that thinning the fruit is very necessary. Mr. SAUL thought well of it, but preferred to leave it in its present position until the next meeting of the Society.

King's Quest.—Mr. HOVEY moved this pear be advanced. Mr. WALKER favored the motion. It was one of the best trees in the nursery, and an excellent fruit. Adopted for general culture.

Kirtland.—Mr. TOWNSEND wished it advanced.—E. E. HOOKER, objected, as it decayed very rapidly, and was very liable to rot at the core. Messrs. BARRY, HOVEY and others, agreed with Mr. HOOKER. Dr. BRINKLEY said that in Delaware, Pennsylvania and New Jersey, it is one of the best of pears. The motion was withdrawn.

Limon.—It was proposed to remove from the list as promising well, for although the fruit was acknowledged to be the very best, it is a poor grower, and winter kills. Mr. SAUL had not found these objections to the tree. Removed from the list.

Lodge.—Dr. BRINKLEY moved be placed on list for general culture. Mr. THAYER, of Connecticut, thought well of the Lodge—never cracks. Mr. CABOT had grown it for ten or twelve years and considered it one of the best. The President and Mr. WALKER had found the tree a poor grower, slow and gnarly. Mr. BISTOL said that in his nursery, on the pear stock, it was a fine grower.—Knew of trees forty feet high. It makes an excellent pyramid. HOVEY considered the Lodge a good grower. Mr. BISTOL, of New Jersey, said it grew well with him, but the fruit rots so rapidly after attaining maturity that it is hardly possible to get it to market.

Niles.—As the name of this pear was called, some desire was manifested to ascertain its origin. Mr. COIT said that Mr. NILES informed him that he obtained the grafts from Baltimore. Dr. BRINKLEY thought it was a foreign pear. Mr. BERCKMANS had sent both fruit and scions to Europe to the Belgian Commission, and the best French pomologists, and the unanimous report was that it was not a native of Europe.

Onondaga.—Mr. WALKER moved be advanced.—Do not rank it No. 1, as to quality, but it has a great many good qualities—holds its leaves until late in the fall, grows and bears well, and if picked in proper time the fruit is good enough for anybody. T. W. FIELD said it was sometimes astringent and sour. HOVEY considered it one of the most valuable pears grown in this country—very large, ripens when pears are needed, and is a great bearer. The President would most cheerfully recommend it for general culture.

Dr. WANN, of New Jersey, had some fine trees that produced many bushels every year, but could get nothing for them. They decay so rapidly that fruit dealers are afraid to touch them. W. R. PRINCE said if we did not adopt the Onondaga for general culture we may as well strike out the Bartlett. HOVEY said it kept better than the Bartlett and as well as any pear of the same season. Dr. RUSSELL, of Conn., had always found it coarse and acid in his State. Mr. CLARK, of New Haven, said both tree and fruit was good. Mr. DICKERMAN, of New Haven, had fruited it for several years and found the fruit uniformly good. BARRY considered it one of the best American pears, worthy to rank with Buere Superfin. TOWNSEND found it variable in quality.—Thompson, of Ohio, and Lyon, of Michigan, said it was very desirable in all respects, in these States. Adopted for general cultivation.

Osband's Summer.—PRINCE, one of the very best of summer pears. Should be advanced. HOVEY would like to see it promoted—a good pear, and unexceptionable in almost every respect. This was the general opinion. Adopted for general cultivation.

Stevens' Genesee.—The President and Mr. CABOT thought it should be stricken from the list promising well—it cracked badly. Mr. TOWNSEND said with him it was of about the same character as the Onondaga. Mr. LYON said it was very fine in Michigan. Mr. PRINCE had trees twenty years old. Good when it does not crack. It was allowed to remain on the list.

St. Michael Archange.—Mr. WALKER proposed to recommend for general culture. The President seconded the proposition—it was as hardy as a forest tree. Mr. BISTOL was in favor of its promotion—a fine fruit, good grower, keeps its leaves, and bears abundantly. Adopted for general cultivation.

The list of varieties promising well having been revised, it was proposed to add new varieties. Hull.—T. W. FIELD proposed the Hull. Mr. HOVEY considered it one of the best pears we have—almost as good as the White Doyenne, of good size, and a fine grower. Added to the list promising well.

Cabot.—Was recommended by the President. Mr. HOVEY considered it of the same class as the Lodge, and even better. Mr. TOWNSEND found it of fine quality and productive. Messrs. BARRY, WALKER and others, spoke well of it. As it seemed so well known and generally approved, Mr. HOVEY proposed to add it to the list for general cultivation. Adopted.

Frederic Wurttemberg was recommended by T. W. FIELD. The President said it had gone out of culture in Massachusetts. No one favored it, and it was passed.

Meriam was moved to be added to the list by Mr. HOVEY; Mr. WALKER seconded the proposition. Mr. CABOT considered it one of the most desirable varieties for market. Not number one, but an excellent grower and bearer. Mr. PRINCE thought it worthy of general cultivation. Mr. HOVEY said it was such a prodigious bearer that unless the fruit was thinned the trees would be much injured. The President said it would rank next to the Bartlett as a market fruit, and please everybody. Added to the list promising well.

Cushing.—Mr. HOVEY proposed. Mr. FIELD objected, as it was not better than the Heathcot.—Mr. SAUL said if as good as the Heathcot, it was as good as Cushing. HOVEY said it was as good as Heathcot, and this was no mean merit. R. B. SCOTT stated it was one of the few pears that had invariably done well around Philadelphia. Mr. BRISTOL, of Long Island, never found it more than third rate. Mr. WALKER did not think quite as well of the Cushing as some others did. Mr. BISTOL thought it much better than some we have on our list as promising well. It was not recommended.

Pineco.—Dr. RUSSELL, of Connecticut, proposed the Pineco pear as promising well. It originated in Connecticut about one hundred years ago, and had been considerably grown in that State, and sold in the Boston market. Mr. HOVEY said it was brought from Lebanon, Connecticut, and sold in Boston in large quantities, as the Virginal. He procured scions and fruited it, and named it the *Boston Pear*, by which name it had been known and sold. Mr. COIT, of Conn., said Pineco was the name of the person on whose farm it originated. It was a fine grower and a good bearer. Dr. RUSSELL said it was described in the Albany Cultivator in 1847, as the *Pineco*, and he thought the old name should be retained. After a good deal of discussion it was voted to add it to the list promising well, under the name of *Pineco*.

AFTERNOON SESSION.

Queen of August.—W. R. PRINCE called attention to a seedling which he had named the Queen of August—a better pear than the Bartlett, and as large as the Urbaniste.

Bonne d'Esce.—T. W. FIELD proposed to add this variety to the list promising well. WALKER, CABOT and others objected to it on account of the unhealthy character of the tree. Mr. CHORLTON, of Staten Island, had grown it for six years on the quince, and it had proved fine and healthy in every respect. It was not recommended.

Bergen.—Mr. FIELD recommended the Bergen. PRINCE considered it a very valuable pear. Mr. BRINKLEY thought it first rate. Z. G. BERGEN, of Long Island, said the original tree was in his neighborhood, and about forty years old. Passed as promising well.

Huganum.—Mr. PRINCE called attention to this pear—a seedling of the Seckel, and double its size. HOVEY moved it be adopted as promising well. WALKER was opposed to recommending it at present. Not adopted.

Camandigua.—Was recommended by Mr. BARRY—a good pear and one of the handsomest of trees—erect as a Lombardy Poplar, and a great bearer. It was not sufficiently known, and was not adopted.

Tea Pear.—Recommended by Mr. CLARK, of Connecticut, who has grown it six or seven years. A handsome, good pear. The President had cultivated it, and did not think very favorably of it. Dr. How, of Conn., liked it well. Not adopted.

Buere Gris d'Hiver Nouveau, was recommended. The President said it could not ripen it. Mr. SAUL said with him it was a fall or early winter pear. Mr. BARRY had grown it for several years. Ripens in middle of winter. Uniformly good, except one

season, when it mildewed and cracked. Adopted as promising well.

Church.—Recommended by HOOKER. PRINCE said the Church was identical with Platt's Bergamotte. Mr. HOOKER said Judge STRONG, of Rochester, obtained some pear trees at PRINCE's Nursery some thirty years ago. Having lost the name of one tree, when it bore fruit it was called *Prince's Virgaloea*. It has been examined by a good many good judges, and pronounced identical with the Church. Dr. BRINKLEY had seen the Church in Pennsylvania and other places under three or four different names. Mr. HOVEY said the Platt's Bergamotte, as grown around Boston, was not similar to the Church. LAWTON, of New Rochelle, and BATEHAM, of Ohio, had seen the Church under different names and without a name. No action was taken.

Gansel's Bergamotte.—recommended by C. M. HOVEY. Mr. WALKER would second the recommendation if the tree was hardy and a good grower. In the north the wood is killed more or less—it is a shy bearer, and comes in when we have a host of other pears that produce more abundantly. BARRY said the fruit was good, but the tree was a delicate, poor grower—one of the very worst. HOOKER would prefer to place it on the rejected list. It was not recommended.

Hamel.—recommended by Mr. BIRD, HOVEY, CARPENTER, and others said it was "good," "first-rate," &c. Adopted as promising well.

The list of pears, as recommended, now stands as follows:

FOR GENERAL CULTIVATION.

Ananas d'Esce,	Golden Beurre of Bilboa,
Andrews,	Howell,
Belle Lucrative, or Fondante d'Automne,	King's Quest,
Beurre d'Anjou,	Louise Bonne de Jersey,
Beurre d'Arenberg,	Madelaine,
Beurre Diel,	Manning's Elisabeth,
Beurre d'Esce,	Onondaga,
Beurre St. Nicholas,	Osband's Summer,
Bloodgood,	Paradise d'Automne,
Buffum,	Roulette,
Beurre Clairgeau,	St. Michael Archange,
Beurre Giffard,	Seckel,
Brandywine,	Sheldou,
Cabot,	Urbaniste,
Doyenne d'Alencon,	Uvedale's St. Germain (for baking),
Debarbon's Seedling,	Vicar of Winkfield,
Doyenne d'Esce,	William's Bon Chretien, or Bartlett,
Doyenne Boussock,	Winter Nails,
Flemish Beauty,	
Fulton,	

Adams,	Fondante de Malines,
Alpha,	Fondante de Noel,
Bergen,	Hull,
Beurre Gris d'Hiver Nouveau,	Henkel,
Beurre d'Esce,	Hosen Schenk,
Beurre Cabot,	Jalousie de Fontenay Vendee,
Beurre Clairgeau,	Kirtland,
Beurre Langier,	Lodge (of Penn.),
Beurre Nantais,	Meriam,
Beurre Hardy,	Niles,
Chancellor,	Nouveau Poiteau,
Charles Van Houghton,	Ott,
Collins,	Pineco,
Comte de Flandre,	Philadelphia,
Conseiller de la Cour,	Plus IX,
Comptesse d'Alot,	Pratt,
Delices d'Harcourt de Prout,	Roulette d'Esperen,
Belgique,	Stevens' Genesee,
Dix,	Striped Madelaine,
Duchesse d'Orleans,	Thoburn's St. Mon,
Duchesse de Berri d'Esce,	Van Assenore, or Van Assche,
Emile d'Heyst,	Walker,
Epine Dumas,	Zepherine Gregoire,
Fondante de Comice,	
Fondante de Charnesse,	

We give a full report of the proceedings of the American Pomological Society, to the exclusion of much other

Ladies' Port-Folio.

THE FISHER'S WIFE.

BY CLARA AGOSTA.

Boards the wild swelling billows
Out on the lone sea;
Tossing the pearl-clear foam-caps
Chasing the wind in glee;
While the gray skies, melancholy,
Low in their mockery bent,
Like the dismal drapery of funeral,
Or coffin-cement.

Light gleamed in the fisher's cottage,
Streamed thro' the heavy night,
Crimsoned the weary woman,
Waiting there, sad and white;
Listening the loud wind's screaming—
Praying the tempestuous waves
To guide him in through the darkness,
In from the sea's black graves.

Over the mountain of waters
Struggled the fisher boat,
With never a hand to guide her,
Never an ear to hear!
Down in the shell-pearl temple—
Nailed the vigil to keep—
Sleepeth the bold fisher sailor,
Low in the halls of the deep!

Woman! extinguish the watch-fire!
Give thy strained ear rest—
One there is up in Heaven
Doth all for the best!
Lie down on thy wretched pillow,
Ask for the dream god's spell—
Far down in the sea thy husband
Sleepeth soundly and well!

Farlington, N. H., 1855.

BEAUTY.

What is beauty? not the show
Of outward forms and features; no,
These are but flowers
That have their dated hours
To breathe their momentary sweets, then go—
'Tis the stainless soul within
That outshines the fairest skin.—SIR A. HURV.

WHAT is beauty? This question may have been often asked and as frequently answered, and the inquirer have found himself as little satisfied and as much perplexed as before. It is an almost indescribable something, which, from remotest ages, has received the homage of all classes. The lowly peasant and the monarch's crown have alike been influenced to bow at beauty's shrine. And surely no one should be censured for having a taste for the beautiful; for it is a quality that the Creator has instilled into all the productions of his hand; and has calculated it to be a source of pleasure and enjoyment to all of his creatures; and not only for their enjoyment, but for their improvement. For (as it is often said, the character of the maker is shown in his works), it exerts an influence upon the seeker after aspiring thoughts, and leads the mind toward the fountain of all beauty.

Again, I inquire, what is beauty? We have the testimony of pretending connoisseurs that a polished and intellectual looking brow, sparkling eyes, a finely turned nose, clear and blushing cheeks, tempting, rosy lips, and a pretty dimpled chin, constitute this all-attracting quality. But I must beg leave to differ with them, unless something more be added to these attractions. An inherent virtuous disposition—a goodness and grace of action which arises from a gentle and affectionate heart, is indispensable to beauty, that beauty which never fades, but ever blooms the same. Consequently, a person having rather irregular features—one that is not remarkable for particular personal attractions—by cultivating a kind and gentle disposition, by schooling the soul, that it may shine out brightly through the roughness of the exterior, and the mild expression of the face speak the goodness of the heart, such may be ranked with the beautiful. Ladies, when you are spending your precious moments in adorning yourselves that you may appear fair, attractive, and charming to those, your friends of the opposite sex, do not forget that true beauty, and leave the mind uncultivated and unadorned; nor that the expression that arises from a grateful heart to an open countenance is far more charming than any artistic blushes you can produce. And remember that every gentleman prefers a kind, benevolent, and undeformed soul to the most regular form and showy figure.

Lansing, Mich., 1855.

NED BLOSSOM.

Written for Moore's Rural New-Yorker.
POFFED-UP FOLKS.

WE wonder if AMELIA wears hoops? And what of it if she does?—nothing, only we think of "Stuck-Up Folks" every time we see a woman with hoops on. It puts us in mind of the frog in the "fable" that undertook to swell so as to equal the ox. The woman that sweeps along the street or side walk, with a dress spread three or four feet in diameter, is a fit companion for "that young gent, dressed in the extreme of fashion, who, as he twirls his walking stick and puffs a fragrant Havana, would fain lead us to believe he is lord of this lower realm." What are the words this young gent would probably use, should he speak out what the discerning observer of human nature plainly reads in his walk, gestures, dress, and cigar? "Behold! what a man I am; having no other business than to make a show of myself, and associate with a species of butterflies." We hope, for humanity's sake, these butterflies are in the last stage of their mundane existence; but it is not likely they will become obsolete, unless butterfly mothers become women of sense, instead of fashion's dupes.

"The butterflies are painted butterflies,
That flutter for a lay,
First from a worm they take their rise,
And in a worm decay."

And, again, what is the language of the woman, passing by with her immensity of crinoline—"stuck over with ribbons and bung round with strings?" "Behold! how much greater I am than God made me—I am for sale to the first gent, I meet, who can say soft words, and has got money enough, or, I think, can support me in genteel idleness. I really think I shall faint and die, if I

do not live as the schools of folly and fashion dictate,"—and you might as well, for you are useless living, and shall we say it, unhonored when dead. The world will roll on, we believe, just as well without you; and we hope your papa and husband, if you have any, (though we pity them if you have,) will soon withdraw their support from the schools of folly and fashion, and leave folly's dupes "alone in their glory."

"When each fulfills a wise design,
In his own orbit he will shine."
"Did ever Proteus, Merlin, any witch
Transform themselves so strangely as the rich?
Well, but the poor—the poor have the same itch;
They change their weekly barber, weekly news,
Prefer a new jupanner to their shoes."

We close with a quotation from Bishop TILLOTSON:—"If the show of anything be good for anything, I am sure sincerity is better; for why does any person dissemble, or seem to be that which he is not, but because he thinks it good to have such qualities as he pretends to; for to counterfeit and dissemble is to put on the appearance of some real excellence. Now, the best way in the world to seem to be anything, is really to be what we would seem to be. Besides that, it is many times as troublesome to make good pretence of a quality as to have it; and, if a man have it not, it is ten to one that he is discovered to want it, and then he has all his pains for nothing."

Byron, N. Y., 1853.

TRUTH SEEKER.

THE PARTICULAR LADY.

THERE is a coldness and precision about this person's dwelling that makes your heart shrink back (that is, if you have the least atom of sociability in your nature) with a lonely feeling, the same which you experience when you go by yourself and for the first time among decided strangers.

Everything is in painful order. The damask table-cover has been in just the same folds ever since it came from the vendor's shop, eight years ago; and the legs of the chairs have been on the exact diamonds in the druggist they were first placed on; by-the-by, do you ever remember of seeing that same drogget off the carpet underneath? No—for she never has company; the routing, the untidiness they would occasion, would cause the poor soul to be subject to fits for the rest of her natural, or rather unnatural—life. Though untidiness is a fault all people should avoid, especially the young, yet for mercy's sake, urge them not to be particular. She will become as hateful in the sight of her friends as a sloven.

The particular lady generally lives in the kitchen—and an exorcisingly tidy one it is. The great parlors, with their crimson curtains, Turkish carpets, mammoth mirrors, beautiful mantels, and elegant paintings, always closed. Nobody visits them; nobody enjoys them; the children tread on tip-toe to steal a glance into them, their eyes expressive of wonderment and a cautious air of dread.

She is all the time dusting and washing and scrubbing, and scrubbing and washing and dusting. The door-steps, the wash-boards must be daily scrubbed, though immaculately white they already be. The very knives, forks and spoons are rubbed thin and genteel by repeated cleaning.

You can tell her crossing the street; she watches for every vehicle and waits until it has passed a square, for fear of being splashed; and even in dry weather she crosses on the joints of her toes, and holds her dress above her ankles. Her constant fidget wears the flesh from her bones and color from her cheeks. She never can get a servant to stay long with her. We never heard of but one "particular lady" who retained a domestic longer than a year, but then she was as "particular" as her mistress.

YOUNG LADIES AND HOUSE-WORK.

A FRIEND of ours, remarkable for strong, good sense, married a very accomplished and fashionable young lady, attracted more by her beauty and accomplishments than by anything else. In this, it must be owned that his strong, good sense did not seem very apparent. His wife, however, proved to be a very excellent companion, and was deeply attached to him, though she still loved company, and spent more time abroad than he exactly approved. But, as his income was good, and his house furnished with a good supply of domestics, he was not aware of any abridgment of comfort on this account, and he, therefore, made no objections to it.

One day, some few months after his marriage, our friend, on coming home to dinner, saw no appearance of his usual meal, but found his wife in great trouble instead.

"What's the matter?" he asked.
"Nancy went off at ten o'clock this morning," replied his wife, "and the chamber maid knew no more about cooking a dinner than the man in the moon."

"Couldn't she have done it under your direction?" inquired her husband, very coolly.

"Under my direction? I should like to see a dinner cooked under my direction."

"Why so?" asked the husband in surprise, "you certainly do not mean to say that you cannot cook a dinner?"

"I certainly do, then," replied his wife. "How should I know anything about cooking?"

The husband was silent, but a look of astonishment perplexed and worried his wife.

"You look very much surprised," she said, after a moment or two had elapsed.

"And so I am," he answered; "as much surprised as I should be in finding the captain of one of my ships unacquainted with navigation. Don't you know how to cook, and the mistress of a family? Jane, if there is a cooking school anywhere in the city, go to it, and complete your education, for it is deficient in a very important particular."

—T. S. ARTHUR.

THERE are hearts all the better for keeping; they become mellowed, and more worth a woman's acceptance than the crude, unripe things too frequently gathered—as children gather green fruit—to the discomfort of those who obtain them.

A WOMAN without poetry is like a landscape without sunshine.

Choice Miscellany.

SUMMER'S DEATH.

BY ELLEN C. LAKE.

Goss out from the emerald meadows,
Off from the breezy hills,
Through an archway of twilight shadows
That sunset's glory fills;
The summer that came, torrid-hearted,
Out of the grave of May,
With Autumn has met and parted
Full in the western sky.

There were gifts of red-flashing roses
That dropped in days of June
From the wealth of the reign that closes
At break of night's dark noon;
There were billows of grass-bloom floating
Under July's red sun,
And grain-fields wore a golden coating
When August days begun.

There were misty, fanciful dreamings
Deep in the woodland aisles,
There were days that seemed but red gleamings
Of far-off tropic smiles;
There came, as Faith's clearest fountains
Start in the wastes of pain,
From clouds that seemed dark-browed mountains,
Flashes of summer rain.

But at last, with its crimson banner
Furling in twilight's haze,
With no anthem or church-bell's clamor
Over its dying rays,
The summer that brought us rare roses,
The summer full of hope,
Goes downward where the darkness closes
Over the hill-top's slope.

Redden slowly, oh, autumn morning
The starry eastern skies,
The thought of another bright dawning
Over the heart's pulse lies;
Send no flashes of triumph beating
Around the vacant throne,
Though the grain-fields wait for your reaping,
Summer is dead and gone.
Charlotte Centre, N. Y., 1853.

LETTERS FROM OUR FARM.—No. II.

"LADY SUMMER, fair and young,
Pale and dead is lying."

A STRANGE spell has come over the beautiful earth, and breathed itself into the soft air about us. The heart is oppressed, in spite of fair skies and undimmed sunshine, with a sense of something sweet and precious gone from it. There is little heart in us for laugh or song, and yet we can hardly tell why. The glory of the green earth is not dimmed yet, but looking wistfully upon it all, we sigh as we whisper regretfully,—"Summer's gone."

True, the forests keep their green livery, and not a leaf is gone from the bough; the meadows show no tints of amber, and even the uplands are scarcely browned. The sky wears the stainless blue of the young June, and the white clouds wander slowly over it, blown about by as sweet a wind as that which shook down the apple blossoms on your face, when you lay dreaming in the orchards in May. You were not sad then—why are you now? Ah! the change is more in you, after all. Then you heard in every whisper of the wind, prophecies of the good and the beauty that were to be; now, you are only thinking of the dismal Winter, waiting, with winding sheet of snow, to dig the grave for all this summer bloom.

The first days of Autumn are very mournful. They are like the passing away of the flush of youth and beauty. When one first realizes that he has reached the meridian of life, and that heart and brain are beginning to ripen and mature into that perfection so soon followed by decay, then comes a brief struggle with regretful longings, that would fain cling a little longer to youth's summer time. But when that is past—when the heart takes home a full realization of the grandeur of earnest and perfected manhood—when life grows solemn and real, as its high aims dawn upon the soul, and the life to come looks nearer and more tangible—then comes a time of riper joy than the passionate hours of youth ever knew. Steadfastly the face is set toward the grave, not seeing that so much, as the eternity beyond it; one by one cherished follies and weaknesses drop away, leaving the soul to grow and ripen in the sunshine that shines freely and fully upon it, till by and by the angels come and gather it for the garner of our Lord. So it will be when these first days of Autumn sadness are over. We shall enjoy the mellow richness of September, and the deepening glory of October, with a kind-of grave happiness, and even look kindly upon the sullen skies of dull November.

The song birds have grown very silent already, but we have no lack of music. Here, at the Farm, we have concerts from troops of traveling musicians, who only make engagements for September, assisted by some few lingerers from the orchestra of Summer. All day, while the sunshine lies warm and still over the glimmering landscape, lighting up with a new glory the brown wheat fields, and flooding the hills with a mellow radiance, you may lie in dreamy languor, and hear no sounds upon the soft west wind, save the faintest of voices from the leaves, that seem as if, with every fibre relaxed, they were too idle to give back a rustle to the breezy fingers that play with them. Only this, and the monotonous song of the locusts up in the maples, and now and then a scream from some solitary jay. But when the deep blue of the sky begins to fade out, and the great drifts of snowy clouds wander over the western horizon, and gather about the sunset slope, building a grand pavilion for the dying day-god, then begins a new scene.

The west wind drops away till not a leaf quivers in the stillness. The sky slowly changes from crimson to orange, from orange to rich saffron tints, that fade into pale primrose, and when you think the grey of twilight has crept over the whole, it flashes up again, as beautiful, if fainter than before. Then if the harvest moon comes up, full and red, over the forests, and lends the magic of moonlight to the scene, all will be ready for the serenaders, that are already sending out solitary notes here and there—tuning their instruments, perhaps.

First comes to your ear the sound of the river.

Strange that you never noticed it by day—now its steady roar seems to swell as you listen, coming nearer, and filling all the night. There is something in that rush of water that carries you away from the present into that wonderful future whither you feel yourself tending silently day by day. Something that sounds solemn to you, as if a voice from eternity cried out to your soul. You do not like to listen to it now, when the Summer has just floated away from your grasp, bearing with it so many treasures that should have been yours, but which can now only shine dimly upon you when you catch occasional glimpses into the storehouses where the wealth and the beauty that "might have been" is laid up. So you turn away with a sigh that is more than half contrition, and might be a prayer, and then you hear other tones. The Katydids are gossiping as noisily as ever up in the trees, telling the old tales that used to move your childish wonder, when you lay broad awake, on pleasant moonlight nights, in the chamber close under the eaves of the old brown homestead among the hills.

Don't you remember how you, and the owner of a little curly head on the next pillow, speculated about that "Katy," and how you crept softly out of bed, and pattered across the floor with your little bare feet, and stood on tip-toe at the open window to listen? Have you forgotten how you stood there, watching the bats as they circled about, and how you leaned out to see if you could find the "Great Dipper," that was always such a wonder to your eyes, thinking, in your simple faith, that you were looking at the very floor of heaven? If a white wing of some wandering angel had flitted across the blue, it would not have very much surprised you, for stars and angels were closely linked in your minds, ever since the time when that loving mother told, in her sweet words, the story of the heavenly host that sang to the Shepherds of Judea, and the star in the east, that led to the Babe of Bethlehem. So you listened and wondered, and by and by stole back to bed, and fell asleep with your hearts brimful of love and happiness.

All the while the concert goes on. One can hardly analyze the music without making discord of it, but Nature blends it all admirably, so that not a note jars unpleasantly on the ear. A whole tribe of crickets keep up a constant chorus in every tone, from the mournful cry of the fall cricket, with its sad "summer's gone," to the merry little household visitor, welcomed at many a fireside in spite of his mischievous pranks with the good wife's carpets, for the sake of the old Scotch proverb, "a cricket on the hearth is good luck to the house." Down in the meadows the frogs send out as musical a chorus as if November were never coming; while their noisy cousins, the tree-toads, hid away among the branches in their invisible livery, trill out their long quavers incessantly.

There are a thousand soft, nameless sounds that you are not conscious of hearing, that come in to fill up the harmony. They are like the semitones in painting, helping to blend smoothly together what would otherwise be in too striking contrast. They fill the soul, and quiet it, so that the grating and jarring of all the machinery of toil and trade is for the time forgotten. The blessed influence falls like dew upon the germ of a better nature within us; it buds and blossoms, and reaches tendrils upward toward heaven.

We are full of fearful penitence for the evil done, and of hopeful resolves for the future to walk humbly before God,—meekly and lovingly toward men. But with the morn comes snow the stern grappling with labor,—the bitter temptations without and doubtings within, and the prayers and hopes are all forgotten with the sounds of the September night.

HOW TO TAKE LIFE.

TAKE life like a man. Take it just as though it was—as it is—an earnest, vital, essential affair. Take it just as though you personally were born to the task of performing a merry part in it—as though the world had waited for your coming. Take it as though it was a grand opportunity to do and to achieve, to carry forward great and good schemes; to help and cheer a suffering, weary, it may be, heart-broken brother. The fact is, life is undervalued by a great majority of mankind. It is not made half as much of as should be the case. Where is the man or woman who accomplishes one tithe of what might be done? Who cannot look back upon opportunities lost, plans unachieved, thoughts crushed, aspirations unfulfilled, and all caused from the lack of the necessary and possible effort! If we knew better how to take and make the most of life, it would be far greater than it is. Now and then a man stands aside from the crowd, labors earnestly, steadfastly, confidently, and straightway becomes famous for wisdom, intellect, skill, greatness of some sort. The world wonders, admires, idolizes; and yet it only illustrates what each may do if he takes hold of life with a purpose. If a man but say he will, and follows it up, there is nothing in reason he may not expect to accomplish. There is no magic, no miracle, no secret to him who is brave in heart and determined in spirit.

OVERBIDDEN not thy memory to make so faithful a servant a slave. Remember Atlas was weary. Have as much reason as a camel, to rise when thou hast thy full load. Memory, like a purse, if it be over-full that it cannot shut, all will drop out of it. Take heed of gluttonous curiosity to feed on many things, lest the greediness of the appetite of thy memory spoil the digestion thereof. Spoil not thy memory with thine own jealousies, nor make it bad by suspecting it. How canst thou find that true which thou wilt not trust? Marshal thy notions into a handsome method. One will carry twice more weight, trust and pack up in bundles, than when it lies untowardly flapping about his shoulders.—Fuller.

How little is known of what is in the bosom of those around us! We might explain many a coldness, could we look into the heart concealed from us; we should often pity where we hate, love when we curl the lip with scorn and indignation. To judge without reserve of any human action is a culpable temerity, of all our sins the most unfeeling and frequent.

Sabbath Musings.

SABBATH MUSINGS.

BY F. E. AUSTIN.

How sweet the holy light of Sabbath eve
When Nature's voice is hushed, and all is calm
As an infant's slumber. When all earth
Seems hushed into repose—when the still air
Scarcely moves the quivering leaf, or waves the flower
Whose fragrant odors mingle with the air,
In sweet perfume, and hues of heaven's own dye
To breathe into the weary, troubled heart
The light of heaven—the goodness of a God,
Who rules o'er earth and sky. 'Tis then the soul,
In sweet communion with her God, looks up
To the blue dome above, and in its bright
And glorious canopy can read those words
Of hope and promise there—"The pure in heart
Shall meet again," even though a Jordan's flood
May roll between, yet in that blissful home
Beyond the skies, where all is joy and peace—
Where God, unchangeable, eternal reigns—
Where all is pure ecstatic praise to Him—
Where all the ransomed hosts together dwell
In realms of pure, eternal, changeless bliss—
Where faith is lost in sight, and prayer in praise.
There, in that blissful abode, from sin set free,
The pure in heart shall see their God, and meet
Each other there; and know as they are known,
And praise the name of Him who safe has brought
Them through this world of tears, and while the long,
Unknown, unnumbered years, the countless ages
Of vast eternity rolls on, their souls,
Attuned in unison with heaven's choir,
Harmonious shall sing the song of praise—
The song of Messias and the Lamb—till heaven
Resounding with the holy strains, the spheres
Shall join the heavenly song, the saints shall sweep
Their harps of gold with hands untaught by man,
And in the holy, heavenly harmony
The soul shall lose itself, and back to Him
From whom it came, with heavenly joy return,
In realms of pure, eternal, changeless light,
To dwell forever with its Father God.

LIFE AND DEATH.

"What is death?"
"Tell me, first, what life is."
"Death is the absence of life."
"But life is not the absence of death, for with life commences death. When we begin to live, we also begin to die. Life, at best is uncertain.—Death sure and inevitable. Death is the great rock round which the waves of life dash, and foam, and fret, and then vanish away, while the dark rock stands unmoved, bearing upon its rugged surface no marks of the surge that has been washing it for these thousands of years. Death is as perpetual as time; but Death cannot enter eternity. It is the shore of time, but sinks and is lost in the ocean of eternity."

"Death, then, only marks the boundaries of time. It is but a monument. It hath no terror, no power of harm—only as it is clothed therewith by the human mind. To those whose lives have been well spent, the passage of this boundary gives no alarm; no phantoms pursue them."

"But those whose lives have been badly spent?"
"Ah! at this boundary all their evil deeds meet them to be forever after their constant companions. It was no idle prayer of the prophet who said, 'Let me die the death of the righteous, and let my latter end be like his.'"

Such thoughts often come into my mind—always when I have seen any one die; often when I have plucked a rose, or even pulled up a noxious weed. But lately my mind has dwelt much upon the subject, and it formed the web of my musings as I came home the other night from a friend's house, wherein lay the mortal remains of a child. She was just bursting into the mature loveliness of early womanhood—the pride of the household, a loving and lovely girl. I had known her from her childhood—even from her infancy. Within a year or two she had been much at our house, (while teaching our village school,) and I can see her, as she often came into the library, and, in her girlish way, sat down upon the carpet by my side when writing, just where I now sit, and we thus had many hours of pleasant conversation. Sometimes grave, sometimes gay, and always instructive, for she had a mind that relished knowledge, and craved the companionship of those whose experience could supply the deficiencies of her own.

Strange how tenacious memory is of the forms of beauty! I can see her now as she came into the room one evening after her school had been dismissed for the day, swinging her hat by the strings, all radiant with beauty, and taking her accustomed seat, inquired "what I was writing?" It could be no love-letter she was sure, for I was too old to write such letters.

I was writing in my diary the time and circumstances attending the death of a mother, and had given way to the feelings which such an event is wont to call out. While reading the page her eyes filled with tears, and when I finished she bowed her head upon her hands and wept freely. Looking up through her tears, she said: "How pleasant to be kindly remembered when we are dead. Will anybody say such good things of me when I am gone?"

The young and beautiful girl has been taken and the old man left, and he now sits in the same chair, and is writing at the same table and in the same place; but the beautiful and animated form that sat beside him,

"Never more on her
Shall fall the friendly eye. She was not made
Through years of grief the inner weight to bear,
Which older hearts endure till they are laid
By age in earth. Her days and pleasures were
Brief but delightful, such as have not
Said long with her destiny."

A little mound in the village cemetery marks the resting place of that form, but the spirit of my young and gentle friend is

"Away, away, without a wing,
O'er all, through all, its thoughts shall fly,
A nameless and eternal thing,
Forgetting what it was to die."

No COMPROMISE—God does not allow us to part with an inch of his ground, though we might thereby gain the peaceable possession of all the rest.—T. Hardcastle.

The Educator.

Written for Moore's Rural New-Yorker
HISTORICAL READING.

THE various dry, indigestible records of events, with the dates of their occurrence and the names of the most prominent actors connected with them, that pass for text-books of History in many of our schools, I suppose, have repelled more minds from a perusal of the master works of true historical composition than they have attracted to it. Indeed, if the object of introducing History into school were to create an early distaste for that branch of letters, the purpose could not be more effectually accomplished, especially in the case of pupils of indifferent memory for names and dates, than by a daily, undiluted lesson from one of the many "Elements," "Outlines," "Abridgments," "Compendiums," &c., got up to facilitate the acquisition of a knowledge of the past. They who are fortunate enough never to have attempted to extract nourishment from these hanks of history, but whose ideas of the pleasure and advantage of historical reading have been formed by acquaintance with such authors as Goldsmith, Hume, Bancroft, Prescott, &c., who have found a fascination in the pages of Macaulay compared with which even the interest of their favorite novels was tame, and who wait anxiously for the appearance of each succeeding volume of his History as the reader of fiction expects the next installment of a story—these may well listen with surprise to complaints of the dullness and tediousness of history; but let them compare the miserable skeletons on which these unfavorable opinions of historical literature were founded, with the full, rich narratives themselves have delighted to read, and they will soon cease to wonder. As it is far more desirable to cultivate in the minds of the young a taste for historical reading than to burden the memory with a mass of facts having little apparent relation to each other, and the mere effort to retain which, in their proper sequence, produces weariness and disgust, it will be found that the only really profitable way in which Epitomes of history can be employed for educational purposes is to use them as references and as aids to the memory in connection with works of a freer, more generous character.

The great mass of readers labor under two serious disadvantages so far as the reading of history is concerned, one of which, perhaps, equally discourages their undertaking all works of a voluminous character, requiring close attention, and the other of which more particularly hinders the successful study of history and books of travel; I mean the want of sufficient connected time and the lack of maps. It is easy enough for any of us to find an occasional hour to devote to a volume of tales, poems or essays, and a book of this kind being a collection of complete works of different lengths and on a variety of subjects, each one having no necessary connection with any other, there is no difficulty in finding a song or essay of convenient measure to fill any leisure space of time. Nor does the necessity of reading such a book at chance intervals prevent one deriving all the benefit and enjoyment it is capable of affording. But to gain the full profit and pleasure of reading history one needs to make a business of it; it is not enough to sit down once or twice a week and read a few pages, then lay the volume aside for several days till the subject of the last reading shall have partially faded from the mind before taking it up again. And, as descending from ancient to modern times, the materials for history constantly increase in abundance, so each succeeding work grows more and more formidable in size, and, of course, proportionally taxes the courage and patience of the reader. (It occurs to me here to refer the recent invention and manufacture by machinery of metallic instruments for writing to a difference between the general literature of our own days and that of more remote times. The ancients confined themselves to accounts of things actually done; and for this purpose the stylus and, in later days, the goose-quill sufficed; but this *Age of Talk* tells not only what it has done, but also what it is doing and what it means to do; and so stylus-making and quill-growing are voted slow and have gone out of fashion.) Again, the fact of works on both ancient and modern history being unaccompanied by maps, is a great drawback on the profit that might be anticipated from perusing them. Most houses have a poor provision of maps, and the scarcity seems likely to continue, because, not knowing exactly what we want, we do not know how nor where to supply the deficiency. Every one who has followed the course of a traveler through a long journey in foreign countries will remember how much more interesting were descriptions of towns, lakes, rivers, mountains, &c., with whose names and locations the reader was familiar, or which he could easily find by referring to a map than accounts of more obscure places. Precisely so is it in reading history; events are far more likely to fix our attention and impress themselves on our memories when the scenes in which they transpired are on paper, before our eyes, than when we are left to depend in good part on imagination and guess-work to determine their situation.

The enchantment that distance of time lends to early events, institutions, customs, modes of thought and action, and the thousand circumstances connected with the political, social and domestic economy of long-ago nations, nourishes, in many readers of ancient literature, an inordinate admiration of the past and a corresponding discontent with the present. Dazzled by the brilliant examples of heroism that history has handed down, and believing that ancient times offered far grander opportunities for illustrious achievement than their own age, these worshippers of the past, in weak regrets for its loss, cheat the present of much valuable effort. Possessing, many times, an overweening confidence in their own untied strength, and scorning to debase it to the poor occasions of ordinary life, these dreamers spend themselves in vain longings for a return of the emergencies that called forth those splendid exercises of public and private virtue they so much admire. Knowing nothing of the interests and the struggles that occupy their country and humanity, or, rather, rendered incapable of appreciating present aims by exclusive sympathy with the past, their experience,

did they choose to bring it to the aid of their fellow-men, would be found ill-fitted to help forward the progressive movements of their age. But, much as history may have taught these lofty souls who could so quickly distinguish themselves if only a worthy occasion offered, and who, perhaps, would not disdain a little fame even from these degenerate times, they have failed to take from it one or two useful hints; that a just appreciation of the present is not inconsistent with a true veneration of the past; that, as the past is the parent of the present, they do not especially honor the former by despising the latter; that the heroes of any age are not those who scorn the times in which they live, and that a habit of looking backward with longing instead of forward with hope, is not a fitting preparation for the performance of deeds worthy to be recorded by future historians. Nor can they be said to have the highest reverence for ancient heroism who imagine that, under the same circumstances, themselves could equal what they so much venerate; for, if, at the end of their career, those same heroes who won from all later ages such admiration for the past had chosen to speak of their deeds, they could, doubtless, have said, in truth, that, looking at their past lives, they saw many things that even they wondered how they accomplished; that they did not believe they could repeat them; so true did it seem that each moment and each duty demanded a strength suited to itself, and, the occasion past, the peculiar capability it called forth had gone with it.

South Livonia, N. Y., 1888.

PHYSICAL EDUCATION.

We find in an exchange the following common-sense views, which we wish were more generally heeded by those upon whom devolves the solemn duty of educating the rising generation:

At the present time, when intellectual activity marks our entire population, and when our children have more active brains than muscle, proper physical education should be regarded as of the very first importance.

Let your boy befit his whole being, physical, mental, and moral, with tobacco, and however well directed the care bestowed upon him by his teachers, the result of this unfortunate physical habit will pain your heart some time, though you may not know the cause. Let your child go from a highly seasoned dinner of gross meats, mince pie, and coffee, or oysters, sardines, and wine, to the school-room, and while this unnatural food is in process of digestion, attempt to study, and it is like loading a race-horse with heavy weights before putting him on the course. But to require a child of five, seven or ten years to think vigorously and closely, is like commanding him to cut his own throat. Let children think naturally and freely—Make knowledge attractive to them, but never cultivate the mind at the expense of the body. The prevalent sentimentality that makes it vulgar to regard the well-being of the body, is fraught with ruinous consequences. We want Professors of Physiology, of Rumping and Fan, in our public schools, as much as we want Professors of Mathematics, or of the Natural Sciences. Children in their sports, want the vigorous influence of joyful and untrammelled maturity, and they would have it, were there less false dignity in the world. A good scholar, who is nothing else but a good scholar, may exist without health, but a truly noble man, instinct with expanded moral and intellectual life, even in his temper and holy in his emotions, to whom knowledge is a servant and research a pastime, to whom one is not a task-master and the other a task,—such an one can not exist without sound health.

LABOR THE CREATOR OF WEALTH.

A NOVICE in reflection would naturally consider the possession of inexhaustible money, gold and silver, as the greatest sign of wealth, national or individual. The false position money has been permitted to assume as a supplier of the necessities and luxurious tastes of society, has begotten the impression that money is the chief wealth. But truly considered how far this conclusion is from fact. Gold and silver bear but a mean relation to those wants of man upon which life depends; intrinsically they are, as an application to his temporal necessities, less valuable than the simplest weeds by the way-side. Can a man eat, or drink, or wear gold? But for the fictitious value allowed to it, what pleasurable impression would it produce on any of the senses more than any other shining substance?

The greatest wealth of a nation, or an individual, does not lie in temporal association or estate to both nations and individuals, but consists in those elements by which the necessities of human life are most surely satisfied. To the wanderer famishing in the desert, the greatest treasure would have been food and drink; he cast pearls aside with disgust, praying they had been dates. The great temporal wants of men and nations are food and raiment, and especially food—deprive them of these, and all other possessions would be useless. The capacity to supply these wants, in spite of exigence, is a wealth and power which gold and silver never possesses. Real capital lies in labor, and labor brought in contact with the earth, in its various capacities, is the creator, as it should be the distributor and enjoyer of the most substantial of all temporal wealth.

THE GREAT OBJECT OF EDUCATION.—Self-instruction is the one great object of rational education. In mind as well as body we are children at first, only that we may afterwards become men; dependent upon others, in order that we may learn from them such lessons as may tend eventually to our edification on an independent basis of our own. The knowledge of facts, or what is generally called learning, however much we may possess of it, is useful so far only as we erect its materials into a mental framework; but useless so long as we suffer it to lie in a heap, inert and without form. The instruction of children, compared with self-instruction, is like law compared with faith; a discipline of preparation, beggarly elements, a school-master to lead us on to a state of greater wisdom, and there give up the charge of us.—*Bulwer.*

He who writes what is wrong, wrongs what is right.

LOGAN'S MONUMENT.

ACCORDING to the traditions of the Cayugas, Osco (where now is situated the city of Auburn,) was the birth-place of LOGAN, the greatest of the Iroquois. His Indian name was TAI-GAR-JUTZ. He was the second son of SHIKELLIMUS, a distinguished sachem of the Cayugas, and compeer of ONTONGAR. About fifty years before the Revolution, when Osco was the principal village of the Cayugas, some two hundred members of the tribe removed to the region of Shamokin, Penn. TAI-GAR-JUTZ was then about seven years of age. His father became the friend of the whites, and he was soon appointed Indian Agent. Having embraced Christianity, as also the pacific doctrines of the Quakers, the Chief and his family were received into the Christian Church. TAI-GAR-JUTZ, on the occasion of his baptism, received the name of LOGAN, in honor of JAMES LOGAN, Secretary of the Province. Ever the firm friend of the Indian, his name has been rendered doubly illustrious by the nobility of the Cayugas.

LOGAN inherited the talents and the peaceful virtues of his father, after whose death he became a Chief. In conformity with the parental wish, he married, the same year, the daughter of a Sachem of great renown. They were united in marriage by the good missionary ZIESSBERGER. But LOGAN was the child of misfortune, and never was kindness to white men requited like his. The following extract will furnish the key to his character:

"Habitually upright, charitable and kind, the noble Chief was unprepared for demonstrations of wanton violence in return. He had befriended white men to the extent of his opportunity and means; he had opened the door of his cabin to all who were disposed to accept of his hospitality; he had given meat to the hungry, and raiment to the naked; he was the generous, abiding friend even of the pioneers whose axes were demolishing the forests which supplied his table with venison."

What wonder, when his implicit faith in the white man had been shamefully violated—wrongs and indignities heaped upon him—his relatives murdered in cold blood—he could not quietly endure all, but that his nature called loudly for revenge? Fond memories of wife, children and home, coupled with the base ingratitude of those

whom he considered friends, prompted him to action.

What school-boy has not read his remarkable speech, immediately after the war in which he distinguished himself against the whites, and has not been moved with sympathy, even to tears, for the lone, forsaken one?

"I appeal to any white man to say, if he ever entered LOGAN's cabin hungry, and he gave him not meat; if he ever came cold and naked, and he clothed him not? During the close of the last long and bloody war, LOGAN remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they passed, and said, 'LOGAN is the friend of the white men.' I had even thought to have lived with you, but for the injuries of one man. Colonel CRESSAR, the last spring, in cold blood and unprovoked, murdered all the relations of LOGAN, not sparing even my wife and children. There runs not a drop of my blood in the veins of any living creature. This called on me for revenge. I have sought it. I have killed many. I have fully glutted my vengeance. For my country, I rejoice at the beams of peace. But do not harbor a thought that mine is the joy of fear. LOGAN never felt fear. He will not turn on his heel to save his life. Who is there to mourn for LOGAN? Not one."

His sun went down in darkness and gloom. THATCHER says:—"The melancholy history of LOGAN must be dismissed with no relief to its sombre colors. He was himself a victim to the same ferocious cruelty which had already rendered him a desolate man. Not long after the treaty, a party of whites murdered him as he was returning from Detroit to his own country. It grieves us to add that toward the close of his life, misery had made him intemperate. No security and no solace to LOGAN was the orator's genius or the warrior's glory."

When the citizens of Auburn determined to preserve the antiquities of Fort Hill, by converting it into a rural cemetery, the pile of limestone represented in our engraving, was erected as a tribute of respect to the memory of the greatest of his race. No modern epitaph is inscribed upon it, but that touching and eloquent sentence:

"Who is there to mourn for LOGAN?"

A SUSPICIOUS MIND.

It is difficult to tell who suffers most from suspicion, he who entertains it, or he who incurs it. There are few evils more intolerable in life, than the coldness and distrust of friends and acquaintances. But the pain of discovering an unworthy trait or a vile deed in those whom we have trusted, is hardly less distressing. God has made us social beings, and the social instinct cannot be outraged without pain. There is hardly any habit more unfortunate, than that of readily taking up an evil report, or of easily imbibing a suspicion of the conduct or character of our fellow-men. It is a habit which finds many incentives in our evil nature, and the world we live in. Every man has his sinister side, and society is at best but a cracked mirror, in which no man's character or motives get a full and fair reflection. It is easy to find in almost every one, some flaw which may be suspected to be an irreparable leak; or some speck upon the surface, that may seem to indicate a radical rot at the core. Few, indeed, go through life not only without wrong, but the appearance of wrong; and if we suffer ourselves to suspect the worst when we see the least, we shall inevitably find ourselves surrounded by rogues, and breathing a very atmosphere of corruption.

Wholly to avoid suspicions of men is impossible, because there is unmistakable occasion for them. But if he is happiest who is freest from them, we should be slow to entertain them. It is better to think well than to think evil of any one. It is better to find a good motive for a doubtful deed, if a good one be possible, than an evil one. It may be nearer the truth; and if not, it will confer a pleasure. Our suspicions often do great wrong to their objects; justice, no less than charity, should make us cautious in indulging in them. And if we do not injure them, such is the retributive law of life, we wound ourselves, we drive charity weeping from our hearts, and deprive ourselves of the blessedness of kind thoughts. It is a loss on all sides. We lose our peace, and our friend loses the joy of our confidence. Charity is profitable as well as right—it is due to our own peace of mind as well as to that of others.—*Evangelist.*

Man imagine they communicate their virtue or vice only by overt actions, and do not see that virtue or vice emit a breath at every moment.

The Young Ruralist.

MODELS FOR YOUNG RURALISTS.

IN answer to a request made in the RURAL, a few weeks since, for information relative to the culture of winter barley, we have received, among others, the following communication, and we recommend its careful perusal by all that portion of our parish of readers to whom this column is specially dedicated. Would we had more young men of like stamina to the JOHNSON BROTHERS. What other portion of the Empire State will show as fair a record? Shall Niagara Co., wear the proud motto—"Excelsior?" The question is with the Young Ruralists of the country for solution:

EDS. RURAL:—If boys may answer the inquiry concerning Winter Barley, we will send our experience. Our crop this year was 232 bushels from three acres and five-sixths. It was sown the 15th September, on clay loam, and after harvesting a great crop of oats. The oats that scattered in harvesting came up with the barley, and formed the most perfect covering of the ground we ever saw, and some of them survived the frost, and had good, well-filled ears this year, so much so that the breadth of a cradle-swath, next the orchard, where it was most protected from the wind and storm, we did not cut. The barley weighed 48 pounds to the bushel.

HOW WE STOPPED A BULL SUCKING COWS—We put him in a stallion and cut a slit in his tongue, one-half inch deep, right at the end. It cured him, and we believe it will cure a cow, or any kind of animal, and not injure their feeding.

THE WAY TO KEEP TURNIPS, BEETS, CARROTS, and all roots as fresh during the year as when dug, is to put them in barrels of any kind—apple as good as any—and cover with a sod. This is our mode, and it works to a charm.

Now, Mr. Editor, you may do as you please with this. We are readers of your paper, like it very much, have taken it a good share of the time since it was first published. We are three brothers, working a farm of one hundred and forty-two acres, and have for three years. We have what we can make, and mean to be good farmers and the ardent friends of good crops. Our ages are respectively, HENRY NORTON JOHNSTON, 19 years; DOORMAN STEEL JOHNSTON, 16 years; WILLIS JOHNSTON, 14 years. This is our farm, and we make a little money every year, and wish all the rest of the boys may do the same. We love to see a boy with clothes and money he has earned.

Hess Road, Niagara Co., N. Y. H. N. JOHNSTON & BROS.

HAPPINESS.

If we glance over society we will see a great difference in the outward conduct of various individuals. Some pursue one course of action, while others take an opposite one, and there are, perhaps, no two persons exactly alike, either in their opinions or outward conduct. Yet there is one object after which all seek,—that is, Happiness.

Some persons seek to obtain happiness by frequenting places of mirth and pleasure; striving to banish all care and serious thoughts—giving themselves up to follow their own present inclinations,—while others, observing the many evils which follow such a course, apply all their energies to the acquisition of wealth, vainly expecting that at some future time this will be a great source of happiness to them. How many are the cares and disappointments which the man who seeks for wealth is subjected to,—and how few ever realize, to any great extent, the hopes they thus so ardently cherish. Another class of men seek for happiness in the acquisition of fame, or worldly honor; but the result of this is only "vanity and vexation of spirit." Then, if we would seek after and obtain true happiness, we must be careful not to place too high a value on the fleeting things of time. We must strive to obey the laws by which the universe is governed—to perform the duties we mutually owe to each other—to cultivate feelings of benevolence,—and, above all, to seek the favor and blessing of the Great Law-Giver; He, on whom we are wholly dependent; He, in whose "favor there is life" and "pleasures evermore." J. M. E. Hebron, N. Y., 1868.

ALPHABET OF PROVERBS.

A GRAIN of prudence is worth a pound of craft. Boasters are cousins to liars. Confession of a fault makes half amends. Denying a fault doubles it. Envy shooteth at others and wounds himself. Foolish fear doubles danger. God reaches us good things by our hands. He has hard work who has nothing to do. It costs more to revenge wrongs than to bear them.

Knavery is the worst trade. Learning makes a man fit company for himself. Modesty is a guard to virtue. Not to hear conscience is the way to silence it. One hour to-day is worth two to-morrow. Proud looks make foul works in fair faces. Quiet conscience gives quiet sleep. Richest is he that wants least. Small faults indulged are little thieves that let in greater.

The boughs that bear most hang lowest. Upright walking is sure walking. Virtue and happiness are mother and daughter. Wise men make more opportunities than they find.

You never lose by doing a good turn. Zeal without knowledge is fire without light. *Young People's Pocket Book for 1858.*

KNOWLEDGE.—It is not knowledge alone which makes us happy; it is the quality of the knowledge. Perfect knowledge is conviction; and it is conviction which makes us happy, which absolutely satisfies, and which changes dead knowledge into living.—*Novalis.*

IDLENESS AND ORDINARYNESS.

DON'T stand in your tracks doing nothing but grumble, But start for a run if you meet with a tumble; You had better be scorched by rubs in the dust, Than to be in your idleness eaten by rust.

Corner for the Young.

MISCELLANEOUS ENIGMA.

I AM composed of 16 letters.
My 13, 6, 15, 5, 16 is both a bane and blessing.
My 2, 14, 8, 4, 12, 10 is the name of a bird.
My 8, 9, 4, 6 is good for man.
My 1, 13, 9, 11, 4 is allied to a burn.
My 7, 3, 2, 5 is a much abused goddess.
My 14, 15, 5 is always singular.
My whole is a State containing a greater variety of people, than any other in the Union.
New York State, 1868. H. R. L.
Answer in two weeks.

ARITHMETICAL PROBLEM.

SUPPOSE three men were mowing around a piece of grass in the form of a square, and the three cut a strip two rods wide; after going once and a half round, they find the piece of grass one-half cut down and four rods over—how much was there in the piece? S. G. C.
Verona, Onei. Co., N. Y., 1868.
Answer in two weeks.

For Moore's Rural New-Yorker.

CHARADE.

My first is always considered a pest,
And, therefore, is never a welcome guest;
It also is an article of food,
And then is considered very good.
My second the city of Rome did have,
But which her might could never save.
My third is a simple verb in English—
My whole was a general of the British.
Rome, N. Y., 1858. G. JACOBUS.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN NO. 454.

Answer to Miscellaneous Enigma:—For the word of the Lord is right, and all His works are done in truth.

Answer to Acrostical Enigma:—Give us this day our daily bread—Acrostically, God is Love.

Answer to Engineering Problem:—Commence on the equator, run to the pole, turn a right angle and run to the equator, thence to the place of beginning.

ROCHESTER, N. Y., OCTOBER 2, 1888.

FALL CAMPAIGN QUARTER!

The Rural Three Months, on Trial, at Half Price!

The Last Quarter of Vol. IX of the RURAL commences to-day—with October. As prosperity is rapidly returning to the People and the Country, and the long evenings, and season of leisure among Ruralists, are coming on apace, (when such a paper as the RURAL is needed in almost every family,) we confidently anticipate a large accession to our subscription list during the ensuing few weeks.—To supply the demand, we this week add several thousand to our former edition, and shall be glad to receive orders for single copies or clubs to any extent, for either the present quarter or a year.

At the suggestion of many of its friends and in order to introduce the paper more generally preparatory to the new volume, we have concluded to offer the RURAL for the present quarter—October to January, 13 numbers—at ONLY HALF PRICE, (25 cts.) thus placing it within the means and reach of all who wish to give it a fair trial. We will send 4 copies for \$1; 8 for \$2; 12 for \$3; 20 for \$5, &c., and mail to as many different persons or post-offices as desired. Of course, we shall not realize a farthing's profit, yet wish to circulate at least Five Thousand trial copies of this quarter—for, though we temporarily lose money by the investment, we trust it will be returned to us in future; and if not, we shall have the satisfaction of believing that thousands of individuals have been benefited by making the acquaintance of the RURAL.

—We therefore frankly ask each and every agent and friend of the RURAL to aid in circulating the Fall Campaign Quarter. There is scarcely one of our readers who could not, if disposed, easily obtain from 4 to 20 or 50 Trial Subscribers, and thereby not only enhance the welfare of his or her friends and neighbors, but directly aid in augmenting the future usefulness of this journal.—Friends of the paper and its objects, near and distant—in the North and West, East and South—will you not give "a long pull, a strong pull, and a pull altogether," in behalf of the Fall Campaign Quarter of the favorite RURAL WEEKLY?

CROPS AT THE WEST.—Speaking of the corn crop in the lake region of Ohio, the Cleveland Leader says that it is most of it, out of danger from frost, and, as a whole, is fully an average one.—Much of it has been cut up, and many of the farmers are busy in putting their fields into shocks. On and in the vicinity of the sand ridges, the crop is better than usual. The ears are large, well filled and ripened. No frost yet to shrivel green leaves.

The Lexington (Mo.) Express says that most cheering accounts are received in regard to the crops in that section of the States—the corn crop in particular.

KANSAS GOLD.—The Wyandotte (K. T.) Gazette of the 18th ult., says that "yesterday \$10,000 in gold dust arrived here from Pike's Peak. One man brought \$4,000, the result of a few weeks' work." Is this a second edition of Fraser River?

Dreadful Casualty—Burning of the Austria.

For some days past the telegraph has brought us reports concerning the destruction of a steamer by fire upon the waste of ocean's waters. The intelligence that had come to hand was such as to invest all with a hope that human life had not been sacrificed, but news just received has scattered all fond desires, and the truth is arrayed before us in all its horror—only sixty-seven have been saved out of a crew and passengers numbering five hundred and forty! The bark Lotus arrived at Halifax with twelve of the survivors, taken from the bark, Maurice, who give the following account of the catastrophe:

At a little after 2 o'clock on the 13th, dense volumes of smoke burst from the after entrance of the steerage. The ship was instantly put at half speed, at which she continued until the magazine exploded. The engineers, it is inferred, were instantly suffocated. The fire was next seen breaking through the lights amidships and traveled aft with fearful rapidity. Some persons let down a boat from the port side of the quarter deck, and it was thought to be crushed under the screw. An attempt was made to launch a boat on the starboard side, but it was swamped from the numbers who rushed into it, and all were lost.

All the first cabin passengers were on the poop, except a few gentlemen, who must have been smothered in the smoking room. Many second class passengers were all on the poop, but a number of them got shut into their cabin by fire.—Some of them were pulled up through the ventilators, but the greater number could not be extricated. The last woman drawn up said there were six already suffocated. The ladies and gentlemen on the poop jumped into the sea by twos and threes—some of the ladies in flames. Several heeled, but were driven to it at the last moment. In half an hour not a soul was to be seen on the poop.

The French bark Maurice, Capt. Renaud, came along side the steamer at about 5 P. M., and rescued about 40 passengers, chiefly taken off the bowsprit. A few were picked up floating around. At about 8 o'clock one of the metallic boats came up with about 20 persons in it including the 1st and 3d officers. Afterwards three or four men were picked up floating on a piece of broken boat. The 2d officer was taken up, having been swimming six hours. He and the 3d officer were severely burnt.

According to the Rev. CHARLES REW, one of the rescued, the fire was caused by the palpable negligence of some of the crew. The captain and surgeon considered it expedient to fumigate the steerage with burning tar. The operation was to be performed by the boatswain, under the superintendence of the 4th officer. The boatswain heated the end of a chain to dip in tar and produce smoke. The end became too hot to hold, and he let it drop upon the deck, to which it set fire. The tar upset, and immediately all about was in flames! A feeble attempt was made to extinguish it, but without effect. There was nothing at hand to meet such an emergency. Mr. Rew states that there were six hundred souls upon the ill fated vessel—a large number being women and children.

N. Y. STATE TEMPERANCE CONVENTION.—The State Temperance Convention was held pursuant to call, at Utica, on the 22d ult. JOHN FORSTER, of Madison Co., in the Chair. On motion, the following preamble and resolutions were unanimously adopted:

Whereas, owing to informality of call signed by but six of the sixteen members of the State Temperance Committee, the lateness of its publication, and its being published in but one Temperance paper, it has been impossible for the Assembly Districts to be generally represented at this time; and the short time previous to the election, now preclude the possibility of an effectual organization, therefore,

Resolved, That in our opinion it is inexpedient to organize at this time a State Temperance Convention for the year 1888, and it is hereby declared adjourned sine die.

LAYING THE CORNER STONE OF THE STATE INEBRIATE ASYLUM.—The corner stone of this Institution was laid with appropriate ceremonies at Binghamton on the 24th ult., in the presence of a large assemblage. After prayer by Rev. Dr. Beech, of Binghamton, Hon. B. F. Butler, President of the Board of Trustees, delivered some eloquent opening remarks. Elaborate and able addresses were delivered by Dr. Francis and Rev. Dr. Bellows, of N. Y., both of whom paid high and deserved tribute to Dr. Turner, the founder and chief mover of the Institution, who was present. Remarks were also made by D. S. Dickenson, of Binghamton, and Hon. Edward Everett. A poem was delivered by Alfred B. Street, of Albany. The exercises were extremely interesting and went off with great success. In the evening the Presbyterian Church was filled to hear Everett's oration on Washington.

THE BRITISH TREATY WITH CHINA.—The latest intelligence discloses that the indemnity accorded by the Emperor of China to Great Britain, is much larger than previous accounts gave reason to expect. Instead of a payment of \$6,000,000 for the joint benefit of England and France, that sum is to be paid to France alone, while England is to receive \$10,000,000—the money to be collected out of the customs' duties at Canton.

VERMONT—OFFICIAL RETURNS.—The official returns are now in from all but a few towns, which do not cast eight hundred votes in all. They foot up as follows:—Hall, (Rep.) 28,131; Keyes, (Dem.) 12,846; Scattering, 96. Hall's majority 15,190.—The Legislature stands, Senate—Republican, 29; Democrats, 1. Representatives—Complete.—Republicans, 195; Democrats, 35; Abolitionists, 1; no choice, 8.

MR. CHAPMAN'S SALE OF SHORT-HORNS, already noticed in the RURAL, is to be held on Tuesday next, at Canastota, directly on the N. Y. Central Railroad and less than one hour's ride from Syracuse. Breeders and others attending the State Fair can, therefore, easily be present at the sale.

THE LAND OFFICE AT SULLY has been removed to Cambridge, at that and Fairbault to St. Peters, Minnesota.

News Paragraphs.

THE DROUGHT is so great in the province of Arragon, Spain, that the fields have to be watered, and the peasantry fight with each other to obtain water from the Ebro.

A strong shock of an earthquake was felt in San Francisco August 19th. The citizens rushed from the buildings in terror, and many took refuge in the plaza.

MAYOR PERRY one of the Albany Mayors, has obtained a judgment against the city for \$2,192 02 for services as Mayor for two years past. The other Mayor has already been paid.

It is stated that actual statistics show that during the last fifty years, "the number of members of the evangelical churches in the United States, has increased from four hundred thousand to three millions and a half, being an increase of eight-fold, while our population has increased four-fold."

THE GREEN BAY (WIS.) ADVOCATE says that the only son of the late Rev. E. Williams, and of course the next heir to the throne of France, is now engaged as a pilot on one of the Lake Winnebago steamers. He is a fine looking young man, bears a striking resemblance to his father, but is too modest, we think, to urge his claims.

THE PARIS PRESSE speaks of the necessity which exists for France to lay down a telegraph to the United States if she wishes to maintain, undiminished, her present commercial relations with the American continent. It declares France is too dependent on England for her communications with America.

THE POST-MASTER GENERAL has decided that if post-masters do not give publishers of newspapers or periodicals notice that their papers remain in the post-office, without being taken out by those to whom they are addressed, for five weeks, they are liable for the pay.

GEN. WALKER was among the passengers for Nicaragua, by the Star of the West, of Thursday week. He goes out to try to get up another Revolution.

THE FRASER RIVER excitement has come to a sudden termination, and many of the runaway men in the recent stampede have returned to their accustomed diggings. The latest reports from the mining region announce great distress among the emigrants. The scarcity of food almost amounted to a famine. Little gold was found, on account of the height of the water, and the Indians were a constant annoyance to the miners.

THE BOSTON TRAVELER says:—"On an average, about 12 out of the 165,000 of Boston die every day of the 365 making up the year. During the present year, however, two days have passed without the recurrence of a single death, one day in February and the other in April. It is not often that the grim messenger ceases his visits in a city like ours even for a single day; in fact it has not occurred, we believe, for a dozen years or more."

Terrible Balloon Adventures.

On the 16th ult., Messrs. BANNISTER and THURSTON made a successful balloon ascension at Adrian, Mich., on the occasion of a Sunday School celebration. Messrs. B. and T. took seats in the car, and ascended safely and steadily. After remaining about forty minutes in the air, they alighted in the woods in town of Riggs, Lenawee county, distant about eighteen miles west of Toledo. Several men came to the assistance of the adventurers, and they proceeded to prepare the balloon for packing, to be taken back to Adrian. In doing this the balloon was turned over, and partially upside down, to disentangle the netting and to reach the valve. To do this, Mr. Thurston took off his coat, and got astride of the valve block. He then suggested that the car be detached from the balloon, while he should hold it down with his weight. This proved a fearful calculation, for no sooner was the still inflated balloon relieved of the weight of the car, than it shot into the air with the suddenness of a rocket, taking Mr. Thurston along with it, seated upon the valve of the balloon, and holding to the collapsed silk of the airship in that portion of its bulk! In this perfectly helpless condition, the ill-fated man sped straight into the sky, in the full sight of his companions, even more helpless than himself. The balloon was found on the 20th ult., near Baptiste Creek, C. W., but the fate of the aeronaut is wrapped in conjecture—that it was horrible, almost beyond precedent, there is little room for doubt.

At the Illinois State Fair, on Friday P. M., Mr. Brooks, of St. Louis, made an ascension. The aeronaut descended about twenty miles from Centralia, tied his balloon to a fence, and went to a house near by for refreshments. He then permitted persons to get into the balloon, and let them up the length of the anchor rope. Finally he put in two children, one aged seven and the other four, and by some unexplained means the balloon got away from him, and darted off like a rocket. It was just dark, and the moon shone bright, but the balloon was out of sight in an instant. The children were given up as lost, no one supposing that they would ever come down alive. But on Saturday morning, the balloon was discovered in a tree top, about ten miles from the starting point. The machine had run all night, and from the fact that it was seen at least twenty miles from where it started, at nine in the evening, it must have sailed around in different directions during the night, with its precious freight, with the intention of landing them as near home as possible. The children were found safe. The oldest, a girl, said that her brother complained of being cold, and she laid him down in the bottom of the car, and covered him with her apron, and he went to sleep, and that she did not sleep at all.

BUTTERFLIES GOING WEST.—The Detroit Advertiser declares that butterflies are moving West!—On Sunday afternoon last, immense clouds of these little insects were seen winging their way over that city. Near the river they were very thick, while towards the back of that city they were more scattered. The St. Paul papers state that the grasshopper tribe in the region of Belkirk, Red River of the North, have made a similar movement.—They were so numerous early in the season that it was feared the entire crops in that region would be destroyed.

"Rural" Letters from the People.

MR. ANOS STONE, of Erie Co., Pa., in a recent letter, says:—"Being a subscriber and reader of your valuable paper, and seeing an invitation extended to its patrons and friends (I took it for granted it meant me), to aid in soliciting subscribers to the RURAL, I take the liberty of requesting you to send me a few specimens and prospectus. Last year I took one copy of your paper and ordered another sent to a brother residing in California. This year I felt poor, so I take one copy, and after reading it I sent it to another brother residing in California. But I do not think much of sending the RURAL away, even after it has been read, for the children make a great complaint about it, and my daughter, 16 years old, declares she will get up a club for the RURAL for 1889 and have one of her own before she will be deprived of it. [Good girl, and sensible.] I have a number of relatives in Oregon and California that I am confident would take an interest in soliciting subscribers for your paper, and if you see fit to forward me some half a dozen or so of prospectuses I will forward them to my friends on the Pacific."

—Thanks for the kind offer. We send specimens, &c., and will be glad to do so in response to requests from any of our readers who will give the addresses of their friends, near or distant. Please give us the names!

MANY readers and admirers of the RURAL are not stockholders (paying subscribers,) but we often receive evidence that such persons possess consciences. Here is an example worthy of imitation. A P. M. in Douglas Co., Nebraska, writes:—"I enclose find \$1, for which please send me the RURAL for six months. I have read the RURAL for months past with pleasure, and not a little profit. I dislike to read what costs nothing, and therefore have concluded to subscribe. I add a list of some of our farmers who I think will subscribe if you'll send them specimens." Who will do likewise?

MR. C. T. F. LEE, of Ellis Co., Texas, writes in this wise, under date of Aug. 2:—"I enclose please find \$5 for three copies of the RURAL NEW-YORKER, to be sent as below. We should have sent for the paper immediately on the receipt of the specimen number, but were absent from home and have but just returned. We obtained the names yesterday, and to-day write you. Will try to make up a club immediately, and send for your 'valuable paper'—as it is the paper for every family, or old bachelor farmer; in fact, no farmer should be without it."

THE RURAL has many ardent and some working friends all over the Union. If the former would unite with the latter, the circulation and usefulness of the paper would be doubled during the ensuing three months. In a letter remitting for a new subscriber, DAVID CLARK, Esq., of Pike Co., Mo., writes:—"I always take the opportunity to slip in a word in behalf of the RURAL when conversing with my friends and acquaintances upon those subjects treated upon in your paper, and to recommend it as everybody's paper, and therefore that everybody ought to take it. Sometimes I am successful in making them believe it, and making them act accordingly, as in this instance. I think I will be able to add other names in the course of a week or two. At any rate I will keep trying."

MR. L. F. ANBOTT, of Oxford, Me., under date of Sept. 22, requests us to mail specimens to several of his townsmen and other friends, who he hopes will subscribe for the present quarter at least, and adds:—"I wish I could circulate fifty copies of the RURAL in this vicinity. I am fully persuaded there are no two papers published that, combined, afford as valuable and instructive matter for all classes as the RURAL NEW-YORKER does. No family can read the RURAL carefully through fifty-two times in the year, without being wiser and better, and its teachings practically carried out will add much to the beauty and convenience of the farmers' domain, not to say anything of dollars to his pocket. Such is our testimony from three years experience."

MANY good, but not very shrewd people, look at the price rather than quality or value of a paper in subscribing. Witness this P. S. to a letter (containing a remittance) from a P. M. in Franklin Co., Ohio:—"There are so many papers published for one dollar a year, and for \$1.50, that people not realizing the labor required to get up such a paper as yours are not easily induced to pay the price when cheaper can be had."

—As we offer the present quarter of the RURAL at low rate—half price—we trust a few thousand people who go for cheap papers will give it a trial, and decide whether it is not well worth full price.

MR. E. H. BARRETT, of St. Lawrence Co., N. Y., after failing to form a club, remits the full price for a copy for himself, and says:—"I like the appearance of the RURAL, its objects and the matter which it contains, and I must have it. In the few numbers which I have read, I have found many articles that were, in my opinion, truly excellent. The paper, besides imparting much useful information, seems to possess a high moral character—to improve as well as to instruct. I believe it is one of the best, if not the best, Family Newspaper in the country. Its articles on the soil are worth more to any farmer than the paper costs for a year; and it gives just such information upon every other subject which it handles as every farmer needs. It seems to me that any one who intends to be a thorough going farmer, who desires true advancement and loves pure and intelligent thought, must respect the RURAL, and be willing to make some sacrifice to obtain it. Although I have failed thus far to get up a club, I mean to do all that I can for you in future."

THE ATLANTIC TELEGRAPH.—On the 24th ult., several of the American Board of Directors of this Company, addressed the following inquiries to the operator at Trinity Bay, requesting explicit answers to the same:—"1st. Are you now, or have you been within three days, receiving distinct signals from Valencia? 2d. Can you send a message, long or short, to the Directors at London? 3d. If you answer no to the above, please tell us if the electrical manifestations have varied essentially since the 1st of September."

MR. DE SANTY replied:—"We have received nothing intelligible from Valencia since September 1st, excepting feeling a few signals yesterday. I can't send anything to Valencia. There has been very little variation in the electrical manifestations."

The American end of the line does not obtain much start of the steamer, to them we are indebted for the faintest account of the non-working of the telegraph yet received.

A HOMESTEAD LAW.—The Legislature of Minnesota has passed a law exempting a homestead of eighty acres from a levy for debts incurred; also, \$500 worth of household furniture; \$300 worth of stock and utensils; \$400 worth of tools, the library of a professional man, and provisions enough to support the family one year.

EMIGRATION.—The number of emigrants which arrived at the port of New York for the week ending Sept. 22d, was 2,898, making a total since the commencement of the year, of 60,165. The arrivals for a corresponding period in 1887, numbered 139,955.

REMNUNCIATION.—Advises from Camp Scott state that several Mormon trains bound for the Atlantic States, had passed there. About 300 Mormons composed the party, who have renounced Mormonism, and fled its haunts. They were wretchedly poor, but happy to escape under any circumstances.

The News Condenser.

—It is said that 390 Mormon women have escaped from Utah.

—Senator Benjamin, of Louisiana, declines the mission to Spain.

—Seventeen thousand troops have been sent to India since Jan. last.

—The number of horses entered for the Springfield show were 361.

—A cannon, captured at Canton, is in Paris, rejoicing the Parliament.

—There are fourteen persons in prison at Boston charged with murder.

—Large quantities of coal have been discovered near Sioux city, Iowa.

—Counterfeit \$4 bills on the City Bank of Montreal, are in circulation.

—A project is on foot to lay an underground telegraph to California.

—The banquet to Prof. Morse, at Paris, is spoken of as a splendid affair.

—The deaths from yellow fever during the past week at Charlestown foot up 128.

—Peaches are selling from wagons at Grand Rapids, Mich., at from \$1 to \$1.25.

—The Democrats have a majority of 70 on joint ballot in the Missouri Legislature.

—There is a rumor that Fernando Wood is to be appointed Governor of Nebraska.

—Only nine of the 250 towns in Vermont gave Democratic majorities for Governor.

—The Carlton, (N. B.) Sentinel records the fact that the potato disease is making unprecedented ravages in that portion of the country.

—The yellow fever has broken out at Mobile.—At New Orleans its march appears to be still onward. Savannah is reported free from it.

—In a large city the clock never strikes twice in the hearing of the same population for within the hour a child is born and some soul taken.

—The Montreal Herald says that the Canadian flour and wheat which reaches England is in a miserable condition and bears a low price.

—The receipts of the St. Louis fair were \$39,000. The daily receipts at the gate were \$3,700 and the proceeds exceed the expenses \$16,000.

Foreign Intelligence.

Arrival of the North Britain and Niagara.

The North Britain arrived at Quebec on the 21st ult., and the Niagara at Halifax on the 22d.

GRAND BRITAIN.—Though the political intelligence, generally speaking, is not of great interest, especially in relation to the Atlantic Telegraph.

The stoppage of the signals through the cable was announced in the English papers of the 6th inst., in the shape of a letter from the Secretary of the Company. The letter says that intelligible signals ceased to be received from Newfoundland on the morning of the 3d, from some unknown cause. The Directors and a corps of scientific electricians were at Valencia, investigating the matter, with a view, if possible, to remedy the difficulty. On the 11th, when the Niagara sailed, the signals continued to be received, but were too uncertain and faint to be legible. Occasionally a word is given, but never anything approaching a sentence. The experiments made still lead to the belief that the injury is near the coast, probably within a few miles.

FRANCE.—An official report of Prince Napoleon, Minister of Algiers, of the condition of the colony, is published. He expresses a desire to replace, as far as and soon as may be safe, the military by a civil government. The latest accounts from the Departments announce a gradual improvement in commercial affairs.

The Times' correspondent is assured that the French government have decided to apply free trade to Algeria, and that all the ports on that coast are to be declared free.

RUSSIA.—A St. Petersburg telegram of August 31st, says that a great explosion took place in the morning of that day, in some powder mills in the vicinity of the city, by which it was feared that several hundred lives would be lost. A subsequent dispatch says the explosion was at St. Petersburg, and 100 workmen were killed.

Hundreds of houses had been burnt at Moscow by clandestine makers of Lucifer matches, and the forests had caught fire and were still in flames on the 1st of September. The smoke at St. Petersburg, in consequence, was intolerable.

INDIA.—Mann Singh, who was besieged in the fortress of Shabji by a large body of rebels, has been relieved by Gen. Grant, whose column is now at Fyzabad, where it has been joined by Manning and his troops.

Gen. Robertson having come up with the rebels near Katurd, totally defeated them, capturing four guns. The loss of the enemy in killed was very severe.

Commercial Intelligence.

BREADSTUFFS.—Richardson, Spence & Co. quote flour from, Good demand, Philadelphia and Baltimore 26 1/2; Ohio 26 1/2; New Orleans 26 1/2; Wheat flour, but quiet, Red Western 66 1/2; Red Southern 63 1/2; White Southern 74 1/2; Corn dull and nominal. Yellow 33 1/2; White 34 1/2. The weather had been unfavorable, but it had no perceptible influence on the market. The Broker's Circular quotes an advance during the week of 1c on choice lots of corn and feed.

Special Notices.

DR. SANBORN'S LIQUID CATARRH REMEDY.—Price \$2 per bottle, sent by Express to all parts of the Country.

GUILFORD D. SANBORN, M. D., Rochester, N. Y.

EXTRACT FROM A LETTER

Written by a lady, in New Bedford, for her sister, in Boston. "Send in the parcel, two or three bottles of Mr. BARNETT'S COCAINE; it is the best thing I ever used for dressing my hair. I use it only once a week, and my hair is beautiful." See advertisement of Barnett's Cocaine in another column.

CATARRH CURABLE.

Persons suffering with that common and unpleasant disease—Catarrh, by sending a stamp, will have returned, by mail, a Circular, giving symptoms and danger of this disease, and how it can be cured.

Address GUILFORD D. SANBORN, M. D., Physician for Diseases of the Chest, Rochester, N. Y.

LET EVERY FARMER AND FAIRMAN SEE SCHOLLEY'S PATENT PRESERVATORY AT THE STATE FAIR, SYRACUSE.

MOORE'S RURAL NEW-YORKER

TWO DOLLARS A YEAR.]

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FIVE CENTS.

VOL. IX. NO. 41.]

ROCHESTER, N. Y.,—SATURDAY, OCTOBER 9, 1858.

{WHOLE NO. 457.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductors devote their personal attention to the supervision of its various departments, and carefully labor to render the RURAL an eminently Reliable Guide on the important Practical, Scientific and other subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

For Terms and other particulars, see last page.

Rural New-Yorker.

WHAT IS GARGET?

Messrs. Eds.:—Seeing many inquiries in the RURAL for remedies for Garget, Enlarged Udder, &c., I am led to think that it is not exclusively in the city that the milk of unhealthy cows is used. I deem the subject one of much importance as regards the health of the people, and would like to see it fully treated in your columns, believing great good would result therefrom.—HENRY LOXO, Melville, Cass Co., Mich., 1853.

At no time since the first issue of the RURAL, have we had as many inquiries relative to the diseases referred to by our correspondent as during the present year; and his belief that "the milk of unhealthy cows is not exclusively used as an article of 'city nourishment,'" certainly possesses a firm base. That part of medicine which explains the nature of diseases affecting our domestic animals, their causes, and remedies, is hidden in much darkness; but the importance of these co-workers with man is fast being properly appreciated, and this, taken in connection with the fact that men of clear minds—men enthusiastic in their chosen profession,—are philanthropically devoting themselves to the perfecting of a *Materia Medica* specially adapted to the wants of the brute creation, gives us glowing hopes for the future. Day by day these individuals are gaining the strength which knowledge alone can give—and we hope the agricultural press will soon be enabled to chronicle the downfall of empiricism and barbarity. The times demand a rational method of medication founded upon physiological laws, a correct system of therapeutics, pathology and chemistry,—without these, success is a myth—the most arduous and severe labor will accomplish literally nothing.

Garget is a disease attacking the internal portion of the udder—one of the teats or the quarters becomes enlarged, hot and tender,—it soon begins to feel hard, is knotty, containing within it small, distinct, hardened tumors or kernels. The disease spreads, and other portions assume the same character. The milk coagulates, and where it lodges local inflammation ensues. Young cows, after their first calving, are particularly subject to an attack, especially when in high condition. A greater or less degree of fever is usually attendant. Garget may be classed among maladies of an inflammatory type.

The symptoms attending general inflammations (though all may not be present in every case), are swelling, redness, pain and heat. The swelling is caused by distension of the vessels of the part, at the outset, but effusions from the surface afterwards take place. Redness is the result of a surplus quantity of blood being present in the vessels. Pain is produced by the pressure of the enlarged vessels upon the nerves of sensation. Heat, an invariable symptom of inflammation, is owing to the development of more than an ordinary amount of caloric, from the presence of an unusual quantity of arterial blood. The part inflamed is more abundantly supplied with blood than when in a healthy condition,—if the inflammation is not suppressed the blood vessels become enlarged and a permanent enlargement often results.

The causes for inflammation in the disease under consideration are various. Garget may be brought on by exposure of the animal to cold and wet at the time of, or soon after, parturition, and by high condition. Hastily drying a cow has produced indurations not easily removed. Lying upon and bruising the udder is another cause. Another source of this evil—and, probably, the most fruitful one,—is the careless habit of not milking the cow clean, leaving a quantity of milk in the bag to irritate and inflame.

Inflammation is succeeded by suppuration—the formation of pus, or matter. The sequel of inflammation is exhibited by ulceration,—the absorption and removal of substance—being illustrated by an abscess. Ulcers may occur in cattle both when in health and diseased, and may be preceded or not by suppuration; in the former case it soon

heals, in the latter it is too apt to spread and increase.

Treatment.—In the early stages of this disease, the most effectual remedy is to place the calf with the mother, that it may suck and knock about the udder at pleasure. Relief, in most cases, soon follows, the milk flows dispersing all lumps. Should the inflammation continue, or the bag be so tender that the cow will not permit the calf to suck; and, especially, should the fever increase and the cow refuse to eat, or cease to ruminate, and the milk become discolored and mixed with matter and blood, then the case must receive immediate attention. Youatt recommends bleeding, a dose of physic administered, the udder well fomented, the milk drawn gently but completely off, at least twice in each day, and an ointment, composed of the following ingredients, as thoroughly rubbed into the bag as the cow will permit. Soft soap, one pound; mercurial ointment, two ounces; camphor, rubbed down with a little spirit of wine, one ounce—rub well together. Apply after every milking, the udder being well fomented with warm water, and the remains of the ointment washed off before the next milking.

If the foregoing fails to speedily remove the disease, iodine must be resorted to. Although iodine often has admirable effects in diminishing glandular enlargements, there is an objection to its frequent use—it occasionally acts upon and diminishes the gland itself. The mode of application is external, in the form of an ointment (one part of the hydriodate of potash being incorporated with seven parts of lard) one or two drachms (about the size of a filbert) of which should be rubbed into the diseased portion of the udder morning and night. Doses of the hydriodate may daily be given internally with a little gruel, gradually increasing from six to twelve grains.

During the process the udder must be closely watched, as matter will begin to form, and it should be speedily removed. If suffered to work its own way to the surface, large, irregular ulcers, difficult to heal, will be formed. Whenever there is the appearance of suppuration the diseased part should be freely and deeply lanced.

While the disease is in progress the bowels should be kept open, and for this purpose take half doses of the following:—Epsom salt, one pound; powdered caraway seeds, half an ounce. Dissolve in a quart of warm gruel. A fever drink composed of emetic tartar, one drachm; powdered digitalis, half a drachm; nitre, three drachms—mix and give in a quart of tolerably thick gruel. A drink more decidedly diuretic is made of powdered nitre, one ounce; powdered resin, two ounces; ginger, two drachms—mix well together in a little molasses and give in warm gruel. This latter drink it will be well to continue for two or three weeks after all bloody discharges have ceased.

The treatment recommended by Dr. DADD is to perseveringly foment the teats, or quarters that have become hot and tender, with an infusion of elder or camomile flowers, at the same time drawing in the most gentle manner, a small quantity of milk. He then gives an aperient—one pint of linseed oil and the yolks of two eggs, or one pint of sweet oil and half a teaspoonful of cayenne pepper—and keeps the animal on light diet. If there is danger of matter forming, rub the bag with equal parts of goose oil and hot drops. If the parts are exceedingly painful, a wash of weak lye, or wood ashes, or sal soda, is recommended. If necessary compels the use of the lancet, after the matter is evacuated the part is washed clean and a stimulating liniment applied.

We have thus glanced at the causes and various modes of treatment for this painful disease, and though there are a thousand so-called remedies put forth as curatives by cow-doctors and others throughout the country, the course we have noticed can lay some claim to regularity. We doubt not that either of the modes prescribed, if faithfully carried out, will meet all the objects the attainment of which is desired.

MANAGEMENT OF STUBBLE FIELDS.

THE best method of managing a stubble field, which is to be sown or planted the next season, is a question of interest, and yet one which receives very little attention. Very often they are allowed to perfect a crop of weeds, filling the land with foul seeds, and injuring largely the crops which follow, or entailing serious increase of labor in their cultivation. A better way would be to plow under this growth, as it would clean the land and benefit the soil, but a more thorough system is that commended by Mr. HUBBARD, of Hampshire Co., Mass., in a communication to the County Ag. Society, some years ago. He would plow soon after harvest, and sow on a crop of rye,—a light seeding only being necessary.

Among the benefits of the practice are these:—The fall feed, which will pay for the seed and plowing. A green crop of rye to turn in as manure in the spring, equal to five or six loads of manure per acre. Autumn plowing, pulverizing the land,

and saving more in fitting it for the crop, or in first hoeing, than all it cost the year before. The destruction of the seeds of noxious weeds, turned under before they ripen. A deepening of the soil—the team being well rested from the spring's work take hold with a will, and are better able to turn a good furrow than in spring plowing. These remarks apply more particularly to light and sandy soils. Our heavy lands would be too hard, in our dry seasons, for early autumn plowing, nor are they well suited to the production of rye, or constant cropping. But light lands, so treated, would produce a heavier crop of corn, roots, or spring grain, with the same manure, than if allowed to remain untilled in autumn.

THE POTATO CROP.

THE 30th ult., we spent among the potato fields and growers of this section. We do not think half as many potatoes are grown in the same extent of territory, in any other place, as within twelve or fifteen miles of this city. There are several reasons why this crop receives so much attention. In the first place, this was the famous wheat section. Here we raised the world-renowned *Gemsee*, and our city was known as the *Flour City*. When this crop failed, the potato seemed to furnish the most available substitute, and many engaged in their culture as a main crop. This fact becoming known, our city soon became the resort of purchasers for the New York market. The price paid has been such as to make this crop highly remunerative, not averaging less than seventy-five cents a bushel for the last five years, and this, of course, has had its influence in stimulating the production. Most of the land, lying north of the city, and between it and the shores of Lake Ontario, is light, and peculiarly adapted to growing the potato in a healthy condition, and it is no strange thing to find farmers in this section, whose almost sole dependence is upon the potato, growing from twenty acres upwards.

Our growers are as much affected by the tastes and notions of the consumers in New York, as though they were in its immediate vicinity, for, of course, the purchasers buy to suit their customers, and the Mercer, which is a favorite sort, will sell for at least one-third more than most other kinds. This variety, however, yields but poorly, and is the most subject to the rot, and any variety that would possess its good qualities without its bad would be a great acquisition. Some of our growers are trying to get such a variety from seed.

The crop the present season is very light, the potatoes small in size and of poor quality. The tops were cut down by the blight, (which Mr. HANCOCK says is the insect,) before the tubers were half grown. We saw potatoes that were planted the first of June, as dead the middle of August as though they had endured a week's hard frost. The tubers thus suddenly stopped in their growth, are not of good quality, some seem to have partially ripened, while others appear as unripe as we would expect to find them at the first of August, with the tops all growing. Some are rotting, though the rot is not very general on light land. The specimens affected seem to be very badly diseased, some being half, others entirely destroyed. Notwithstanding the pooriness of the crop, potatoes have not been as cheap for many years as at present.—Growers, especially those whose land is a little heavy are afraid to trust them over the winter, and force them upon the market. The result is, they are now selling at from twenty to thirty five cents per bushel. If the crop, however, is not better in other sections than here, they must bring a high price in the winter or spring.

We have been very much interested this season in watching about thirty varieties of potatoes, raised from seed, by GEORGE VICK, about five miles from this city. The seed was sown two years ago this spring. His object was to raise a potato as good as the *Mercer*, one that would bring as high a price in the New York market, and yield a good crop. The *Mercer*, it is known, is a poor bearer, and although it sells higher than most sorts, is not, therefore, very profitable. The seed was obtained from *Mercer*, *Scotch Greys*, and several other sorts. This spring the seedlings were planted carefully, and labeled, and in a short time we expect to see some interesting results. But, what attracted our particular attention, was the different degrees of injury the leaves and tender shoots had received from the insect. A portion of them have their leaves and tops slightly injured, some are injured quite badly, while the haulms of others were destroyed, almost entirely, quite early in the season. Then, there are others entirely uninjured, and as sound and healthy as could be desired. Is it not singular that the insect shows such a nice taste? Whether or not an insect causes the rot, there can be no question but that the insect before referred to injures the haulms. We have had proof of this in the destruction of our *Dahlias*, by the same enemy.

The past Spring J. RAPALJE presented us with two large, whitish potatoes of something of a

ARABIAN HORSE "TARTAR."

FINE horses are always popular and admired, but this popularity and admiration seems to culminate during the season of Fair, when so many superior specimens of the equine race are exhibited to advantage. The present is, therefore, the season to talk and read about the best breeds, and compare and discuss them.

We offer no apology for devoting more than usual attention to portraying and describing representative horses. Two or three weeks ago we gave a portrait of an English Draft Horse, and talked somewhat of that elephantine breed; and we now represent a pure blood Arabian, and converse of his family relations.

We give an excellent portrait of the Arabian Horse "Tartar," sired by the celebrated "Imam"—a pure Arabian stallion, presented by the Sultan of Muscat, to Mr. PINCHER, of Salem, Mass., and said to have been selected as the best of a stud of one hundred favorite horses. "Tartar" was bred by ASA PINCHER, of Topsfield, Mass., and was subsequently owned by J. S. LEAVITT, Esq., of Salem. The unnatural and cruel manner in which his beautiful head is curbed in, is a decided blemish—while his back is somewhat low, and longer than accords with our idea of strength and symmetry, though for speed it is not an objection. The best points which the engraving displays are the head, (which we consider superlatively beautiful,) the well arched and exquisitely set on neck, the large, well developed, muscular quarters, and strong flat legs, short from the knee to the fetlock joint.

The Arabian horses are known to be the swiftest, hardiest and gentlest in the world, and though it is asserted that a superior Arab mare has never been sold out of the country, yet such as have been imported into Europe, have stamped indelibly their valuable characteristics on the breeds crossed with them. The modern English racer owes some of his best qualities to Arabian blood. According to Mr. LAYARD, there are five distinct breeds of Arabian

kidney shape, with pink eyes, which he called the *Mammoth Pink Eye*. The sort was sent him two years previous by a gentleman of Washington county. Liking their appearance we gave them to one of our potato growers who cut them into forty pieces, as they contained this number of eyes, and planted each piece in a hill. We examined them when growing, in a field of ten acres, containing several of the best sorts, and yesterday, the last day of September, dug several of the hills, and they are the largest, most productive, and apparently the most healthy of any that we have seen, equalling the *Merino* in vigor and productiveness. If the quality is fair, which we are informed it is, this sort must be a great acquisition. Some good judges who tried them last year are loud in their praise. The *English Fluke* and some other promising new sorts are rotting badly.

The following communication from Mr. HEN-

DRY, has been crowded out several weeks. It can do no harm, and we think will do good, to heed his counsel, given in a previous number, and dry thoroughly all potatoes before housing.

EDS. RURAL.—Since I visited Rochester, in the beginning of August, I have traveled over sixteen hundred miles in different parts of the country, visiting during that time over five hundred potato fields, and in every particular have my previous investigations been verified. I have not found one farmer who doubted. The matter is so plain that the simplest individual can see and understand how the rot is produced. I found the earlier planted potatoes were very much affected; for in-

stance, those planted in the month of March at Flat Bush, Long Island, were so much diseased in the beginning of August, that from one third to one-half were left on the ground at digging. The smallest young insects, such as we examined together in Rochester, were very numerous on the decaying tubers under ground.

Your paper of the 21st August, is before me, and in answer to the *Albany Country Gentleman's* statement that from the earliest times, the farmers have found the insect referred to infesting their potato fields, and have consequently given it the common name of Potato Bug, I say that in all my travels, I have not yet found one farmer who had ever seen the *Phytocoris* before I pointed it out to him. The Potato Bug, so called by the farmers, is an entirely different insect, having no proboscis, and injures the leaves in the early part of the season by eating them, but no rot is produced. I did find one store-keeper on Long Island who had seen the *Phytocoris* on some of his potatoes growing in his garden, but did not know what injury it was doing.

To the second question, I think S. E. RATHVON's letter is a complete answer, for he there states that he has foreign specimens which resemble the *Phytocoris*, which he calls *P. Pratensis*. In your remarks you say that you think that Dr. SMITH does describe, in his work on the potato disease, an insect very much like this in form, habits, &c. In that you were not mistaken. Mr. SMITH, in paragraph 245, says that "a very small insect which is constantly to be seen upon tubers, is a small *Acurus*, which runs about the potato very nimbly. There

is no reason whatever for believing that it causes the malady." Now, this is precisely the young *Phytocoris*, such as you said looked like an animated dew drop. This insect I have watched from the time it first made its appearance until it got its wings, and in answer to S. A. BATHON's doubts as to my theory of their propagation, I have to state that the insect comes out of the egg perfect, except wings, and can live over ground if so hatched, and in that state I watched them, and could not be mistaken. Besides, from twenty to thirty eggs, I soon found that I had hundreds of the young insects. I have again and again seen the young insects cohabiting, but never those full grown. Mr. BATHON states that he is quite certain that he has seen the species under consideration, or those nearly allied to them, in the larva state, upon plants many times. He also adds, their habits, then, are similar to the mature insect. Now this, I think, bears me out in my statement, for if they cohabit over ground so young, they will underground at the same age. The insect being hatched underground does not change its nature. In all my investigations, I have had no theory to build up. Facts only were looked at, and everything that could not be tested was laid aside. If I am wrong in any one particular, I should like to have it pointed out. No wholesale denouncement is worthy of a moment's consideration; not even from Dr. FITCH or Dr. LINDLEY. Let them bring forward their opposition item by item, and then the public generally, and the farmers in particular, will be able to judge who is right.

I am under obligations to Messrs. BATHON and STAFFORD for the gentlemanly manner in which they state their doubts, and no less so to yourself, Mr. Editor, for the interest you have taken in the matter since it was first brought under your consideration, although I do think that you have not been as decided in your statements as the facts brought to your knowledge would have warranted. For instance, you state that the insects were so numerous that you have seen one hundred specimens on one hill: now, what were they doing there? Could it be said of any other insect that they were to be found in such numbers on the potato crop? I know from personal observation, that this is not the case; besides Entomologists state that they are injurious to vegetation. Mr. BATHON states that he found them on the tomato and nightshade plants, which are of the same family as the potato. He does not, however, state what effect they had on those plants; a matter of some importance.

Should you find room in your next issue for the foregoing, I may, on some future occasion, address you on the same and other subjects interesting to farmers, and which I have now under consideration.

ALEXANDER HENDERSON,
Buffalo, N. Y., September, 1868.

PLEASURE GROUNDS.

HOME, the place of one's constant residence, is a term replete with deepest interest. It should also be a place of beauty. There should be an exhibition of taste, not only in the architectural construction of the house, but in its surroundings. How few rural residences are beautified by what is truly and elegantly termed *pleasure grounds*. Taste is the faculty of discerning beauty, order, congruity, proportion, symmetry, or whatever constitutes excellence. It is a nice perception of that which is beautiful, or the power of perceiving and relishing excellence in human performances, especially the fine arts. It is style and manner in respect to what is pleasing.

THE FARMER'S BEAU IDEAL.—It is a source of regret that so few of the agricultural classes, seem to have developed, in any considerable degree, this noble faculty. A large two story dwelling, 40 by 50, situated nearly on a line with the highway, with a 7 by 9 yard about the front door, crammed with briars and bushes, few or no trees about it, a large old fashioned barn on the opposite side of the road—the road itself in part being used for a barn-yard—a corn barn and hog house in close proximity, with shabby rail fences to match—these constitute their "beau ideal" of a home!

COMMON FOLLY.—It is a sickening truth that there is a fearful waste of property throughout our rural districts by investments in over-large houses. Millions of dollars are worse than destroyed by being buried amid huge piles of boards, brick and mortar. It seems that this is the fruit of a foolish vanity, for in four cases out of every five, the family occupy simply the wing, or kitchen part, while the main building serves only to be looked at by wayfarers, or dreamed of, and kept in partial repair by its owner.

PLEASURE GROUNDS INDISPENSABLE.—Every house in rural situations should have its pleasure grounds, the area of which should vary and agree with the size of the residence. The grounds should be tastefully laid out and arranged, with circling drive-ways, winding foot paths, groups of trees, shady arbors and retreats. If the surface of the ground is uneven and varied, all the better. An elevation here, and a depression yonder, only serve to heighten its charms. Roses and flowering shrubs may be planted as borders to the walks, and here and there an evergreen will serve to heighten the effect. Let no one imagine that this is turning land to a valueless account. The grounds are in grass, and are made to contribute favorably to the dimensions of the hay-mow. We advocate no extravagant outlay of means in fitting the grounds, much less in the construction and cost of the buildings. Houses of moderate dimensions, finished neatly and conveniently, and furnished substantially but not showily, with ample pleasure grounds, arranged with taste and beauty, are far more desirable than those huge, unsightly dwellings which are to be seen all through the country, crowded into the highway, and meagerly furnished within.

A BEAUTIFUL OBJECT.—Were we called upon to mention a thing of beauty, we would cite to a snow-white cottage, half screened from view by generous foliage, having ample pleasure grounds, nicely divided by winding foot paths and gravelled walks, and inviting to its cool retreats the dusty, weary, way-worn traveler.

THE CULTIVATION OF TASTE A DUTY.—The effects of these tasteful arrangements as to our dwellings and grounds are two fold. First—its direct and refining effects upon our own family, producing a

love of home and home occupations. Second—its cheerful and healthful effect upon all who may come within the circle of its chastening and elevating influence.

A MISTAKE.—It is a mistaken idea that the useful is confined solely to that which contributes to the support of animal life—that what will not directly enhance and swell our coffers, is a misdirection of effort—that the Money King is the only monarch that can rightly claim the allegiance of our powers. It is a sentiment of inspiration that man shall not live by bread alone. Man is constituted with a keen perception of the beautiful. A landscape, a waterfall, a rainbow, a flower, a group of trees, if they produce pleasure in the beholder, are really useful. The God of Nature is a God of endless variety and beauty. They are scattered with a lavish expenditure through all his works. Why are we endowed with such exquisite perceptions of the beautiful, if it be not right and proper to gratify our tendencies in that direction? To assert that a thing is simply beautiful, but good for nothing, is giving utterance to sheer nonsense, for everything that is truly beautiful in all its parts, is truly useful. The capacity of receiving pleasure through the different senses—of hearing, seeing, and smelling—is as worthy of gratification, as that of pampering the palate with delicious viands, and often far more innocent.

A FACT.—It is a gladsome fact that the style of ancient architecture is receiving a radical change, and is giving place to new and modern modes, clothed with refined elegance and taste. The late lamented DOWNING has left a legacy of ideas that will be cherished as a sacred treasure, in the hearts of his countrymen. But in connection with the improvements in the construction of our dwellings, we need to pay far more attention to the grounds around them. No one subject needs so thorough and radical a change as this. He who might be instrumental in producing a reform in this noble object, would be justly entitled to more honor than usually rests upon the distinguished and great. His name would descend to posterity as a philanthropist—as a benefactor of his race. It might not be tabled in brass or marble, but it would be inscribed on tablets far more enduring—the hearts of his countrymen and their posterity forever. No farm-house should be thrust into the din and the dust of the highway. He who does this wickedness, robs himself, his companion, and his children, of a full cup of pleasure every day through all their lives. He can scarcely compute the amount of injustice and positive injury he inflicts, by so flagrant a breach of good taste.

A CONTRAST.—Let those who contemplate the erection of new dwellings contrast the picture of a huge, uncouth dwelling, situated on or near the line of a filthy, dusty thoroughfare—with barns, cow yards, piggeries and other out-buildings, huddled together in one motley group—with a beautiful white cottage, or farm-house, situated at a modest distance* from the road, half screened from view by graceful shade trees, with fine, simple pleasure grounds artistically arranged throughout; its velvet lawn, its winding gravel walks, its circling carriage road, its groups of evergreens, its bowers and rustic seats, all vying with each other to lend their charms and heighten and increase its beauties; having its farm buildings neatly, tastefully and conveniently situated in the rear, and connected by a distinct and separate entrance with the highway; then let them render their verdict in the case by a practical demonstration, which rejects the abominable and absurd, but endorses the beautiful, the chaste, and the elegant, (in pleasure grounds) which we advocate. But more on this subject at a future time.

*No farm-house, should have in its pleasure grounds less than a plot 20 rods square. From the highway, let the house occupy a position three-fourths of the distance to the back line, while to the right and left, it is about equidistant from the lateral lines.

BEEES AND BEE-HIVES.

MY EXPERIENCE.—NO. IV.

It is supposed by many that the inclined bottom-board is effectual for rolling out the worms that fall upon it. I have seen worms drop from the combs that had a thread attached above, like a spider, and could creep back if they chose. I have become satisfied that but few leave the combs till they have finished their mischief there—eaten all they wished to, and are ready to spin their cocoons, for, be it known, they are a species of silk-worm. Now, even if there is no thread attached above, how are they to be thrown off the board?—they have legs, and claws on the end of each by they can hold fast. I can imagine a shot, musket-ball, or even a pea rolling off, but the moth worm, it is difficult. And, if it should roll off, what have we gained then? Imagine every one that touches the board to be thrown "beels over head" to the ground, he does not break his neck or legs, but gathers himself up quietly, and looks around for a place to spin his cocoon; he may find it in the grass, or under some stick, or board; he cares nothing further for the hive now, as far as himself is concerned. Secured by his silken covering, he quietly awaits his transformation from the larva to the chrysalis, from that to the mature form which is the brown moth. He is now furnished with a pair of wings, ample to carry him to the hive whenever disposed to visit it, even if fifty feet from the ground! As far as his own wants are concerned, the hive furnishes nothing for his appetite. It is only to accommodate his offspring that he seeks it. The waxen combs are the only proper aliment, and it is his endeavor to find a situation where access to such food is as easy as possible.

These inclined bottom-boards are usually but not always connected with the suspended hive, which I think must be objectionable to any one who wishes to know the true condition of his bees at all times. The trouble of unhooking the bottom-board, and getting down under the hive, and looking upward, and seeing nothing satisfactory for want of light among the combs; or lifting the hive from its supporters, and turning it over, is too formidable an operation to be done every day, or once a week, for an indolent man, or one that has much other business. The proper and necessary examinations would be very likely to be put off entirely too long, and when made the stock might

be past remedy from neglect. "See your bees often," is a valuable injunction—worth hundreds of dollars at interest—even where there are only a few stocks. How important, then, that we have everything convenient for minute inspection. The simple box is far preferable in this respect, it can be turned over and examined with much less trouble.

St. Johnsville, N. Y., 1858.

PRODUCTIVE CORN.

MISSISS. EDG.—Mr. JOSEPH WRIGHT has several acres of corn now standing in large stacks in the fields, and in such bulk as perhaps was never before equalled on the same extent of the earth's surface—prairies and river bottoms not excepted. Ten years ago these fields were an unsightly bog, overgrown with bushes, aquatic weeds, cat tails, &c.; the soil, sand resting on clay many feet below. It was tiled, the drains thirty feet apart, the mains leading to the Seneca outlet; then, after being grubbed, the field was treated with stable manure, plowed and harrowed, and planted with tobacco; producing a very heavy and very even crop. A second large crop of tobacco was grown with a little addition of manure. The last spring two acres of it was planted with large, sixteen-rowed, Dent corn, four feet apart each way, three to four kernels in the hill, with only a little fine manure to each hill. The seed planted was from a barrel of ears brought to the U. S. Fair at Philadelphia, for exhibition; but the present product is at least twenty per cent. larger than were the seed ears. Some of the ears are 14 inches long, with 16 to 20 rows to the ear, and the kernels as large and long in proportion—on one ear I counted 972 kernels—but the great evenness of the yield is the most remarkable feature of the crop, as every stalk had at least one large ear, and in every hill I noticed at least one stalk with two very large ears, and nearly alike. The tallest stalk was 14 feet, while there were few under 12 feet. When this corn was cut up, on the 25th September, the stalks were apparently as sweet and juicy as the stalks of the Sorghum. Although every rank weed had been kept down in this corn, the whole surface was now covered with a thin mat of chickweed, which seemed rather to aid the loose soil to retain its moisture and its caloric. In an adjoining field Mr. W. had three acres of long eight-rowed Flint corn, some of the ears nearly 18 inches long. The yield was very large, even larger than I had ever seen before; but although the fodder was more abundant and valuable, the cereal yield would not compare with that of the Dent corn. Some of the largest ears of both will be exhibited at the State Fair at Syracuse, where, methinks, they will take the palm.

There can be no doubt but that the extra growth and great evenness of the same, both in this corn and the previous tobacco crops, could not have been attained without the aid of tile drains. In July last, I saw tobacco growing near Buffalo, on a field more highly manured than Mr. WRIGHT's, but for want of underdrains the tobacco was very unequal in the growth of its heads—in the low spots they were very small, while on the very highly manured knolls they were no larger than the average of Mr. W.'s crop.

Waterloo, N. Y., 1858.

WORK FOR THE SEASON.

THE autumn-time is unmistakably with us. It is here in all its chastened beauty, tingling field and forest with a sombre hue. To us it is the most delightful season of the year.

And now that the pressure of harvest duties is over, it is time to look about and see what permanent improvements can be made upon the farm, also what can be done to forward work another spring.

DITCHING.—Among the last spots mowed were the swales and low grounds of the farm, yielding, perhaps, a ton of inferior grass to the acre. Drain such lands as speedily as may be consistent with your other engagements. Do not wait till your present stock of muck is exhausted, but ditch for the sake of letting out the water. "A farmer should be content to kill one bird with one stone, if he has not the opportunity to kill two." Wet lands, after being drained and allowed time to carry off the water become thoroughly changed in texture, are much easier worked, yield more and better produce, are more readily warmed, and therefore earlier, sometimes to the extent of two weeks or more, and, withal, more healthy after being drained.

SAND HILLS.—It not unfrequently happens that barren knolls or sandy plains are close to a muck swamp. Where this is the case, you may "kill two birds with one stone." In most soils there is a deficiency of some of the primitive earths,—sandy lands have an excess of siliceous, or, in other words a deficiency of aluminous particles. By adding muck or clay, the constitutional texture is changed and improved, and the character of the land ameliorated, and rendered more productive. The addition of these earths to sandy lands renders them more ponderous, and consequently less liable to sift and wash,—it also increases their retentive power or capacity, and, therefore, endues with the necessary energies requisite to enable them to resist successfully the effect of drought.—An inch or two of sand or gravel upon the swamp will do more for it than the same quantity of manure. Swamps too soft for plowing may in this way be reclaimed. These exchanges of soil, we are fully persuaded, will pay on all farms where swamp and poor land abound. The yield is, in many cases, more than quadrupled. FRYE, JR., Andover, Maine, 1858.

NOTES AND ITEMS FROM ILLINOIS.

Sorghum.—Wheat.—Lee Co. Fair.—Large Barn.—The Rural, &c.

FRIEND MOORE.—W. B. P. seems to cherish a little of the "old grudge spirit" against Messrs. DOOLITTLE & Co. in regard to Sorghum growing. Now, Mr. P. and myself hail from the same blue hills and last autumn when I left Stenben, I was convinced that Sorghum was a humbug. But it is not. I have eaten here at the West, gallons of its syrup superior to Sugar-House. I have also seen 80 acres in one field of prolific growth and fully reaped. It is largely planted through this State,

and is being extensively manufactured now in some places. It is no humbug!

WHEAT.—C. P. D. would infer that the wheat crop is poor, partly from want of proper cultivation. However this may be, the real cause of scant yield, so far as I have seen, has been blight—the Club yielding as well as any, but generally not as good quality. The blight affecting the wheat here is similar to that described in Vol. 15, page 312 of Harper's Magazine. Wheat has blighted here on every variety of soil and under the best of cultivation.

LEE CO. FAIR.—The Third Annual Fair of this county is to be held at Amboy, October 13th, 14th and 15th, instead of at Dixon as you said in a late Rural. Send on machinery and fruits; we will be on hand to look at them.

LARGE BONE.—While breaking prairie lately I discovered the scapula bone of some animal considerably decayed. I gathered the piece, and upon arranging them, found it at least six inches longer than a similar bone from a large ox or horse. It has been examined by several gentlemen and pronounced a curiosity. If proportionate it must have been a monster elk or buffalo to whom it belonged.

THE RURAL is a favorite institution here, serving as a popular encyclopedia. As at the East, it is read by old and young, and liked by all. You may at least count as a life subscriber, W. H. G. Amboy, Lee Co., Ill.

INQUIRIES AND ANSWERS.

CAN you, or some one experienced, inform an "old time" subscriber, through the columns of the Rural, whether it is a fact, (as is here reported by some), that two or three of the upper joints of the Sorghum are bitter, and will not produce a good article of syrup? If it is, or if they will injure the flavor, it would be better to cut them off for feed than to injure the syrup by extracting the juice of the whole cane. An early reply to the above will much oblige. The majority of canes in this vicinity are magnificent.—C. P. HENDRYX, Franklin, Lenawee Co., Mich., 1858.

REMARKS.—The upper joints will make good syrup, but when manufacturing sugar they are cut off, as they contain but little of that article. The eight lower joints are the richest.

TREATMENT OF POLL EVIL.—Will you, or some of your readers, inform me how to cure the poll evil? I have a horse which is getting it, and thought that through the Rural, I might gain the desired information.—SUNSHINE, Whitford, Lucas Co., Ohio, 1858.

REMARKS.—As the horse of "Sunshine" is only "getting" the disease, it may be well to give a few of the causes which operate to produce it. These may be found in his own stable, and, if present, should be removed. Poll Evil is generally the result of blows or bruises. Horses in low-roofed stables are apt to strike the poll against the beams or ceiling, and frequent repetition produces induration. Where the horse is restless and continually throwing the head up, especially if tied short, it becomes bruised from the pressure of the head-stall, and tumefaction and suppuration soon set in. Excessive friction on the nape of the neck, from bridle or halter, or pressure of either on the part, from too tight fastening, is a very fertile cause. In the following directions for treatment, we give only such rules of action as are required for the cure of the disease before the ulcer has deepened and spread:

The first thing to be attempted is to abate the inflammation by bleeding, physio, and the application of cold lotions to the part. In a very early period of the case a blister might have considerable effect. Strong purgatives should also be employed. By these means the tumor will sometimes be dispersed. This system, however, must not be pursued too far. If the swelling increases, and the heat and tenderness likewise increase, matter will form in the tumor; and then our object should be to hasten its formation by warm fomentations, poultices, or stimulating embrocations. As soon as the matter is formed, which may be known by the softness of the tumor, and before it has time to spread around and eat into the neighboring parts, it should be evacuated. Now comes the whole art of treating poll evil; the opening into the tumor must be so contrived that all the matter shall run out, and continue afterwards to run out as quickly as it is formed, and not collect at the bottom of the ulcer, irritating and corroding it. This can be effected by a seton alone. The needle should enter at the top of the tumor, penetrate through the bottom, and be brought out at the side of the neck, a little below the abscess. Without anything more than this, except frequent fomentation with warm water, in order to keep the part clean, and to obviate inflammation, poll evil, in its early stage, will frequently be cured.

POTATO EXPERIMENTS.—I have been trying experiments in planting large and small potatoes cut and uncut. First I took middling-sized potatoes and planted two short rows, side by side, in drills. One row cut the potatoes into two or three pieces, the other row planted whole; gave each piece a space of a foot in each row and cultivated both alike. This fall I dug and weighed them, and the following is the result:—Cut 49 lbs; whole 45 lbs. The cut potatoes weighed 4 lbs. the most, and were larger than the others and the only reason I can give for it is that the whole potatoes produced more sprouts and made more small potatoes. I also took some small potatoes, the size of walnuts—planted one row whole and the next row cut into pieces and cultivated as usual. The yield was 39 lbs. cut, and 38½ lbs. of the whole ones, but those from the whole ones were the largest and best. I do not deem this experiment decisive, I wish others to try it.—AMERY WILLSON, Marcellus, N. Y., 1858.

CROPS &c., IN HINDS Co., MISS.—The cotton crop in this county is very deficient, more so, I think, than for the past years. I know quite a number of planters who will not make more than half as much as last year. Corn is light—too much rain and then a drought. In many sections much sickness—this is usual in yellow fever years. A few cases only in Vicksburg. Shall we see you South. I would be proud to welcome you to Log Hall and its "open house." We keep the door open, not needing even a latch string.—M. W. PHILLIPS, Edwards, Miss., 1858.

Rural Miscellany.

THE STATE FAIR.—As we write (Tuesday A. M.) the sun shines brightly, and the indications are most favorable for a pleasant week and successful exhibition at Syracuse. This is the opening day; to-morrow the judges will make their examinations and awards, and the Fair will be open to the public on Thursday and Friday. A dispatch dated Syracuse, Monday evening, says there will be a far larger attendance of exhibitors, and a better display in all departments, than last year,—that thus far the cattle, horses and sheep are of a higher grade than ever before remembered by the Society's officers,—and that the Grounds (comprising about 25 acres) are convenient, and the exhibition buildings superior in quality, size and accommodations. The entries in the various Classes are larger than usual before the opening day, and include many novelties and new inventions. Many distinguished visitors have arrived or will be present—among others Ex President VAN BUREN and Hon. JOHN WATSON, of Chicago. The Fair certainly opens very auspiciously, and promises to be one of the most interesting and useful ever held by the Society. We shall probably be enabled to report the result, from personal observation, in the next Rural.

THE RURAL FESTIVALS.—FAIRS—celebrated during the past two or three weeks, in various sections of the country, have generally proved creditable to the various Societies, and successful pecuniarily. Many of our exchanges, from various localities of this and adjoining States, contain gratifying reports of the results of County and Town Fairs. In this State, the shows of the Ontario, Oneida, Erie, Orleans, Niagara, Schoharie and Wyoming Co. Societies, held last week, were generally good and largely attended, so far as reports have been received. The Schoharie Co. Fair—which we had the pleasure of attending on the last day, (as alluded to on our news page)—was far better and more numerous attended than was expected, and the arrangements reflected credit upon the President, GRANT B. THOMPSON, Esq., and those associated with him in the management.

Several of the Union and Town Fairs held in this State have been remarkably successful—a number of them exceeding, in both exhibition and attendance, some of the Co. Shows. Among others, the Medina Union Fair is said to have been a perfect triumph. Others have resulted very satisfactorily,—but we are unable to even enumerate them in our present number.

THE VERMONT STATE FAIR—which took place at Burlington, Sept. 14th to 17th,—is reported to have been very successful. The exhibition of Ag. Implements was excellent, including nearly all the mowers, and a variety of horse-rakes, plows, harrows, corn-bushers, shellers, winnowers, seed-sowers, &c., comprising many new and valuable improvements. The display of Horses was of course grand, for no State in the Union can produce finer specimens of the equine race than Vermont. The show in this department, was a decided triumph, and greatly admired. The exhibition of cattle and sheep is also said to have been large and superior. On the whole, the exhibition and attendance reflected great credit upon the people of the Green Mountain State.

EXTRAORDINARY WHEAT PRODUCE.—The Cornish (Eng.) Telegraph states that a son of Mr. WILLIAM MANNING, of Trarven, near Wadebridge, while visiting the World's Exhibition of 1851, noticed an unusually fine sample of wheat, and requested the favor of a few grains. He brought home about 100 grains, which he that year carefully dibbled in, in one square yard of ground. This produced, in 1852, two gallons; this, in 1853, was again dibbled in, in about a quarter of an acre, and produced 80 gallons; this produced, in 1854, 50 bushels. The ratio would give 50 acres (customary) in 1855, 500 ditto in 1856, 5,000 ditto in 1857, and 50,000 in 1858, or more than the whole of the sowing of the county of Cornwall in one year. The quality of this wheat is superior to any ever grown in that neighborhood. The first prize at the Annual Farmer's Club has always been awarded to it, and it is now known as "The Exhibition Wheat."

SULPHATE OF ZINC AS A WASH FOR WOUNDS.—A correspondent of the New England Farmer, who was formerly a practitioner of medicine, makes some very interesting and useful remarks about the application of the sulphate of zinc in solution, as a wash for horses, cattle, sheep, &c. He asserts that it is excellent for sore teats in milk cows, and mentions a few cases where its application was at once effectual and permanent. For washing all kinds of wounds and sores, we believe that the sulphate of zinc will be found a virtue by those who use it, superior to any with which we are acquainted. The Scientific American comments thereon:— "We have been acquainted for a number of years with its useful properties for inflammation of the eyes, for which a very weak solution should be used; also for washing all kinds of sores." This experience is supported by other authorities.

WOODEN WATER-PIPE.—Having admitted H. J. F.'s allusion to HOBBS & Co's water-pipe, we cheerfully give the following brief reply from the latter gentlemen:

Somebody over the signature of "H. J. F."—of course entirely disinterested,—seems to be anxious to show the public through the Rural, how cheap materials can be furnished for the manufacture of water-pipe, and says in the last number of your paper that materials for pipe "equal to HOBBS & Co's wooden water pipe in its capacity, and of imperishable materials," can be furnished for twenty-five cents per rod. If cheapness of material is all that is desired, we will deliver them to any person in the western part of the State for twenty cents per rod.—I. S. HOBBS & Co.

LEAKING COW'S TEATS.—A correspondent of the New England Farmer says, dip the teat in strong alum water twice a day, for several days, and the leak will cease.

Now is the time to select and save seeds for use next season. Look sharp for good seed corn!

Orchard and Garden.

AMERICAN POMOLOGICAL SOCIETY.

SECOND DAY.—AFTERNOON SESSION.

PEARS FOR CULTIVATION ON QUINCE STOCK.

Long Green of Conn.—Mr. Townsend moved to strike this pear from the list. Agreed to.

Brandywine, Mr. Townsend recommended for culture on quince root. Messrs. Hooker, Barry, Brinckle succeeded well with it. Clark, of Conn., found it a very poor grower for the first two years. It was not recommended, though there was a pretty general expression in its favor.

Soldat Labourer, on motion of Mr. Hooker, was stricken from the catalogue.

Napoleon, it was moved, should be treated in the same way. Mr. Barry did not like to have it rejected. Colt, of Conn., and Reid, of N. J., could grow it on the quince, but the fruit was worthless. Quinn, of N. J., said it was one of the best pears he cultivated. Newhall had fruited it for twenty years, and found it fair every way.

Beurre Hardy was recommended by Mr. Hovey as the best for culture on quince.

Beurre Superfin, by unanimous consent, was added to the list.

Doyenne d'Alencon was added to the catalogue for culture on quince.

Howell was recommended by Clark, of Conn. Colt, Barry, and Townsend thought well of it.

Buffum—recommended by Mr. Hoag, of Lockport. Berckmans said it was splendid on the quince, at the south. As good as Virgallen. Walker considered it as a pear, on the whole, good enough, and one of the best of growers—tall as a poplar. Hooker did not find it as good as some of the gentlemen described it.

Bril Epine Dumas, recommended by Mr. Hovey. Mr. Field thought it did not make a good union on quince.

Doyenne d'Alencon—recommended by Mr. Barry. Clark, of New Haven, said it made one of the best of pyramids.

Beurre d'Arenberg—Mr. Field thought it should be placed on the rejected list, the tree is so unhealthy—others complained of cankering. Mr. Hovey objected to its rejection. Colt, of Conn., had grown it many years—no canker to injure it. Mr. Lyons said it did well in Michigan.

Stirling was recommended by the President. Improves by acquaintance. Lyons, of Michigan, had grown it for a great many years. Always good. Placed on list as promising well.

The following is the list of pears recommended for culture on the quince, as corrected at this session.

FOR CULTIVATION ON QUINCE.

Belle Lucrative, Louise Bonne de Jersey, Beurre d'Amal, Napoleon, Beurre d'Anjou, Nouveau Poiteau, Beurre d'Al, Rosticher, Beurre Langeller, St. Michael Archange, Beurre Superfin, Urbain, Catillac, Uvedale's St. Germain, Doyenne d'Alencon, Belle Angervine, Duchesse d'Angouleme, (for baking), Easter Bours, Village of Winkfield, Figue d'Alencon, White Doyenne, Giont Morceau.

FOR PARTICULAR LOCALITIES.

Grey Doyenne, White Doyenne.

SECOND DAY.—EVENING SESSION.

GRAPES.

As it was pretty evident this evening that all the time of the three days' session, would be necessary to revise the list of fruits, the further discussion of culture and pruning of the pear was postponed, and the list of grapes taken up for discussion and amendment.

Delaware—Mr. Prince moved to recommend for general cultivation. Mr. Bateham gave a brief history of the Delaware, stating that it was found growing on a farm near Delaware, Ohio, and was brought to that village for sale. It was found to be of excellent quality and hardy. It was traced to New Jersey. Four years ago, when attending the Pennsylvania State Fair at Pittsburg, he saw it on exhibition, by a gentleman residing near Wheeling, labeled the *Ladies' Choice*. On questioning him as to its origin and name, he was informed that the ladies preferred it to any other grape, and therefore the name; and that he found it growing on his farm when he bought it; and that its former owner emigrated from New Jersey. It proves perfectly hardy in Ohio, more so than any grape grown there. Had seen the Catawba and Isabella killed to the ground in gardens where the Delaware remained unharmed. Never heard of its being affected by mildew. Like all grapes, it does best in a good soil and with good culture, but had seen very good grapes on very poor soil. Mr. Thompson, of Delaware, Ohio, felt a personal gratification at the standing of this grape. When he first presented this grape to a Pomological Society, it was well received, but afterwards became mixed up with a worthless foreign sort, and for a while was belittled. There can be now no question as to its hardiness or health. The vine, when it has a fair chance, makes a good growth, though it is not as rampant a grower as some of the natives. The original vine came from a garden in Hunterdon county, New Jersey. R. R. Scott, said it grew on sandy soils in New Jersey, and is not affected with mildew. Mr. Downing had fruited it four years. It is hardy, and sufficiently vigorous. Think it at least one of the very best of American grapes. Adopted for general cultivation.

Concord—The President once had a rather unfavorable opinion of this grape. It now looks beautifully, and is of fair quality. Not as early as *Harford Prolific*. Prince was in favor of its adoption for general cultivation on account of its hardiness. Considered it extremely valuable because extremely hardy. Clark, of New Haven, said it was the most vigorous and hardy grape he cultivated. Reid thought it was one of the best for New Jersey. James, of Philadelphia, said the Concord was better, particularly in favor, around Philadelphia than at Boston. Adopted.

Rebecca—Mr. Hovey moved that it be added to the catalogue for general cultivation. Prince did not believe it would prove hardy, or be generally cultivated. It had very characteristic of the Chasselas family. R. R. Scott said that some of the seedlings raised from *Rebecca* looked like the Chasselas, while others looked like its parent. Mr. Hovey said he had failed to discover any of the appearance of the Chasselas in the *Rebecca*. For two winters it had stood the frosts with the Concord and Diana, and appeared as hardy as these. Had known Isabella one and a half inches in diameter killed to the ground, while the *Rebecca* remained untouched. Mr. Hoag, of Lockport, had grown it two years and never saw a leaf or branch injured. Strong, of Mass., said it was as hardy as most of our native grapes—mildew a little—about as much as Diana. Hooker said it did not make as good growth as the Delaware, and the leaves scorched with the sun. Field had been informed that the original vine was laid down every winter. Freeman, of New York, found it a better grower than the Delaware, making shoots the present season fifteen feet long. Somewhat affected with mildew. E. Frost said it mildewed some last summer, but very little this season. R. R. Scott had not seen a vine out of doors without mildew. Barry had great hopes of it, but was not willing to recommend it for general culture. Sanders, of Philadelphia, considered it a native grape. The mildew which affects it is not the *oidium*, which affects all foreign grapes, but the same that injures our native grapes, which goes far to prove it a native. It was not adopted for general cultivation, but remains as promising well.

Norton's Virginia Seedling was recommended by

Mr. Prince. In Indiana and Missouri it succeeded well, where all others fail—an early grape, now ripe. Saul said he never saw a meaner thing. Mr. Downing had it for fifteen years and considered it worthless. Dr. Warder said it was a very good vine grape, and though not much grown around Cincinnati, was a favorite South.

Union Village—Dr. Warder would not recommend it for general culture, as it was rather tender North; South it is excellent. Prince said it was a very good grape, of second quality, but better than Concord. Cabot said with him it had stood the two last winters unprotected. About as early as Isabella. Planted on poor, dry soils, it did well in Massachusetts. Walker had a strong vine of this variety. Fruit superior to anything he had, and having the appearance of Black Hamburg. Recommended as promising well.

Herbmont—Presented by Dr. Warder—a fine grape for wine or the table—thin skin, no pulp, and rather tender. Hovey found it tender. Steels, of N. C., said that in North Carolina, as a wine grape it is superior to the Concord. Recommended as promising well.

Logan—Recommended by Mr. Thompson, of Ohio. The earliest grape he was acquainted with—thoroughly colored on the 17th of August—Hardy and prolific, and of fair quality; fully equal to the Isabella. Cuttings of the *Logan* grape have been sent out through the Patent Office as the *Logan*, by Mr. Shepard. He thought they were identical, but does not think so now. Mr. Bateham said the grape propagated and sent out by Mr. Shepard as the *Black German* and *Small Black German* are unworthy of cultivation. Mr. R. now acknowledged it. The *Logan* is distinct from the *Logan*, and is a coarse, large grape. Mr. Longworth thought it might be good as a claret grape. It is unfit for the table. The *Logan* was recommended as promising well.

Harford Prolific—Was proposed by Mr. Terry, of Connecticut. It was an accidental seedling, and originated about ten years ago. Valuable where the Isabella does not ripen. It ripens well in Maine. Mr. Prince considered it valuable on account of its early ripening. Mr. Saul said one-half of the berries would drop off the bunches before the others were ripe. Mr. Terry said the falling of the berries was a fault at first, but the character of the vine seemed to have changed in this respect with age. Barry considered it of poor quality, though valuable in cold climates. Mr. Judd, of Flushing, found it very productive in his garden, less so than the Concord, and ripens one week earlier. Hoag, said it ripened in Lockport the first of September. Considered it one of the most valuable grapes he had. Walker tasted it four years since, and thought it quite inferior. Had not tasted it since until to-day. Thought it would prove one of the best of the new grapes for New England. Mr. Wilder had not ripened an Isabella grape on his grounds in thirty years. The *Harford Prolific* ripens well, is very hardy, and does not mildew. Not first-rate in quality, but valuable for cold climates. Adopted as promising well.

Clara and Raaba—Mr. James, of Pennsylvania, called the attention of the members to these two grapes, as being worthy of attention. Dr. Brinckle also spoke well of them.

Graham—Mr. James also presented this variety as worthy of notice, being a good hardy grape, something of the character of the Isabella.

Anna—The character of this grape was inquired of, and Mr. Saul said it was raised by a gentleman of Newburgh. It did not meet his expectations, as it never ripened in this climate.

Amber Catawba, Mr. Prince said, was two or three weeks earlier than Catawba, and of a light amber color. The Early Isabella was also earlier than the common. He thought there were several varieties of the Isabella.

Muscat Catawba—Mr. Bateham said a grape had been advertised under this name in New York, and inquired if any one could give any information in regard to it. No one knew anything about the advertiser or the grape.

Manhattan—Mr. Hogg, of New York, called attention to a seedling grape under this name raised in the vicinity of New York, of an amber color, and much like the *Rebecca*.

Canadian Chief—Information in regard to this grape was called for. Prince said it was a foreigner. Hovey had it in bearing in his grape house. Last winter it was entirely destroyed out of doors.

Massachusetts White Grape—Mr. Saul inquired of the Massachusetts delegation if they knew anything of this grape, which was advertised by a nurseryman of Massachusetts. No one could give information of its character or value. Mr. Walker cautioned all present against purchasing things whose only merit seemed to be that they were loudly praised for sale the fruit should be exhibited before some Society competent to judge of its character and pronounce a righteous judgment.

Idem—This grape Mr. Bateham said was entirely unworthy of cultivation, and no one should purchase it.

Child's Superb—Several members had tried. It is unfit for open culture. With the President it did the second year.

Black Missouri, Mr. Clark thought well of. Dr. Warder said it was too small, and a poor grower.

RECOMMENDED FOR GENERAL CULTIVATION.

Delaware, Diana, Concord, Isabella, Catawba.

NEW VARIETIES PROMISING WELL.

Union, Logan, Herbmont, Harford Prolific, Rebecca.

UNDER GLASS.

Black Hamburg, Red Chasselas, Black Frontignan, White Frontignan, Black Prince, White Muscat, Black Damascus, White Muscat, Canon Hall Muscat, West's St. Peter's, Chasselas de Fontainebleau, Zinfandel, Grizzly Frontignan.

THIRD DAY.—FORENOON.

STRAWBERRIES.

Large Early Scarlet—Mr. Prince moved to strike from the list recommended for general culture. Mr. Hooker and others objected, considering it one of the most valuable varieties. The proposition was not carried.

Hooker—E. Frost, moved that it be adopted for general cultivation. Prince said all of its class, it was a poor bearer, and therefore unworthy of general culture. Townsend found it more productive than *Hooker's Seedling*. Barry considered it one of the finest of American strawberries. Adopted.

Wilson's Albany—Mr. Field proposed for general culture. Dr. Brinckle said it was very productive—had counted 190 berries on one plant. R. R. Scott had counted 160 on one plant. Mr. Shotwell, of New Jersey, had grown three bushels on 160 plants. The flavor was represented by Mr. Pardee as being good. Adopted as promising well.

Walker's Seedling—Proposed for general culture. Dr. Ward said with him it was a good bearer, and of fine flavor. Redmond, of Georgia, said it was high-flavored at the South, but small. Manrice, of Long Island, said it was too small for profitable culture.

Burr's New Pine—Proposed for general culture. Hooker considered it too uncertain. Dr. Sylvester, considered it the best strawberry he had. Mr. Clark, of New Jersey, had discarded it long ago. Knapp, of Michigan, said at the West it was one of the most productive and best flavored sorts grown.

Triomphe de Gand—E. Frost proposed to recommend as promising well. Barry said it was a fine strawberry.

Boyden's Late Mammoth—Quinn, of New Jersey, recommended as promising well. Reid and Ward said it was a very late sort, growing a good crop, but of poor flavor.

Boston Pine, it was proposed should be removed from the list for general cultivation. Dr. Ward said the strawberry growers of New Jersey would not be willing to dispense with the *Boston Pine*. Manrice, of Long Island, could not do without it. Cabot said it was one of the best about Boston. Dr. Warder said it was not a good "setter" and does not yield well in Ohio.

Peabody's Seedling—Judd thought well of it—Lawton had found it satisfactory. Manrice had about 200 plants and did not raise half a pint. Cabot said the quality was poor. Pardee had seen it a good many times—a poor bearer and of poor flavor. E. Frost said its only merit was its size. Shotwell said in New Jersey it was second in productivity only to the Wilson. Dr. Sylvester had fruited it, and found it a rampant grower and a fair bearer.

Longworth's Prolific, was moved for general culture. Walker seconded the movement very heartily. Some thought it too small, but when fully ripe it is of good quality. Dr. Warder said it was highly esteemed in Ohio. Was glad the friends from Massachusetts had sufficient discernment to appreciate it. Ripens after coloring, and that is the reason some call it sour. Taylor, of Virginia; Smith, of Syracuse; Redmond, of Georgia, and others spoke in favor of the motion. Adopted.

Tyrolle's Victoria—R. R. Scott moved to advance to the list for general culture. Hovey considered it a very good sort for amateurs. Downing preferred to allow it to remain as promising well. After some discussion it was stricken from the list.

Extra Red, proposed by Dr. Warder for general culture. Field said it was too sour. Bateham thought Mr. Field could not have ripened it. Mr. Hogg said it looked well and was productive, but lacked flavor. Good for preserving. Dr. Ward said it was a good bearer, looks attractive—people will buy it once, but never a second time. Dr. Warder said acidity was one of its merits. Prince considered it one of the sourest and meanest strawberries grown.

Le Baron—Moved by Mr. Walker for general culture. Believed it to be a first-rate strawberry. Berries of large size, good flavor and prolific. Prince said it was the highest flavored large strawberry in existence. Others did not think well of it. Allowed to remain as promising well.

Scott's Seedling—Proposed as promising well. Walker said it was a miserable bearer in Massachusetts—almost unproductive. Hooker and Frost said it produced very large crops in Rochester—not of good quality, but less so than *Extra Red*. Manrice said when grown in hills it was a good bearer. Clark, of Conn., said it was very productive. French said that five acres in Massachusetts would not produce as much as half an acre of some other sorts. Reid, of New Jersey, found it a good bearer.

McAvoy's Superior—Mr. Field proposed that it be stricken off the catalogue. Prince thought it one of the best of the Ohio strawberries. Lyon, said in Michigan it was very productive but not extra in quality. Dr. Ward said in dry seasons it was valuable, but in wet seasons tender and comparatively tasteless. Hooker found it difficult to fertilize. Dr. Warder thought this was from the fact that the Early Scarlet was used as a fertilizer, which blossomed too early. Mr. Prince recommended *Ladies' Pine*, Barry's *Extra*, *Globose Scarlet*, and several other varieties. Several gentlemen proposed that these should be examined by a committee before action was taken. The following is the list as revised by the meeting.

FOR GENERAL CULTURE.

Boston, Longworth's Prolific, Hooker, Large Early Scarlet, Hovey's Seedling.

PROMISING WELL.

Genesee, Scarlet Magenta, Le Baron, Walker's Seedling, McAvoy's Superior, Wilson's Albany, Burr's New Pine, Jenny's Seedling.

FOR PARTICULAR LOCALITIES.

THIRD DAY.—AFTERNOON SESSION.

RASPBERRIES.

American Red—Mr. Saul moved to stricken from the list promising well. Mr. Prince said the American Red is a native with red bark, and roots from the ends of the shoots—of the Black Cap species. Dr. Grant thought it superceded by the Hudson River Antwerp. R. R. Scott considered it unfit for garden culture. Mr. Parsons would not like to be without it. Some others spoke well of it, and it was allowed to remain.

Cope—Prince said was the largest red berry cultivated. Barry thought well of it.

Ohio Ever-bearing—Dr. Warder moved to stricken from the list. Only the Black Cap. Several gentlemen said it was worthless in Massachusetts. Stricken from the list.

Thunderer—Dr. Grant said it was large, productive, and of fine flavor. None superior to it except the Orange.

Bagley's Perpetual, a new sort, first exhibited at this session—moved as promising well. Clark, of Connecticut, considered the quality fair, but that it must be some old variety, as the original plants are growing in two long rows, having evidently been set out. Mr. Bridgman, of New York, said that Mr. Bagley, who owned the original plants, considered it the very best for market. Had fruited it and was satisfied of this fact. It bears until frost. Mr. Walker was opposed to recommending this fruit now. Should be referred to a committee. He had never known a perpetual raspberry or strawberry, though he had tried several claiming those qualities. Perpetual fruit was something like perpetual motion. Mr. Barry said we had perpetual roses, and why may we not have perpetual strawberries. We have a beginning in *Belle de Fontenay* and *Merrill de Four Seasons*. Mr. Prince said that in the main Mr. Walker was correct. The raspberries that bear in the fall are deficient in the spring. Nature compensates itself in this way. In answer to a question Mr. Clark said the quality of the fruit was generally considered very good in the fall, because we have no other. The subject was passed over to the next meeting.

Black Cap of Mr. Donohue—The question being asked as to its quality, and whether it was the old Black Cap, or a new variety, Mr. Barry said he had it in bearing, and it gave enormous crops. Thought it only the common Black Cap. Some think it a different variety. Warder thought the whole tribe very inferior, as did Mr. Bateham. Some gentlemen having stated that it sold for more in market than the Antwerp, or any of that class, Dr. Warder replied that once this was the case in Cincinnati, but now they had fallen one-half below the price of good sorts. The following is the list recommended:

FOR GENERAL CULTURE.

Fastolf, Orange, Franconia, Red Antwerp, French, Yellow Antwerp, Kaevel's Giant.

CURRENTS.

Cherry—Mr. Scott and others proposed the Cherry Currant. Some said it was too acid. Mr. Cabot proposed the *Versailles* as promising well. Prince said it was the largest of all currants. Dr. Sylvester said the Cherry Currant was productive and acid, but we send abroad for lemons and other fruits, and why not cultivate acid currants? Mr. Saul said the *Cherry* had a large berry and a short bunch. *Long Red Dutch* has longer bunches, and would weigh more than the *Cherry*, although the berries are smaller. *La Versailles* when generally known, he thought would take the place of these sorts. *Cherry* and *La Versailles* were recommended as promising well.

Transparent Blanche, was recommended by Mr. Cabot. Prince said it was the mildest of all currants. R. R. Scott said it was white, sweet and very

good. Mr. Barry said it was the same as the *White Grape*. Messrs. Berckmans and Saul agreed with Mr. Barry.

Red Grape—recommended by Mr. Scott. *Fertile Currant of Falloux*, was recommended by some gentlemen, though it was not generally known.

Fertile de Angers, was recommended by the President. Messrs. Saul and Hovey thought it was not sufficiently productive to be recommended. In appearance it was similar to *La Versailles*. The following are the sorts recommended:

FOR GENERAL CULTURE.

Black Naples, White Datch, May's Victoria, White Grape, Red Datch.

PROMISING WELL.

La Versailles.

APPLS.

Mr. Bateham, of Ohio, said some of the apples recommended on the list for general culture, were not adapted to a great portion of the country, particularly the West, and planters were misled by it. Many of the winter sorts fall entirely in the West. Seven or eight varieties should be stricken out of the list for general culture, and placed in the one for certain localities. As the Convention was within an hour of its close, the list for general culture was not taken up. The Fruit Committee it was understood should investigate this matter thoroughly so that at the next meeting there might be a thorough revision of the Catalogue of Apples, and their adaptation to certain localities ascertained.

Autumn Bough—Berckmans said it was very fine at the South. Brinckle said it was good at the North. Adopted with unanimous consent for general cultivation.

Carolina June—Steels, of N. C., said it was fine in his State; a little too acid, but as good as *Maiden's Blush*. Mr. Lyon said it did well in Michigan. Several gentlemen spoke for other States. Adopted for general cultivation.

Jonathan—Was represented as being good, by representations from all parts of the country. Adopted for general cultivation.

Monmouth Pippin—Reid, of N. J., said it was worthy of advancement. Barry, good in Western New York, and known as the Red Cheek Pippin. Adopted for general culture.

Smith's Cider—Mr. Bateham said it was one of the most popular at the West. Did not like the older name. It was not a cider apple. French, of Mass., was disappointed when he found how good it was. Had been misled by the name. Hovey said the name prevented many from planting it. Mr. Barry was opposed to changing the name, although it might be inappropriate. Yardley Taylor, of Va., said there was another Smith apple in Virginia, and if the cider was omitted it might cause confusion. Warder thought it poor—no cider. Reid thought it poor—only second or third rate.

Wagner—Dr. Warder moved for general culture. Lyon said it bore too profusely in Michigan. Dr. W. said this was a good fruit in a new country. Adopted for general culture.

Willis' Sweeting—Mr. Parsons recommended as a beautiful sweet apple. Recommended as promising well.

Buckingham—A fine apple in Southern Illinois, and the West generally. Adopted as promising well.

White Winter Pearman—Recommended by Western and Southern members. Adopted as promising well.

Mr. Bateham wished the members of the Convention, and the planters of the country generally, to understand that the Baldwin, Hubbardston's Non-Such, Rhode Island Greening, Roxbury Russet, Eswar, Wine, or Hays, do not succeed in the Southern part of Ohio, and in the South and West generally. He proposed notes be added to their names, stating the fact. This, however, was not agreed to, as it was contended that "to making" notes "there would be no end."

PEACHES.

Carpenter's White was placed on the list as promising well.

The Columbia was also placed on the list as promising well.

CHARTER OAK GRAPE.—Two years ago I purchased some of the Charter Oak Grape vines, and soon after they were pronounced a humbug. This fall I gathered about two quarts and they are a very good sort of grape, are very large, some of them measuring an inch in diameter. My neighbors have examined them and pronounce them very good.—A. WILSON, *Marcellus, N. Y.*, 1858.

REMARKS.—We had Isabellas on exhibition at the Western New York Fruit Growers' Meeting last week, measuring an inch in diameter; then the bunches weighed about a pound, while the Charter Oak never forms bunches, only small clusters. The Charter Oak is the meanest thing that was ever called a grape, and how a person can put one in his mouth, unless prescribed by a physician, as an emetic, we cannot imagine.

KEEPING DAHLIAS.—To keep Dahlias through the winter dig just before frost, break apart as little as possible; let them get perfectly dry, then bury them up in a bin of potatoes, and you will never fail of finding them all right in the spring.—AMELIA, *Cayuga, N. Y.*, 1858.

REMARKS.—Now that our potatoes rot more or less every winter, we should be afraid to trust the Dahlia roots in the potato bin.

INQUIRIES.—When should strawberry runners be cut off? Are Mandrakes healthy? and what are they used for? Will tying a colored string around a hollyhock in the spring change the color of it to the hue of the string? if so, what is the reason of it?—A FARMER'S DAUGHTER, *Tecumseh, Mich.*, 1858.

REMARKS.—Cut off the runners as fast as they form, unless you want new plants. Mandrakes are of no value as a garden fruit. The string story is one of those foolish things that seems to live and flourish though contradicted a thousand times.

A WORD TO OUR READERS.—Although we think we could give no matter of more value to our readers than the opinions of practical men from all parts of the country, on the different fruits, so pressing is the demand upon our columns that we are glad to bring our report to a close in this number. The latter part of the discussion we have had to condense very much. In our next we will pay particular attention to our correspondents, inquiries, &c. We have a good many illustrations, notes of fine things seen in our travels, notices of fruits sent us—all of which we will give our readers in due time.

FRUIT GROWERS' SOCIETY OF WESTERN N. Y.—The Autumn Meeting of this Society was held in Rochester on the 29th ult. The meeting was called so late in the season, when farmers and fruit growers are busy, that many anticipated a small attendance—in this however they were disappointed. The attendance was very fair, the discussions interesting and the fruits excellent, though the collection was not large. We will give a brief report next week.

Domestic Economy.

ABOUT BREAD-MAKING.

How many of the young lady Rural readers are there who can make a loaf of bread so that it will come to the table wholesome and palatable? "Pooh," some of you will say, "I am not going into the kitchen and muss around merely to learn to make bread—simple stuff as that is! Anybody can make bread!" Not so fast, young Misses. No doubt you pride yourselves on making "splendid loaf cake," and rich pastries, for festive occasions, where you will receive much praise for your efforts; but can you make good bread—from the beginning to the end of the process? It is a comparatively easy matter to weigh certain specified quantities of flour, sugar, butter, &c., and put them together, and bake them. You work by rule, but bread is made more by rote—of smaller or larger quantities—and requires skill, and attention, and practice to enable you to produce the fine-grained, beautiful loaf.

Some of you have probably made yeast, and mixed bread, while "Ma," or the housekeeper, or some one, was in the kitchen to refer to, as to how much water and flour, or how hard to mix, or how long to rise, &c., and consider yourselves expert, and finished in the art. But suppose "Ma" was sick, and the servants gone—could you make such good bread that "Pa" would not know the difference, or would praise you for its superiority? Besides, would "Pa's" favor be worth seeking? Perhaps the kitchen girl is raw Irish, or reckless, and the "daily bread" is poor—not fit to eat. Did it ever occur to you to step into the kitchen and soil your fair hands by producing nice bread for your parents, and brothers, and sisters, to eat—and would their pleasure more than repay you?

Some young ladies will exert themselves for company's sake, but "cannot afford to bother so much for only father and mother," while all the time they are mourning or moping because father is not able to buy them a piano, or all the dumplings and gewgaws they would like to put on and parade to the envy of those less favored. And yet they do not know how to make good bread, or boil a kettle of potatoes properly! Why not become skilled in those more important accomplishments within your reach?—then, if, in process of time, you should have an opportunity, you can learn the ornamental without neglecting the useful. Learn to make and bake bread, for it is important to know that dough is not bread, and there is more spoiled in baking than there is made good, and it is the most important point of bread-making, to bake properly. Learn to boil potatoes, to make a good cup of tea, if any, and to out and make a shirt, and dress, before you cry for a piano, or a carriage. And not only learn to do all these things, but do them gracefully, sweetly, pleasantly, cheerfully; for it is a mistaken idea that grace and ease does not very much add to even domestic employments. If after all this you do not get a sensible, accomplished gentleman (in the true sense of the term), for a husband, we will institute an "Investigating Committee" to search into the causes, why, and wherefore.

A FARMER'S WIFE.

PRESERVING BUTTER.—PIES AND TARTS.

Messrs. Eds.—A correspondent asks for a recipe for preserving butter. I do it in the following way:—Take 8 ounces of fine salt; 4 ounces of saltpetre; 4 ounces loaf sugar—mix well together—after the butter has been salted (not as much as usual), and well worked, so that no buttermilk can be pressed out, I add one small tablespoonful of the mixture to every pound of butter. Pack closely in stone jars—cover as to exclude the air. Keep in a cool place and it will be good a long time.

Ladies' Port-Folio.

Written for Moore's Rural New-Yorker.
"WHEN I AM RICH."

BY KATE CAMERON.

"We will be rich," said the maid,
"I'll bind my floating curls
With sparkling diamonds from the mine,
And ocean's snowy pearls;
The sapphire there shall softly gleam,
The ruby brightly shine,
And there'll not be in all the world
So gay a heart as mine."

"When I am rich, my home shall be
A castle grand and fair,
And all my longing heart could wish
Shall find an answer there.
Till all the artist's glowing dreams,
Or scholar's mystic lore,
Or queenly dignity and rank
Could ever ask for more!"

And so she proudly scorned a heart,
Whose love was strong and true,
Because forsooth the humble youth
In all, save love, was poor.
Then came an old and haughty man,
Ahi story often told—
The maiden yielded to her pride,
And sold her heart for gold.

She won her stately dwelling-place,
Superb in every part,
And lost the roses from her cheek,
The sunshine from her heart.
Not all the gems that wreathed her brow,
Could drive away the care,
Which, like a heavy cloud of gloom,
Had darkly settled there.

Too late she learned that wealth alone
Can never purchase joy,
And ever with the shining gold
There mingles some alloy.
And of the bitter lesson, this
She felt with keenest smart—
Earth's riches never can outweigh
A true and loving heart!

CLEANINGS.—NO. I.

SUCH a sweet picture—this little child, kneeling on the green sward, her brown curls straying carelessly over her white shoulders, and her tiny clasped hands and innocent eyes raised to the blue sky. "Of such is the Kingdom of Heaven," I softly murmured. "Happy artist you must be, to imagine so beautiful a picture. After all, this may be no ideal fancy."

Beneath the painting were the words, "RUTHIE—child-angel." Ah, that told the whole story, and I stole a little aside from the busy throng of goers and comers, to muse over this life picture, for such I was sure it was.

Dear little "RUTHIE." Perhaps she was the brown-haired sister of his boyish days—she, whose infant steps he had so often guided, and whose childish love and words had so often kept his own feet from straying to "the evil." Yes, his little sister, who used to swing with him every day out under the maple tree in the front yard, and who used to kneel with him every night beside his mother's knee.

It may be "RUTHIE" was his little school-mate—she, whom he used to draw on his sled to the old red school-house in the winter time, and for whom he would gather bright flowers and berries in the long summer days. The same "RUTHIE" for whom he used to solve those horrid problems in Algebra when she was a girl, and who, after years of patient waiting, stood by his side and promised to "love, honor and obey" until death should break the holy tie.

Or, it may be, "RUTHIE" was his own little birdie, his first born daughter—his all upon earth, when the gentle wife died and left "RUTHIE" to be his comfort. And, oh, had't she brought him a world of sunshine, the little brown-haired "RUTHIE?" Nestling on his heart as a baby, and then taking her first step after papa, and by her childish prattle and loving wiles, banishing the sorrow that would come when he thought of the sleeper in the church-yard.

I drew nearer the picture, and gazed long at the sweet face, yearning to fold the living "RUTHIE" close to my heart.

"What is a child-angel, mamma?" asked a weedy little voice close beside me. I turned and looked. A child—and yet how different from "RUTHIE." She had a pretty, delicate face, shaded by long golden curls, but such a sad, mournful look in her blue eyes. I sighed, for I knew there were thoughts and unsatisfied longings in that little heart, that God never intended should find a resting-place there. The child repeated her question again, but it was not answered until, moved by a sudden impulse, I laid my hand on her curls, and said softly, "A child-angel is a good little girl who loves everybody. Pray God every night, darling, to make you a child-angel on earth, and when you die to take you to live with His bright angels in Heaven."

The mother started and looked at the picture, and a change came over her face. "RUTHIE" had awakened old memories. She knew she had a heart beating somewhere beneath her jeweled robes, and that she was a child once—just as innocent and happy as "RUTHIE." In her girlish days she had been called "darling" by one who walks in a "far apart road" now. Well, what of it?

Lewis GALT was poor in this world's goods, though a millionaire in heart-wealth; and so, when the wealthy Mr. Lawson laid his fortune at her feet she grasped it with one hand, while with the other she dashed aside the priceless love of the humble country pastor, and went forth to her princely home to become an unloved, unloving wife, and careless mother.

The old, haughty look came back to her face again, and bidding GRACIE follow her, she summoned her carriage and drove away.

Well, you may go to your palace-home, proud Mrs. Lawson, and close your blinds, and draw your lace curtains to bar out God's blessed sunshine, and so seek rest for your weary head in the dark and quiet—you may bind your heart in its shroud of silks and satins, and fasten it tightly with golden chains, and so stifle the voice of conscience as night after night you tread the halls of gaudy and fashion, while GRACIE at home prays God to "make

her an angel!" But the days are coming when the dark waters will threaten to sweep over you, and the blue hills of Heaven so far distant, but no "shining ones" will wait for you "beyond the river," for you have not the love and trust of years gone by.

Oh, why will we so live that the Heaven which in childhood seems so near, recedes as years wear on?

I can see "RUTHIE's" face again, and it lights up my room like a glory, while a voice is whispering from my Bible—"Except ye become as little children ye shall not enter into the Kingdom of Heaven."

WIMMIE WILLIAM.

HE DOES NOT GROW OLD.

In a quiet church yard there is a little mound all covered with green—for many a year the little sleeper beneath it has been there in the unconscious sleep of death. Once that little sleeper greeted me with a smile as I drew near to his cradle. He knew no other language, and never pronounced a word. His was a short life,—many a long year he has reposed beneath that mound. He was never strong but had a perfect frame, and his unfolding life shadowed forth his immortal destiny, and while I felt that he was mine, I knew that he had a path of his own—that it might lead him from me, still I looked upon him with pleasure, and as day by day I beheld his unfolding life, I was drawn to him by a power that I could not myself control. The destroyer came and took him, and he now sleeps beneath that little mound. He does not grow old, but is still to me a little child. His death awoke within me a new tenderness of love, and I have since been able to sympathize with those in affliction as I could not before.

How great the change will be before I shall see him again! When we parted he was a helpless child and knew but little. He now wears robes of glory, not formed by mortal hands, and has an orbit of his own that is measureless. It touches mine, but it is so vast and wonderful that I cannot comprehend it. He has long since passed me in knowledge, and may be my teacher and guide.

When I think of the sorrowing and danger of our pathway in life, I no longer grieve that the opening flower was so early taken to bloom in the garden of the Savior—taken before the bud had even felt the withering blast of life. FIRM.

DREAMINGS.

TO-NIGHT as I sit by my window and watch the beautiful clouds of crimson and gold as they float on the sky in many varied forms, the gentle evening wind whispers in my ear of the days gone by, and brings to mind many past scenes in my life journey, with their sunshine and shadow. I think of one who but a few weeks since passed so gently and peacefully to her last home. In the silence of the night the Angel of Death entered the midst of a happy circle and bore away the wife and mother. Ere we knew it the pure spirit of our loved LOUISE was borne on "angel wings" to the presence of her Savior. Ah! who shall tell of the agony of that moment in which we found that she was indeed gone and that we looked only upon lifeless clay. None, none can know the sorrow of our hearts but those who have laid away under the sods of "Mount Hope" the lifeless but precious forms of those loved best on earth. Oh, how we long to meet once more her loving smile, to feel the pressure of her hand, and hear again her sweet voice singing the old familiar lays over the cradle of the two little buds she has left us to cherish. We miss her to-night—when do we not?—and in the moments of our wildest grief we would call her back to us on earth.

"For the heart forgets in its agony wild,
That 'tis better for her, that 'tis well with God's child."
Now from her beautiful home on high, she is beckoning us on towards the celestial city.

"Her spirit has gone where the angels are,
And the Savior's crown bath another star!"

ISABEL.

HOW TO MAKE HOME HAPPY.

Do not jest with your wife upon a subject in which there is danger of wounding her feelings. Remember that she treasures every word you utter, though you never think of it again. Do not speak of some virtue in another man's wife, to remind your own of a fault. Do not reproach your wife with personal defects, for if she has sensibility, you inflict a wound difficult to heal. Do not treat your wife with inattention in company. Do not upbraid her in the presence of a third person, nor entertain her with praising the beauty and accomplishments of other women. If you would have a pleasant home and cheerful wife, pass your evenings under your own roof. Do not be stern and silent in your own house, and remarkable for sociability elsewhere. Remember that your wife has as much need of recreation as yourself, and devote a portion, at least, of your leisure hours to such society and amusements as she may join. By so doing, you will secure her smiles and increase her affection. Do not be so exact in pecuniary matters, as to make your wife feel her dependence upon your bounty. If she is a sensible woman, she should be acquainted with your business and know your income, that she may regulate her household expenses accordingly. Do not withhold this knowledge, in order to cover your own extravagance. Women have a keen perception—be sure she will discover your selfishness—and that no word is spoken, from that moment her respect is lessened, and her confidence diminished, pride wounded, and a thousand, perhaps unjust, aspirations created. From that moment is your domestic comfort on the wane. There can be no oneness, where there is no full confidence.—*Woman's Thoughts About Women.*

A soul, like an instrument of music, should be well tuned to meet the various strains the hand of destiny may call from its thrilling chords; firmly, yet sweetly, should its tones ring out of whatever character they are; strong but sweet music still, should a God-strengthened spirit yield beneath the touch of sorrow or adversity, as sweet though it may be sadder, as in its days of brightest power.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

A LONE.

BY M. V. GARDNER.

I WANDER through the city's throng,
Unnoticed by the thousands here,
While living masses pour along,
Some worn and gray—some young and fair.
And loudly rings the din of life,
As countless voices fill the air,
And all are eager in the strife
Of busy toil and pressing care.

I linger by the festive board,
Where youth and pleasure gayly meet,
The laugh goes round, the wine is poured,
And music trills to flying feet.
But "mirth upon my lips is dumb,"
I seem unknown and unknown,
And, as my thoughts within will come,
My spirit sighs, Alone! Alone!

There is no loneliness so drear,
No sadness has so deep a shade
As that I feel when crowds are near,
And all life's toys around me laid.
There may be gladness all the while,
There may be feelings deep and strong,
But not for me that glowing smile,
Or not for me that gushing song.

Bright eyes may gleam and pulses thrill,
And yet I'm sad and all alone;
The looks I meet are ever chill,
They turn away, I am not known.
Then let me leave this noise and show,
And give me still my tranquil home,
Where sweetest joys abundant flow,
And jarring strife may never come.

I love sweet Nature's thousand forms,
Her forest gloom, her mountains high,
There's wild delight in raging storms,
And glory in the arching sky.
There's Angel whispers in each breeze
Of sweet accord and thrilling tone,
That ever in my spirit leaves
A sense that I am not alone.

Oh turn thou, then, my wandering feet
To Nature's scenes, my heart to calm,
There let me find a pure retreat,
My aching brow would seek its balm.
'Tis there that Solitude creates
A feeling deep of joy to one
Whose heart with Melancholy mates,
And all its echoes are, Alone.

Northville, Mich., 1865.

THE DREAMER.—NO. I.

IDENTITY.

"Who is the Dreamer?" says some fair one, (you know the women have all the curiosity,) as she reads the title of this—and as she queries, she asks as many questions about me as a lawyer. So, to save trouble, I will answer her questions, and yours at the same time. "Are you tall?" O, so, so, the average of mankind. "Slim?" Rather. "Good looking?" Good enough to dream—"Well—well—are you married?" There, I knew it was coming. Not else how could I dream? A married man is never a dreamer, unless he is a dunce,—the very term is opposed to the idea. When a man has another being dependent upon him for support and nourishment—and crinoline—he must keep his eyes open, and his thoughts on terra firma.

Well, if you are done with your questions, I will tell you who I am. I am yet on the sunny side of thirty—a little—am in a business which suits and supports me—no matter what—and I live in a city of respectable dimensions—no matter where. I pay my landlady promptly, and don't owe my washerwoman anything, so I feel independent. I wear shirt-studs and cuff-buttons, too; that's another item towards independence. I mention these last items, however, merely to show that I am not haunted by buttonless shirts. I am a dreamer, too. I come home at night, light the gas, "Poke my feet into slippers, and my fire into a blaze," light a Havana, and just dream at my ease.

And that little word at the beginning of this dream comes into my head as I sit watching the blaze, and building my fancies out of the coals. I can hardly make myself believe that I am the same as the little robin memory (kind memory!) paints, away back among the shadows of the past. I can but dimly trace the path of that child clear down to my fire. The events are clear, but they seem to belong to some story I have read—not to myself. But while I sit here, it seems as if the old dreams of my childhood were realized, and I seem to be, not what I am, but what I used to wish to be. The realities of life melt away into the shadows of dream-land, and boyish air castles fill their places. Oh the hopes and fears, joys and sorrows, of those by gone days.

I remember, I remember,
When I used to go to school,
How I kept a watchful eye,
On the master's rod and rule.

How he used to seat me with the girls. How bad I felt, too, except when he put me beside SUSY L. She was my divinity, then. How she used to sympathize with me when I was punished, I.e. six times a day. Indeed, I believe I enjoyed getting into scrapes, just to see her blue eyes (what eyes they were though) look moist with pity, or blaze with indignation against my persecutors.

We say sometimes that childhood is the happiest time of life. I don't believe it. It is just our egotism which makes us say so. The mole hills we saw then were just as large to us as the mountains we see now—we have only changed our measure. And, by and by, the Great Judge will try us all by a new standard, and the Andes of now and the hillocks of then, will be all mole hills together,—when we have reached the summit.

I used to think, "If I was only a man, so I could marry SUSY"—now, I sigh, "If I were only young, so I could sit by SUSY." So it goes. "But what became of SUSY?" Ah! you want to make me tell a story, instead of dreaming. However, you shall have it.

By and by I had to leave home, and the old red school-house, (wherever saw one that was not red,) and the woods and streams, and come to the city. Still I had a fancy that I would go home and marry SUSY some day. But after two or three years, there came a note from my old crony TOM H., asking me to officiate as groomsmen at his wedding—SUSY's

wedding. Should I go? Envy said, "No." Good sense said, "Yes." I went. I arrayed myself in the most spotless of wedding suits, and played my part with the same ease that I should at the wedding of JOHN JONES, Jr., our friend on the corner. I attended the "happy pair" on their excursion, registered their names, carried the purse, made myself generally useful, and let TOM enjoy himself. And he did. Poor fellow! he couldn't have paid his own bill, to have saved SUSY's life. I didn't blame him.

I think SUSY knew my secret. Leave a woman alone to find out when she is beloved. There was the same kind pity in her eyes, when she looked at me on that trip, that there used to be at school. And now there is always a corner for me at H—farm, and many the dainties I get which my landlady does not provide. SUSY is happy, and I ought to be. May God bless her!

My cigar is out, and it is bed-time. I didn't smoke once—SUSY's husband does not smoke, and I should not smoke if I was SUSY's husband—but a man must do something. Good-night.

PRIDE.

A JUST pride is one of the most beautiful manifestations of human character—a disposition to be cultivated and encouraged at every age and in every condition. Pride in the maintenance of a spotless character and pure life—pride in the performance of noble and generous actions—pride in all things that tend to elevate the mind and heart, and that, however the vulgar and vicious may regard us, ensure to us more and more of the esteem of the virtuous. Fortified by such pride, we can in the midst of poverty and trial maintain the dignity of manhood, and rise by self-respect superior to every misfortune. For after all the homage paid to external pomp and possession, it is the man—the true man—that counts in the great battle of life, and on the pages of history. What has not such a man accomplished, in spite of so-called advantages and fortune—in spite of obscure birth, ignoble caste, and perhaps, still worse, inherited embarrassments?

Look over the record of those who have made our humanity illustrious, and see how few were born and nurtured in the lap of worldly, sensual pride. The pioneers, the leaders, the Saviors of our race have been chiefly of the humblest origin so far as temporal surroundings were concerned. To the brave soul, proud of its manhood and of continuance in lofty aspiring, all conquest is possible and easy, and in the march of higher goals, without effort is obtained the baser spoils of fortune and renown.

There is a pride as mean, contemptible and debasing, as its counterpart is elevating and noble. It is pride of birth without merit to back it—pride of wealth, acquired or inherited, without virtue or generosity in its use—pride of dress and equipage, which knaves and fools, and even felons may compass. Indeed, the lower the quality of pride, the more offensive and ostentatious its exhibitions. Those are often the proudest, in the common acceptance of the term, who have the least to be proud of. Vain, shallow minds, characterless characters,—spreading their gaudy plumage to the gaze of wittings, and winning after all only sneers and contempt. How true the lines of the "peasant poet," Burns:

"The rank is but the guinea's stamp,
The man's the gold for a' that."

False pride can never secure the esteem, nor the respect of those who surround us. We may delude ourselves with the idea that we are making a grand impression on society by its displays, but in the end we shall find that we are only laughed at, and set down as shallow masquers and conceited fools.

EDUCATION OF THE FEELINGS.

BAD TEMPER is more frequently the result of unhappy circumstances than of an unhappy organization; it frequently, however, has a physical cause, and a peevish child often needs dieting more than correcting. Some children are more prone to show temper than others, and sometimes on account of qualities which are valuable in themselves. For instance, a child of active temperament, sensitive feeling, and of eager purpose, is more likely to meet with constant jars and rubs than a dull, passive child, and, if he is of an open nature his inward irritation is immediately shown in bursts of passion. If you repress these ebullitions by scolding and punishment, you only increase the evil by changing passion into sulkiness. A cheerful, good-tempered tone of your own, a sympathy with his trouble, whenever the trouble has arisen from no bad conduct on his part, are the best antidotes; but it would be better still to prevent beforehand all sources of annoyance. Never fear spoiling children by making them too happy. Happiness is the atmosphere in which all good affections grow—the wholesome warmth necessary to make the heart blood circulate healthily and freely; unhappiness is the chilling pressure which produces here an inflammation, there an excrescence, and, worst of all, "the mind's green and yellow sickness—ill-temper."

EVILS OF GREAT CITIES.

In cities, the soul of man grows proud. He needs at times to be sent forth, like the Assyrian monarch, into green fields, "a wondrous wretch and weedless," to eat green herbs, and be weakened and chastised by the rain shower winter's bitter weather. Moreover, in cities there is danger of the soul's becoming wed to pleasure, and forgetful of its high vocation. There have been souls dedicated to Heaven from childhood, and guarded by good angels as sweet secluded for holy thoughts, and prayers, and all good purposes; wherein pious wishes dwelt like nuns, and every image was a saint; and yet in life's vicissitudes, by the treachery of occasion, by the thronging passions of great cities, have become soiled and sinful. They resemble those convents on the river Rhine which have been changed to taverns; from whose chambers the pious inmates have long departed, and whose cloisters the footsteps of travelers have affected to images of buried saints, and whose walls are written over with ribaldry and names of strangers, and resound no more with holy hymns, but with revelry and loud voices.—*Longfellow's Hyperion.*

Sabbath Musings.

"BRINGING OUR SHEAVES WITH US."

THE time for toil is past, and night has come—
The last and saddest of the harvest-ere;
Worn out with labor long and wearisome,
Drooping and faint, the reapers hasten home,
Each laden with his sheaves.

Last of the laborers thy feet I gain,
Lord of the harvest and thy spirit grieves
That I am burdened not so much with grain
As with a heaviness of heart and brain;
Master, behold my sheaves!

Few, light, and worthless,—yet their trifling weight
Through all my frame a weary aching leaves;
For long I struggled with my hapless fate,
And laid and toiled till it was dark and late,
Yet these are all my sheaves.

Full well I know I have more ears than wheat,—
Brambles and flowers, dry stalks, and withered leaves;
Wherefore I blush and weep, as at thy feet
I kneel down reverently, and repeat,
"Master, behold my sheaves!"

I know these blossoms, clustering heavily
With evening dew upon their folded leaves,
Can claim no value nor utility,
Therefore shall fragrant and beauty be
The glory of my sheaves.

So do I gather strength and hope anew;
For well I know that patient love perceives
Not what I did, but what I strive to do,
And though the full, ripe ears be sadly few,
Thou wilt accept my sheaves.

WHAT IS THY HOPE?

YOUTH, and maiden, what is thy hope? Is it that the sparkling eye, the rosy cheek, the form of grace and beauty, and the light elastic tread will ever be thine? Then is thy hope a frail one. The eye must grow dim, the cheek pale and sunken, the form must be bowed with age and sorrow, and thy footsteps, now so buoyant, must surely become heavy and feeble. Then, where, and in what is thy hope? Is it in the friends that now make thy life joyous and happy? O, trust not alone in earthly friendship. Friend after friend will pass away—the ruthless hand of the destroyer will take from thine embrace brother and sister, parent and friend. One after another will pass, until, perchance, thou may'st stand alone on life's rugged pathway. Then let thy hope be one that as a staff will support thee—one that penetrates beyond this vale of change and sorrow.

And thou, traveler on life's journey, who hast seen thy sun reach its meridian,—what is thy hope? Is it that the wealth thou hast accumulated will purchase happiness for thee,—will be a source of comfort to thy future life? O, lean not upon a broken reed. Earthly treasures cannot endure,—decay will inevitably claim them; and he who trusts in riches, trusts in that which is as fleeting and transitory as the morning dew. Then, what is thy hope? Is it in the honors thou hast gained,—the trophies of fame thou hast won? The laurel wreath must fade,—earthly honors must perish,—fame can never satisfy the spirit's longing, and if thy hope is in these, thou wilt, one day, and thyself tossed on a tempestuous sea, and, helpless, will be wrecked upon the shoals of life. O, secure that hope which will be "an anchor to thy soul, sure and steadfast."

And thou, aged pilgrim,—what hope hast thou, to soothe life's declining years? Thou hast seen much of uncertainty, much of the mutability of earth and earthly things. Thou hast seen thy dearest hopes perish, thy wealth pass away from thy grasp, and thy most cherished friends have been laid, one by one, beneath the clouds of the valley. The lilies bloom over the remains of those whom thou once fondly hoped would be the support and comfort of thy last days. Sad, then, is thy lot, if thou hast no unfailing hope to be thy support under this weight of trial and affliction.—Turn, then, thou weary one, and make the God of Israel thy strength and never-failing hope. "Happy is he that hath the God of Jacob for his help, whose hope is in the Lord his God." ANNA.

New York, Sept., 1865.

THE FAITH OF CHILDHOOD.

WHAT a lesson of truth does the following incident convey—what a sermon against deceiving the "little ones" with idle tales—"A touching case," says the New Orleans Delta, "was presented lately to the consideration and charity of one of the Good Samaritans who now take care of the sick, relieve the destitute, and feed the starving. A boy was discovered in the morning lying in the grass of Clairborne street, evidently bright and intelligent, but sick. A man who has the feelings of kindness strongly developed, went to him, took him by the shoulder and asked him what he was doing there. 'Waiting for God to come for me,' said he. 'What do you mean?' said the gentleman, touched by the pathetic tone of the answer and the condition of the boy, in whose eye and flushed face he saw the evidences of the fever. 'God sent for father and mother and little brother,' he replied, 'and took them away to his home up in the sky, and mother told me when she was sick that God would take care of me. I have no home, nobody to give me anything, and so I came out for God to come and take care of me, as mother said he would. He will come, won't he? Mother never told me a lie.' 'Yes, my lad,' said the man, overcome with emotion, 'He has sent me to take care of you.' You should have seen his eyes flash and the smile of triumph break over his face as he said, 'Mother never told me a lie, sir, but you've been so long on the way.' 'Mother never told me a lie,' and when she promised her lone child the protecting care of the Father of Mercies, how fervent his zeal—how great his reliance. Oh, for more of the faith of little children!

SEEKING CHRIST.—Christ is not in the market nor in the streets; for Christ is peace, in the market there are strifes; Christ is justice, in the market is iniquity; Christ is a laborer, in the market is idleness; Christ is charity, in the market is slander; Christ is faith, in the market is fraud. Let us not, therefore, seek Christ where we cannot find Christ.—*Ambrose.*

The Traveler.

Written for Moore's Rural New-Yorker.
Sketches from the Alps to the Adriatic.

NUMBER FIVE.

Dismal Morning—Peasants Rolling at Ten Pins—The Guitar Player—A Picture from Robinson Crusoe—Ascent to a High Valley—A True Tyrolean—Tyrolean House and Village—Crossing the Mountain—The Brenner Road.

It was a dismal morning when I left Fügen. A mist kept constantly descending, and the clouds formed a roof over the valley, lower down than the tops of the mountains, so that the view was confined to the bottom and half a mile or so up the slopes on either side. A group of peasants was collected at almost every house along the road, amusing themselves by rolling at ten pins on rude platforms, or the hard ground, beneath the widely projecting roofs which sheltered them from the storm.

The valley grew narrower, and the slopes, as high up as I could see, were dotted by innumerable huts. In three hours, I saw the taper spire of the church, rising out of the village of Zell, which, though not the largest, is the liveliest village in the valley. While in the dining room of the inn, a young man entered with his *Zither*, a kind of guitar which is laid on a table when played, and has fifteen or twenty strings. The music is soft and dreamy, suited well to the climate and people of the East, where the instrument might have originated. One imagines with delight its dreamy strains among the orange and fig groves of Italy, or amid the ranker vegetation and voluptuous climate of a more Oriental land, but amid the stern mountains and fierce storms of the Tyrol, it seems sadly out of place. But I shall never forget the musician; his quaint costume, his masses of raven hair, falling on his shoulders, his dark and dreamy eyes, now and then flashing with enthusiasm and feeling, and his finely cut and poetical cast of features, told plainly that he, as well as his instrument, were in a land foreign to their real character.

Shortly after leaving this village, I met three peasants driving a flock of goats and sheep, which strongly reminded me of some pictures I used greatly to admire in the "Adventures of Robinson Crusoe." The main valley ends a couple of miles above Zell, and I took a foot-path, leading into a higher valley, and across the mountains to the main road from Innsbruck to Italy.

The foot-path brought me to Leenersbach, where I found quarters for the night. The first two-thirds of the way were as wild and romantic as one could desire. Down the mountains ran streams of foam, falling into a large torrent which roared in the bottom of a deep gorge, hundreds of feet below me. The foot path wound along the brink often dangerously near, and crossed the torrents by rude wooden bridges. I could not have followed this path in the dark, for frequently places occurred where a single misstep would have precipitated me into the torrent; and there was no barrier to hinder the making of a false move. The latter part of the way was far less wild, and the stream flowed between low banks in the bottom of a green and narrow valley. High above me, wherever there was a green spot, though in the midst of yawning precipices, stood the low wooden peasant cottages.

Most of the way up this valley I had a fine specimen of a mountain peasant for company—one who would undergo the severest privations rather than emigrate. He was about twenty years old, and his business was to transport articles to such portions of the valley as were inaccessible to horses. He carried a heavy load of cloth on his shoulders, but notwithstanding this, and the steepness of the way, he kept me on a fast pace. He said he could earn twenty-five or thirty dollars yearly, and he lived mostly on milk and cheese, with now and then some hard, black, rye bread. I described to him the advantages which America offered to the laboring man, and asked him if he would not like to go to a land where all the people ate, daily, meat and wheat bread. "Have you got mountains like these in America?" he asked. "No," I replied, "not where the white men live." "Then I shall not go," said this prodigious of the Tyrol. "I had rather live where I can climb the mountains."

"Even the loud torrent, and the whirlwind's roar, But blind him to his native mountains more." June 2d.—I slept last night in a real Tyrolean house, in the cluster of low, unpainted, wooden buildings, standing without any order on the green meadow, called the village of Leenersbach. The windows of my room consisted of only four small panes of glass each, and a door opened from it upon one of the wooden balconies in front of the house. The rooms were all boarded up on the inside for plaster or stone would have been too damp and cold in that high region. I had the curiosity to look into the kitchen, and found the fire burning on a large platform of stone, raised about two feet above the floor. The smoke escaped through the door and windows, and a hole in the corner, which was apparently meant for the chimney. Wood for fuel was drying in frames around the top of the walls.

I sent my boots, which had suffered on yesterday's journey, to the shoemaker, and he delayed me till 10 o'clock. I employed myself by observing the people who gathered about the inn, and appeared to have little to do, although the day was warm and the sun shone. The men were large and broad-shouldered, but nearly every one stooped from the practice of carrying heavy loads up the mountains on their backs. They wore above and stockings, and their pantaloons—which reached only just below their knees—and short coats, were made of the coarsest cloth. Their costume lacked much of being so good and picturesque as that of the inhabitants of the lower valley. Nor were the people themselves so fine-looking. There was more of the brute, and less of the intellectual in their countenances, and many of them showed the effects of hard drinking. I observed, too, that but little beer was drunk; mostly *schnapps*. I am inclined to think that the inhabitants of the highest valleys in mountain countries, are inferior to those who dwell lower down. They are worn by continued hardships and battling with nature, and their intellects are not developed by contact with their fellow men.

The weather was so warm that I pulled off my coat, when I started on my day's journey. The sloping meadows were colored by beautiful flowers of which I saw seven or eight species. In fifteen minutes I crossed the rapid torrent twice, by foot bridges, and in a couple of hours came within sight of Hinter Dux, which is the last village in the valley. It consists of a dozen wood-colored houses, clustered together on the green meadow, without a fence or a cultivated spot anywhere around them. Above, on all sides, rise snow-covered peaks. A flock of hens came strolling over the meadow towards me, and a few goats and sheep were grazing around. When I got among the houses, I saw four peasants, lying on the grass, and one of them hailed me, and asked if I were going over the *Jock*. On my telling him that I was, he said they were also going in half an hour, and they would show me the way. I went into one of the cottages, and ate some bread and milk and put some lunch in my pocket. When we started, one of the peasants put my knapsack into a long basket which he carried on his back. Another carried a fox skin, and a bird that he had shot. The tail of the bird, for which he expected to get several florins at the market in the village on the Brenner road, was fastened in his hat.

A winding foot-path leads up the steep mountain side from Hinter Dux. We passed a large water-fall, formed by a torrent, and in an hour and a half, came to extensive snow fields. The snow, in many places, was several feet deep, and after wading to our breasts, one time—in that which was fresh fallen—we had to retrace our steps and seek a place where it was firmer. On our left was a glacier, and on our right the highest peaks rose a few hundred feet above us. They are more than seven thousand feet above the sea. The sun glared hotly, and the snow melted some, though the air was piercing cold. The snow dazzled us, and my companions put handkerchiefs over their eyes, and warned me to do the same, or I might be snow-blind when I came into the valley. All around was snow and rock, and the scene was wild and desolate beyond description. We had left the flocks and the pastures out of sight, and had entered the highest Alpine region—the home of the Avalanche and the Tempest. There was no vegetation in sight, nothing but frowning rock and untrodden snow. The wind blew, and it waved no tree, no shrub, no grass—nothing but dead snow. The sun shone, but no happy insects hummed in the atmosphere, and no gentle flower woke to life.

Did you ever stand in a winter night—after the clocks have struck twelve—on the summit of a high hill, underneath a sky covered with broken, stormy clouds that sent down showers of snow, and admitted scanty moonbeams? Did you look out then over the landscape, at the fierce and ghostly sky, the leafless trees, the white fields, the dead fences, and the lightless houses, all dimly seen through the moaning storm? If you did you have witnessed one scene of desolation; but if you would picture to yourself that Alpine scene, let the hills swell to jagged mountain peaks and glitter white against the jeweled sky—let the valleys deepen to almost impassable gulfs, full of precipices and chasms, and all the works of man turn to drifting snow banks, and then imagine the hottest summer sun all powerless to dispel the desolation, and you can fancy the scene I have tried to describe.

Two of my companions were boys, and one of them showed a little of the Yankee propensity, when he offered to swap coats or hats with me, even. He said he could sing, and when I asked him if he could dance, he began to go through the motions of fiddling, and to dance about so lively on the rough rocks, that I was half afraid he would tumble over the precipice by our side. One of the men was much interested about America and said he would like to emigrate, but he should never get money enough, for he could barely provide his family with the coarsest food and clothes. He had been a soldier in Italy, in his younger days, and in the loneliest spot of our day's journey, he gave me the comforting advice, "not to trust myself alone to the Italians, in by places, as I did to them."

On getting across the ridge we descended into a deep and green valley. The descent was very steep, and in one place we went down a long strip of hard snow very quickly, by leaning backward on our sticks and sliding. We followed this valley downward for a couple of hours, and came to the village of Staffaach, on the Brenner road. As the sun was quite high I went on, and gained the summit of the pass of Brenner by dark. The ascent is so easy and the road so smooth, that a horse can trot almost to the hamlet on the very summit. The wide arched door, low roof, and thick walls of the inn welcomed me after my hard walk, and I found the table laden with hearty food and generous wine. The temperature rendered a blazing fire quite comfortable, and snow lay on the mountains but a few hundred feet above. In the morning I was in a warm valley—at noon among snow fields on the mountain—in the afternoon again in a warm valley—at night comfortable by a blazing fire on Mount Brenner. O. V. W.

MAHOMET.

SLIGHTLY above the middle size, his figure, though spare, was handsome and commanding, the chest broad and open, the bones and framework large, the joints well knit together. His neck was long and finely moulded. The head—unusually large—gave space for a broad and noble brow. The hair, thick, jet black, and slightly curling, fell down over his ears. The eyebrows were arched and joined; the countenance thin, but ruddy. His large eyes, intensely black and piercing, received additional lustre from their long, dark eyelashes. The nose was high and slightly aquiline, but fine, and at the end attenuated. The teeth were far apart. A long, black, bushy beard, reaching to the breast, added manliness and presence. His expression was pensive and contemplative. The face beamed with intelligence, though something of the sensuous might also be there discerned. His broad back leaned slightly forward as he walked; and his step was hasty, yet sharp and decided, like that of one rapidly descending a declivity. There was something unsettled in his blood-shot eye, which refused to rest upon its object. When he turned towards you, it was never partially, but with the whole body.—*Mur's Life of Mahomet.*

INDEPENDENCE HALL.

ABOVE we present RURAL readers with an illustration of one of the most celebrated buildings in our country—an edifice which, did the respect and veneration of the people go forth to such an object, would justly lay claim to more of the homage of Americans than any other in the land. The old State House, in Philadelphia—better known as Independence Hall—was the theatre of many of the most interesting and important debates it has ever been the lot of our country to witness—the place where WASHINGTON, and JEFFERSON, and FRANKLIN, and ADAMS, and others, no less remembered or honored, held communion, actuated by the spirit of liberty, forgetful of selfish interests, and only anxious for the fate of their common country—the room where that noble band of patriots threw off the galling yoke of British

bondage and foreign servitude, and proclaimed to the world that America should be free, should stand as a monument to incite American youth to emulate the glorious acts of their fathers.

Erected in 1730, it is now 128 years old, but with the care it will receive from the patriotic citizens of Philadelphia, it will yet last many years. In front of the Hall are many beautiful shade trees, but these have been omitted in the engraving in order to more perfectly place before the eye the style and dimensions of the building.

The building on the southeast corner of Chestnut and Sixth streets (on the right of the engraving), was the "Old Congress Hall." Here WASHINGTON bade farewell to public life, and delivered that memorable address which will ever be cherished as a sacred legacy by his admiring countrymen.

ABIGAIL WATERS.

[Concluded from page 332, this No.]

At noon she ate her lunch with the children under the beech trees. She listened to their childish talk with evident interest, laughing at their jests and stories, and then at her proposal they went down the dark pine lane after flowers. She made a garland for DANNY's curls and crowned her with a pretty speech, and she taught them the botany of their pet blossoms. Then she told them much about the birds they saw, and many of the insects. They had a very happy time, and DANNY said it made them think of their walks with Miss MILLER.

Four o'clock came that afternoon before it was expected. ANNIE was not granted the opportunity she had always had before of meditating over her desk in silence, for PATTY and DANNY, and a dozen more, were waiting to walk home with her. They did not go by the dusty road, but across the fields and along by the creek side, down by the mill where they came in sight of the village, and where ANNIE said she must leave them as she wished to call at the post-office before going home.

"You always go to the post-office, don't you?" asked DANNY. "Do you always get a letter?"

"Oh, no," was the laughing reply—"I get one but seldom."

"Have you got a father and mother, Miss WATERS?" timidly asked a little girl, who had clung to her hand all the way.

ANNIE told them that she had, and how far away they lived, and how long it was since she had seen them, and the many weeks that must come and go before she could be at home again.

"I should think your father or mother would write to you every day," said KERRY.

They saw her lips tremble and the big drops she brushed from her eyes ere she replied—"They are both sick. Mother's eyes are so poor she cannot write—we fear she is growing blind. Father has laid in his bed more than a year. He writes me all the letters I get, and he writes as often as he can. Good night," and meeting the faces that were upturned for her kiss, she went silently on her way. Had she heard what those children said as they stood gazing after her, she might have wondered at her power to make them love her so soon.

The next morning there were several bouquets on her desk, and PATTY GRAHAM opened his books, and the "noisy corner" was comparatively quiet. ANNIE, though harassed with perplexing thoughts of her home, did not suffer the cloud to darken her face, or sink her spirits into the sullen gloom she had nursed so long. She found that hope made the burden lighter, and feasted her soul upon it. But she could not find courage enough to appeal to Mr. DODDS that night, or the next, or the next, and when the rainy, dull Saturday came, and the children were troublesome, and everything seemed warring against her resolutions, she was fast giving way to bitterness and misanthropy, when Mr. DODDS's carriage arrived for the impatient DANNY, and with it an urgent invitation for the school-mistress to come to tea. ANNIE was just starting off on foot, through the mud and rain, when DANNY called loudly after her.

That night as she sat alone with good Mrs. DODDS talking cheerfully and freely, for it was impossible to resist the influence of that generous, tender-hearted woman, she found herself, before she was aware, treading upon her own history and sad experience. She paused, and would have retreated from the subject, but Mrs. DODDS had laid down her knitting and drawn close beside her, and, with tears in her mild eyes, she urged her to go on and tell her her trouble, for since the little, DANNY had told her about her sick father and mother, her heart had ached for the poor girl.

Before ANNIE went to bed that night, Mrs. DODDS gave her a warm, motherly kiss, and told her to cheer up and be happy. "Don't vex yourself, childie," said she, "for it is all coming out right yet, I know it is."

Therefore she was not surprised at the ready advance of the little sum she requested of Mr. DODDS, but she was greatly so when he informed her shortly after of the considerable increase of her salary, which he hoped would be an inducement for her to remain as their teacher through the winter term.

She taught in the little red school-house four years after that, and when, in one summer vacation, the young rector took the orphan girl to the parsonage as his wife, the village children hung the little gray church with flowers, and wept and smiled when the Holy Rite was over, hardly knowing whether to be sorry or not.

Rochester, N. Y., 1858.

The Young Ruralist.

A COUNTRY GIRL AT THE FAIR.

FRIEND MOORE:—From within the precincts of my quiet country home, I have thought to write to you. You, of course, will not be surprised at the reception of a letter—you who receive so many—nor yet when I tell you the writer is an "unsophisticated country girl," barely out of her teens, homely and—clever. I do not expect you will even notice my letter—much less reply to it—yet, because I wish to do as others do, I have concluded to write to you. But my letter shall speak for itself.

We have very few holidays here, its "all work and no play," which you know "makes Jack a dull boy," so you must know I was for a long time anticipating with delight our County Fair. As the time drew near I was all excitement, how I should dress, how appear, for I knew I should meet very many of your city folks and didn't like to look or appear insignificant. I knew how I should be squinted at and laughed at as "only a country girl," for with all my attempts I cannot carry my head quite so high, or walk quite so genteel as your city-bred ladies.

At last the time arrived; I arranged my hair after the latest fashion, donned my best gown (didn't see many better there) and left my country home for one day at least. Ere long we arrived at the grounds, and after duly flourishing our badge, waiting half an hour for an opportunity to enter, we were unmistakably at the Fair. I regret very much, Mr. MOORE, that I did try to be so nice, but then I wasn't going to walk round "regular country style," so I passed round once in our carriage, looked straight ahead, and as a consequence knew nothing about the splendid horses and cattle, poultry and rabbits, which they say were there.

I can't tell you of all the nice things I saw—my letter would be far too long—but the idea struck me forcibly that lazy people—those of whom I have heard it said, "were too lazy to eat!"—ought to procure a set of those jaws I noticed, over which the will has no control.

Contrary to the customs of many of our "country people," I didn't carry my provisions with me but dined in the *Hall*, with all others who could afford it, and weren't too stingy. I wouldn't like to tell you how long I had been saving my small allowance of spending money, so that when I went to the Fair I could appear like *somebody*—you would laugh at me for my forethought. I saw you, Mr. MOORE, figuring pretty extensively in the dining hall, and thought when I left, your appetite might soon be appeased, providing the waiters did their duty. I haven't told any one I ate at the table with you—if I should they would think me so highly honored perhaps I might lose some of my country friends. Had it not been for this circumstance, I doubt whether I should ever have written this letter.

I am greatly in favor of these gatherings and shall look forward to a pleasant time when next we have our County Fair. By-the-by, Mr. MOORE, I intend to take something pretty nice next time, and I know if you have anything to do with awarding premiums you will not forget your humble friend, Castle Farm, Sept., 1858. JANE JACKSON.

[Our ironical friend is assured that we always endeavor to perform our duty—even at a dining table, in presence of rare specimens of "Heaven's last" if not always "best gift." If JANE will do us the honor of making herself known at the next Fair, she shall have an opportunity of seeing somewhat outside of the dining hall, albeit we can promise nothing about the award of premiums.—By the way, JANE puts on too many airs to comport with the character of a genuine country girl, and we suspect resides in the suburbs of the city.]

CLERKS AND FARMERS.

MESSRS. EDITORS:—I see by the RURAL of August 21st, that there seems to be quite a contest going on between the *Clerks* and *Young Ruralists*, in regard to whether the *Clerks* shall have a place in the corner heretofore devoted to *Young Ruralists*. I can see no reason why they can object to our sharing the corner with them. Are they afraid that some bright star from among the *Clerks*, will outshine them? Or do they consider themselves so much our superiors, that they will not condescend to have their writings printed in the same column with ours? I hope it is neither. Why will they not come out and welcome us kindly and openly, instead of driving us off. I think it would be much more manly, and certainly much pleasanter. Can you, or some *Young Ruralist* inform me when it is the best time to put down layers of the grape vine? Also, the manner in which it is done?—CLERE, Buffalo, N. Y., 1858.

REMARKS.—All that is necessary to do to layer the grape vine, is to take a branch in spring, after having removed a little of the surface earth, lay it down, and cover it with mellow earth; cover a foot or two in length, and let the end of the shoot remain uncovered, tying it to a stake. Where you have a long branch it will make two or more layers, by covering it at two or more points.

AUTUMN IN THE COUNTRY.

MESSRS. EDITORS:—As I am one of the "young country folks," as we are denominated by the *Young Ruralists* of Monroe county, I presume upon your goodness to write a few lines. The country is my home, and I trust I am truly thankful that I am permitted to live far, far from the ceaseless din of a noisome, busy city. But be that as it may.

How beautifully the sun's rays are intercepted by the vines which go clambering up against the window near which I am seated. I raise the window, part the vines, and gaze at the setting sun.—No walls of brick or highly painted wood-work to rear their, to me, gloomy surfaces, (when compared with nature's ever-ceasing scene) to weary the eye with the monotonous appearance; no grocery, jewelry, or dentist signs to gaze at, but instead, the broad fields of corn and clover, the trees, already decked in autumn's gorgeous colors, awaiting only the frosts and winds of the coming month, to lay them in their early graves. Oh that we may be so prepared, that when death comes, we, like the autumn leaves, may descend gently, peacefully into the dark valley, supported on the arm of Him who hath said "It is I, be not afraid."

NILLA.

Corner for the Young.

For Moore's Rural New-Yorker.
ACROSTICAL ENIGMA.

I AM composed of 23 letters.
My 1, 12, 2, 10, 16 is king of grain.
My 2, 13, 15, 12, 4 is a number.
My 3, 7, 20, 9 makes young folks merry.
My 4, 17, 7 is a weight.
My 5, 20, 3, 16, 17, 7 is a city in one of the Eastern States.
My 6, 8, 1, 14, 18 is a boy's name.
My 7, 6, 1, 16, 20, 17 was a philosopher.
My 8, 6, 5, 16 is the cause of much trouble.
My 9, 10, 4, 19, 12 is a time piece.
My 10, 14, 7, 10 is a girl's name.
My 11, 21, 10, 18 is a bird.
My 12, 10, 4 is a covering for the head.
My 13, 7, 8, 22, 10, 18 never forgets a kindness.
My 14, 22, 4 is a small insect.
My 15, 10, 7, 16, 23, 10, 9 is a useful machine.
My 16 is a kind of drink.
My 17, 7, 13, 17, 7 is a garden vegetable.
My 18, 6, 10, 23, 12, 20 is a town in Wisconsin.
My 19, 10, 3, 12 is hard to get.
My 20, 12, 22, 20 is the name of a State.
My 21, 10, 3, 12, 22, 16, 15, 4, 20, 7 was a President of the United States.
My 22, 8, 10 is a girl's name.
My 23, 20, 4 is a name for a drunkard.
My whole is the name of a Town, County, and State.
West Bend, Wash. Co., Wis., 1859. H. G. H.
Answer in two weeks.

For Moore's Rural New-Yorker.
PROBLEM.

SUPPOSE a round tub, the perpendicular height of which is four feet; the bottom diameter is two feet, and the top diameter three. After putting into the tub a chain composed of twenty-five round links, each link being six inches in circumference, and made of round iron one-fourth inch in diameter; and also an iron globe twenty inches in diameter, with a cavity in the form of a sphere in the centre, occupying $\frac{1}{4}$ of 29-160 of the whole globe, with a round orifice, leading to this cavity, one inch in diameter—how many gallons of water will be required to fill the tub?

Ballston Spa, N. Y., 1858. MEROY P. MANV.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c. IN NO. 455.

Answer to Miscellaneous Enigmas:—Hermanstadt.

Answer to Puzzle:—For example:— $4 + 3 + 2 + 7 = 16$, subtracting this amount from 4,327 gives 4,311—adding them as at first, and rejecting 3, the number is 6. Subtract this number from 9, and you have the figure omitted. If this number given should be composed of units and tens, (13, for instance), add the tens to the units and subtract the amount from 9. If it should happen that the figure to be taken from 9 is 9, the figure omitted will be 9. Of course the person to tell the figure omitted must not see the operation performed.

UNHEALTHY POSITIONS.

THOSE persons engaged in occupations requiring the hands alone to move, while the lower limbs remain motionless, should bear in mind, that without constantly raising the frame to an erect position, and giving a slight exercise to all parts of the body, such a practice will tend to destroy their health. They should, moreover, sit in as erect a position as possible. With seamstresses, there is always more or less stooping of the head and shoulders, tending to retard circulation, respiration, and digestion, and produce curvature of the spine. The head should be thrown back, to give the lungs full play. The frequent long-drawn breath of the seamstress evinces the cramping and confinement of the lungs. Health cannot be expected without free respiration. The life-giving element is in the atmosphere, and without it, in proportionate abundance, must disease intervene. Strength and robustness must come from exercise. Confined attitudes are in violation of correct theories of healthy physical development, and the instincts of nature. Those accustomed to sit writing for hours, day after day, can form some idea of the exhausting nature of the toilsome and ill-paid labor of the poor seamstress.—*Scientific American.*

ROCHESTER, N. Y., OCTOBER 9, 1888.

FALL CAMPAIGN QUARTER!

The Rural Three Months, on Trial, at Half Price!

At the suggestion of many of its friends and in order to introduce the paper more generally preparatory to the new volume, we have concluded to offer the Rural for the present quarter—October to January, 13 numbers—at ONLY HALF PRICE, (25 cts.) thus placing it within the means and reach of all who wish to give it a fair trial. We will send 4 copies for \$1; 8 for \$2; 12 for \$3; 20 for \$5, &c., and mail to as many different persons or post-offices as desired. Of course, we shall not realize a farthing's profit, yet wish to circulate at least Five Thousand trial copies of this quarter.

We therefore frankly ask each and every agent and friend of the Rural to aid in circulating the Fall Campaign Quarter. There is scarcely one of our readers who could not, if disposed, easily obtain from 4 to 20 or 50 Trial Subscribers, and thereby not only enhance the welfare of his or her friends and neighbors, but directly aid in augmenting the future usefulness of this journal. Friends of the paper and its objects, near and distant—in the North and West, East and South—will you not give "a long pull, a strong pull, and a pull altogether," in behalf of the Fall Campaign Quarter of the favorite Rural Weekly?

Review of the Week.

The accounts from the Atlantic Cable, brought by the Arabia, are very gloomy. Electricians seem to have reason for believing that the lesion is about two hundred and seventy miles from Valentia—a point where there is a sudden descent in the bed of the ocean—and such is the position of the break that it cannot be repaired. Prof. Thompson also pronounces, on the strength of indications furnished by his delicate tests, that the electrical currents are drawn off at several points in the entire line. There was still hope, however, that communication might be restored by powerful instruments, which were on their way from London. Mr. C. W. LUNDY, the gentleman sent out to Trinity Bay by the English Directors, has arrived at Halifax, and telegraphs to CYRUS W. FIELD as follows:—"I bring instruments and regulations for testing and working on certain days, when Valentia will be particularly watchful for signals. It is hoped, that by establishing a system of unison between the two stations, to get signals through. The conductor is not broken; the defect is loss of insulation two hundred and eighty miles from Valentia. It is possible, by sending a certain kind of electricity, to improve the insulation, and thus the difficulty may be overcome for a time. From the nature of the defect, signals even at present, may be received at Valentia from Newfoundland, and not vice versa. Everything will be done to restore communication. Mr. BARTT thinks the cable can be lifted and repaired."

There seems to be but little doing at Washington. A telegram on the 28th ult., informs us that Judge BOWLIN, Special Minister to Paraguay, would receive his instructions the day following, and proceed to New York, where he would embark on the Sabine on Monday, the 4th inst. Dispatches from our Minister resident at Panama, say President LOPEZ is making extensive preparations to receive our Paraguay squadron. Mr. A. O. BRAYTON, Auditor in the Treasury Department—a post-

tion he had held for nearly twenty-five years—died on the 1st inst.

DURING September, 978 warrants were issued from the Pension Office, to satisfy which 148,000 acres of land were necessary.

A TELEGRAM, dated New York, 4th inst., contains the gratifying intelligence that the Norwegian ship "Catarina," Capt. FUNKENBERG, has arrived at Quebec with twenty-two of the passengers and crew of the steamer Austria, the destruction of which, by fire, was noticed in the Rural of last week. The log of the "Catarina" thus states the particulars received:—"On the 24th of September, at 3 A. M., lon. 33.40, lat. 41.39, the Catarina fell in with the steamship Austria, and took from the wreck twenty-two persons—eleven passengers and six of the crew. In the number included a girl fourteen years of age."

DISPATCHES from Mr. FORSYTH, our Minister at Mexico, were brought by Dr. BILLINGS, who arrived at New Orleans on the 4th inst. The principal object of the Dr. is stated to be the purchase of Minnie rifles for the Liberal army, for which purpose he is well supplied with funds. He says the Americans are much thought of by the Liberal party, and occupy high stations of trust. He thinks Sonora will soon be ceded to the United States for a consideration. On the 5th of Sept. a force was preparing to march on Jalapa and Cheagary's head quarters.

Schenyler County Fair.—Watkins.

AN EDITOR ON AN ENGINE.—Neighbor MOORE of the Rural New-Yorker, had some extra experience yesterday. Being engaged to deliver the Address at the Schenyler Co. Fair, at Watkins, at 2 P. M., he started on the 8:40 train from this city, having been informed that he could connect at Canandaigua with a train on the C. and N. E. Railroad, which would reach his destination before noon. On arriving at Canandaigua, however, he learned that the trains did not connect; that he was an hour behind time, and in a decided fix, being forty-seven miles from Watkins. In this emergency, Mr. Moore, who always endeavors to meet his engagements if among the possibilities, applied to W. G. LAPHAM, Esq., Superintendent of the C. and N. E. Road, for aid and comfort in the shape of an extra. After learning the circumstances, Mr. Lapham kindly consented to send an engine over the road. The good engine "Dundee," was, therefore, promptly "fired up," soon en route, and by putting on extra steam and speed, Mr. M. arrived in time to meet his engagement—much to the surprise of the large number of people in attendance at the Fair, as it had been announced that, having failed to reach there in the regular train, he would not be present.

Mr. Moore wishes us to express his acknowledgments to Mr. Superintendent Lapham for his courtesy and accommodating spirit and action, and trusts the train on his road may ever pass as safely as did the good engine "Dundee," driven by Engineer W. H. Hayward, under command of Mr. Conductor Jendevine, yesterday. He also avers that riding on an engine, especially through such a beautiful and picturesque region as that bordering Seneca lake, is a pleasure and novelty worth the investment required for a special train.—Rochester Daily Union, Sept. 30.

To the above veritable account of the manner in which the Schenyler Co. Fair was reached, it may not be improper for us to add a few words relative to the result of the exhibition, and its location. In the first place, we were agreeably surprised to find from 3,000 to 5,000 people in attendance at the Fair, and to learn, from observation, and otherwise, that the exhibition had been unusually creditable and successful. Certainly, we never attended a Fair which closed more pleasantly and satisfactorily, where all seemed so well pleased with the result of their efforts in behalf of improvement. The farmers of Schenyler seem to be imbued with the right spirit, and the prosperity of their Society proves that they have manifested it by efforts in the proper direction. Personally, we are indebted to the officers and members of the Society for a most cordial and gratifying reception, as well as patient hearing and endorsement. Acknowledging the kindness which induced them to manifest so much appreciation of little merit, we trust our Schenyler Co. friends will never "fail to connect," but always keep the track whereon glides the car of improvement. They have already surpassed many older, larger and wealthier counties, and no doubt will report decided progress, annually, in future.

The pleasure of our brief visit to Watkins was greatly enhanced by the kind courtesy of Messrs. FREER and other residents of that favored locality. We shall long remember with pleasurable emotions our first view of "The Glen"—one of the most remarkable and wonderful natural curiosities in the Union,—and from "Prospect Hill," which overlooks the beautiful village and valley, Seneca Lake, and a wide extent of the rich and picturesque country surrounding that rightly-named eminence.—Watkins is worthy of an annual visit by those who frequent Saratoga, Niagara, and other popular summer resorts, in pursuit of health or recreation.

TO CORRESPONDENTS.—We often receive letters from correspondents who consider themselves slighted, on account of the non-appearance of certain prose or poetical articles contributed by them, when the facts in the case would exonerate us from all blame. Our rules require the author's name and residence, and when communications are received with nothing but a "nom-de-plume" to signify paternity, they are cast aside with little attention. We have now a considerable number of meritorious contributions from "Lulu," "Gipsy," "Kittie," of Clyde, "Knick," "Will Wanderer," "J. Hinner," "Pleasant Bard," "Plow-Boy," &c., which, if the authors will recognize our law in such case made and provided, will receive consideration. If writers for the Rural would comply with the rules the press of the whole country have established, they would save editors much trouble, and no little vexation for themselves.

MISSIONARY MEETING.—The American Missionary Association convened at Worcester, Mass., on the 28th ult. The attendance was very slim. Addresses were made by Rev. J. G. Fee, of Ky., and Danforth, N. C. The annual sermon was preached by Rev. Dr. Thurston, of Me. The Treasurer's report shows receipts during the year, of \$40,000. The expenditures during the year were \$44,000.

WAR DECLARED AGAINST TEXAS.—Galveston papers of the 21st ult. are received via New Orleans. They say that the Northern Camanches, Kiowas and a party of the Apaches, numbering fourteen bands in all, had declared war against Texas.

The Kansas Gold Mines.

Gov. DENVER, writing to the Secretary of the Interior, at Washington, under date of September 17th, says that late news from Pike's Peak leaves no room to doubt the correctness of the reported discoveries of gold in that vicinity. The explorers found gold on the Arkansas, on the heads of Kansas, and South Fork and Platte rivers, embracing an extent of country of more than 300 miles. The richest mines yet found are on Cherry Creek, a tributary of the Platte, directly north of Pike's Peak.

Gov. D. has not yet heard of quartz veins, but the best information would seem to indicate a great similarity between these mines and the first discoveries in California. In view of the present condition of affairs in that region, Gov. D. advises that the lands there be withdrawn from pre-emption, if they are open to settlement, leaving them as in the mining districts of California, free for all who may see fit to engage in working the mines.

The country, he believes, is or has been claimed by the Utahs and Cheyennes, the Kiowas and the Arapahoes, and he does not know that their title has ever been extinguished. If it has not there will be no trouble in withdrawing the lands from the operations of the pre-emption laws, but if it has they ought to be withdrawn any way, and the facts and reasons reported to Congress next winter. It would, he adds, be advisable to send out some competent person to examine the mines and report facts.

MEXICAN NEWS.—The New Orleans Picayune is in receipt of late and interesting news from Mexico, of which the following is a summary:—The papers report the vomito as still prevailing quite extensively in Vera Cruz, and numbers dying daily. Up to the 5th inst., Gen. Robles had not made a landing, but remained on board the British steamer Clyde, at anchor off the port. It was the impression among quite a number that he might be called upon to succeed Zuloaga at the head of the Government. The proposition recently offered for the recall of Santa Anna, was strongly opposed by Gen. Echegaray, who threatened to join the Liberal army in case the proposition should be persisted in. The final success of the Liberals was not doubted. Mr. Forsyth, the American Minister, was still in Mexico, (at Taubaya), where he would remain for several weeks, or until the vomito had disappeared sufficiently to render traveling safe.

OCEAN STEAMERS LOST.—By reference to the following list of steamers which have been lost in the Atlantic, it will be seen that the destruction of life by the Austria is greater than has occurred on any one vessel for many years:

1. President, ...	Never heard of.
2. Columbia, ...	All hands saved.
3. Humboldt, ...	All hands saved.
4. City of Glasgow, ...	Never heard of.
5. City of Philadelphia, ...	All hands saved.
6. Franklin, ...	All hands saved.
7. Arctic, ...	322 lost—87 saved.
8. Pacific, ...	Never heard of.
9. Lyonnais, ...	144 lost—16 saved.
10. Tempest, ...	Never heard of.
11. San Francisco, ...	240 lost—460 saved.
12. Central America, ...	422 lost—170 saved.
13. Austria, ...	508 lost—89 saved.

The Peruvian ship Mercedes was wrecked on 1st of May, 1854, and 731 perished out of 820.

LATEST FROM HAVANA.—Advices from Havana say that an American ship had landed a cargo of slaves at Cardenas, numbering 700. Nearly 250 died on the passage from starvation. A Spanish officer had been sent to Cardenas to investigate the matter. The health of Havana is improving. A letter from Havana in the N. Y. Herald, says a number of secret agents of Santa Anna had arrived there from St. Thomas, en route for Vera Cruz.—They had plenty of gold, and left on the English mail steamer, after having interviews with the son of the ex-Dictator and some Spanish officials. It was said that the Spanish Government would lay the cable to Key West at its own expense.

A BREAK DISCOVERED IN THE ATLANTIC CABLE.—A recent issue of the N. Y. Times says that the workmen employed in cutting up the cable in the machine shop at the Brooklyn Navy Yard, found a break in the communicating copper wire, about three-eighths of an inch long, through which the saw passed in the solid gutta percha, showing that the disconnection must have occurred during the process of manufacture, and therefore leading to the very great probability that other similar lesions may have occurred to other parts of the cable.—What have the electricians to say in regard to this fact, which is reliably authenticated?

TERIBLE SUFFERING FROM THIRST.—A long letter appears in a Texas paper concerning the passage of McCullough's emigrant train across the staked plain to California. The Great American Desert, through which the train passed, is a barren waste, and poorly supplied with water.—Out of 1,600 head of cattle, 650 died for lack of water, and for a period of seventy-six hours were without a drop to slake their thirst. The men also suffered terribly, and many shot down famishing bullocks on the road, pulled off their boots or shoes, caught the thick hot blood, and drank it freely.

BETTER THAN GOLD MINING.—It is said that the lead mines of Wisconsin and Iowa are just now yielding extraordinary quantities of Galena. Two young men at Fairplay, Wis., are taking 30,000 lbs. per diem from a lode which they have recently opened, and from which they have raised 3,000,000 lbs. Mines in Grant county are also said to be exceedingly rich. On the opposite side of the river, in Iowa, in Clayton county, and near Dubuque, lead mining pays better than gold digging.

FROM THE PACIFIC WAGON ROAD EXPEDITION.—Letters from the Pacific wagon road expedition, dated Big Sandy, Oregon, Sept. 7th, say that Col. Lander was pushing the work with all possible dispatch with hopes of reaching Soda Springs before bad weather set in. Two hundred miles of road were finished, and a force was at work beyond Salt River. The expedition will winter at Laramie.—Col. L. starts for Washington Oct. 10. The health of the expedition was good.

Literary Notices.

THE PUBLIC AND PRIVATE HISTORY OF NAPOLEON THE THIRD, EMPEROR OF THE FRENCH: with Biographical Notices of his most distinguished Ministers, Generals, Relatives and Favorites, and various details descriptive of France under the Second Empire. By SAMUEL M. SARGENT. A. M., author of "Court and Reign of Catherine II." "History of Nicholas I. of Russia," "Life of Hamilton," etc., etc. Philadelphia: J. W. Bradley.

In a handsome volume of over 400 pages, we here have an elaborate and apparently impartial history of the public and private career of one of the most remarkable and prominent men of the nineteenth century. In his preface the author avers that in the preparation of this work he has exhausted all the reliable materials which were accessible. "These include everything that is valuable, which the literatures of France and England contain in reference to the subject. Several biographies of the Emperor of the French have already appeared in this country; yet none of them are complete even as far as they go; none bring the narrative of events down to the present time; all of them speak of the subject of their narratives with the exaggerated and unfair coloring of partisans; and they have been indiscriminate either in their censure or their praise. The present writer has endeavored to avoid these errors; he is not conscious of yielding to the least degree of prejudice in either direction; and he has aimed at elaborating such a history of the public and private career of LOUIS NAPOLEON in all its stages, as will describe it precisely as it occurred. The reader himself will judge how far the author has been successful in achieving a correct historical portrait of the most extraordinary man, beyond all comparison, who has flourished during the middle epoch of the nineteenth century."

The work is rendered more valuable by the addition of a variety of interesting and useful matter relative to France under the Second Empire. The volume is got up in superior style, and comprises several fine steel engravings. Reliable and interesting in contents, and creditable in externals, we cordially commend it as worthy a place in every library. To the Publisher.

COURTESHIP AND MATRIMONY: with other Sketches from Scenes and Experiences in Social Life. Particularly adapted for Every-day Reading. By ROBERT MORRIS. Philadelphia: T. B. Peterson & Brothers—1868.

These Sketches, by the editor of the Pennsylvania Inquirer, on account of the moral merits they possess, will take a prominent position among the best books issued by the American press. Not one of the one hundred and twenty articles the volume contains but manifests a sincere desire to do good. The tendency of the work is to present a true picture of life—life practical, energetic. The clear common-sense and high-toned integrity of the author have enabled him to happily grasp the length and breadth of every subject to which he has devoted his pen, and the result is one—from the influence it is destined to exert upon the minds of the young—with which Mr. MORRIS may justly be gratified. It is truly a family book, and the home-circle which places it in its every-day reading will be the recipient of kinder feelings therefor. A remarkably excellent steel engraving of the author is given. DEXTER has it for sale.

OUR favorite—the London Quarterly Review—was received as usual, and the July number is fully equal to its predecessors. Admiral Blake; History of Civilization in England; Iron Bridges; Life of Wycliffe; Professor Blunt and his Works; Shipwrecks; British Museum, British India, are the titles of the articles which make up the present issue. Those who desire standard reading should subscribe for this Review. LEONARD SCOTT & Co., New York, Publishers. DEXTER, Agent.

News Paragraphs.

The Louisville Young Men's Christian Association have remitted \$1,070 to aid in the support of a yellow fever hospital under the care of the Young Men's Association of New Orleans.

A STEAM WAGON, or traction road locomotive, is used in Marysville, Cal., and draws trains of heavily laden wagons on common roads with great ease, turning corners with entire facility. It moves through loose sand as well as on hard roads, and without increase of power.

On Monday week, the Spanish Minister paid into the State Department twenty-five thousand five hundred dollars, interest of the debt of Spain to American citizens.

MR. DANIEL WEED, four miles south of Moosene, informs the editor of the Waupun Wisconsin, that he has killed seven bears within the past two weeks in his immediate vicinity, and all within half a mile square.

THERE is great repugnance in Australia to Chinese emigrants, and the Colonial Assembly have passed a bill taxing them ten pounds per head.—The miners are not satisfied with this, but demand their exclusion from the country.

DIED, in Hunter's Bottom, Ky., Sept. 14th, Margaret Hoyt, aged 91 years. She was a native of New York, and landed at Mayeville, Ky., 70 years ago. She was the first white woman in Cincinnati.

OVER thirty colored families, embracing some 150 persons, residing in Boston and vicinity, have organized themselves under the title of the "Cambridge Liberator Emigration Association," for the purpose of emigrating to Liberia. Some forty or more of these persons hope to embark in the colonization ship Mary Caroline Stevens, the 1st of November prox.

A NEW ORLEANS paper says of the overflowed district known as the "Bell Crevasse," that the spot looks like a desert. Not a blade of grass appears where once was smiling plantation verdure. The ground is furrowed into every shape, and the channel of the crevasse is wide and deep enough to form a respectable river.

APPLES are not very dear in New York city, according to the Courier and Enquirer:—"Washington market is overstocked with windfalls, and prices rule very low. There is little prime fruit offering. The current range paid is 75c to \$1.50 per barrel, but choice qualities bring \$2.25. Russets are a drug—hardly saleable at any price. Baldwins, also, are not wanted. A better market, however, is anticipated as soon as the offerings are restricted to winter fruit."

THE vintage, which is now in active progress in most parts of France, is likely to prove one of the greatest abundance known for many years past.—The grape disease appears to have been completely mastered, and the apprehensions of its ravages, especially in the Bordeaux and Claret districts, have fortunately been without foundation. The accounts, too, from all parts of Italy, from Savoy, and from Lisbon, represent the vintage of 1888 as most splendid. In Savoy, in particular, it is said that never within the memory of man have the vineyards been so exuberant and prolific.

The News Condenser.

—Sweet potatoes are cultivated with success on Cape Cod.

—New York has had 18 Governors in a period of 81 years.

—A telegraph line has been established to Grand Rapids, Mich.

—There was a smart white frost at Utica on Friday night week.

—Snow fell briskly in Rutland, Vermont, on Wednesday week.

—Baltimore oysters are selling in St. Louis, at 75 cents per can.

—There are now 270,000 members of the French Legion of Honor.

—They are talking at Boston about a uniform for their policemen.

—Potatoes are said to have been first planted in New England, in 1719.

—Three convicts have escaped from Sing Sing Prison within a few days.

—Ice formed in Hartford, Ct., on the morning of the 29th of September.

—One of the principal streets in Galveston, Texas, is paved with shells.

—The N. Y. Times says the bills for the cable celebration foot up \$20,000.

—Thirty-five of the captured Africans have died since they reached Charleston.

—At the recent Book Trade sales in N. Y. city, about \$250,000 worth was sold.

—A gentleman of Cincinnati has realized \$12,000 from the sale of peaches, this year.

—The Turkish Government is about to establish a journal at Paris to represent its interests.

—The crop accounts from Russia are unsatisfactory, particularly in the vicinity of Odessa.

—About 2,000 persons had returned to California from Fraser river since the 1st of August.

—In the attack upon the Columbia miners in Oregon, 108 Indians and 10 whites were killed.

—The colonial assembly of Australia has passed a bill taxing the Chinese ten pounds per head.

—An Italian woman, who owns three houses and lots in Chicago, has been arrested for begging.

—The business of horse-stealing is said to be very brisk, in Kansas, during the present season.

—A feminine imposter, who passes for Mrs. H. B. Stowe, is receiving much attention in Europe.

—A fire at Greensburg, Pa., destroyed buildings to the value of \$30,000 on the night of the 21st ult.

—Theodore Parker, of Boston, has in his possession the first fire arm captured in the Revolution.

—A chimney, 235 feet in height, is in process of construction at the Navy Yard, Charlestown, Mass.

—The Astor Library, New York, contains ten thousand volumes that have been published since 1849.

—The steeple of the Universalist church in Auburn was blown down during the gale of Thursday week.

—Of the reformers convention held in Utica, a newspaper says "the only thing out of order was a bluish."

—Prof. Morse has been decorated by the Emperor of France, with the insignia of the Legion of Honor.

—There are in the United States 26,000 persons who make their living partially by the sale patent medicines.

—The total gold circulation of Great Britain is estimated at \$250,000,000, and paper money at \$158,000,000.

—There are now issued from the Louisville, (Ky.) press five dailies, nine weeklies, and three monthlies.

—The Russian Government has it in contemplation to re-establish a metallic currency throughout the Empire.

—The American stable is looking up in England. Priors has won the great Yorkshire handicap race at Doncaster.

—The Leavenworth City Herald says the newly discovered gold region is about as large as the State of Missouri.

—Wild turkeys are reported to be more plenty than usual, at the west. This will be good news for the sportsmen.

—About 75 of the Sioux Indians intend to adopt the dress of their pale-faced brethren, and pursue an agricultural life.

—The continued drought is advancing the price of tobacco. In Lynchburg, Va., four hogheads were sold for \$921.

—It is reported that Louis Napoleon is negotiating for the mammoth Leviathan. The Company ask \$3,000,000 for her.

—The little mountain Republic of San Marino, in Italy, has awarded a medal to Miss Mitchell, the astronomer of Nantucket.

—Peaches have been raised in great abundance in Southern New Hampshire; this is an exception to the general experience.

—An effort is making in Arkansas to induce the Legislature to compel the whole colored population to leave the State.

—A beautiful cave in the mountains at the north, near Paterson, N. J., was explored last week to the distance of 250 feet.

—A council of Baptist churches, at Gloversville, N. Y., have decided that a man cannot be both a Christian and a Free Mason.

—It is stated in the German journals that the ladies of the Court of Wurttemberg have resolved no longer to wear crinoline.

—It is stated that J. J. Alston, of Tipton Co., Tennessee, has lost 600 hogs by the hog cholera, which is raging in that section.

—The oldest grist mill in Pennsylvania is at Germantown. It is still in operation. It is built of stone, and was erected in 1693.

—The first week in September was five degrees warmer in England than the average of the same week for the last forty-three years.

—A band of gipsies have pitched their tents near Columbus, O., and have made several attempts to kidnap children from that city.

—Duties received at the N. Y. Custom House for the first eight months of 1888, \$18,021,536; against \$30,227,371, same time 1887.

—The tobacco in the Conn. Valley is mostly gathered, and very favorable, too, for there have been some smart frosts there lately.

—The town of Catina, in Morocco, (Africa) has been in a state of siege for upwards of twenty years, with short intervals of relief.

—There are boats now navigating the Erie Canal with greater tonnage than the ship with which Columbus discovered America.

—The first lot of new rice was received at Charleston on the 20th ult. It is of a very handsome quality for the first in the market.

—Dr. Hind, the English astronomer, states that Donati's comet, now visible, can be seen presently in the daytime, by the aid of telescope.

—The reading of the bible in common schools is a subject of warm discussion in Kentucky. The Roman Catholic Bishop is opposed to it.

—The consumption of Cocobut water in Boston the last year, was equal to 73 gallons per day for each man, woman, and child in the city.

RURAL NEW-YORKER

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FIVE CENTS.]

VOL. IX. NO. 42.]

ROCHESTER, N. Y.,—SATURDAY, OCTOBER 16, 1858.

[WHOLE NO. 458.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY

Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Variety, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Editor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it seasonably advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

Rural New-Yorker.

AUTUMN HINTS.

The people of this country are highly favored with beautiful fall weather. Our springs are changeable, generally wet, cold and unpleasant, and summer with its bright sunshine, its intense heat, makes its advent suddenly. Those who are so disposed may complain of the damp and chills of spring, the heat of summer and the cold of winter, but no one can say aught against our autumn weather. To say it is beautiful gives no idea of the glory of the American fall, and the gorgeousness of our autumn scenery. The trees are just putting on their rich autumn dress,—the Virginia Creeper covers the trunks of the tall trees with its brilliant scarlet foliage, while the Sumachs in the hedge-rows and around the fences make the fields look as if surrounded with a belt of fire. The oaks, too, are assuming a golden hue, and the maples have put on a colored dress more rich, more brilliant, than any lady in the land can boast. Then the mellow haze of the atmosphere softens all these bright colors, and presents a scene more glorious than poet can describe or painter portray. Look up, ye dwellers in the country—enjoy the feast of beauty which a kind Father has provided for you—and thank the Giver of all Good that you have so glorious a heritage.

This fine weather we may not only enjoy, but we can use it to good advantage. It is just right for work—neither too hot nor too cold, and westward to give only a hint or two, just to call to mind what ought to be done, or what might be done, at this time, when we were rather involuntarily led to make the remarks above. We have just returned from the State Fair, and from rambling about the country, and a visit to the country in the fall, always fills our head with just such thoughts, and we find ourselves getting them on paper unconsciously, at every convenient and inconvenient opportunity. In a week or two we shall become settled down again.

The past summer has been favorable for the ripening of all kinds of products. Fruits difficult to ripen have been more perfect this fall than we have known them for many years. Corn is safe, everywhere, we believe. All that is now needed is to husk and house safely. The fodder, too, will be in good condition generally. We have had some sharp frosts here, but not enough to injure the stalks. Passing through Oneida county on the railroad on the 13th of September last, we noticed that corn-stalks were badly injured by a frost that had taken place some time previously. Take care of all the fodder. Things that seem of little consequence, hardly worth saving now, will assume an importance you little suspect before spring, especially if the winter should be long and tedious.

Potatoes should be got out of the ground now, as soon as possible. Hundreds of bushels are every year lost in this neighborhood by delaying digging until so late that they cannot be safely housed before hard frosts. Above all things, thoroughly dry potatoes before burying or putting in the cellar. Dry them a little more than you think necessary. Just to try the benefit of this, house a small pile damp, as they are dug from the ground.

The pigs should now be fattening. It takes a good deal more of food to make a pound of pork in cold weather than during autumn. Then in gathering crops there is a good deal of food that will be fine for hogs, especially if cooked and mixed with a little meal, that could not be used very well in any other way. We need not particularize. Every farmer will understand.

Almost all roots make a good growth quite late in the fall, therefore, it is desirable to leave them in the ground as long as possible, particularly if they were planted rather late, and have not, therefore, made a desirable growth. It is better, however, to take them up a little too early than too late, and delays at this time of the year are very dangerous. Sometimes winter sets in suddenly and unexpectedly. It is always well to be prepared for winter as early as possible. It is a very good plan to commence digging pretty early, where practicable, and continue digging a few every day

or two, as fast as the stock can consume the tops, which are of a good deal of value. Last season a gentleman gave us an estimate of the value of the tops of an acre of carrots and ruta bagas, which he fed to his cows, and it was so large we thought we would not give it to our readers. We did not, however, doubt the statement. We shall continue our "hints" when we can command more space.

NEW YORK STATE FAIR.

The Annual Exhibition of the N. Y. State Agricultural Society, held at Syracuse, Oct. 5th to 8th inclusive, opened auspiciously and was in many respects a decided success. Having, in connection with our assistants, taken very full notes of the show in its various departments, we shall endeavor to give, in this and the next number of the RURAL, a synopsis of the most prominent and noteworthy features of the whole Exhibition; but as the main portion of our present article is necessarily written and put to press before the close of the Fair, we cannot give so connected and complete a report as is desirable.

The fine weather on the first and second days induced a large attendance of exhibitors and visitors, and we believe the receipts were greater than during the corresponding period of last year. The spacious grounds and exhibition buildings were well arranged—evincing order and system in the preparations and management. The entries were numerous, and the animals and articles presented of such quality, and mostly from such sources—the practical Farmers, Mechanics and Manufacturers of the State—as to reflect credit upon the skill, industry and ingenuity of the producers represented. All this gave a prestige of success, and at the close of the second day, the officers and members of the Society, and others interested in its prosperity and objects, had just cause of congratulation upon the result thus far, and the prospect of a triumphant exhibition. The rain storm which commenced early on Thursday morning, and continued till toward noon, was, however, a great check to the anticipated success, and no doubt prevented thousands from attending the Fair. How seriously this may affect the result, or lessen the receipts, we are of course unable to determine.

In some of the principal departments the display at this Fair exceeded that at any previous exhibition of our own or any other State Society we ever witnessed. This is especially true, we think, in regard to the Stock and Agricultural Implements and Machinery—the show in each being unusually large, and remarkable for the superior quality of the animals and articles exhibited. The competition in most classes of these departments was close and spirited, placing the judges, in many instances, in delicate and responsible positions, and of course rendering the awards of premiums a difficult and unenviable task. From what we saw and heard, however, relative to examinations and awards in the Stock Department, we are inclined to believe the premiums were generally given upon supposed merit and value of the animals, rather than the position or influence of their owners, and that Smith's bull and Mr. PLOWMAN's mare were not successful—albeit we heard the remark in one instance that "Smith's bull" was in luck, and the ribbons ought to be changed.

The display in the various Halls—Floral, Domestic, Dairy, Mechanics, &c.—was generally good, but in several classes, such as Dairy Products and Flowers, quite inferior to previous exhibitions of the Society. In this article, and on our Horticultural page, we shall endeavor to make proper mention of the most noticeable articles in all departments, under appropriate headings.

The best part of the whole Fair, in our opinion, was the absence of great men, par excellence—the National and State officials, and such prominent and forward politicians and place-seekers as frequently patronize such exhibitions in order to show themselves to the people—and the presence of many of the most progressive, enterprising and influential practical Farmers, Horticulturists and Manufacturers of the State. We observed that Western New York was very largely represented by this useful class, as were, we presume, most other sections. At no previous Fair have we had the pleasure of meeting so many of the active, working friends of Rural Improvement—the men by whom our County and Town Ag. Societies are officered, manned and rendered successful and productive of great good in their respective localities. And it was the presence and voice of such men which rendered the evening discussions at the Voorhees House and City Hall of such peculiar interest and value. We have notes of these discussions, and shall endeavor to give their substance hereafter. The reader is now invited to accompany us through the Fair—first noticing the

CATTLE.

Every class of horned cattle was well represented—if any deficiency in number was apparent, the quality fully compensated therefor. In this respect, the New York Fair was the Exhibition of

the Nation for the present year. One feature in this Department—the splendid display made by those not professional breeders, the farmers of the State—must be intensely gratifying to the agricultural progressionist.

Short-horns.—This breed took precedence, numerically speaking, while of a large portion of the animals shown their owners may well be proud.—S. P. CHAPMAN's bull, "Duke of Oxford"—the only sample of his herd not disposed of—attracted much attention. S. THORNE, though his entries were confined to young animals, made a fine show. Ontario Co. was well represented by the bull "Nigel," white, 5 years, owned by TYLER & TOUR. THOS. RICHARDSON, West Farms, West Co., had five beautiful animals—imported and native bred. WOOD & EASTMAN, Woodville, Jeff. Co., made an excellent exhibition. E. MARKS, Camillus, presented one of the largest stocks, mostly young animals. JOHN SNELL, Brompton, C. W., exhibited a bull and heifer which furnished conclusive proof that this breed is in favor with our Canadian friends. JAS. O. SHELTON, Geneva; J. F. CONVERSE, and J. CHADWICK, Jefferson; OLIVER JONES, Onondaga; W. HAST, W. BULLOCK, Bethlehem, Alb. Co.; J. R. PAIGE, Cayuga; E. CORNELL, Ithaca; G. BUTTS, Manlius, Onon. Co.; J. K. TUCKER, Buffalo; A. B. BENHAM, Tompkins; and a host of others whom we would be glad to name did not space forbid, furnished their quota of specimens which could not fail to please the eye and gratify the admirers of Durham blood.

Devons.—The show of Devons was superb—unusually full in numbers and of prime quality.—Among the exhibitors E. G. FAIR, West Farms, Westchester Co.; JOHN COY, Freetown, Cort. Co.; C. S. WAINWRIGHT, Rhinebeck, Dutchess Co.; E. G. COOK, Rural Hill, Jeff. Co.; F. WYATT, Oswego, Tioga Co.; J. R. CHAPMAN, Oneida Lake, Mad. Co.; G. R. & H. KNOWLES, and R. E. & C. MILLS, of Onondaga Co., figured conspicuously. Fine animals were also shown by F. H. ELLSWORTH, Columbia; J. W. COLLINS, Sodus; M. PARSONS, Onondaga; J. D. EASTMAN and J. HILTON, Oneida. Here, as with the Short-horns, we must pass over a large number of meritorious animals without mention—suffice it to say, no one could have witnessed the display made without being ready to grant for these "red coats" all claimed for them by their most ardent admirers.

Herefords.—An excellent exposition was made of Herefords by Wm. A. MILLS of Mt. Morris, Liv. Co.; M. C. REMINGTON, Cayuga; A. H. BOWEN, Medina; E. CORNING, Jr., Albany, and others. The bull "Prince of Wales," exhibited by Jno. HUMPHREY's, of Elyria, Ohio, was a model animal in every respect. The Herefords elicited much commendation.

Ayrshires.—S. D. HUNGERFORD, J. BRODIE, and J. F. CONVERSE—all of Jefferson Co.—exhibited animals of this blood and a marked amount of attention was given to the specimens offered.

Grade Cattle were exhibited in goodly numbers—they looked well and doubtless felt about as good as those who boast a wonderful scarcity of "plebeian blood" in their veins. Among the prominent exhibitors of Grades and Natives, were GUL of Jeff. Co.; Wm. HIRST; J. BRYDEN, Oneida; O. HOWLAND and E. SHELTON, Cayuga; S. A. WINGLOW, Ontario; A. B. BENHAM, Tompkins; W. SAMPSON, Onondaga.

Fat Cattle.—No such outrages upon the brute creation, as we have heretofore witnessed at our Agricultural shows, were exhibited at Syracuse.—There were, however, such symptoms of obesity observable, as would create feelings of sympathy for the animal, had the mercury at all approached the nineties. In this respect, we consider the present Exhibition a decided improvement—fat piled on fat is not what is wanted, but that nice admixture which pleases the sense and leaves man—after dinner—on good terms with "all the world, and the rest of mankind." Messrs. JAS. FANTING of Erie Co., ELON SHELTON of Cayuga, M. L. WILCOX of Oswego, C. WALKER of Genesee, O. GERR of Onondaga, and others, presented superior animals.

HORSES.

We expected great things of Onondaga Co. in the display of horses. Magnificent animals are there in profusion—they were on the Fair Grounds, too—but the narrow limits of the horse ring prevented what might have been otherwise obtained, a splendid exhibition. Viewing a proud specimen of horse-flesh in a tightly-boarded stall, or amid the crowd upon the track, "we'll none of it," and there was no other mode at Syracuse, without devoting the entire day thereto. We know that Onondaga horsemen feel proud of what they have done and can do—we would gladly have shared in so commendable a spirit, but circumstances prevented, and the pleasant anticipations connected therewith were obliged to forego.—Other parts of the State, and especially of Western and Central New York, were well represented in the various classes, as the awards will no doubt show. We regret the necessity of so brief a notice of the display in this attractive department.

A PENNSYLVANIA BARN.

The above design was originally given in ALLEN's "Rural Architecture." It is partially on the plan of the famous Pennsylvania barns, with some changes which are thought to be improvements. Though given in a former volume of the RURAL, it will prove of interest to most of our readers at the present time.

This barn is calculated for a grain and stock farm—the "mixed husbandry" most profitable in many sections of the country. It has underground stables and a stone walled basement, with sheds on three sides of the yard. The body of the barn is 60 by 46 feet; the posts 18 feet high above the sides, the roof spreading and gables hooded, but the engraving is incorrect in representing the roof as hipped, or gambrel fashion. The large doors are 14 feet high, and double, each seven feet wide. A slatted blind window is in each gable, for ventilation, and a door 9 by 6 feet on the yard side.

The interior arrangement may be described as follows:—A, main floor 12 feet wide, through the center of the barn. H, H, are trap-doors, to let hay or straw down to the alleys of the stables underneath. B, principal bay 16 feet wide, runs up to the roof. C, bay 16 by 26 feet, for the grain mow, if required. D, granary, 15 by 16 feet, and 8 feet high. E, storage room for fanning mill, cutting box, &c., same size and height as the granary. F, is a passage 8 feet wide, to the yard door, through which to throw out litter. G, G, are the large doors. A line of moveable sleepers, or poles, may be laid across the floor, 10 feet above it, so as to add to the capacity of the barn for storage of hay and grain, and the space over the granary, store room, and passage, will of course be used for that purpose.

The underground plan and yard may be arranged to suit the convenience of the owner, the cut here given divides it up into stalls for stock, though a root cellar, calf pens, &c., might occupy a part of the space. At the ends, I, I, are passages for the stock to go into their stalls; and also on the sides, for those who attend them. The main passage through the entire double line of stalls is 8 feet wide, and

on each side are double stalls 6 feet wide. From the two end stalls the cattle passages are five feet wide, the partition between the wall running back in a slant, from five feet high at the mangers to the floor, at that distance from the walls. The mangers, J, J, are 2 feet wide, or may be 2 1/2 feet by taking 6 inches from the back passage. The passage between the mangers, is 3 feet wide, and communicates with the floor above by trap doors.

In front of these stalls, is a line of posts, the feet of which rest on large flat stones, and support the outer side of the barn, forming a recess of 12 feet in width, under which may be placed a line of racks or mangers for outside cattle, or the manure may be housed under it, which is removed from the stables by wheelbarrows. The two lines of sheds may be occupied in this way, or used for sheltering carts, &c., or they may be carried higher than shown in the plan, so as to furnish storage room for hay and other fodder.

It will be seen that a driving way is built up to the barn doors at the ends, as indeed there always should be. It is hardly necessary to remark, that this barn is designed to stand on a shelving piece of ground, or on a slope, which will admit of its cellar stables without much excavation of earth; and in such a position it may be economically built. The size may be expanded or contracted to suit the requirements of the farm, and the cost will depend upon this, the price of materials, and the convenience of procuring stone on or near the farm.

SHEEP.

Most descriptions of Sheep were represented by splendid specimens, and the numbers were large. A. H. BOWEN; E. G. COOK; J. F. CONVERSE; HUNGERFORD, BRODIE & Co.; LEGGART, of Monroe; WOOD & EASTMAN, Jeff. Co.; J. D. PATTERSON, Chaut. Co.; W. CHAMBERLIN, Red Hook, Dutchess Co.; E. MARKS; CHO. CROSS, Dewitt, Onon. Co.; E. GAZLEY, Clinton, Dutchess Co.; BUTTS & BLANCHARD, Manlius, Onon. Co.; E. CORNING, Jr.; W. HAYDEN, Syracuse; A. EASTMAN, Ellisburgh, Jeff. Co.; E. RICE, Whitins, and J. T. STICKNEY, Shereham, Vt., were prominent among exhibitors in this Department. Sheep-breeders—to their preferences what they may—could hardly fall being pleased with the display made. Mr. PATTERSON's show of French Merinos was large and attractive.

SWINE.

We were not favorably impressed with the part taken by Porkdom in the vast collection of Domestic Animals. We knew swine are much abused;

are not "justly appreciated until they are dead;" are reckoned good for nothing except when they have "shuffled off this mortal coil," (if a performance of this latter process would place a value upon some of those at Syracuse, the quicker they are introduced to the knight of the knife the better,) but there were samples which had no business upon the grounds of a State Fair. "Small Breeds" were indeed small, and the "Large Breeds" didn't amount to much. A few good ones were exhibited, but they could not do away with the disgrace that fell upon the class—that were an impossibility—and we would advise their owners never to place them in such bad company again. Some of the best were shown by E. C. BLISS, R. D. HUNGERFORD, J. BRODIE, J. J. HOPPER, E. MARKS and E. G. COOK.

POULTRY.

The show of poultry was very good. We have seen much larger, but never more interesting collections. This was the opinion forced upon us after a cursory look at the exhibition, and this opin-

ion was confirmed by a more careful examination of the different pens. The large Chinese fowls were not as largely represented as usual, yet there were some fine specimens, marked as *Brahmas*, *Gray Shanghaies*, *Dominique Shanghaies*, &c. When we kept fowls pretty largely we thought there was no prettier bird than the *Dominique Shanghai*,—and think so still, if they are bred carefully, so as not to have too much leg and neck, and a fair show of breast. We counted nine cages of *Black Spanish*, fine birds, in excellent condition, of which their owners may well be proud. That pretty, neat fowl, the *Boston Grey*, was shown by three exhibitors in fine condition—clean as if in their own yards. There were some fine specimens of *Black Poland*. This variety seems to be coming into favor again, now that the *furor* for the large breeds has died away. They are fine layers, when well taken care of. When confined, especially if the house is not well ventilated and kept clean, they become diseased. They are not first rate for the table, and the color of the flesh is an objection with some. The little *Bantams* of all colors were well represented, and we never saw prettier *Sebrights*, which is the favorite breed with fanciers. Then there were *Frizzled fowls*, *Wild Game*, and other sorts, more curious than useful, in great numbers.

The show of *Geese* was very good. There were several cages of *Bremers*, of immense size and spotless whiteness. Also, *African*, *Poland*, &c., and two cages of *Wild Geese*. There were also shown several varieties of *Ducks*, and among them we noticed very fine *Aylesbury*—a magnificent large fowl—*Muscovy*, *White Top Knot*, *Rouen*, and *Black Cayuga*.

The show of *Turkeys* was not large but very good. W. R. HILLS, of Albany, exhibited some very fine, and J. D. ALVORD, of Syracuse, and O. HOWLAND, of Auburn, showed very fine *Wild Turkeys*.

The finest show of *Fancy Pigeons* we have seen for many years was made by D. S. HOFFMAN, of Utica. We counted over a dozen varieties, and among them some of the fine scarce sorts, highly prized by pigeon fanciers, such as the *Jacobins*, *Tumblers*, *English Carriers*, *Ruffs*, *Turbits*, &c. Altogether this was a very interesting show of poultry, and no one could spend an hour in its examination without pleasure and profit—at least we could not.

DAIRY AND GRAIN.

The show of *Dairy Products* was very meagre. We counted only eight or nine specimens of butter, some of which no doubt were very good, but as it had been left uncovered by the judges or exhibitors, it had received a coating of dust which we hardly dared penetrate. A few very fine cheeses were shown, and among the best were those of C. EAMES, of Rutland, Jeff. Co.; O. HILL, of Onondaga Co.; E. PITCHER, of Martinsburgh; D. CHOVON, of Sandy Creek; and F. CONNELL, of Cortlandville. A very fine lot of *Pine Apple* cheese was exhibited by P. PENDLETON, of Norwich. While we must say that we never saw so small a show of *Dairy Products* at a State Fair, this does not detract from the merit of those who did exhibit, as we have no doubt, from a slight examination, that the quality of cheese shown was never excelled, if equaled, at any previous Fair.

The exhibition of *Grain* and seed was very fair. There was a most magnificent display of *Corn*, of all kinds and colors. *Barley* was abundant and good. *Oats*, of all kinds, exceedingly fine. We did hope, for the sake of the horses, that many of the farmers present would purchase their seed oats from some of the fine specimens shown. There is no use in raising oats like needles, when such good plump seed can be obtained. We did not see any extra samples of *Wheat*. Many good specimens of *Rye*, *Flax Seed*, *Millet*, *Beans*, &c., were shown, but we have not room for details.

IMPLEMENTS AND MACHINERY.

The display of *Ag. Implements and Machinery* was unusually large and meritorious—one of the best, if not the best, ever made in the State. We devoted several hours in examining and "noting" the thousand-and-one articles in this department—from the mighty *Steam Engines*, *Reapers*, *Mowers*, *Horse-Powers*, *Thrashers*, &c., down to the light and tiny *Churns*, *Rakes*, *Forks*, &c.—but it would require a full page of the *RURAL* to even name and briefly describe what we consider worthy of notice. Hence, we can scarcely mention the most prominent and noteworthy features of the very interesting exhibition.

Our first view was of the *Reapers and Mowers*, at the head of which stood the "Ketchum Family," composed of three members—a combined machine, and a double and single mower. This machine, as improved for next year, looks as tho' the old pioneer was bound to keep in the front rank, if not a little ahead. Next in line, among the reapers and combined machines, were Jackson's, Manny's, Kirby's *Amer. Reaper*, Seymour & Morgan's *N. Y. Reaper*, Wheeler's, Hubbard's, Parkhurst's, Allen's, Hussey's, Washington Co., Wemple's, and Gale's—several of which comprise new features and improvements which will increase their value and reputation. The principal mowers shown (except by parties above named) were Bullock & Co.'s, the Vermont, the New England, the Buckeye, Fisher's, the Empire, and Halenbeck's. *Shorwoods Raker and Binder*, which can be attached to any reaper, was exhibited in operation and attracted much attention.

There was a good exhibition of *R. R. Horse Powers, Thrashers*, &c., in operation—including those of EMBURY BROS. and PEARCE & Co., of Albany; WESTINGHOUSE & Co., of Schenectady; BAUGH & Co., of Fly Creek; and WHEELER & Co. EMBURY, of Albany, ALLEN, of New York, and others, made fine displays of various implements.

The show of *Plows, Cultivators*, &c., was not very large, but creditable. Among the novelties, and the best thing in its line, was BLIVEN'S *Reversible Central Share Steel Plow*, which will turn a furrow either right or left, or both ways at once. WARREN'S *Patent Plow*, (recently described in the *RURAL*), also attracted much notice. SAYRE & REMINGTON, of Utica, made a good display of *Horse Hoes*, (illustrated in a recent *RURAL*), *Steel Plows*, *Cultivators*, and *Combined Cultivators and Horse Hoes*, and other articles.

Three *Potato Diggers* were shown—HARDENBERG'S *Improved*, from Faltorville; LITTLE'S, from Clyde, and ALLEN'S, from New York. They were novelties, and much observed by the curious. The first named had the most practical look.

Among the *Harrows*, we observed several on the rotary principle—including the Buckeye, from Cleveland, (heretofore described by us,) and that of S. J. ORAMOR, of Illinois. BUCKLEY'S *Harrow and Cultivator* combined, from N. E., attracted attention.

Drills, Seed-Sowers, &c., were not numerous, but embraced some novelties and improvements—such as CAHOON'S *Seed Sower*, for both hand and horse power. SEYMOUR'S *Grain Drill and Broadcast Sower* combined, and also his broadcast machine, were prominent—as was a novelty called STAVENS' *Seed Drill and Cultivator*, combined.

Of *Corn Huskers*, a comparatively new institution, about a dozen different kinds were exhibited and operated, attracting great attention. Among them were the Empire, Ohio, the Little Giant, Bedell's, Perkins', Smith's, Gould's and others, the names of which are not remembered.

Of the various hay and straw cutters, corn shellers, feed mills, cheese presses, churns, bee-hives, and lesser machines, implements and tools—as well as of patent fences, gates, &c.—we cannot at present make even brief mention, but shall endeavor to notice many of them hereafter.

In *Mechanic's Hall* there was a good display of *Stoves*, &c.; also of *Scales* and other articles.—The Duryee & Forsyth Manuf. Co. of this city, exhibited some fine *Scales*; also bank and house *Scales*, &c.

DOMESTIC AND "HOME" HALLS.

In the *Domestic Hall* there was a fair but not large display. The fancy work was superior, in both quantity and quality, to the more useful and practical articles of domestic manufacture. There were some fine things, but the display embraced few novelties, and was altogether inferior to what we anticipated.

A hall labeled "Home," contained a fine exhibition of domestic and fancy articles, and specimens of *Fine Arts*, &c. This was filled by the ladies of Syracuse and vicinity, and was very creditable, so far as we could observe—the crowd precluding a careful examination.

Schooler's *Patent Preservatory*, which has been illustrated and described in the *RURAL*, was exhibited on the grounds—it being a distinct building, containing fruits, fresh meats, &c., in a good state of preservation—by Mr. J. L. ALBERGER, of Buffalo, and of course received much attention.—It is a successful "institution."

THE ADDRESS.

The Address was delivered by Hon. JOSEPH R. WILLIAMS, President of the Michigan State Agricultural College. It occupied over an hour in its delivery, and was listened to by a large and attentive audience, although the weather was quite inclement. The necessity of furnishing Farmers' Sons the means of acquiring a good Agricultural Education, was the theme, and it was ably treated. In our next we will give an abstract of the Speech, from our notes taken at the time.

BEES AND BEE-HIVES.

MY EXPERIENCE.—NO. V.

NEARLY all writers on bees agree that when a colony of bees is deprived of its queen, if the comb contains eggs or larvae, the bees repair the loss by rearing another. This principle led me into a series of experiments, and the construction of a peculiarly shaped hive, the result of which, to me, was somewhat important, as it taught me a profitable lesson that may be beneficial to many, as similar hives are yet recommended. I shall, therefore, be a little particular in my description of it. I conceived the idea that this remarkable instinct of the bee could be turned to good account. I could see no reason why the principle would not revolutionize the whole system of bee-keeping. I constructed a hive in two parts, with bars as a division of the combs, and resolved that whenever it was full, if my bees were not disposed to swarm, I would divide the fall hive, putting an empty half on each half; the part destitute of a queen would be likely to possess eggs, or larvae, and raise one, and I should make a sure thing of an addition to stocks, whether I got swarms or not. The bees were introduced into such hive in 1840, to test by actual experience what was so plausible in theory. Before becoming fully satisfied of its utility, the idea occurred to a Mr. JONES, and a patent was said to be obtained for such hive, in '42, probably without waiting to test it. The idea seemed to take finely, and a great many rights were sold in many places; but in a few years they were laid aside as useless, like most others. Yet it was highly praised on the start—it was said, one man has gained 63 stocks from one in three years; this generally silenced all doubts, and did the job. My own expectations were not realized, and the failure with others was universal.

The principal difficulty with this hive seemed to be here:—It must be constructed with a partition, or division, to keep the combs in each apartment separate, with frequent passages for the bees to pass from one to the other, so that when the two halves were separated no combs would be broken. When bees are put into such hive, unless the swarm is very large and honey abundant, one apartment is likely to be filled to the bottom, before a commencement is made in the other. Perhaps no one, unless well acquainted with the nature of the labors of the bee, would suppose that would make any difference, especially if the other half was filled afterwards. The difference is this: The first combs built by a swarm after being hived, are brood combs, that is, cells in which worker brood may be reared, and store combs are made afterwards, as needed. One apartment is filled nearly, perhaps quite, with brood combs, the other with store combs and honey. Now, in the two kinds of cells that these combs contain, there is a great difference. Those for breeding, in which the workers are reared, are the smallest size, and near half an inch deep; while those for expressly storing, are large size, and frequently two inches deep or more—totally unfit for breeding. A few that sometimes happen to be the right size in diameter, may be cut off to the proper length by the bees, when crowded for room for brood. Consequently the side containing store combs is but little used for breeding. When such hive is full of bees, and you wish to make another swarm, there are but few chances for the one apartment to have any eggs or larvae, from which to rear a queen. The old one will be in the apartment containing the cells first made—

those of the right size for brood—at least she would be likely to be there ninety-nine times in a hundred, just when you wanted to divide the hive—that is her place. The consequence would be, the half without the old queen must fall for the want of one; or, if it could provide a queen, the failure is next to certain, from the fact that such store combs would contain so few cells of the right size for workers, that more of the colony would die off daily than could possibly be matured in them. But if there was no difficulty here, there is one in wintering the bees that would condemn it, especially in the open air, and that is, it is very liable to starve the bees! It can be made plain, as follows:

I said one apartment would usually be filled with brood combs, this will be mostly occupied with brood as long as the yield of honey lasts. Of course but little honey can be stored here, but the other apartment, not used for breeding, may be full throughout. The bees will take up their winter quarters among the brood combs, where they can pack themselves closely in the empty cells just left by the brood. Now, suppose the small quantity of honey in this breeding apartment is exhausted (which it will be, long before spring,) during a turn of severe cold weather, what can the bees do? If one should leave the mass, and go among the frosty combs in the other apartment for a supply, its fate would be as certain as starvation! Without frequent intervals of warm weather to melt all frost on the combs, and allow the bees to go for a supply of honey without freezing, they must starve. So many things about this hive came up unexpectedly, making it an utter failure in practice, that it taught this caution, viz:—Not to recommend a thing, however plausible it might appear in theory, until I had thoroughly tested its utility. St. Johnsville, N. Y., 1853. M. QUINCY.

CROP PROSPECTS IN THE WEST.

SINCE I left Rochester, about two weeks ago, I have endeavored to collect a few rough but reliable notes on the Crops, Health, and Prospects of that goodly portion of our Union known as the "West." My journey has been through Northern Ohio, Indiana, Southern Michigan, and Northern Illinois. In Northern Ohio and Indiana the corn is very poor, owing, no doubt, to the cold weather about and after planting time. Corn is also light in Southern Michigan, and in Northern Illinois, excepting in a few counties lying along Rock River and farther South. Wheat is quite poor all along the entire route I have traveled. Unharvested fields are very common throughout the entire West, while that portion harvested will not yield more than from five to eight bushels per acre, and of an inferior quality. I have heard it asserted by reliable persons, that the wheat crop of Illinois will be more than an average one, but from what I have observed, I think that three-fifths will be a large estimate. I have attended the County Fairs of Winnebago and Ogle counties, and the specimens on exhibition were inferior to what I have before seen exhibited. A drover who said he had been nearly over the area of the State of Illinois, during or before harvesting, is of the opinion that there have been as many bushels of wheat grown in the State this year as in any for five years past, but the quality is very poor. Corn on the low, flat lands of Fox River is quite poor, but upon the high prairies it is an average crop, and I think that is a fair estimate. Take the whole State of Illinois, I think from what I can learn, that corn will not be a two-fifths crop. The best fields I have seen are not eared as well as usual—more short and false ears. If the whole of Ohio and Indiana are as poorly off for corn as the portion I have seen, I shall not give them as great a yield as I have Illinois.

Fields of buckwheat this year in the West are more numerous than I have ever seen before west of Buffalo. This was no doubt sown on the ground planted first with corn and failed, either from bad seed or a wet, cold planting time.

I have made many inquiries, and from what I can learn, there are thousands of bushels of old grain, especially wheat, lying in the granaries of the West.

Potatoes are light, as far as my observations have extended, and have commenced to rot in some locations. Oats have proved almost a total failure throughout the whole Western country.—Fruit in some portions has done quite well, but usually it is scarce and inferior in size and flavor. I saw some very good specimens exhibited by WHITNEY, of Franklin Grove, Lee Co., Ill., at the Ogle Co. Fair. At the Fairs I have attended, the products of the soil have been quite poor, much poorer than at preceding exhibitions. The only articles worthy of note were some very fine stalks of sugar cane—a stalk of Dent corn, measuring some seventeen feet high—one beet weighing about 20 pounds—one squash weighing a little over a hundred pounds—some fine California potatoes, tomatoes and onions—a coffee plant, laden with green berries—a tamarind plant from the Island of Jamaica, and quite a good show of grapes. A specimen of Sorghum sugar and Sorghum candy, very fine, were shown at Rockford. At the Ogle Co. Fair I saw a Mexican cucumber three feet eight inches in length,—some fine sweet potatoes raised near Mount Morris, and some good looking (to some) onions and tomatoes. These were all the productions of the soil worthy of note exhibited. A very good show of Dahlias, Verbenas and house plants were on the ground, and an endless variety of quilts, fancy needle-work, &c., in the Ladies' Department, and last, though not the least, to a Westerner, comes fast horses, which usually closes up the scene. D. B. WAITE, Rockvale, Ill., 1853.

SORGHUM.—The failure of Sorghum to ripen its seed in this region last year, was owing to the unusually cold and very wet season. This failure of seed prevented hundreds from making another attempt to grow Sorghum. But I am informed by G. W. BABBITT, of this place, who exhibited syrup from the cane at our County Fair last fall; that he has grown another patch this year with complete success—the stalks are no larger, but much sweeter, and the seed were full of farina and ripe on the 25th Sept. We had no ripe seed last year, although frost kept off until the 20th of Oct. I take it that Sorghum, like Corn, requires hot, dry weather to ripen its seed; time alone, without heat, will not do it; warm nights as well as hot days, are indispensable.—B. W., Waterloo, N. Y., 1853.

MANURES.

LEACHING OR DECOMPOSITION AND EVAPORATION.

MESSRS. EDITORS.—In looking over the *RURALS* since returning from the Far West, I find that W. H. H., of Wheatland, demurs to my assertion, that "if organic manure can be prevented from going up as it decomposes, it may go down without any fear of loss to the crop." I need not reply to that part of his argument which goes to show that manure plowed in deeply does not decompose as well as though it was near the surface; but if my opinion is incorrect, why is it that sandy land, proper, when top-dressed with clay holds manure so much longer. Again, what evidence have we that even potash, and the other mineral elements of plants ever reach below the roots, or beyond the reach of those plant roots, some of which we know have descended into a loose soil more than twenty feet; and to say that the organic food of plants, carbonic acid and ammonia, goes down, is about as unphilosophical as to say that smoke goes down.

It is, however, the opinion of some practical and scientific men, after many experiments in manuring, that the reason why nitrogenous manure is so much sooner exhausted on a loose sandy soil than on clay, is, that it decomposes and acts quicker on the crops, and not because it either leaches down or is lost in the atmosphere. But proofs are stubborn things, and it has been proved, time and again, that guano, the most nitrogenous of all concentrated fertilizers, when sown broadcast on a moist soil or immediately before a warm rain, will have its urea converted into the volatile carbonate of ammonia and lost in the air in a very few hours, unless it is plowed or harrowed in immediately. That it is a very economical use of well rotted, not exhausted manure, to plow it near the surface of the soil to be planted, there can be no doubt; but that is no argument to prove that coarse, unfermented manure plowed in deeply for a corn crop, is not to make the most of such manure for the benefit of the crop. If the soil is worn, a little fine manure or compost in the hill to start vegetation early is desirable; but to fill the ears and ripen a maximum crop, despite of a drouth, the other process I have found to be indispensable. In the very dry summer of 1855, when the corn leaves on every farm curled like a round rod, and every corn crop suffered, I had a patch of corn thus treated, as large and the ears as well filled as I had ever before grown. A. W., Waterloo, N. Y., 1853.

BURYING POTATOES.

EDS. *RURALS*.—I saw in a late No. of your paper an article on Burying Potatoes, in which the writer recommends "digging a large hole in the ground so as to put the potatoes below the surface." Now, this may be a safe way, but it is a great deal of labor; more than most people like to encounter if they can avoid it, and I think they can. I have buried a great many potatoes and never lost a bushel when the work was properly done, and I always put them above ground. Select a place where water will not stand,—heavy soil is best,—and dig away the top soil about six inches deep, in a circle about six feet diameter,—or large enough to contain a pile of not more than thirty-five bushels,—then round them up as high and smooth as possible to a point on the top; put on a heavy coat of dry straw five inches thick when well packed; then cover them with six or eight inches of earth; just before it begins to be freezing weather, give them a heavy coating of good stable manure. Manure from the horse stable is much the best, as its warm nature will prevent all frost from entering the potatoes, though there may be but very little dirt put on, but other barn-yard manure will answer when this is not at hand, provided it is in a condition to pack firmly on the pile to keep the cold air from circulating through it. W. O. K., Grand Rapids, Mich., 1853.

PRODUCT OF A HEAD OF MILLET.—In the *RURAL* of the 11th ult., I saw an account of the number of millet seed obtained from one head, by a person of Geneva, N. Y., and, like most people, I was a little curious to know whether or not that "millet head" could be beat. I selected one which measured thirteen inches in length, shelled the seed therefrom, and counted four thousand, and had not counted half. I then measured the seed already counted, and then those remaining, and found the quantity uncounted to exceed those counted by several hundred seed—should say one thousand—which would make nine thousand seed from one head. This will undoubtedly sound rather large, but nevertheless I honestly think the seed would have counted as many, if not more than the number estimated. I can find plenty of heads one foot long, and some longer than that from which the seed was counted. I think that with care, millet heads can be grown that will have twelve thousand plump seeds. With these lines I close my "millet talk" for the present, hoping to hear from others alike curious to know how much can be raised from a single germ.—H. FROST, Newark, N. Y.

REMEDY FOR BONE AND BLOOD SPAVIN.—I noticed in the *RURAL* of the past week an inquiry from P. H., for a cure for Blood Spavin. Herewith I send you a recipe for a blistering ointment which I have tried with success on both blood and bone spavins, and many other ills that horse flesh is heir to. I have found it a very valuable remedy, and one that I would not be deprived of for a great deal,—it is perfectly safe,—does not prevent the growth of hair, nor require that the animal should rest under its application.—Pulverized cantharides 1 oz.; oil origanum 2 oz.; Venice turpentine 4 oz.; oil sassafras 2 oz. Shake well and apply freely upon the spavin. One or two applications will cause a sore, and it will be necessary to desist until it heals, when the application must be renewed, and repeated until a cure is effected. The remedy is perfectly safe, and will be effectual if persevered in.—HENRY WILLARD, Cayuga, N. Y., 1853.

SUGAR CANE.—Last year I commenced harvesting my Sugar Cane by first cutting the canes and then stripping the leaves by hand, but I soon found a more expeditious mode. I took a rod about 6 or 7 feet long, and passing along by the side of a row I would strike off the leaves each side of the cane—the leaves falling to the ground, then pass along the second time and cut the canes, and when the canes are gathered the leaves can be taken up with a rake.—A. W., Marcellus, N. Y., 1853.

Rural Miscellany.

THE N. Y. STATE FAIR, held at Syracuse, was a grand demonstration in most departments, as will be seen by our report elsewhere. The weather, however, prevented its proving a success pecuniarily; and we observe that some of the city papers are scolding the Syracuse people for sins of omission and commission,—exorbitant charges, and "bleeding" generally. We heard nothing of the kind while at the Fair, but did see and hear enough to convince us that a great many ordinarily good and honest people consider it no crime to shave and cheat a Society. The Fair was generally well managed—Col. JOHNSON, the long-time Secretary, being a host in himself, and rendering the duties of other officers comparatively easy and pleasant. Maj. PATRICK, the Grand Marshal, and his aide, performed their duties in a very satisfactory manner. We shall have more to say of the Fair in our next.

—The Michigan State Fair is said to have been quite successful. We hope to give some account of this and other Fairs in our next.

AN OHIO TOWNSHIP.—In a late number of the *Toledo Blade*, a "Young Farmer" gives an interesting account of the Township of Washington, Lucas Co., Ohio. Among other things, figures are furnished relative to the hay and potato crops, the dairy, &c. An aggregate of 2,153 tons of hay are produced from 2,153 acres. This, at \$9 per ton, amounts to \$17,224. Deducting the expense of making—say \$2.50 per acre—and the farmers of the town have a clear profit of \$11,441.50, which sum pays the interest on \$92 per acre. The potato crop is estimated at from 8,000 to 10,000 bushels annually—of corn rather more, and enough wheat for home consumption. The township contains 570 milch cows, valued at \$20 per head. It is estimated that these 570 cows produce an average of four quarts of milk through the entire year—say 832,200 quarts—which, at 2 cents per quart, yields the snug little sum of \$16,644. In mowing and other machines, implements, &c., the farmers are fully up to time. To show that the people of the township constitute an intelligent, reading, model community, the writer (after stating that the *Blade* has 61 subscribers,) says—"Of the *RURAL NEW-YORKER*, published at Rochester, N. Y., there are one hundred and five copies taken, and a general assortment of Agricultural, Horticultural, Political, Religious and Literary Papers, too numerous to mention. Altogether, there is nearly \$1,000 paid annually for newspapers and periodicals by this one township and it is seldom that you find a farming community better supplied with standard library books." A model "Rural" township.

THE PRAIRIE FARMER, which has for a year been arraying different classes and interests against each other, and all of them against itself, and otherwise penetrating terra firma, hath ceased to revolve on its own axis—or, rather, the world has ceased to revolve around Chicago, and Chicago and the North-west no longer revolveth on the axis of the *Prairie Farmer*; all, probably, in consequence of the pranks of its great rival in vapory matter, gaseous brilliancy and tale-bearing—*Donat's Comet*! The last number of EMBURY'S *Journal of Agriculture* comes to us with the affix "*and Prairie Farmer*"—briefly announcing the purchase of "the entire interest and good will" of the latter paper, but distinctly adding that "the proposition to sell came from the proprietors of the P. F., unsolicited by us." This is a very natural and not unlooked for result, and the best for all interested. The combined J. & F. will no doubt prove worthy of cordial support, as it will ignore in the future, as it has in the past, all illegitimate discussion, warfare and blackguardism. This is evident from a very significant item in the first issue of the combined paper, stating that its columns "are open to legitimate talk on legitimate subjects"—which means, we infer, that they are not open to such matters as were harped upon in the P. F. The fate of the P. F. is certainly a warning to all its contemporaries that "still live" to beware of the rock upon which it split. Peace to its ashes, and success to the *JOURNAL AND FARMER*!

NEW JOURNALS.—We are in receipt of the first number of the *Farmer, Miner and Mechanic*, published semi-monthly, in folio form, at St. Louis, Mo., by THOMAS & SCHUTZ. It is devoted to Agriculture, Mining, Mechanical Arts, Literature and Temperance. E. B. THOMAS is the conducting editor, Mr. F. B. ELLIOTT taking charge of the agricultural department. The number before us is well filled, though we do not admire the style and form of the paper.

The *Oregon Farmer* is the title of a neat 16 page quarto monthly, hailing from Portland. It had a good look and interesting, but having been abstracted from the sanctum, we are unable to give particulars as to publisher, terms, &c.

MICHIGAN STATE AG. SOCIETY.—The annual election of officers for the Michigan Ag. Society, took place at the close of the recent Fair, held at Detroit. Col. CHARLES DICKET, of Marshall, was chosen President. The Presidents of the County Societies in the State were made Vice-Presidents. Executive Committee—H. G. Slygh, Wayne; A. S. Berry, Lenawee; James Bailey, Oakland; H. E. Degarmo, Ionia; H. G. Wells, Kalamazoo; Archibald Jewell, Cass; J. E. Kinton, St. Clair; D. C. Henderson, Allegan.

—The President announced that the receipts at this Fair had been \$4,200, being \$1,200 more than last year.

GOOD SALE OF SHORT HORNS.—We learn that Mr. S. P. CHAPMAN'S sale of Short-horns, on Tuesday week, resulted much better than had been anticipated—the animals selling at a high average, compared with previous sales. We shall endeavor to give the result in our next. "Duke of Oxford," (reserved by Mr. C. at time of sale,) was awarded the first prize in class of three year old bulls at the State Fair last week, and subsequently sold to E. CORNELL, Esq., of Ithaca, for \$1,500.

WEIGHTY COLTS.—Mr. BENJ. BRADLEY, of Lyons, N. Y., informs us that he has a span of matched colts, one year old last June, that weigh 1,850 lbs. Mr. B. says he would like to hear from any one who can beat them.

Orchard and Garden.

THE PEAR.

NOTWITHSTANDING the opinions of others to the contrary, we think ours is destined to be the greatest pear-growing country in the world. This fruit is peculiarly adapted both to our soil and climate, and succeeds North and South, East and West.—Those who have read the proceedings of the American Pomological Society, as reported in our columns, must have been struck with the favorable reports from so large an extent of country. Indeed, several stated that the pear was more certain than almost any other fruit cultivated. A few days since we were honored with a visit from W. WOODMAN, editor of the *Battle Creek Journal*, Michigan, who informed us that while the extreme cold of several past winters had injured not only the apple crop, but destroyed very many bearing trees, the pear trees had not suffered in the least, and every year he had a good crop of Bartlett and other pears in his garden, as did others who planted trees and gave them decent care.

L. E. BECKMAN, the Belgian Pomologist, who is now growing pears in New Jersey and Georgia, and who is conversant with the state of pear culture both in this country and Europe, told us a few days since that the finest exhibition he ever witnessed was that made the present fall by the *Massachusetts Horticultural Society*. He could select a collection from that exhibition and successfully challenge the world to equal it.

A correspondent writes us:—"E. B. WARREN, of Alabama, Genesee Co., N. Y., informed me recently that a little five year old tree of the *Beurre Giffard* pear on quince, bore this season 135 pears, which he sent to New York, as an experiment, and sold them there for \$4.72. I have seen the trees of this excellent summer pear yield the most abundant crops. Mine sold this season in Rochester readily at \$4 per bushel, to the grocers and fruit dealers."

THE BARTLETT ON QUINCE.—It is well known that the wood of this pear does not make a very good union with the quince, yet we often see very fine trees, bearing well. It is not, however, a variety that can be recommended for culture on the quince. Some remarks having been made at the last meeting of the Fruit Growers' Society of Western New York, unfavorable to the culture of the Bartlett as a dwarf, AUSTIN PINNEY, an experienced cultivator of Clarkson, in this county, replied that "he had growing some fifteen hundred dwarf pear trees, and he was satisfied that more fruit could be grown on an acre of ground planted with dwarfs, than on the same ground in standard. He would always grow the Bartlett as a dwarf. Had them nine years old, the trees strong and healthy, and bearing well. The fruit from dwarfs is much the finest. He can get readily \$3 per bushel for Bartletts from dwarfs, but only about half that price for fruit from standard trees." BENJAMIN FISH, of Rochester, had dwarf Bartletts growing that yielded him one and a half bushels of fruit the last season, and nearly as much for several seasons past.

NEW YORK STATE FAIR.

In other pages of this number will be found a pretty full report of the other departments of the Fair, and below we give some notes on the *Fruits, Flowers, and Vegetables*. The Society was very fortunate in the time, so far as the weather was concerned, but it was too late for a good show of Fruits and Flowers. The season, too, has been unfavorable. The apple crop is almost a failure in this section of the State, and it was too late for a good exhibition of peaches and plums. The fall flowers in some sections had been cut off by frost, and the Dahlias have not done so poorly in a score of years. Then, the nurserymen had just commenced their fall business and could not give the matter that attention which they otherwise would have done.

FRUIT.

The display of fruit was exceedingly small; indeed, we never saw so poor an exhibition at any State Fair. In the *Nurserymen's* Department there were only two collections of fruit, and these were very fine. THORP, SMITH & HANSCHEIT, of Syracuse, exhibited 165 plates of Pears, 82 varieties of Apples, 32 of Plums, and some plates of Quinces, Melons and Grapes. ELLWANGER & BARRY, of Rochester, presented 147 plates of Pears, 9 varieties of Plums, and a dozen of Rea's Mammoth Quinces. E. C. FROST, of Schuyler county, exhibited three plates of Apples. This comprised all the fruit shown in the Nurserymen's Department, except about a dozen plates of grapes by G. E. RYONMAN, of Chautauque county, and Dianes and Rebecas by BROOKBANK, of Hudson, and a few melons.

In the *Amateur's* Department the display was a little better, the apples more in number and equal in quality, but the pears were not so numerous or fine. In all we counted over 200 plates of apples. JOHN J. HOPPER, of Onondaga Valley, exhibited 25 varieties; GEO. CROSS, DeWitt, Onondaga Co., 33; A. G. OWEN, Big Flat, 20; W. P. OTLEY, Phelps, 14; G. NOTTINGHAM, Syracuse, 12. These were also a few other small collections. Several small collections of pears were shown, numbering in all about fifty plates. As a general thing they were well grown, but many specimens in these collections were improperly named, and we were very glad to see the Committee doing good service to the exhibitors by correcting these errors. The season was rather late for Plums, yet we were pleased to see a dozen plates of very good specimens, *Reine Claude de Bayou*, being the best shown. Nine plates of Peaches were exhibited, but they were extremely poor, as might be expected from the unfavorable nature of the season, as well as from its lateness. We saw the first premium ticket on a plate of the *Yellow Alberger*, shriveled and partially decayed, but in ordinary times no one would think of eating. About half a dozen plates of Quinces were shown, the best by E. S. HAYWARD, of Rochester, and some nearly as good by GEO. PLUM, of Fairmont, Onondaga Co. There was a very good collection of *Native Grapes*—*Isabellas* well-ripened and *Catawbas* nearly so, with many of the newer sorts. HAMILTON WHITE, of Syracuse, made a fine show of *Foreign Grapes*, 19 varieties. They attracted much attention, and

THE BEURRE BOSC PEAR.

At the request of an intelligent Fruit Grower of Western New York, who presented us with a dozen magnificent *Beurre Bosc* Pears, we have had an engraving taken of one of the specimens, of medium size. This pear, our friend thinks, is not appreciated by the fruit growers of the country, or it would be as generally cultivated as the Bartlett and *Flemish Beauty*, as a standard. It does not succeed on the quince, unless double worked. In the fall of 1853 we saw this pear at Boston, in competition with the *Beurre Die*, and other fine sorts for the prize offered for the best autumn pear, and it received, as it seemed to deserve, the first premium. We thought then, as it became known it would be popular, and since that time we have always noticed it as being fair, smooth, of good size and excellent quality. This pear bears regularly, never rots at the core, and the fruit hangs on the tree remarkably well. It is very rare to find a specimen blown off. The stem in the engraving is shorter than in most specimens. It is recommended by the American Pomological Society, for general cultivation, and we introduce it with pleasure to the special notice of our readers as a pear well worthy of more attention than it has received.

though they were not all what grape growers call "well-grown," they were very good and added much to the exhibition.

FLOWERS.

The Floral Department was almost a failure, and the strange spectacle was presented of a *Floral Hall* almost without flowers. In the *Nurserymen's* Department there was but one collection shown, and that by THORP, SMITH & HANSCHEIT. We had not the heart to look upon it, so lone and desolate. The Dahlias, the *Queen of Flowers* for exhibitions, was wanting—only about a dozen specimens being there. They had a very fine display of *Verbena*, about one hundred varieties; a large list of *Roses*, (perhaps 160), but they were not in a fit condition to show, some very good *Petunias*, and a few *Asters*, &c.

In the *Amateur's* Department the matter was still worse. MR. VAN NAMED, of Pittstown, the veteran of a score of Fairs, and who has made a good exhibition at every Fair we have attended, we believe, for many years was there, and made as good a show as possible, though it was far inferior to her usual exhibition. HAMILTON WHITE, of Syracuse, presented a collection of *Roses*, cut *Flowers*, a few very good *Asters* in pots, a box of *Pansies*, and a seedling *Phlox*. This comprised the substance of the Floral exhibition.

VEGETABLES.

Quite a large show of *Vegetables* was made. At the entrance to the Hall devoted to the exhibition of vegetables was the *Vegetable King*, a very good representation of a man and ingeniously made entirely of vegetables, with a regular pumpkin head. Some very good Pumpkins were shown, and a few good *Winter Squashes*. That old mammoth *Mexican Pumpkin* was exhibited in good numbers and of large size as *Squashes*, and we saw plenty of people giving a penny each for the seeds. We suppose the seed of a really good *Winter Squash* would not have sold for a penny a hundred. We counted over fifty baskets of *Potatoes*, many specimens looking very good, but of course we could not judge of their merits by their appearance, nor do we see how any committee could act understandingly, without more knowledge of their qualities than is to be obtained at such an exhibition. The Carrots were exceedingly fine especially the large *White*. There was a pretty large display of *Cauliflowers*, but we noticed only two or three good flowers. The *Celery* was miserable—not a stick shown was worthy of a premium, or worthy a place in the exhibition. *Sweet Potatoes* grown in the neighborhood of Syracuse were large, and appeared tolerably good, and some from Long Island were fine. *Lima Beans* were poor; only a few specimens were shown, and they were not what they should be at this season of the year. We fear our vegetable growers are neglecting this delicious

beverage. We give Mr. DOWNING's description entire: "The *Beurre Bosc* is a pear to which we give our unqualified praise. It is large, handsome, a regular bearer, always perfect, and of the highest flavor. It bears singly, and not in clusters, looking as if thinned on the tree, whence it is always of fine size. It was raised in 1809 by VAN MONS, and named *Beurre Bosc*, in honor of M. Bosc, a distinguished Belgian cultivator. Having also been received at the garden of the Horticultural Society of London under the name of *Beurre Bosc*, Mr. THOMPSON thought it best to retain this name, as less likely to lead to a confusion with the *Catawba*, a distinct fruit. The tree grows vigorously; shoots long, brownish yellow.

"Fruit large, pyriform, a little uneven, tapering long and gradually into the stalk. Skin pretty smooth, dark yellow, a good deal covered with streaks and dots of cinnamon russet, and slightly touched with red on one side. Stalk, one to two inches long, rather slender, curved. Calyx short, set in a very shallow basin. Flesh, white, melting, very buttery, with a rich, delicious and slightly perfumed flavor. Ripens gradually from the last of September to the last of October."

bean. *Tomatoes* were in great numbers, and all that could be desired. The show of *Turnips* was very poor. One gentleman was exhibiting a white pole bean, probably the old *Casc-Knife*, as the *Windsor Bean*. The *Windsor* belongs to the family of English *Field Beans*, and this class is fully described in the *RURAL* of May 22d, the present year. A goodly number of *Beets* were shown, very well grown. Of *Cabbage* there was a small show, of fair quality.

FRUIT RECEIVED.

We are somewhat behind in our acknowledgments of specimens of fruits sent us by our friends. Several weeks since we received a box of what is called the *Canada Wine Grape*, which we have before spoken of in the *RURAL*, and also a bottle of wine made from it this season. The grape is a native, sharp and harsh. If productive, as represented, it may do well for wine, but will never be a good table grape. The wine was too new to decide as to its character, though some judges pronounced it fair.

To Mr. BROOKSBANK, of Hudson, are we indebted for a fine assortment of grapes, numbering nine varieties. *Isabellas*, very fine, some berries measuring one inch in diameter. They were not, however, as well ripened as smaller specimens we have had here. *Concord*, ripe, and about the size of *Isabellas*, as ordinarily grown. *Catawba*, good specimens, but not ripe. *Anna*, a white grape, like the *Catawba*, in every respect, except color. *Delaware*, thoroughly ripened and delicious. *Hyde's Eliza*, a black grape smaller and earlier than the *Isabella*; its earliness being its chief merit. *Rebecca*, ripe, and excellent. *Clinton*, very fair, and *Diana*, fine, large clusters, and well ripened. The whole collection was placed on exhibition at the late Fruit Growers' Meeting, and was very much admired.

Chenango Strawberry Apple from SAMUEL S. ANNOTT, of Hamilton, Madison county, a light red, beautiful looking apple, something like the *Gilliflower* in form, has been exhibited here by different persons, under different names, but latterly as the *Chenango Strawberry*. It is tolerably good if eaten just at the right time, but soon becomes worthless. MR. A. writes:—"this apple is supposed to be a seedling originating in this valley, and so far as I can learn is cultivated little beyond this immediate neighborhood. The tree is a strong, fine grower, forming a fine round head, with broad, light green leaves. The bark is smooth and yellow. Here it is hardy, and no variety bears a more uniform or abundant crop. It is a fine looking apple long before it ripens. It ripens in succession, all through September. If it has a fault it is that it will not bear transportation, and when

ripe should be eaten at least within a week or ten days—not that it decays, but it loses flavor. It is just the apple to grow near the owner's table, where he can pluck and enjoy them as they mature."

Isabella Grapes of the finest quality, from ALVIN WILCOX, of West Bloomfield. After all, there is nothing much better in the grape line than well grown and well ripened *Isabellas*,—so we sometimes think when we have such specimens to eat as those presented us by friend WILCOX.

Also, *Isabellas* perfectly ripened, from Mr. J. HILPRETH, of Big Stream Point, on the border of Seneca Lake. Mr. H., who is a very intelligent cultivator, has a fine vineyard only three years old, which already produces abundantly.

HORTICULTURAL HINTS.

TRANSPLANTING TREES.—There are many opinions as to the best time to transplant trees. We have done it successfully at different seasons; and from experience and observation have come to the conclusion that it makes but little difference if it is done after the sap ceases to flow in the autumn, and before it starts in the spring. It is considered that hard and somewhat rocky land is the best for apple trees. This is doubtless correct, but apple trees may be advantageously grown on light and even sandy land. In soil retentive of water, perhaps it would be better to transplant in the spring. Trees, however, set in such soil at any time should have ample drainage, and they should be set very near the surface. One reason why trees do not come forward more rapidly is, they are set too deep when they are transplanted, and this, too, we believe, is one great cause of disease in many kinds of trees. The influence of the atmosphere and the warmth of the sun is as necessary to the health and vigorous growth of trees as they are to the germination of seeds. Heavy, flat stones placed around the roots of trees, will serve a double purpose by protecting them from the scorching rays of the summer sun and drought, and prevent their being blown over by strong winds. A good broad mound thrown around the trees will be a safe-guard against frosting, and serve to shed the autumnal accumulation of water. It will also be a protection against mice gnawing at the bark.

SHADE OR FRUIT TREES do much better set on the north side of a hedge or wall than they do on the south side. The reason is that, on the south side the snow melts off early in the spring, and the sap begins to circulate before the severe frosty nights are all gone; consequently the sap gets chilled and the growth of the tree is retarded if its life is not destroyed. On the north side, the snow remains and all the functions of the tree lie dormant, until they are warmed into life by the atmosphere, then they "go ahead" rapidly.

ALL MANURES for fruit trees should be those termed cold,—that is, those that have been composted with muck, and decomposed before use. Andover, Maine, 1858. FRYE, JR.

FRUIT TREES IN OREGON.

EDS. *RURAL*.—If you have no objection, I will give you some information about trees here in Oregon. The soil and climate here is so different from that of the States, that we are compelled to adopt a mode suitable to them, or fail in forming hardy, tough and durable trees. High-headed trees, with naked bodies, have proved a failure. Trees with forks, split with the weight of the fruit, and the wind twists and blows them to pieces,—so that we discard forked trees. Thickly headed trees are bad, because they do not ripen their fruit well. The fruit is too much shaded, the air and sun cannot get at them. The sun and air are two very important elements in the growing and ripening of fruit. The air we have, however, acts powerfully on the leaves, for those leaves on the outside of the limbs, where the fresh air comes in direct contact with them, are of a dark green color, and not pale, like those inside. Hence the heads should be open enough for the air to circulate perfectly among all the leaves. This is very important.—The fresh air and warm sun acts powerfully upon the leaves, causing them to elaborate the sap well, sending it back in a proper state to form wood and fruit. And, again, the rain and dews should have free access to all the leaves. This cannot be where the head is dense. The earth for fruit trees here, should be rich in all the elements necessary to form healthy trees,—dry, so as not to surfeit the roots with moisture—and mellowed deeply, to enable them to ramify and extend all round.—These conditions are absolutely necessary in order to have fine trees in Oregon. Deep culture,—low, open heads, gives the trees all the life invigorating qualities they want. The rich, dry, mellow land, enables the roots to collect and send vast quantities of good food up to the leaves for digestion, to sustain both tree and fruit.

There are, also, secondary conditions necessary to be dwelt upon. As a cultivated tree grows very fast, and sometimes irregular, it should be kept in check by pruning; and, except when limbs need cutting off, pinching, or finger-pruning, is by far the best. You may by finger-pruning alone, keep a tree of beautiful form.

As many trees were killed here this spring by the sun, or, as we call it, *sun stroke*, I will say something of the forms of those that suffered most.

No. 1. No. 2. No. 3. Of No. 1, seldom one killed or even injured. No. 2, some killed, No. 3, nearly all killed. No. 1, is a first rate form. No. 2, bad. No. 3, is a scandal to the land. No. 2, is a forked, irregular tree; fruit and winds split off the limbs. No. 3, is too tall, bends over, and is in every way a very bad form for Oregon. The only form worth anything, for our climate, is that of No. 1. A. F. DAVIDSON. Salem, Marion Co., Oregon, 1858.

NEW PRUSSIAN MUCKMILK.—Can any of your readers inform me where I can obtain seed of the New Prussian Muckmilk?—A. SALISBURY, Lockport, Erie Co., Pa., 1858.

Domestic Economy.

BREAD, PUDDING, CAKE.

MESSRS. EDS.:—Having read and tried a number of the excellent recipes that have been published in the *RURAL*, I thought I might send a few which I know to be good.

GINGER CAKE.—One pint of best molasses; two teaspoonfuls saleratus; one of alum, dissolved in a little boiling water; one half teaspoon shortening—stir pretty thick—ginger to your taste.

TOMATO PUDDING.—Take a deep dish or pan and butter well, peel and slice ripe tomatoes enough in the bottom of the dish to cover, then cut bread in slices, (yeast is better than milk raising), a layer of the bread, butter, pepper, and salt, then tomatoes and bread alternately, until the dish is filled, leaving tomatoes on the top. Bake three-quarters of an hour. This is an excellent dessert.

BUTTERMILK BREAD.—Scald three quarts of buttermilk at night, let it cool a little, stir in flour until it is rather stiff, when cold, stir in a cup of good yeast or a cake. In the morning, scald three quarts of buttermilk, and put in it six teaspoonfuls saleratus, (a teaspoonful to every quart of milk), pour this in the rising while hot, and mix as soft as possible. M. A. S. Romulus Centre, N. Y., 1858.

ELDERBERRY WINE AND GRAPE SAUCE.

MESSRS. EDS.:—Noticing in a late number of the *RURAL* an inquiry for a recipe for making Elderberry Wine, I here send one which is thought to be very good.

To one gallon of elder juice, three gallons of water, and three pounds of common sugar—mix it well, and set away until it has fermented. Then remove the sediment from it, and put it in jugs, or something that can be corked tightly—it is fit for use as soon as it has fermented.

I also send you our recipe for making grape sauce. Before the grapes are fully ripe remove them from the stem, being very careful not to break the skin, then, to one pound of grapes, take three-fourths pound of sugar, put them in a jar, a layer of sugar and grapes alternately; then put a weight on them, and let them remain until they have become juicy; remove the juice, and let it come to a boil, turn it on the grapes, and proceed in this way until the sugar is all dissolved. Then make your syrup boiling hot, put the grapes in, and boil until done. Skim them out, and boil the syrup until it becomes the consistency of molasses, and your sauce is done. Canoga, N. Y., 1858. A FARMER'S DAUGHTER.

ELDERBERRY WINE.—For the benefit of the readers of the *RURAL*, I send the following recipe for making Elderberry Wine, which is an excellent article:—To 1 quart of elderberry juice, add 3 quarts of water, and to the 4 quarts, add 3 pounds of sugar; 1 ounce of root ginger; 1 ounce of cloves; 1 ounce of allspice. Boil the wine, and skim off what rises—when no more scum comes to the surface it is boiled enough. When nearly cool, add some good yeast to cause it to ferment, and put in a cask—the cask must be kept full to allow the fermentation to pass off—when done fermenting, cork up tight. It is best to boil the spice in a small quantity of wine, and add it after the wine is skimmed.—ADAM JONES, Plainfield, Hendricks Co., Ind., 1858.

A CHANCE FOR THE GIRLS.—The column devoted to baking and cooking recipes in the *RURAL*, has received a due share of my attention, and I perceive that quite a number of young ladies are more or less expert in various mixtures of eggs, sugar, spices, butter, flour, &c., &c., *yelept cake*, which, if people choose to mix and eat, I shall not object; but, if ever I should choose a wife, I should like to have her know how to make good, light dumplings of apples, cherries, grapes, &c. Now, if any young lady will furnish a recipe for light, boiled or steamed dumplings, I will get my landlady to try it, eat, pronounce judgment, and, if good, come down to see her forthwith, cap in hand.—SYLVANUS, Bartons, N. Y. 1858.

PACKING BUTTER FOR WINTER USE.—In a late *RURAL*, P. E. N. S. wishes to be informed of the best method of packing butter for winter use. I will send him one that I think the best. Take a wooden cask, or half barrel, fill about half full of cold water, then put in salt sufficient to make a strong brine. Let it stand a day or two to settle, and skim off what rises on the top. Work the butter thoroughly in rolls of from a pound and a half to two pounds, put them in the cask, placing a weight on them to keep them under the brine. I have put down butter in this way in May which kept sweet and good until the next year in June.—HATTIE A., St. Jo., Mich., 1858.

PRESERVING CITRONS.—Herewith find a recipe for preserving Citrons which I know to be good. Cut the citron in pieces, about two inches square, (be particular to get the seeds out), then put them in a stew-kettle with a sufficient quantity of water to cook them tender. When done, to each pound of citron, add one-half pound of good white sugar—raisins and lemon are an improvement—boil all together over a slow fire. When the citron looks clear, skim it out, and simmer the syrup until of a sufficient thickness to keep.—J. M. C., Van Buren, Onondaga Co., N. Y., 1858.

TO COLOR COTTON GREEN.—For 3 pounds of cloth or yarn, take 1 pound of fustic; 3 ounces of logwood chips; 1 ounce of blue vitriol. Boil the fustic two hours, and the logwood the same—both in brass—then pour together, add the vitriol pulverized, bring to a boil, then put in the cloth previously wetting in soda. After removing from the dye, put in soda again. This makes a beautiful color.—FARMER'S DAUGHTER.

QUERY.—Will some one tell us how to clean light-colored wool delaines nicely?—also how to color them a bright blue, where they were previously a light blue?

Lemon juice put on cloth, with the addition of a little salt, and placed in the sun, will take out ink spots.—MISS CORNVALIS, Cornfield, Out West, 1858.

Ladies' Port-Folio.

MUSIC OF HOME.

WARRIED at midnight, I hear them when dreaming,
Far from affection's kind circle I roam,
Softest of music—the voices of home,
Sweetest of music—the voices of home.

Far from my gaze are the eyes that were gleaming,
Fading my soul with their glances of light,
Far from my sight are the faces bright beaming,
Yet there is music that cheers me at night.

Fancy still I hear, as nightly I listen,
Soft whisp'ring sighs from that leafy elm tree,
Hear that dream that by moonlight would gladden,
Right so sadly, and singing to me.

Music of laughter my fancy now wings me,
Voices of loved ones float still on the air,
Words of affection now kindly I bring me,
Hushed now to silence in accents of prayer.

Oh! how they soothe my sad spirit's commotion!
Sorrow's wild marmors how mildly they quell!
Lulling the tempest on life's heaving ocean,
As if there were magic untold in their spell.

Tell not of music from Italy's bowers,
Tell not of strains that from charmed tales come,
There's not in this wide world to soothe the lone hours
Music so sweet as the voices of home.

HASTY TEMPER.

SCOLD, scold, scold—fret, fret, fret, and what does it amount to? What do you gain? Are things done any better? Does it recover the lost, or broken, or mended? Does it win you love, or respect, or attention? Suppose a thing is wrong, does it make it right to fret and harp about it forever? If wrongs are committed that it is your business to know and correct, reproof, warning and advice may be necessary, but why not give it calmly, soberly, kindly? Why fly into a rage, heaping profane, coarse epithets on the offending culprit? When angry you cannot look at the matter in a just light. You are apt to be ungenerous, casting censure where there is no blame; perhaps the error, traced back, was your own, or you have been misunderstood. Be cautious, slow to anger, especially in your own household. If any of the members there have disobeyed, or been reckless, or indifferent, launching into angry invectives will be so far from impressing or reclaiming, hearts which should be full of love will be hardened against you.

Do we not all resent and rebel against abusive reproof? We may have erred, or made a mistake, or been thoughtless, and see and know it afterwards, and be ready to acknowledge and repair the fault; but if some one comes to us with bitter railing and merciless censure, before we have a chance to explain, or defend, or confess, we receive it in sullen silence, or give back blow for blow, and every particle of regret or good resolve is forgotten, and another time we do not care if we do displease or do wrong. "To err, is human; to forgive, divine." Those who condemn often and harshly, are seldom willing to "forgive and forget," and are usually the people whose conduct will bear least scrutiny.

What is true magnanimity of soul? Is it not to bear ill, crosses, vexations of life, with a calm, gentle spirit?—not with indifference or passiveness, but with a loftiness and purity of mind that can not be sullied? Those who cannot be convinced with kind expostulations and calm reasoning, will never grow better on stripes and harsh words. Fear may control the outward demeanor, but the heart will be alienated and filled with hatred.

Let us study, above all things, to subdue, to conquer the hasty temper that flies into ungovernable wrath at every little provocation, and makes us misuse our best friends, as well as sink us in our own estimation, for useless anger must always be got contempt and self-reproach.

SPECTACLES.

Written for Moore's Rural New-Yorker.
A SABBATH MORNING IN THE STATE PRISON.

It was on a beautiful Sabbath morning in July last, that I found myself in the city of Auburn, and resolved to attend public worship in the Prison Chapel. The day was fair, all nature was decked in smiles, and as we passed along the street at the early hour of eight and a half o'clock, their stillness seemed to speak of the day of rest upon which we had entered; for, excepting now and then a footstep passing in the same direction of ours, and occasionally a devotee of the church hastening to mass, all was quiet.

When we arrived at the gate we were admitted by the keeper, and directed to the keeper's hall, where there were already assembled quite a congregation. As the seats were all occupied, Col. Lewis kindly opened his office and invited us to one there. It is situated on the north side of the hall, and commands a view of the north wing of the prison—also, the fruit trees and belongings of the prison yard. Here, removed from the crowd, I could hear the grating of the locks as one bolt after another was withdrawn, and the tramp, tramp, tramp, of the inmates on their way to the chapel. It was a very doleful sound, and as I looked at the beautiful view from the window and heard the birds singing so joyfully, my heart was full. A call to the chapel was quite a relief for a moment, but on entering where nearly one thousand men of all ages and nations were seated under the care of keepers, and dressed in the striped garments of the convict, the sensation was anything but pleasant.

Here sat an old man bowed down by sin and shaking with age, by his side a man of middle age, whose countenance shows that temperance has not been one of his virtues, and here, too, is the youth and the more strapping—youth in years, but old in sin and degradation. As my eye wandered over this large and strange congregation, collected from all directions and from almost every clime, it rested on a youth not more than seventeen, apparently very ill, who had just come from the hospital. He was already shaking with a chill which the exercise and change of air had occasioned, whilst the flush on his cheek and the hollow eye betokened consumption. Alas! for him there was no mother's care, no sister to anticipate his wants and smooth the path to the tomb. No loving hand with tender care shall wrap around him the warm garment, and

gently perform those little offices of love which many times take away the weariness of sickness, but alone, with that unbefitting garment, insignia of disgrace, he must pass to his account. O, if there he may hear the Judge of all the earth say, "Thy sins are forgiven thee," how happy shall it be.

As my mind was thus occupied, the services were commenced by the Chaplain, Rev. B. I. IVES, by reading a portion of Scripture, and a hymn, which was sung by a choir composed of convicts. There was respectful attention on the part of the audience, but evidently, with few exceptions, no heartfelt interest, and when the hymn was sung and the Chaplain knelt in prayer, scarce a head was bowed in token of reverence or of communion with their God. Mr. IVES returned thanks for the many mercies enjoyed, and then proceeded, in his peculiarly pathetic manner, to pray for his charge, that they might pass from death unto life, and yet be a blessing to their homes and the world, and then he prayed for those whose homes were made desolate by sin and disobedience to the just laws of the land,—the parents, the wives, the sisters and brothers, and the little ones of these unfortunate men were all commended to the compassion of a loving Savior. As he went on in this way one head after another was bowed down, and the quick starting tear, with now and then a stifled sob, told that was the arrow that touched their hearts. Ah, thought I, there is yet hope where there is love for home and its pure associations.

After prayer another hymn was sung, and Mr. IVES preached from these words:—"Cease to do evil, and learn to do well," and a sermon better adapted to the wants of a congregation could not well have been preached; for, without telling them that they were sinners above all men, he plainly showed them that if they had obeyed the first part of the text they would not have been there; and that it was now their duty to "learn to do well." At the close of the sermon he sang a few appropriate verses and dismissed with the benediction. The visitors then left as they had entered, and as I passed out of the gate once more into the open air, I think I was never so thankful for liberty and the grace which made me to differ from the wretched inmates,—and thus ended my Sabbath in a State Prison.

East Lansing, N. Y., 1855.

DIFFERENCES IN WIVES

Two weeks since we were riding in the cars, when a gentleman came and spoke to a lady directly in front of us, who was seated beside a sickly man, whom we thought was her husband. The conversation turned upon the health of her companion, who was evidently a consumptive.

"Last winter," said she, "I went to Kansas with him; the winter before we spent in Florida, and now we are thinking of removing to Wisconsin or Minnesota, for the benefit of his health."

The gentleman expressed some thoughts relative to her hardships in thus going away from her home and friends, and traveling so much abroad. "Oh!" she replied, "I do not mind that at all; if he can only regain his health. I like New England better than any other part of the country, for it is my home, but I am willing to live anywhere for his sake."

Her husband made no reply as he heard these words, but volumes were in his eyes. The incident, however, did not particularly impress us, until we stopped at a station about half an hour afterwards. Then a friend entered the car, and took a seat by our side. He was troubled with a bronchial and lung difficulty, of some years standing. In course of conversation, we recommended a residence in a certain Western State, to which he replied in substance:

"I should have been there three months ago, if my wife had been willing to go. But all her friends are here in Massachusetts, and no consideration could induce her to leave for a residence so far away."

We looked at once at the strange woman whose conversation we cited. "Noble woman," we said. "One of a thousand, doubtless, in this spirit of self-denial for her husband's sake." There is certainly a great difference between these two wives.—Happy Home.

ADVICE TO LADIES.

Have the feet well protected, then pay the next attention to the chest. The chest is the repository of the vital organs. There abides the heart and lungs. It is from the impression made upon these organs, through the skin, that the shiver comes. It is nature's quake—the alarm bell at the onset of danger. A woman never shivers from the effect of cold upon her limbs, or hands, or head; but let the cold strike through her clothing on her chest, and off goes her teeth into a chatter, and the whole organism is in a commotion. One sudden and severe impression of cold upon the chest, has slain its tens of thousands. Therefore, while the feet are well looked after, never forget the chest.—These points attended to, the natural connections of the dress will supply the rest, and the woman is ready for the air. Now let her visit her neighbors, go shopping, call upon the poor, and walk for the good of it, or the fun of it.

Keep away from the stove or register. Air that is dry or burnt, more or less charged with gases evolved by the fuel, is poison. Go up stairs and make the beds with mittens on. Fly around the house like mad, and ventilate the rooms. Don't sit pent up in a single room with double windows. Fruit will not retain its full form and flavor in airtight cans; neither will women. They need air. If the shiver come on during these operations, go directly and put on something more about the chest.

Again, do not live in dark rooms. Light fades the carpet, but it feeds the flower. No living animal or vegetable can enjoy health in darkness. Light is also as necessary as air, and a brown tan is far preferable, even as a matter of beauty, to a sickly paleness of complexion.—Selected.

Do all in your power to teach your children self-government. If a child is passionate, teach him by patient and gentle means to curb his temper. If he is greedy, cultivate liberality in him. If he is selfish, promote generosity.

In childhood, be modest; in youth, temperate; in manhood, just; in old age, prudent.

Choice Miscellany.

THE AUTUMN WIND.

BY KATE CAMERON.

THE Autumn Wind—thou Autumn Wind—
A burden rich thou bearest,
Many a wreath by Fancy twined
Of flowers, the brightest, fairest.

Many a wasted gem of Thought,
Many a vanished pleasure,
Many a memory inwrought
With the heart's dearest treasure.

An echo of the Long Ago,
With thy sad strain is blended,
A murmur of that wave whose flow
Shall ne'er on earth be ended.

And to our hearts thou tell'st again
The oft repeated story,
That joys of earth are all as vain
And brief as Summer's glory.

Thou bring'st to mind the "loved and lost,"
O'er whom we wept when dying,
Their life-barks, no more tempt-tost,
Are safe at anchor lying.

And thou dost sing a requiem
Above their place of sleeping,
And still wilt sing when we like them
Death's solemn rest are keeping.

THE FIRST FROST.

THE first frost has come. It has come like a skillful artist, beneath the touch of whose invisible hand, mountain and plain, forest and grove, are clothed in vestures of crimson, yellow, orange and gold, more beautiful far than those of Solomon in his glory. It has come, bringing with it the season of exquisitely beautiful sunsets, when one fancies that in the far-off cloud-land, he discovers with mortal eye the golden streets and palaces of the land of the "Hereafter." It proclaims the death of another Summer with its warm bright sunlight, with its buds, blossoms and flowers, with its fields of waving grain now gathered into the garner; a Summer of which it may be said, its last days are its best, for having well performed its task it fades away with a lingering smile of welcome to its Autumn sister, as if to say, "I have finished my course with joy." Each blade of grass, like an emerald encased in diamonds, proclaims the season when the barns are bursting with plenty, when the orchards are bending beneath their golden fruit, when the vine is weighty with its clustered delicacy, and joy, and gladness are beaming from every eye. It "shouts the harvest home."

It announces the season of fairs, when city and country shake hands in jubilation over the first fruits of the earth, and the productions of human genius; when Squire Broadacres talks boastfully of the products of his wide fields, and his goodly dame displays with honest pride the cheese, butter and bread,—evidences of her skill in the dairy and kitchen,—when the mechanic displays his machine, the artist his pictures and wax-work, and the beau his gallantry. It comes in a season of joy.

It comes as the forerunner of Winter with its snows and its north winds, with a story to the poor of cold, and hunger, and bitter sorrow; to the young, of coasting, sleigh-rides and frolics, and to the aged, of pleasant evenings around the "old hearth-stone." It comes, the language of decay, telling us, as the flower and the leaf wither beneath its touch, that earth, with its temples, palaces and generations shall vanish, and "leave not a wreck behind."

It comes an emblem of that first sorrow which falls with crushing weight, on the heart of childhood, the first letter in that book of experience by which man learns his brotherhood to that Divine Man, who, while here, was "a man of sorrow and acquainted with grief," teaching him that like gold he is tried in the fire, through which he who endures to the end, learns

"How sublime a thing it is,
To suffer and be strong."

It comes, reminding us of that other frost, which shall whiten the raven locks, a harbinger of the old age which is creeping on. It tells us that Spring-time, Summer and Autumn shall each pass away, and warning us to lay up a store of kindly feelings, and affections, and "sunny memories" for the long days of that Winter, when the life-blood, cold and thin, shall flow sluggishly in the blue veins,—when the trembling hand shall grasp the staff to assist the feeble limbs as they "trotter on the road," and the light shall grow dim in the eye.

The good man beholds it, and feels that but few more frosts shall crisp the grass of the field, ere his body shall be withered by the frosts of Time, after which he shall go to that land where the pastures are ever green, where he shall partake of the bounties of the "tree of life" which yields its fruit every month." T. D. TOOKER.

Ypsilanti, Mich., 1855.

ENGLISH LANDSCAPE.—English landscape has a minutely finished look; it lacks grandeur; its features are delicate, and the impression left is that of softness and gentle beauty. The grass grows to the very rim of the water, like carpet to a rich drawing room, which must not betray an inch of unadorned floor. The fields are rolled to perfect smoothness; the hedges look as if they had no use but beauty; the trees and multitudinous vines have a draped air, and strike the eye rather as part of the charming whole than as possessing an individual interest. We have seen woodlands in the far west that were far more gracefully majestic than any we have yet seen in England; but we have no such miles of cultured and dited scenery. Nature with us throws on her clothes negligently, confident in beauty; in England she has evidently looked in the glass until not a curl strays from its fillet, not a diaphanous school—Kirkland.

A CHILDISH CONCEPT.—Looking out of his window one summer evening, Luther saw, on a tree at hand, a little bird making his easy disposition for a night's rest. "Look," said he, "how the little fellow preaches a faith to us all. He takes hold of his twig, tucks his head under his wing, and goes to sleep, leaving God to think for him!"

THE DREAMER.—No. II.

MEMORIES.

THE last dream I gave was by a blazing coal fire and with the gas light burning brightly, but all that has gone now, and those days have gone back into the past with many others. The summer is here, burning and scorching us all, and making our brains shrink up at the brazen sky, and furnace heat. Just in the midst of it all came one day from the Post-office, among business-like brown envelopes, and dull papers, a delicate little white missive addressed in a delicate little Italian hand, and strongly redolent of femininity. My clerk stared when he handed them to me, that I, of all men, should have such a letter; but he stared still more when I put it quietly by until all the others were disposed of and the telegram read, then opened it with my feet elevated on the desk. He would not have done so. He would have read the white letter first with awe and reverence. I acknowledge that would be more feeling, but it would not be business-like. I would lecture my clerk on such matters but he is too young to be benefited by it. By-and-by he will read the business letters first. Well, the letter was a cordial invitation from Susy to come out to H—farm and "drive dull care away" for a time—as long as I chose. Appended were a few hearty, genial lines from Tom, endorsing the invitation.

"JOHN," said I, "how would you like a turn in the country?"

JOHN is my clerk, you know.

"Very much, sir." Didn't his eyes snap!

I guess JOHN has a Susy down in the country somewhere who isn't married. I strongly suspect that there was more than one white envelope came to our box that day.

"Well, JOHN, I am going down to — to spend a few days, and if you will keep things straight here, I will give you a week when I get back."

"Thank you, sir!"

I saw JOHN writing very busily a few minutes afterwards, on a very small white sheet. He wasn't writing anything for me.

Two hours after that I was standing at the Depot at — holding Tom's hand and returning his cordial greetings. As we drove up to the gate of H—farm-house Susy stood in the door to welcome us. She was the same, and yet not the same as of old. She used to be agreeable, good-natured, kind hearted; now she has a cheerful, contented, happy look of home about her. The qualities are the same, but strengthened and developed by exercise.

How much like home it felt there! The hearty welcome—the broad cool rooms—the fresh breezes—the glorious old trees—the green of the fields—the generous, wholesome food, are all elements of a beauty, more grand, more lovable than the standards of Greece or Italy, marble or canvass, can give. The radiant, undying beauty of a Home; a beauty which no canons of criticism or of art can ever appreciate or define; the only beauty which has the power to take hold of the hearts and souls of the mass of mankind. Art may satisfy the longings of a few, wrought

"—of finer clay
And tempered with a purer flame,"

but the most of us want a more tangible beauty—a beauty of the heart, not of the mind.

Lying under the trees how vividly did childhood come back to me. There was the church spire, the school-house just the same as of yore, (school-houses never change) the woods and streams, everything as it was when Susy and I went "bare foot" to school, long ago.

As I live, there is Susy! The same eyes, face, and hair. Just about the same age, too—not yet half a score. But this Susy wears shoes—that spoils the illusion. It must be the second Susy.

Almost involuntarily I look at myself to see if I am not a bare foot urchin,—but I'm not. I call the child to me, and, as I look into those eyes, the spell comes over me again, and with knife in hand I fall to carving out such toys as a boy I remember to have seen, in the glass, once made for Susy the First.

What a charm there is in blue eyes! I don't mean grey eyes—they are cold—but real blue eyes. You can always look clear into them. Away down, down, you can see the whole heart and soul in the depths of them. There is no deceit in a blue eye. Black eyes may have a warm heart behind them—but they don't show it. Blue eyes are windows to let the sunshine of a happy, loving nature shine upon us poor mortals of the outer world.

When we go in Susy the First looks at the toys and then glances inquiringly up to me.

"I thought I was a boy, Susy."

They were the first I had made since I made them for her. There was half a tear in her happy eyes as she resumed her work. Tom throws me the morning paper.

With one stride I am back from the Past to the duties of the Present.

I believe I must go back to the city and send JOHN down to the country. I hope his Susy has blue eyes.

CULTIVATE CHEERFULNESS.—An anxious, restless temper that runs to meet care on its way, that regrets lost opportunities too much, and that is over-pains-taking in contrivances for happiness, is foolish, and should not be indulged. If you cannot be happy in one way, be happy in another, and this facility of disposition wants but little aid from philosophy, for health and good humor are almost the whole affair. Many run about after felicity, like an absent man hunting for his hat, while it is on his head, or in his hand. Though sometimes small evils, like invisible insects, inflict great pain, and a single hair may stop a vast machine, yet the chief secret of comfort lies in not suffering trifles to vex one, and in prudently cultivating an undergrowth of small pleasures, since very few great ones, alas! are let on long leases.—Richard Sharp.

LIVY.

SOME men are envied because of their wealth,
Who envy others because of their health;
And whether it be in palace or cot,
One will ever sigh for another's lot,
And the blessings of life be unemployed,
While envy is keeping the mind employed.

There is so great a charm in friendship that there is even a kind of pleasure in acknowledging oneself duped by the sentiment it inspires.

Sabbath Musings.

Written for Moore's Rural New-Yorker.
THE ADMONITION.

BY CLARA P. TAYLOR.

THOU didst Thou pass me in beauty by,
Fruit of the Sunbeam—bright & merry!
Thou that dost tear on thy fairy wings
No burden of mortal suffering,
Cold of stagnation—thou winged and free,
One moment, one moment I envied thee—Mrs. LEBLANC.

BUTTERFLY! beautiful, frolicsome thing,
With the gay bright spots on thy golden wing,
Fitting forever from flower to flower,
Sportively resting thy brief summer hour,
Knowest thou winter ere long will come,
Whose breath will fill thy slender wings dumb,
Dash every down from its fragile stem,
And thy certain doom is to die with them?

And thus did the "Sunbeam's child" reply—
"I rejoice with the beautiful flowers to die,
For who would live when the loved are dead,
With whom our moments have sweetly sped?
And Death's cold fingers I do not fear,
For I have no spirit to live for here,
In joy or sorrow beyond the grave,
No soul to lose—and no soul to save."

"But thou, immortal, mysterious soul!
Most live while circling ages roll;
Thy fleeting moments were given thee
To fit for an endless Eternity;
Thou hast much to do in thy little day,
While I have only to sport and play
With the soft sunbeams and blossoms fair—
And away it flew through the scented air."

THE IMAGE OF CHRIST.

THE image of CHRIST, drawn by the pencil of the Spirit, to which Scripture directs our aims, is painted in such colors, that it is impossible often to contemplate it without its irresistibly affecting the heart. As the bodily eye that has looked long at the sun retains a bright image of it, so the spiritual eye that gazes steadfastly on the face of Christ is filled with light. We carry this image with us wherever we go, and it blends with all our thoughts and actions. It never ceases to be a study to us, ever growing more bright and beautiful as we gaze upon it, revealing in contrast, more and more, the darkness of our own hearts. I have said, it is with us as conversion, as it is in spring, when the sun melts the snow in the fields and on the mountain side, but upon the highest peaks and in the deep valleys patches of it still remain. So the rays of the spiritual sun may penetrate our souls, and still there remain in each heart heights and depths, where yet all is cold and hard. How much must still be melted away, he is first aware who conscientiously yields himself up to the discipline of Scripture.

The longer we contemplate Christ, the more do we discover how unlike him we are, how selfishness has penetrated our inmost nature, how poor we are in humility, in love. When we enter this school of discipline, it does not seem so. This beholding ourselves in the image of Christ has the peculiarity, that whilst we more and more discover the darkness in us, upon us all the while unconsciously it is pouring its light. Paul has expressed this in a particularly rich passage in his letter to the Corinthians. He says, "But we all, with open face, beholding as in a glass the glory of the Lord, are changed into the same, from glory to glory, even as by the Spirit of the Lord." A wonderfully rich saying, indeed. Just as when we behold ourselves in a metallic mirror, he would say, it spreads over us its own effulgence; so we Christians, looking with unveiled face at Christ, as into the mirror of humanity, are adorned with his light, made partakers of this spirit, changed as from glory to glory into the same resplendent image.—Tholuck.

EVERY MAN'S LIFE A PLAN OF GOD.—Every human soul has a complete and perfect plan, cherished for it in the heart of God—a divine biography marked out, which it enters into life, to live. This life, rightly unfolded, will be a complete and beautiful whole, an experience led on by God and unfolded by the secret nature of the world; a drama cast in the mould of a perfect art, with no part wanting; a divine study for the man himself, and for others; a study that shall forever unfold, in wondrous beauty, the love and faithfulness of God; great in its conception, great in the Divine skill by which it is shaped; above all, great in the momentous and glorious issues it prepares. What a thought is this for every human soul to cherish! What dignity does it add to life! What support does it bring to the trials of life! What instigation does it add to send us on in everything that constitutes our excellence! We live in the Divine thought. We fill a place in the great everlasting plan of God's intelligence. We never sink below his care—never drop out of his counsel.—Dr. Bushnell.

THE VALUE OF PRAYER.—Prayer is the haven of a shipwrecked man, an anchor to them that are sinking in the waves, a staff to the limbs that totter, a mine of jewels to the poor, a healer of diseases, and a guardian of health. Prayer at once secures the continuance of our blessings, and dissipates the cloud of our calamities. O, blessed prayer! thou art the unwearied conqueror of human woes, the firm foundation of happiness, the source of every enduring joy, the mother of philosophy. The man who can pray truly, though languishing in extremest indigence, is richer than all besides; whilst the wretch who never bowed the knee, though proudly seated as the monarch of all nations, is the most destitute.—Chrysostom.

PREPARATION FOR DEATH.—The sad condition of many dying men is that their work is to do when their hour is come; when the enemy is in the gate, their weapons are to look for; when death is at the door, their graces are to seek for; when the bridegroom is come, their oil is to buy; the purser of blood is upon them, and the city of refuge is not so much as thought of by them. In a word, the seven years of plenty are wasted, and no provision for the years of famine. Time is spent, and nothing is laid up for eternity. I will, therefore, now finish every work I have to do, that to die may be the last work I have to finish.

If there be no enemy, no fight; if no fight, no victory; if no victory, no crown.—Satanar.

The Educator.

Written for Moore's Rural New-Yorker.
READING-BOOKS AND NEWSPAPERS.

Books have long been the companions and friends of men. In the days when they were rarer than now, and better, taken as they come, with how warm affection and honest reverence did those remarkable men, whom we look upon as the literary landmarks of their times, cherish a copy of some old Greek or Roman author, or the work of some great pioneer in English literature. They read and re-read a favorite writer—they studied his style as well as his meaning—they quoted him—and gratefully acknowledged him as the sharer of their wit, the refiner of their taste, and the inspirer of noble sentiments. But times are changed. Now a-days there are many book writers, and each seems to think it his duty to write many books—Readers are many, and they must read many books. There are few readers of the stamp of Demosthenes—who copied a history six times for his own intellectual improvement—but many, that, on finishing a book, exclaim with the tired foot-traveler passing a milestone, "Well, I've got past that." One reading is as much as men generally give a book, for there are other and perhaps richer mines to explore.

But a new element—the periodical, the newspaper—has meanwhile been growing up. Untrammelled with the dignity and formality requisite to a book, it is better fitted for particular ends—like a company of French riflemen, it does quick and "brilliant execution;" while a book, like English rank and file, performs the slow and heavy work. Periodicals always find work to do. Whether employed, as in the last century, in refining the popular taste, satirizing manners and fashions, setting up and pulling down rulers, fardishing fustian clubs with a daily dish of the latest facts and fancies, to relish with their coffee and punch; or applied to every possible use, as in our day, they display an eminent degree of practical skill and power. Newspapers are now, to the mass of the people, almost what the blood is to the body—the great carriers of allment and agents of growth. They are the dispensers of the political, scientific, and, to a great extent, the religious opinions and fables of multitudes. They almost monopolize the reading of the present day.

We have thus carefully noticed these three kinds of reading and readers, because they really exist, though more or less blended together. Each has its advantages and its defects. The third class, or newspapers, is our subject, and the other classes may give us hints of the value of good reading, and the way to secure the full benefits of newspapers. One paper is devoted to politics, another to religion. The principles and endless discussions of each subject demand full possession of one paper. But we hail as noblest and best the journal that, removed from sectional and partisan strife, is with a quiet earnestness, seeking through its influence in the family circle to bless mankind. To such a paper our remarks will especially apply.

A newspaper is a reservoir of the observations and experiences of many men. To its agricultural department, the farmer goes to know how and what other farmers think and do. This knowledge is an addition of capital in his business. In company with the treasured truths of other departments it banishes his narrow and one-sided views—introduces a generous liberality—leads his thoughts from particulars to general, from facts to principles, from himself to the great family—teaches him that his farm is not the globe, that its soil and its products, and its treatment are not identical with those of all the world, and that the price he gets for his wheat does not take precedence of all other human interests—in short, it makes a thinker of him, without being which he can be neither a farmer, nor anything else. But in the family the newspaper holds a sacred office. It enters its sacred precincts as the nurse of thought—as the guide to experience—as a fire-side companion who appears sometimes in the garb of a venerable sage to counsel, or traveler to narrate—sometimes as a man of delicate fancy and delicious humor, moving to laughter, and melting to tears, winning the tediousness from the hours, and making the heart lighter and better; and sometimes as a grave teacher, to uproot "vain hopes, inordinate desires," and implant right views of life. A good family newspaper, as an educator of children, is valuable beyond price.

"Experience contradicts that assertion," says one—"we don't witness such results. Besides, newspapers are—by nature—liable to be incorrect, and are—by practice—abominably so. Children read in them about sea-serpents, quack cures, and other marvels, and swallow them whole. If they ever look at the sensible portions, they only skim them, and what they get 'stays like water in a sieve.'" We reply that this depends upon circum- stances. Many travelers journey to little advantage, and very many "take the papers" to no purpose, but yet this does not justify Dr. Johnson's assertion that "traveling is a dissipation of the mind," nor the drawing of the same general principle concerning newspaper reading.

How, then, are the benefits of a newspaper to be secured to children, or to grown people? Simply, entirely, through the heads of the family—the parents. This is an age of great contracts and wholesale business, but most people have yet to learn that they cannot contract and hand over the education of their offspring to preachers, school-masters and editors. They will find that sermons, books and newspapers do little good of themselves. School-books, with an ingenious Yankee school-master to explain and make them interesting, may sometimes make great men of bright lads—and no thanks to parents; but sermons never referred to, and newspapers never talked about, will not fulfill their intended mission. Such neglect of encouragement is the banish that covers the light and smothers the genius of very many bright young minds. A child, whose parents have carefully taught him to walk, and talk, and then left him, will seldom get farther than to walk and run well, and talk and reason badly. Father, if you would have your son a manly, intelligent farmer, an honor to his vocation and to yourself—if you would have your daughter intellectual and refined, accomplished, both in manners and in housewifery—if

you would triple your own mind's growth and stock, and quadruple your happiness, then, use your RURAL as some of those noble old Puritan fathers used their catechism, gather boys and girls in a circle daily, question them, discuss with them, laugh with them over whims, which all correct ponds, even of this paper are not free from, and send them away to think, and look about, and see "whether those things be so." DRAWD.

THE SCHOOL-MASTER—HIS FUTURE.

We look forward with hopes to the time when teaching will be a distinct profession, requiring the same course of studious preparation as law or medicine. The importance of the teacher's labors can not be exaggerated. He wields the future success and character of the man. The work which others perform may be seen and calculated, but who can reach so far, even in imagination, as to touch the completion of that structure which has its foundation in the mind of the child? It was the first impulse which gave motion and shape and direction to the universe, and sent the earth and stars to wheel uninjured through their orbits in eternal space. It is the first influence—in the beginning it may be only a grain of sand hidden in the bosom of the earth, which imparts strength and beauty to the hundred years of oak, or fore-dooms it to a distorted and feeble maturity. It is the first impulse, likewise, which shapes and sentences the ever-during mind. "I hold that every man is a debtor to his profession," said Webster; and surely no one has so much power to dignify his office as the teacher. If the next century witnesses as vast achievements in the arts of imparting knowledge as the last has—in text-books, the railways and telegraphs of mental communication and wealth, go on improving and extending, perhaps, the same amount of knowledge may be accessible in weeks which it now requires months of labor to attain. This promise for the future rests with the teacher. Whatever is to be the hereafter of our country, whatever the calamities which party warfare may engender, we can not fail to be secure in the homes of our principles and liberty, so long as the common school, the peaceful glory of New England, is perpetuated, and the work of the school-master is honorable and honored.—*N. A. Review.*

NEATNESS.—A filthy school-house is an abomination. And yet who does not know that one of the hardest duties of the teacher is to keep the school house and its furniture perfectly neat and clean? Boys will bring in so much dirt on their feet, and then both boys and girls will find it so convenient to scatter so many bits of paper, and now and then one will want to spit upon the floor, that it seems almost as great a task to keep the house clean, as it was for Hercules to cleanse the Augean Stables. And yet a good school can never be kept in any other than in a neat and well ordered school room. Let the teacher, and scholars, the committee, and visitors, all look to this one matter, and in a little time the whole aspect of the room will change; and with this change will come a change almost of the hearts of the pupils. Cleanliness will make them alive to beauty, and to duty too.—*R. I. Schoolmaster.*

LABOR was the son of Necessity, the nursing of Hope, and the pupil of Art; he had the strength of his mother, the spirit of his nurse, and the dexterity of his governess, and came down upon earth to oppose the devastations of famine.

Home Journeys.

CONNECTICUT RAMBLES.

The Home of the Yankees—Long Island Sound—Connecticut River—Saybrook—New London Water-Factories—Fort Trumbull—"Uncle Sam's" Headquarters—Groton—Fort Griswold—Massacre in 1781 by Benedict Arnold—Groton Monument—The Atlantic Telegraph, &c., &c.

ED. RURAL:—Nearly every week your many readers at the East are favored with the privilege of perusing interesting letters from your Western correspondents, describing not only how they carry on farming, but also picturing to us the fine scenery presented in various places. Maybe, in turn, our Western friends would like to hear from the East—the home of the Yankees, of clocks, and (as some say) wooden nutmegs. You will see that your humble correspondent has, for the present, from Clinton. Your home—the Empire State—has a Clinton, besides there are some fifty other towns of that name in different parts of the States—all named, I suppose, in honor of him, who, though not the projector, was the promoter of the canal system in New York, and to whose enterprise and perseverance is doubtless owing the fact—the great work of uniting the Hudson with the great lakes of the West, and upon whose muddy waters the experiment is now being made of propelling canal boats by steam. But I am digressing. I spoke of the little town of Clinton, from which I hail. 'Tis a quiet little village nicely located on Long Island Sound, and in my next I will, if you wish, give you a sketch of it—its soil, people and productions—and the manner in which farming in its several branches is carried on. This time I propose giving a brief sketch of places visited yesterday, and of which I presume little is known to my Western friends.

Being weary of school duties, and feeling need of recreation, I yesterday gave my pupils their freedom and took the morning train on the New Haven and New London Railroad for New London. To visit, more particularly, places of historical interest. The distance from Clinton is 37 miles. The route lies along the Sound shore, and nearly the entire distance the Sound is visible, affording pleasant views to passengers—diminishing in no slight degree the monotony of riding on the cars. The first town of any importance after leaving Clinton is Saybrook, located near the mouth of the Connecticut, flowing into the Sound at that place. It is the largest river in our State, and from it, the State takes its name. The Indian name for the river is Quonah-ah-tant—meaning the "long river," or, as some render it, "the river without end." Saybrook is one of the oldest towns in the State, and in its early days the colonists were much an-

THE GREAT WALL OF CHINA.

ABOUT two hundred years before the birth of Christ, CHI HOANG-TI, the "Great Warrior," came to the throne of China. The internal peace of the country was, at the time, and for three hundred years previous, incessantly disturbed by the wars and the quarrels of the petty Kings. CHI HOANG-TI determined to put an end to this by uniting all the small kingdoms into one monarchy, of which he intended to be the sole and absolute sovereign. There was no difficulty in finding pretexts for invading the several States of the tributary Kings, as scarcely a year passed but one or other of them rebelled against his authority. By degrees, however, he conquered them all, and after some years of civil warfare, became master of the whole Empire. When he had subdued all the petty provinces, he next turned his arms against the Tartars, who had become very troublesome neighbors. They were a much more warlike people than the Chinese, and were enemies very greatly dreaded. The Emperor, therefore, devised a plan to keep off their invasions, by erecting a wall along the whole extent of the northern frontier, of such a height, thickness, and solidity as to be proof against any attempts which might be made either to scale or to effect a breach in it. To the completion of this great undertaking, means cruel and arbitrary in the extreme were called into use, and thousands of lives sacrificed. In order to obtain a sufficient number of workmen for so vast an enterprise, the Emperor ordered that every third laboring man throughout the Empire should be compelled to enter his service; and they were forced to labor like slaves, without receiving any compensation beyond a bare supply of food.

The Great Wall extended fifteen hundred miles, from the sea to the most western province of Szechuan. It was carried over the highest mountains, through the deepest valleys, and by means of arches across the rivers. Its breadth was sufficient to allow of six horsemen riding abreast on its summit, and it was fortified by strong towers,

noyed by Indians. In the year 1635 a fort was built at the mouth of the river, and in March, 1637, the commander of the fort, with twelve men, was attacked by a body of Pequots and three of the number killed. Saybrook is distinguished as being the seat of Yale College. But I must not detain you here too long.

We have crossed the river on the ferry boat, and taking the cars on the opposite side, are soon whirling along fast as steam will take us. Passing through a section of country interspersed with hill and dale, at 10 A. M. I found myself in New London, a city of New London county, situated on the west bank of the Thames river, 50 miles from New Haven, and three miles from the ocean. Its harbor is one of the best in the United States—being three miles long, capacious, deep and not liable to be frozen over. The city is built on a declivity facing the South and East. Granite rocks protrude from the surface in many places, making it somewhat difficult to lay out the city with very great regularity, though within a few years past the enterprise of the citizens has done much to overcome the irregularities of the surface. A great portion of the wealth of New London consists in its whale fisheries, which employ some 1,600 men and a large amount of capital. The receipts from the whale fishery in 1853 amounted to \$1,349,872. The amount of shipping employed in the same was 15,960 tons. Population of the city about 12,000. At the mouth of the river stands Fort Trumbull. This is a strong granite fort having for its foundation granite rock. "No well worth a trip across our State; aye, further, to visit this structure. As "Uncle Sam" is at peace with all the world, and "the rest of mankind," there are no troops stationed here, but within, and on the outer walls, are some fifty cannon mounted, and so placed as to rake an enemy's ship fore and aft, sending death and destruction into the ranks of any so venture as to come within their reach. The "Red Coats" would find it more difficult to take that Fort now, than when, in 1781, they sloppily found a breast work, or water battery, open from behind, and defended by 23 men. The Fort is in charge of a Sergeant whose duty it is to see that things are kept in order, and everything bears testimony to the fact that this duty is discharged, for no parlor can outline the neatness and order of things in and about the fort, and no young readers of the RURAL of either sex need ever complain if they can succeed in securing for a companion one who keeps things as neat within and without as that noted old Bach, "Uncle Sam," has his housekeepers do.

Crossing the Thames, (which is here half a mile in width,) I found myself in Groton, a town opposite New London, and containing about 3,700 inhabitants. Historical incidents connected with this town render it peculiarly interesting. The village is built on the side of the hill facing the river. In the early settlement of the country it was the home of the Pequots—a tribe of Indians who were very unfriendly to the whites, frequently annoying them, killing and taking captive many of the inhabitants of the surrounding country. Here, too, on Groton Heights, are the ruins of Fort Griswold, of Revolutionary fame, which was so bravely defended Sept. 6th, 1781, by a garrison of 160 Americans, against 500 British, commanded by the traitor, BENEDICT ARNOLD. Bravely did the Americans struggle against such fearful odds—never was a

fort more bravely defended, nor a garrison more barbarously butchered. They fought with all kinds of weapons, and many of the enemy were killed under the walls simply by throwing shot over upon them; but, overpowered by numbers, they were obliged to surrender, when followed a scene of cold-blooded butchery, such as, probably, had no parallel in any other battle of the Revolution. No sooner were the British within the fort than they began butchering the defenceless ones, till 120 were weltering in their heart's blood,—85 were killed, 35 mortally and dangerously wounded, and 40 taken prisoners to New York. I wandered all about the ruins—passed through the old gate way—along the bastions now crumbling to ruins—through the narrow passage-way (under ground) that led from the fort to the hospital—and my mind was busy reviewing scenes that had transpired there. On the hill, a few rods north of the fort, stands a monument of granite erected to the memory of those who fell in that battle. It is 26 feet square at the base, 12 feet square at the top, and has 168 steps, being 127 feet high. A marble slab on the west side bears the following inscription:—

"This monument was erected under the patronage of the State of Connecticut, A. D. 1830, and in the 55th year of the Independence of the U. S. A., in memory of the patriots who fell in the massacre at Fort Griswold, near this spot, on the 6th of September, A. D. 1781, when the British, under command of the traitor, BENEDICT ARNOLD, burnt the towns of New London and Groton, and spread desolation and woe throughout this region."

I ascended to the top of the monument, from which a fine view of the city and surrounding country can be had. While standing there I was almost deafened by the ringing of bells, and discharge of cannon in commemoration of the successful laying of the Atlantic Telegraph. Striking contrast! thought I. Now the hills are echoing with the cannon's roar in view of the recent union of England and America, while 77 years ago, the same hills echoed with, not only the cannon's roar, but also with the shrieks of dying victims of England's cruelty and oppression. Oh, that this last, this great achievement of the age, may hasten on the time when wars and rumors of wars shall cease from off the face of the whole earth, and peace and prosperity reign throughout all its borders; then may we say from the heart—"Glory to God in the highest—on earth peace, good will to men."

WATER.—Potatoes contain 75 per cent. (by weight), and turnips no less than 90 per cent. of water. A beefsteak, though pressed between blotting paper, yields nearly four-fifths of its weight of water. Of the human frame, bones included, only about one fourth is solid matter (chiefly carbon and nitrogen), the rest is water. If a man weighing 140 pounds was squeezed flat under a hydraulic press, 105 pounds of water would run out, and only 35 pounds of dry residue remain. A man is, therefore, chemically speaking, 45 pounds of carbon and nitrogen diffused through six buckets of water.—Bernellus, indeed, in recording the fact, justly remarks that the "living organism is to be regarded as a mass diffused in water;" and Dalton, by a series of experiments tried on his own person, found that of the food with which we daily repast this water-built fabric, five-sixths are also water.—*Scientific American.*

The Young Ruralist.

THE LAW AND THE FARM.

MEERSA, ED. RURAL:—I have been much amused at the correspondence of HARRY HARRIS and "JUNIOR," in the RURAL, and thought if I would not be getting valuable ground to an unprofitable use, I would like to drop a word or two between these fierce combatants. My sympathies were elicited very strongly in behalf of HARRY, for, poor fellow, instead of fighting "a flock of sheep" as the DON QUIXOTE (which would certainly be little enough honor to him), he has aroused only one.

I am willing to concede the main argument of Junior, and so I presume will all who have read his communication, and that, as I understand it, is that he has not only read DON QUIXOTE, Lord Byron, Mr. BLAIR, and something about RICHARD CROMWELL, but has also dipped his literary fingers into the Latin puddle. Now, if we may argue from effect to cause, and then apply the ancient proverb "ex nihilo, nihil fit," (I presume I shall be excused if I use the language so familiar to our friends), we can come to a very clear estimate of the calibre of the "representative" gun "of the Rural District."

Now, MEERSA, Editors, I have quite a liking for the profession of the law, and may, at some future time, make it my business, and if I do so, it will not be because I consider manual labor upon a farm as beneath my dignity, nor on account of any "natural repugnance," but because my taste is stronger for a professional life than for that of a farmer. I have ever believed that the farmer's life was one of the most healthy, independent, and ennobling occupations in the world, but I believe, by a doubtless wise dispensation of Providence, we have been created with different tastes and proclivities, and much of our success in life depends upon our adaptation to our business. If we engage in an occupation for which, either by ability or taste, we are not adapted, we are continually laboring at a disadvantage.

But I do not agree with the seemingly asprinclpled remark of HARRY in reference to the disregard of truth requisite to be an Attorney. If I ever enroll under the banner of the law, it will be with a firm determination to strictly adhere to the truth, and if I find I cannot succeed in that profession without a sacrifice of my principles, I shall, most assuredly, abandon it. BAUTUS.

Grand River Valley, Mich., 1858.

"CONSTITUTIONAL WEARINESS."

ED. RURAL:—I wish to impart the knowledge possessed by me in regard to the above disease, HARRY HARRIS having desired information on the subject. It is not a hereditary disease, as stated by HARRY, as we rarely can trace its symptoms to our parents or to our ancestors; therefore, we cannot be said to inherit it, and it is not a hereditary disease. As to the origin of the malady there is nothing very definite, although it has been known to exist in almost every part of the world, for many centuries back. It consists in having settled in one's constitution a natural weariness or tired disposition, which one is not able to account for, nor is it easily overcome. Those affected with it, shrink a great deal of labor, by whining forth the cry, "I am so tired." It would seem that to those willing to burden themselves with the distemper, it serves a very good purpose, that of avoiding labor. It affects many farmer's boys, when they make up their minds to go to the city, and renounce the farm and all kinds of work. But, thrown upon their own resources, it proves a very valuable companion. If not possessed of otherwise bright talents or income, it will hurry them to a pauper's grave. There are, alas! too many that throw that disease upon themselves in their youth, but in maturity they find to their sorrow that they were deluded into a false step. In their advanced days, it has worn into their very vitals, then nothing can root it out; and they are allowed to drag out their miserable existence without a plying word. Such are the effects of the disease. I know of no better remedy, for the cure of the complaint, than to use one's utmost endeavors on the appearance of the first symptoms to overcome it. It can be done then, and only then, by steady and unceasing attentions directed in the proper way. DR. QUACK.

Monroe Co., N. Y., 1858.

AUTUMN.

EVERY season of the year has its charms, and brings its enjoyments and blessings. To some this is the most religious season. Nature speaks most impressively of the goodness of God. The air seems loaded with an influence that breathes calm delight into the soul—the trees are rich in beauty—the day invites to healthful exercise, and the night is eloquent in praise of Him who made "the heavens and all their host." Who could contemplate the deep glory of such evenings as some which we have had the past month, and be unconscious of a religious sentiment? The sun in its rising is glorious, and in its going down—when it wraps itself in its mantle of crimson and gold—is yet more magnificent, but there is a majesty, a spirituality, a power in the distant stars that surpasses the effects of the brighter luminary. We can imagine these celestial intelligences offering their silent worship to the Creator. How calm, how grand, how solemn, how holy! There is beauty everywhere, wisdom everywhere, love everywhere, but in no other of the material works of God are his perfections so clearly revealed to us as in the gentle brightness of one of these starlight nights. It lifts us above the earth—takes us away from worldly associations, and enkindles our desires after a better life. We feel ourselves to be created for something prurer than this world, more enduring than this life. MARY E. N.

Rural Dist., N. Y., 1858.

PRIDE.

No man should carry his head so high That he cannot downward cast his eye. For some misstep he may chance to make, And the haughty head, in falling, break.

If you are disquieted at anything, you should consider with yourself, is the thing of that worth that I should so disturb myself, and lose my peace and tranquillity.

ROCHESTER, N. Y., OCTOBER 16, 1858.

Review of the Week.

A NEW era in mail transportation to and from California has dawned. The Overland Mail experiment promises perfect success. On the night of the 9th inst. the mail arrived at St. Louis, being twenty-three days on the route. A public demonstration greeted the arrival, long processions, music, &c., hailing the procedure as a happy omen. The following synopsis of news is taken from the California papers:

A line of telegraph from Placerville to Salt Lake City had been commenced. The news from Fraser river is unimportant, and water was still too high for mining purposes. Affairs at Victoria were much depressed.

DATES from Oregon are to Sept. 8th. Maj. Garrett had a skirmish with the Okanagans, in which Lieut. Allen and six Indians were killed. A party of miners under Major Robinson, had been attacked by the Indians on the Wenatche, in which one white was killed. A rumor had obtained credit at Fort Dallas that a party had been massacred near Okanagan. Good gold diggings had been found on the Wenatche river.

THE condition of affairs at Washington will be found in another column, but the telegraph puts us in possession of rather an important item this A. M. (12th inst.), as follows:—A grave difficulty on the Nicaragua question supervenes. Jerez now denies having made any stipulations as conditions to his reception by our Government, and refuses to perform any pretended stipulations. He will probably be dismissed by Gen. Cass, and orders will be very likely given to take possession of the Transit Route by a naval force, until the demands of this Government shall be conceded by Nicaragua.

THE Atlantic Telegraph don't telegraph now-a-days, and we are again compelled to await the arrival of such "slow going coaches" as the steamers. It is really too bad that we can hear from the "Old Country" only two or three times a week, especially as we expected to be talking with Brother John just when we felt inclined. However, we must submit; mistakes will happen.

A PROPOSAL is on foot in New York to establish a bank, which, like the celebrated Bank of Amsterdam, shall keep all deposits in its vaults in gold coin, and charge depositors a percentage for keeping it. The advantage of such a bank would be, not so much that it would make money, or that its credit would be better than that of others in ordinary times, but that once in twenty years, when a financial crisis and bank suspension occurred, it would be able to keep on making specie payments.

YANKEE VICTORY AT TORONTO.—A great yacht race came off at Toronto on Friday of last week, at the Provincial Fair, for a prize of \$240, in which vessels from all parts of Canada and from the American shore of Lake Ontario participated. The prize was won by the Yankee sloop Coral, owned by Mr. Oudea, of French Creek.

DISASTER ON LAKE ONTARIO.—During the heavy gale which sprang up on the 7th inst., the schooner Osprey, of Buffalo, with a cargo of wheat from Racine, Wis., was driven against the east pier at Oswego, carrying away her spar, and sunk immediately. The captain's wife and child and the mate were washed overboard and drowned.

DEFERRED.—Several excellent communications, and a number of editorial articles and items, are necessarily deferred. We will give the favors of our friends as early and fast as possible, but the RURAL will only be 15 "so much" each week—until enlarged.

Destruction of the Crystal Palace by Fire.

On the afternoon of the 6th inst., the New York Crystal Palace, with nearly the entire contents, was destroyed by fire. The American Institute was holding its Annual Fair in the building at the time, and a large amount of property was destroyed, consisting of mechanical and agricultural implements, pianos, melodeons, steam-engines, &c., which were on exhibition. The fire broke out in a lumber-room, which was filled with empty boxes and a large quantity of lumber, and is supposed to have been the work of an incendiary. When first discovered, the Palace engine was brought out, but the hose was so full of holes as to be useless. The flames spread with astonishing rapidity, creating intense excitement among the visitors, (estimated at upwards of 2,000,) present. One of the exhibitors, Mr. L. D. TOWLER, gives the following statement, from which our readers can gain an idea of the fearful progress of the destroying element:—"About 5 o'clock the alarm was given, and my little boy being with me I took him to the door, and returned for my cases, one of which I succeeded in obtaining. I again attempted to return to my property but could not on account of the dense smoke. At sixteen minutes past five the dome fell. When I first saw the fire it was about the size of a man's hand, but in a moment immense volumes of smoke poured into the building."

It is thought that turpentine was used by the incendiaries, as a strong smell indicating its presence was detected when the fire broke out. Previous to the fire, a boy was seen dodging about between the palace door in 42d street and a liquor shop opposite; and just before the alarm three boys were seen hurrying away from 42d street entrance, and running at rapid speed down the street. Nothing was left standing but the iron towers at the angles and a small portion of the iron sides. Everything combustible was reduced to ashes. The iron parts of machinery and other articles, together with the frame work of the building, form one undistinguishable mass. The glass fused into large masses.

We cannot individualize the losses sustained, though many exhibitors, of whom there were 4,000, suffer greatly. The Palace originally cost \$300,000. The loss of the American Institute amounts to \$15,000, chiefly in motive power and machinery. The articles on exhibition were valued from \$500,000 to \$700,000. There was an insurance on the Palace—effected to protect foreign exhibitors—for \$50,000.

It is five years since this magnificent edifice was inaugurated with all the splendor and pomp that cosmopolitan importance could devise. In its architectural features it was the pride of all Americans, for we speak but the general sentiment, when we say that, in this respect, it eclipsed all similar buildings erected in either the Old or New World. The N. Y. Tribune speaks of it as being as "beautiful as a fairy dream; as light as fancy could make it; as original as the age of iron could devise; as perishable, alas! as the grass of the prairie." * * * The loss is manifold, general, national, irreparable. We shall never have another Crystal Palace. Its glorious dome, seeming as though poised itself for a flight to the Empyrean, is no more; its galleries, its treasures, its magnificent expanses indispensable to the mass-gatherings of this great metropolis—its superb memories are all gone, and gone forever!—

STEAM ON THE CANAL.—Judging from the paragraphs in the press at the present time, the inventors are fully determined to dissipate all the difficulties heretofore attendant upon the use of this motor in Canal navigation. The N. Y. Tribune learns that the Cathart propeller, which has been working to great advantage for a year, on the Chesapeake and Ohio Canal, and is there regarded as a complete success, will be tried on the Erie Canal in the course of the present week. Two boats, equipped with this propeller, will be started to make a trip from New York to Buffalo, when all who are interested will have an opportunity to see for themselves what progress has been made to meet this acknowledged want of the State. Mr. Abner Burbank, a resident of Buffalo, has invented and put into operation, a new plan for propelling Canal and other steamers, by which the loss of power caused by placing the paddles close to the stern, where they have to work in a sort of vortex and partial vacuum created by the passage of the boat through the water, is overcome. The simple idea of putting the propeller on the end of a shaft which could be shoved out so as to work some feet from the stern of the boat when in open water, and drawn in when entering a lock or other circumscribed place, occurred to him, and he has put it into practice successfully.

BALLOON RACE.—Considerable newspaper controversy has been had in reference to the relative merits of Prof. STEINER, the celebrated American aviator, and Mons. GODDARD, a French celebrity, and a trial of skill is to take place in Cincinnati, Ohio, on the 18th inst. The Cincinnati Gazette says that the inflation of the balloons, each containing 36,000 cubic feet of gas, will commence at 9 o'clock in the morning, and the ascension will take place at 4 o'clock precisely. A committee of five well known citizens have been chosen, who are to act as judges, etc. They will decide whether the weather in the morning shall justify the inflation of the balloons. When the inflation has commenced the aeronauts must go. Each may take up a passenger, at his own discretion. The success of either will be in relation to distance, not height. Arrangements will be made for each aeronaut to send down, at every town passed, in a parachute, a "log," or note, containing the name of the balloon which passes, and any incident occurring on the trip, which will be sent by telegraph, so that the citizens here and elsewhere may be continually posted of the whereabouts of the aeronauts, and the success attending their aerial flight. Each expects to occupy three or four days in the experiments.

DEBTS FOR LIQUOR NOT COLLECTABLE.—Michael Scanlan sued Michael Markham at Boston, to recover \$75 for liquor, and the Supreme Court has given a verdict to the defendant, because the liquor was not sold in the original packages, and the sale was not legal. Scanlan therefore loses the liquor and the costs of prosecution.

"Rural" Letters from the People.

MR. CHAS. WATTS, of Bureau Co., Ill., remits \$1 for the Rural 6 months, and says:—"It is a good paper, but my neighbors think it is dear, considering the size and hard times—but they ought to know that a load of wheat is worth more than a load of hay or straw. Times are hard, it is true, but they would be much harder if our intellectual supplies were withdrawn or blighted, like our agricultural. 'Half a loaf is better than no bread,' therefore if I cannot afford your paper a year, I will take it for 6 months, till the arrival of that 'good time' which always is 'coming.'"

In starting the RURAL we determined that it should have a good, useful, beneficial influence upon all who might read and heed its contents—and especially upon the young—and that money-making would be ignored in its management. To this principle we have thus far adhered, and though we cannot count our profits in gold, it is awarded us in evidences of usefulness which are most satisfactory. Vide the following recent letter from Mr. C. F. GOODRICH, of Franklin Co., Mo., and which is similar to many others received during the past year:—"I enclosed I send stamps for the RURAL New-Yorker three months. Also, please send me any three numbers you choose for specimens, and in return I will, as far as I can, aid its circulation in Missouri. I am and have been a devoted friend of the RURAL a number of years—although I have not seen its contents but once since I left New York, my native State, several months ago. Its precepts and counsels inspired in my boyhood days, (though they are scarcely passed,) motives and principles which I trust will never be obliterated. I am also indebted to that most excellent paper for enkindling a thirst for literature and science—for first awakening a desire to read and to read good books and papers. And thinking that the same influence may be exerted on some persons in Franklin Co., Mo., I will cheerfully lend my aid in introducing the RURAL here."

We trust many other young men who appreciate the RURAL will volunteer their aid in augmenting its circulation and usefulness in their respective localities. Now is the best time to make the effort.

A YOUNG LADY, Post-Mistress in Tompkins Co., writes:—"I have been without the RURAL two weeks, and now send \$1 to renew my subscription so far as it will. I have tried to get subscribers for you, but the hard times have been such as to prevent. But I intend to be on hand with the RURAL in the fall, and if it does not take the place of the Ledger in about one dozen families it will not be the fault of your subscriber." &c. The RURAL is a universal favorite with the ladies, many of whom are active in extending its circulation. They are also among its most successful agents, for of course none but a hearth-stone can resist their appeals in behalf of the model family paper.

In a recent letter containing pay for new subscribers, Mr. JAS. A. STERLING, of Kent Co., Mich., writes:—"Believing as I do to the RURAL to be the paper for the Farmer and the Home Circle, I feel willing to do what I can to aid in its dissemination. Thus far I have given my time to this object, and shall cheerfully do so while I feel I am placing wholesome, moral literature in Community. I shall send some more in a few days. If I am spared shall also try to get up a club for the next volume."

MR. WM. ANTHONY, of Santa Cruz, Cal., remits pay for 15 copies, and closes his letter in this wise:—"Did not attend to this in time. Was so full of business I did not realize my situation until the significant words, 'time up,' aroused me. I cannot live without your paper in my family, and I will not. I will set the boys to work another year, and get up a larger list, if I have no time to devote to it myself." That's right. Let the boys—the "Young Ruralists"—take the field in all cases where the seniors have not time. Some boys can do as much as men in getting subscribers. If our young friends will only take hold of the matter in earnest, the circulation of the next volume will be largely increased.

Washington Matters.

MR. REED, the Minister to China, says in his official dispatches, that after he signed the treaty he made a provisional arrangement with the Commissioner for adjusting claims of American citizens. He intended to visit in the summer such parts of Japan as might be accessible, and return in November.

Commodore TATNALL, in his official dispatches, dated July 5th, after saying that the entire East India Squadron will soon be shown to the Japanese, remarks that no better opportunity could be selected for the temporary absence from the coast of China, as the recent treaties and termination of hostilities, together with the swarms of English and French ships-of-war in the rivers, must place all the foreign interests of a lawful kind in perfect safety for the present. He should return with the squadron to the coast of China about the last of October.

The correspondent of the N. Y. Courier and Enquirer says Gen. JERZY has been received as Envoy Extraordinary from Nicaragua, having previously engaged to exchange ratifications of the treaty of 1857, unconditionally, and to pay an indemnity for the lives and property destroyed by the allied army during the filibuster war. He also repudiated the Belly contract.

The Secretary of the Treasury has, on appeal, decided that shaved shingles being manufactured by any other processes than hewing or sawing, are not embraced in timber and lumber, admitted free under the reciprocity treaty with Great Britain, but subject to a duty of twenty-four per cent. He has also decided that walnuts and limes in salt and water are each chargeable fifteen per cent.

It is not true, as has been stated, that the rank of Admiral is recognized by the Navy Department, but by the regulations flag officers who have been in commission twenty years and over are authorized to hoist their flag at the fore, instead of the mizzen mast, and those under that period, at the mizzen as usual.

An Army Board is to assemble at the Washington Arsenal, for the purpose of examining the recent improvements in small arms.

INDIANS ROBBERING THE MAILS.—The Indian Bureau at Washington, received a letter from Dr. Forney on the 4th inst., confirmatory of the report of the Indians robbing the mail 350 miles from Salt Lake City. He says that no attempt was made to kill the conductor, drivers, or guards; that the Indians on the Humboldt have been committing depredations for ten years past; and that this was the first outbreak of the present season. Gen. Johnston, at the request of Gov. Cumming, had sent a military force of 150 men for the protection of the mails and travelers.

A VESSEL IN DISTRESS.—New Orleans papers of the 4th inst., state that the steamer Orizaba, from Key West, found the British brig Esperanza drifting about in the Gulf, the captain dead and all the crew sick with fever, and towed her into Apalachicola.

News Paragraphs.

THE New Bedford Mercury understands that the late frost has destroyed the greater portion of the cranberry crop on Nantucket. The yield would have been unusually large, as the people have turned their attention to the business considerably of late.

THE Assay Office is at present doing considerable in the way of receipts of silver for recoining. Four hundred thousand Mexican dollars are now waiting to be turned into American money, and more will be sent in next week.

THE Methodist Advocate regrets to have to say in answer to many anxious inquiries, that Bishop Simpson's health has not improved, and that present indications do not promise an early recovery. He is greatly reduced in flesh and strength during the past month.

THE Harrison (Mo.) Democrat states that a Mr. Johnson, of that place, a reliable young man, who had just returned from Pike's Peak, pronounces the stories about extensive gold deposits in that region, wild fabrications. The most industrious, well provided with tools, do not average over \$1 per day.

THE Milwaukee Sentinel of the 28th ult., says the freight train on the Milwaukee and Mississippi Railroad on Wednesday morning consisted of 101 cars, all loaded to their utmost capacity, and most of them carrying wheat.

THE oldest and at the same time the smallest city in New England, is that of Vergennes, Vt., which was incorporated in 1783. It is the only city in Vermont, and in 1850 contained 1,378 inhabitants.

THERE is a strong sentiment among the people of the Society Islands in favor of annexing those islands to the United States. At a council of Provincial Governors it was resolved to ask this Government for annexation, and a paper to that effect was drawn up and handed to the American Minister, who forwarded the document to Washington. The French and English residents, however, are opposed to this movement, and have already stirred up an insurrection to prevent its attainment.

THE Wool Grower estimates an increase in round numbers of 500,000 lbs. in the wool crop of Ohio, over last year—only one county, Knox, showing any considerable decrease.

FORTY-NINE of the camels belonging to the United States are now at Campe Verde, sixty miles from San Antonio. Only one of those imported has died, while ten have been added by birth. These young American born camels thrive well, and promise to grow up equal in all respects to those imported.

LONDON astronomers do not regard the present brilliant comet as identical with that of 1565, which is now expected. The present visitor will not re-appear for two or three hundred years.

THE new Custom House at Pensacola, Florida, has just been finished. The cost was \$50,000. The amount of revenue collected at that port for the year ending June 30, 1857, was in round numbers \$478. To collect this sum it cost the government \$3,012.

TWELVE cast-iron columns, said to be the largest in the United States, are now in process of construction at Cincinnati. They are each fifty feet in height, four feet two inches in diameter, weigh between 200 and 300 tons, and will cost about \$30,000. They are designed for the State House, Madison, Wis.

In the town of Zehligen, Wartemburg, there has been lately opened a new printing establishment, by M. Theodore Helgerad. All the compositors and pressmen are deaf and dumb, to the number of 100; eleven of the former are women.

THE State of Ohio has recently lost a valuable set of documents,—a complete series of Legislative papers, from the organization of the Territory to the present time—the only one extant. These documents were ruined by fire, which destroyed the contents of a store-room in the State House at Columbus, a few days since.

THE gold mines of Guana, South America, believed to be the veritable El Dorado so fruitlessly sought for by Sir Walter Raleigh, have been recently visited by a correspondent of the New York Tribune, who says that companies well organized, and with the requisite machinery to work the gold quartz, and drain the pools at the various cascades will, undoubtedly, realize vast fortunes.

THE catalogue of books published by the American Sunday School Union numbers over 1,000, the largest list by far in the country, if not in the world. Although most of these volumes are small, yet many of them sell largely, and the aggregate of the entire sales is large, not much less the present year, it is said, than a quarter of a million of dollars.

THE STATE SUNDAY SCHOOL TEACHERS' CONVENTION.—The annual meeting of Sunday School Teachers, at Brooklyn, which opened on Tuesday week, was very largely attended from all parts of the State. Hon. E. A. Lambert was chosen President. The Secretaries of the County Associations made their reports, of which the following is a partial summary:—New York county contains 300 schools, 7,000 teachers, and 72,000 scholars; Allegany county 32 schools, 303 teachers, and 1,122 scholars; Erie county 119 schools, 1,534 teachers, and 9,356 scholars; Monroe county 163 schools, 1,932 teachers, and 15,622 scholars; Ontario county 25 schools, 401 teachers, and 2,898 scholars; Richmond county 35 schools, 217 teachers, and 4,191 scholars; Schoenectady county, 30 schools and 2,000 scholars. No statement was received from either Yates, Washington, Chenango, and other counties, but the delegates gave some very interesting accounts of the progress of the school interest in their different towns.

GENESEE VALLEY RAILROAD EXTENSION.—A correspondent of the Rochester Democrat, writing from Mt. Morris, under date of the 6th inst., says that the iron for the road has been purchased, and is on its way to its place of destination. A portion has been received, and the work of laying will commence at Avon on the 10th. The Directors are determined to have the road completed by the 1st of December, or as soon thereafter as possible.

The News Condenser.

—Pike's Peak gold dust is said to be worth \$31 per ounce.

—Railroad fares are up again on the competing roads in this State.

—The Democrats carried Delaware on Tuesday week by a majority of 750.

—The city of St. Louis has entirely abandoned the use of hand fire-engines.

—One firm in New York, employs 780 girls in the manufacture of crinoline.

—More than one hundred miles of railroad will be completed in Texas in 1858.

—The Natchez Courier says New Orleans is the fifth city in the United States.

—Brigham Young is worth \$3,000,000, besides controlling the church property.

—In Sweden, a man who is seen four times drunk is deprived of a vote at elections.

—A Pennsylvania dentist advertises that he will pull out teeth for one dollar a dozen.

—There are 205 citizens in Providence, R. I., who pay a tax of \$5,000 and upwards.

—Gen. Monagas, ex-President of Venezuela, has died of ill-treatment received in prison.

—The Howard Association of New Orleans warn the unaccompanied against going to that city.

—It is said the Utah army transportation contractors will clear half a million of dollars.

—The men and officers of our Indian army are doing a brisk business in buying up squaws.

—Hon. W. B. Preston, of Louisville, Ky., has accepted the appointment of Minister to Spain.

—B. A. Smith recently fished up a rifle, marked 1805, from a depth of 180 feet, in Lake Ontario.

—The report that the Pope intends to make a pilgrimage to Jerusalem, has been contradicted.

—The Boston Board of Aldermen have voted eight to four that the police shall wear uniforms.

—G. P. R. James has sailed for Venice, where he is to hold the position of British Ambassador.

—A new company has been formed for purchasing the Great Eastern, and running her to America.

—The President has appointed Dr. James McDowell, of Missouri, Consul General to Constantinople.

—A "matrimonial broker" in New York has recently retired from business with a handsome fortune.

—The jail at Freehold, N. J., was forced on the night of the 9th inst., by the prisoners, all of whom escaped.

—The expenses of the British Patent Office for this year have been \$138,990 over and above its receipts.

—Carl Mozart, a son of the great composer, and a man of considerable ability, is living in poverty, at Milan.

—The Governor of New Hampshire has appointed the annual Thanksgiving on the 26th of November.

—According to the N. Y. Courier and Enquirer the marine losses for the past month foot up \$1,128,000.

—Gen. Scott has returned to New York, nearly recovered from the effects of his recent fall at West Point.

—In Mexico, everybody is supposed to be an ex-President who wears a clean shirt and keeps his hands washed.

—Twenty-five of the Maine editors have started on a tour to the Aroostook country, to examine its capabilities.

—James Thorp, a colored teamster, of Newark, N. J., has had \$75,000 left him by a gentleman of North Carolina.

—Later news from Utah represent everything to be quiet. There had been heavy snow storms on the plains.

—An acre of vines in California yields from 800 to 1,050 gallons of wine. In Ohio and Europe only about 400.

—The bursting of a camphine lamp caused the destruction of \$10,000 worth of property at Milwaukee, last week.

—An official report shows that the Federal Government owns 578 acres within the limits of Washington City.

—The steamer Cleveland, about whose safety so much anxiety was felt at Milwaukee, has arrived at port all right.

—The Cincinnati Gazette learns that cases of yellow fever have occurred at Louisville within the last few days.

—Charles Sumner was at Aix in Chappelle, France, when last heard from, and very much improved in health.

—The typhoid fever, which had assumed an epidemic form in the Penitentiary, at Columbus, Ohio, has subsided.

—Gov. Cumming retains the confidence of the Mormon community, and his acts and policy give general satisfaction.

—The total mortality in New Orleans by yellow fever, up to September 24th, was two thousand four hundred and twenty.

—Mrs. Cunningham, now sojourning in Upshur Co., Va., is 105 years old. She has 39 descendants of the fourth generation.

—Lord Elgin has gone on a mission to Japan, to induce the Japanese to enter into a treaty of Commerce with England.

—The Postmaster-General, notwithstanding the reports to the contrary, has not yet selected a site for the New York Post-Office.

—The French have successfully tried the experiment of slicing and drying potatoes for future use. It is done by machinery.

—A. Keene Richards, of Georgetown, Ky., is about to purchase the celebrated English race horse "Fisherman," for \$30,000.

—Dermott Dempey, of Macon, Ga., who died on Sunday week, wills \$5,000 to his relatives and \$495,000 to the Catholic Church.

—President Benson writes from Liberia that the prospects of that colony, as a cotton producing region, are improving rapidly.

—From the returns of the census of Texas, now nearly completed, it is ascertained that its population will not fall short of 450,000.

—The Paraguay Expedition will be composed of 16 vessels, carrying 205 guns, and a land and naval force of 2,800 men and officers.

—A man killed the favorite cat of a neighbor, who sued him for damages. The jury decided that cats were not property in New Jersey.

—It is a remarkable fact that the Cleveland market is sending grapes to Cincinnati, the crop at the latter point having proved a failure.

—Two Chicago ladies went to a ball the other evening, in a furniture wagon—no ordinary carriage could contain the dresses they wore.

—The wife of State Prison Inspector Rhodes, while out hunting, one day last week, in Clinton Co., had the good luck to shoot three deer.

—A son of A. G. Talbot, M. C. from Kentucky, has made his debut in the ring as a clown. His family is one of the wealthiest in Kentucky.

—All Switzerland is in a state of insurrection against the railroad lords, whose political power is rapidly extending over the whole continent.

—A great fire occurred at Jamez, Island of Hayti, on 15th Aug. The commercial part of the city is in ruins. Loss, a million and a quarter.

CENESEE VALLEY NURSERIES

GENESEE VALLEY NURSERIES
Fruit Trees, Ornamental Trees, and
Shrubs, Roses, &c., &c.

THE Proprietors of these well known and extensive Nurseries, do
on hand a large and well-grown stock of
FRUIT TREES, ORNAMENTAL TREES, SHRUBS, ROSES,
GREEN HOUSE and BRIDGING PLANTS, DAHLIAS,
PILULARIES and OTHER HARDY
BORDER PLANTS.

The assortment of **ROSES** is vast, extensive, and embraces
the most valuable and beautiful varieties which are considered
the most desirable for the **CLIMBER** PROPRIETORS.

THE GREEN HOUSE DEPARTMENT receives trees, plants, and
flowers, which are raised in the most perfect manner, and
are offered at the lowest prices.

FRUIT DEPARTMENT,
992 stock consists of
APPLES, of the leading varieties, Hwarf and Standard,
PEARS, of all desirable varieties, on Quince and Pear stock,
PLUMS, of all the best varieties,
CHERRIES—All the popular sorts, Dwarf and Standard,
PEACHES—A choice assortment.
NECTARINES, APRICOTS and QUINCES, in variety
GRAPES—A complete stock of all the best natives and foreign
varieties, including many of recent introduction.

SMALL FRUITS,
CURRANTS—A fine choice stock, including many new varieties,
RASPBERRIES, GOOSEBERRIES, BLACKBERRIES, and
STRAWBERRIES of all sizes and approved varieties.
We have also a complete stock of RASPBERRY STICKS
and SKOOLINGS, including APPLE, PEAR, PLUM (OLD
and NEW), CHERRY, and ALMOND SKOOLINGS OF EVERY SIZE
including Norway Spruce, Norway Fir, Scotch Pine, Austrian
Larch and Hemlock.

ORNAMENTAL DEPARTMENT.
The stock of Ornamental Trees and Shrubs, both the House
Evergreen, will be found to embrace all that is desirable as
LAWN and STREET TREES and SHRUBS. RUSSIAN, Scotch
and Hybrid Poplar and Sumner Roses, Moss, Hebe, Yucca,

HARDY RHIZOMES OR BORDER PLANTS and **EDIBLE FLOWERS**, an extensive assortment.

All the above will be disposed of at low rates, and on advantageous terms. For further details we refer to our full set of Catalogues, which will be mailed to applicants who enclose a one cent stamp.

No. 1.	Description	Catalogue of	Ornamental Trees,
" 2.	do	do	Shrubs, House etc.
" 3.	do	do	Green-House and bedding Plants, Palms,
" 4.	do	do	Wine-festival or Trade List for Nurseries and Dealers.
" 5.	do	do	Catalogue of Bulbous Flower roots.

THE BEST APPLE PEEK IN THE WORLD.
WHITTEMORE BROTHERS' PATENT.

APPLE-PEEK prepared for use by five generations of the craft, is in daily use by the Farmers of New York, Canada and Britain. Its construction and use is liable to get out of order, as many other oblique tools are, and capable of performing four times as much labor as the common tools.

It is the perfection of Yankee Ingenuity, and can be operated with ten years of age and no family can afford to be without one. They can be obtained of the principal merchants throughout the country, or sent by mail, on receipt of the price, as follows:—
Small, which will give all orders correct and prompt answers.
Instruments offered to Agents and Dealers.

Prices below competition and within reach of all.

443 WHITTEMORE BROTHERS, Rochester, N.Y.

KIDZIN WATER FILTER.
THE RUBENKIRK give notice that they have made arrangements with Mr KADON, the patentee of the celebrated Kidzins manufacture, under his own supervision, and sell at former rates, cash and discount to dealers as when made by J. R. Ouseley & Co.

RURAL NEW-YORKER

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

(SINGLE NO. FIVE CENTS.)

VOL. IX. NO. 43.

ROCHESTER, N. Y., SATURDAY, OCTOBER 23, 1858.

{WHOLE NO. 459.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ADEQUATE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on the Important Practical, Scientific and Literary Subjects intimately connected with the business of those whose interests it seeks to advance. It embraces more Agriculture, Horticulture, Science, Education, Literature and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

Rural New-Yorker.

NEW YORK STATE FAIR.

THE ADDRESS.

We have already devoted so much space to matters of interest connected with the Fair of this State, that we are compelled to make our synopsis of the address much more brief than we had at first designed. The subject was the Necessity of furnishing Farmers' Sons the means of acquiring a good Agricultural Education, and was delivered by Hon. JOSEPH R. WILLIAMS, President of the Michigan State Agricultural College. Mr. W. spoke of the progress of Agriculture the last fifty years, the benefits derived from the dissemination of periodicals, the establishment of fairs, the general discussion of agricultural questions, the use of improved implements, &c., and when contrasting the past with the present said, now "offensive exhibitions of poverty are witnessed only at long intervals, and, in fact, rarely seen at all." We regret that we cannot assent to the truth of this statement. He then quoted from the census of 1850, showing the average production of crops in the State of New York, and remarked that this product could be doubled by proper culture. The loss on the deficient crop of wheat alone to this State annually was fifty millions of dollars. To aid in the work of raising maximum crops he recommended attention to Botany, Geology, Entomology, and particularly chemistry. He did not attempt to show what great benefits had accrued to agriculture from chemistry, but after recounting what this science had done for the miner, in medicine, &c., said, "Let us not discourage this science from delving into the earth, if such are the prolific results of her researches elsewhere."

The speaker then said that the young men of the country were unable to acquire knowledge of these sciences, as no schools were established accessible to them. The census of 1850 showed that there were in the State of New York 250,000 young men between the ages of sixteen and twenty-two. There were only 2,673 enrolled in all the colleges of the State. Allow nearly nine times this number to enjoy good advantages of education in advanced schools and academies, making the whole number 25,000, and then allow for the class so irretrievably stupid that they will not seek, and could not profit, perhaps, by education, and for those who possess such vitality and energy of mind as to overcome all barriers and drink in education as they live and move, 25,000 more, and we still have 200,000 of the young men of New York deprived of all education beyond that which the common school affords. The great desideratum, the great need, is a chance for the boy to aid himself—to study and work—to earn the means of education while being educated. The speaker most emphatically used up the notion that labor and study are incompatible, by showing that the boy while acquiring the rudiments of an education at the common school was expected to work, and do the worst kind of drudgery; and that some of the greatest men in the world—those whose acquirements have shed a lustre not only upon their names but upon their country and their age—have gained their knowledge and their fame, while supporting themselves and families by the hardest kind of labor. That most of the Manual Labor Schools had failed, the speaker admitted. It was a new system, and in most new things, failure precedes success. They had to contend with public prejudice, and this public prejudice has frowned down many a good thing. They had failed, too, because the labor required of the students had no connection with their studies—their labor was mere drudgery—not labor and science united for one great object, as it is in Agricultural Schools. In some cases, too, labor was not general—only the poor students worked, and this formed classes and destroyed the institutions.

The speaker gave an account of his own College and of the condition of the different States in this respect, also of the Agricultural Institutions of learning in Europe, and urged the claim of the agricultural interests to recognition and aid from government. The good farmer exerted a good influence on all around him, and the ignorant and

prejudiced participate in this benefit, though they may not acknowledge it. A friend called his attention to a Pennsylvania German who could hardly read and write, and had a great contempt for papers and books on farming, but was the best farmer in the neighborhood. The speaker told him he thought this basket would not hold water, and that this model farmer owed everything to the spirit of improvement abroad. His plow was a Troy plow instead of the old shanty implement, with wooden mould board sheathed with iron, with straight handles tipped with cow-horns, which he used when a boy. His implements were mostly light, graceful, elastic ones, of recent pattern—His fruit was budded and grafted from such as his neighbors had imported from the best nurseries—Whatever superior cattle, or sheep, or swine he had, were obtained from neighbors at no extra cost. The nails he shingled his house with cost but one-third as much as those which his father used. When he got up in the morning, he lighted his fire in a second with a friction match instead of ten minutes with flint and steel and tinder box, and he complemented himself to sleep at night under sheeting that cost eight cents per yard, as good as that which cost fifty cents when he was a child. The story is told of PLATO having described man to be a bird without feathers. DIogenes, the cynic, laid a plucked rooster before him and exclaimed, "Behold Plato's man!" If our model farmer was deprived of all the benefits he had derived from that progress which he despised, if he was stripped of all borrowed plumes, he would be as innocent of feathers as Plato's man.

In closing, Mr. W. urged all farmers, as "like products like," to get the best cows, horses and sheep—to use the best implements—open their parlors to themselves and their families—make home cheerful and instructive, so that their sons would not wander away in search of pleasure—to plant orchards and surround their homes with vines, and make the air fragrant with flowers.

COMPLIMENTARY.

At the close of the address, Mr. GEORGE GEDDES, of Onondaga county, made a few remarks, claiming that the farmers of Onondaga had done something towards approaching the speaker's standard of a good farmer. They had educated men engaged in tilling the soil, and ladies who were accomplished, and at home, either in the dairy or the parlor. He wished the speaker or other scientific men, would tell the farmers why it was that one plant in a certain soil would produce poison, while another in a similar soil, so far as the farmer could judge, would produce sugar. This was a rather hard question, as the wisest know but little of this matter, and the foolish know just as much. He proposed a vote of thanks to the speaker, and that a copy of the address be requested for publication in the Transactions of the Society, which was unanimously adopted. Several votes of thanks were then proposed by different individuals, to the Judges, Superintendents, the people of Syracuse and the Ladies, the Railroads, the Press, &c.

A BANNER—MORE COMPLIMENTS.

The managers of the National Horse Show, at Springfield, had offered a prize banner to the State Agricultural Society of that State whose citizens should enter for exhibition the largest number of valuable horses. It seems that the exhibitions made by New York and Vermont were so nearly equal, that it was decided to give a banner to each State. SOLOMON ROBINSON was the bearer of the banner to our State, and everything being cooked for the occasion, made a presentation speech on Thursday afternoon, in which he announced himself as "the bearer of a trophy from a field of contention, where it was honorably won," and so forth. He also read a letter from the President of the Association, having in charge the National Horse Show. Mr. McCORM, President of the State Agricultural Society, responded, expressing his pleasure at being the "recipient of the elegant banner won in the field, not of wars, but of civic honors."

The banner is made of blue silk, with a gold lace border, with fringe. On one side is ROSS BONNOR's picture of *The Horse Fair*, and "State Prize Banner," in gilt letters; and on the reverse, "State Prize Banner—Awarded to the N. Y. State Agricultural Society, at the Annual Exhibition of Imported, Blood and American Breed of Horses—Springfield, Mass., 1858."

After the address of the President, the Hon. T. C. PETERS, of Darien, said he hoped the design on the banner would be engraved, and given in the next volume of Transactions, and also used hereafter in the Diplomas of the Society which shall be awarded to horses. He offered a resolution to that effect, which was unanimously adopted.

Hon. HARVEY BALDWIN, of Syracuse, moved that the thanks of the Agriculturalists of the State be presented to SOLOMON ROBINSON, for the manner in which he had discharged his duty. At this stage Mr. ROBINSON arose, and said he asked no thanks for the discharge of his duty, and made the strange announcement, that "it was a matter of history, and therefore no egotism on his part, to say that

through his exertions was this beautiful banner awarded to the Agricultural Society of the State of New York." Previous to this statement, we had supposed that the prize was fairly merited and honorably won by the best exhibition of fine horses, and not secured through the exertions of any individual. We have heard of some persons being "half horse," and of others being a "whole team," but SOLOMON must have been a whole stud of horses, to have secured the prize for the best equine exhibition, to this State!

EVENING DISCUSSIONS.

A very laudable desire was evinced by the farmers in attendance at the State Fair to employ their evenings more profitably than in lounging about the streets and hotels, so it was announced that there would be meetings in the evenings to discuss agricultural subjects. These meetings were not attended by the officers of the State Society, who were of course fully employed in their responsible duties, nor by any great men, but by a host of practical, hard-working farmers who did not attempt to make speeches, but told their experience in a common-sense way. The

DETERIORATION OF THE BARLEY CROP.

and its failure in many parts of the country elicited a very interesting discussion as to the cause and remedy. Mr. CLARK, of Oswego, remarked that, formerly, when barley was largely grown in that county he regarded it as an exhausting crop, and thought that was the cause of the failure.

GEORGE GEDDES, of Onondaga, said that his county formerly produced more barley than the whole State of Massachusetts. He had found it a very sensitive crop, easily affected by moisture and heat. It requires for success a heavy soil, will not succeed well on light land. The average crop now is about 20 bushels an acre; some raise 40, others but 15. Though it would continue to decrease—the mildew destroys it, and often when everything bids fair for a large crop about the time for the ears to form, dry weather will disappoint the expectations of the farmer and dwindle his crop to a very small amount. About the exhausting nature of the crop he knew nothing, and therefore would say nothing. Left that to scientific men, and intended to keep up such a rotation as would continue the soil in good condition.

Dr. WELLS, of Seneca county, said many farmers in his neighborhood had raised large crops of barley—had heard of 70 bushels to the acre, on pretty good authority. The soil was mostly strong or clayey. Some winter barley was raised in the county and the largest crops were of this variety.

JUDAS ENOS, of Madison county, said the farmers of his section of the State had done very poorly in raising barley the last three years. He had raised good barley for thirty years until the last three—now he could get but about 10 bushels to the acre. Raised the two-rowed of two varieties, one of them being the *Hess*. The *Hess* had given him 65 bushels to the acre—now it is harder to raise 10. Was in the dark as to the cause. Had found no insect. The plant seems weak and sometimes does not head out—in short, won't grow. The soil is as good and cultivated in the same way as formerly. Corn in the same ground will give as large a crop as ever. Raised 75 bushels of shelled corn to the acre, followed it with barley and only got 14.

Mr. BROWN, of Wayne, succeeded well with barley after corn, if the soil was in good condition, but instance a case in which he had signally failed in an attempt to raise barley after barley, although the soil was good, while the field adjoining, every way the same, except that it had borne corn the previous year, produced a good crop.

JUDAS ENOS replied that he had grown a second crop of barley of 60 bushels per acre, but he had well lined the land before sowing.

EQUIRE M. BROWN, of Elbridge, had good success with barley until the two last years—now it fails—don't know the cause. Never sows barley two years in succession on the same land, but after well manured corn. Once could depend on 40 bushels to the acre, now could not get 20. Last year got in a piece of barley in excellent order, and it looked well for a time, but one-half of it did not head out. Could not tell the cause unless it was the heat. His barley this year weighed 40 pounds to the bushel—has had it 53 pounds. Found great benefit from the use of salt. Used about a barrel to the acre. In one case tried an experiment with salt—gave five bushels an acre to eight acres, and left four acres of the same field without salt. The result was 50 bushels an acre on the salted and 33 on the unsalted piece. Mr. B. also recommended salt for manure heaps, to prevent burning. Some one objected to this in all cases as it might prevent decomposition, which it undoubtedly would. There was, however, a general feeling in favor of salt, which is not strange seeing we were assembled in the *Saline City*.

W. A. MILLS, of Livingston, said last year he had 60 acres of barley which gave only 18 bushels per acre. Previously he had grown 40. Attributed the failure last year to the hot, wet summer—it

ruined. Barley does best in a cold season, and last summer did tolerably well on the cold, dry hills—Succeeded well with winter barley—35 bushels to the acre, of admirable quality—sowed two bushels to the acre the 15th of September. A neighbor sowed 10 days later, and lost his crop with rust and mildew.

C. WINGOAR, of Cayuga county, formerly had good crops of barley, this year poor, but he attributed it to poor culture. Thought it best to grow some four-rowed variety, as it would sell higher. Mr. CLARK, of Oswego, inquired how long it was customary to go between grass and grass—Mr. W. replied his system was clover, corn, barley, seed again. Mr. GEDDES said the usual rotation was sod, corn, barley, wheat, grass.

Mr. DUNNING, of Cayuga, preferred the two-rowed barley. Had tried the four-rowed and it fell behind ten bushels to the acre. His rotation was the same as that described by Mr. GEDDES—Depend upon barley as much as any crop. Last year only averaged 20 bushels, this year 25, formerly 40. This year found a maggot in the straw which he considered the cause of the failure. As the straw came through the machine found it full of maggots. Sow barley as early as possible in the spring—last of April or first of May.

C. WINGOAR had injured his cattle by feeding them barley straw. Mr. CLARK, of Oswego, had found barley straw good feed. He would recommend a change of rotation, to make barley follow wheat, with a summer-fallow to intervene.

Mr. DANFORTH, of Cayuga, said he could not succeed in growing barley upon a clay soil—never got more than his seed. Mr. GEDDES replied that in Onondaga they used the light land for oats and the most clayey for barley—still heavy and light land are relative terms, and what would be called light in one section of the country would be called heavy in others.

Mr. BAILLY, of Kent Co., Michigan, had raised barley on new land for several years—three years ago got 30 bushels, last year 15, this year eight. The eight bushels this year grew on soil that gave last season 187 bushels of ears of King Philip corn. Had grown the two and four-rowed side by side. The two-rowed was best. Charged the failure to unfavorable seasons. There appeared to be no substance in the straw. Did not despair.

Col. BRADY, of Tompkins, lived on the hills of Enfield, in Tompkins county 1,016 feet above Cayuga Lake. He had raised barley the last eight years and for seven years the crop had averaged more than 30 bushels. Sowed on clover sod. Barley was an excellent crop to seed down with. Clover was his manure. Had made poor land "too rich," or given it too much vegetable matter by repeatedly plowing in clover. Let clover lay only one year. His present farm when it came into his possession was so poor that it had been sold for \$1 per acre. Ashes had been useful on his land and plaster was almost indispensable. Had repeatedly tried salt and lime without the least benefit. He found it almost impossible to make clover seed take on clover sod, and thought there was something in the decaying leaves that injured the vegetation of the seed, just as the pine leaves when decaying in the soil injure vegetation, so much so that when cultivating new land he could tell where a pine tree had fallen and decayed as the form of the top could be traced in the growing crop. He was opposed to subsoiling and deep plowing, on his own farm, others could do as they found best. Two-and-a-half or three inches was as deep as he found it beneficial to plow. Had tested this matter for fourteen years—had experimented with 2, 3, 4, 5 and 6 inches deep, and found 2, 3 or 4 inches the best, 4 inches not as good, 5 inches still worse, and 6 inches the worst of all. Some one asked Mr. B. if he ever raised 100 bushels of corn to the acre, with such plowing. He stated he had not. A voice replied "no, nor never will." Mr. B. said he did not expect such a crop on his land, and certainly should never get it with deep plowing. A good many seemed to think Mr. B. was pursuing and recommending an improper system, but he seemed to have a bright eye, and we have no doubt had learned in fourteen years' experience what course of plowing was best suited to his mountain home.

T. C. PETERS stated that the best *Isabella* grapes he had ever tasted were grown by the last speaker, and although he had no doubt that shallow plowing was adapted to his soil, he wished Mr. B. would tell how he cultivated grapes, so that the audience might know that he did not believe in shallow culture for everything. Mr. B. replied that he dug a hole for each vine six feet deep, and the same width and length, and filled it with bones, manure, good soil, &c.

LEWIS MARSHALL, of Orleans, had sown winter barley in the spring, with good results. It was sown in March, and yielded over 60 bushels to the acre. When it does not winter-kill it yields well, if sown in the fall. Had been acquainted with winter barley more than eight years. When sown early in the spring it ripens as soon as though sown in the fall. Winter barley weighs about 50 pounds to the bushel.

Mr. GOWDY, of Lewis county, said barley succeeded in that county. Usually sows barley after corn or oats. Get from 25 to 40 bushels. The last season the crop was poor.

Dr. VAN SLYCK, of Wayne, said since he first made his home in Wayne county, (12 years ago,) barley had been grown, and always with success, until last year, which was very wet. Barley requires as good soil as wheat. Many do not give it a chance, but make it a kind of "catch crop," and then wonder that they do not succeed. They turn over a sod, then corn follows, and wheat, and barley last before seeding, when the soil is pretty badly exhausted. We find the better way to be to turn over clover, and sow barley first, and invariably get from 20 to 40 bushels. Then follows wheat, &c. This year barley had been affected by the mildew when sown late, or on a cold, damp soil. Winter barley is the most popular and yields from 20 to 60 bushels of better quality than spring, and selling for 12 cents a bushel more. Clay soil is best, but any good wheat soil will grow barley. Drill it in as it is less liable to kill out, in fact, drill in everything.

VARIETIES OF INDIAN CORN.

It is generally admitted that all our varieties of Indian Corn were derived from the same parentage, the Wild or Rocky Mountain Corn. There is now an almost incredible number of kinds in cultivation, of almost all shapes sizes and colors. Annexed we present sketches of twenty varieties, commencing with the original, and embracing some of the most highly prized sorts.

- 1 and 2 Original Wild or Rocky Mountain Corn.
- 3 Rice Corn.
- 4 Jersey White Flint.
- 5 Two-rowed.
- 6 Ohio White Flint.
- 7 Kentucky White.
- 8 Virginia Golden.
- 9 King Philip.
- 10 Middle-sized eight-rowed Yellow.
- 11 Samsonit.
- 12 Improved Dutton.
- 13 Ohio Dent.
- 14 Small eight-rowed Yellow.
- 15 Blood Red.
- 16 New Mexican Black.
- 17 Oregon Shoe-Peg.
- 18 Canada Pop Corn.
- 19 White Gourd-seed.
- 20 Golden Sluz.

The varieties of corn mix very readily, and it is rare to find farmers who keep any kind pure. In the interesting discussion at the New York State Fair, on the subject of corn culture, (which we shall give next week,) several times the speakers were asked what kind they cultivated, and the reply in almost every case was—"I have a mixed sort." Sometimes the farmer had given it a name, and the general opinion was, that these "mixed sorts" gave a better yield than any variety kept pure. We shall make some remarks on the subject when we give our report of the discussion.

CHEESE-MAKING.—PREPARING RENNET.

As our experience has been with a small dairy, we write especially in reference to that large class of farmers who keep but few cows. First rate cheese can be made from a few cows, but it is attended with more labor, in proportion to the amount made, than in a large dairy, inasmuch as the curd has to be made every morning and placed aside until sufficient is obtained to make a good-sized cheese.

In the manufacture of cheese I would urge the absolute necessity of having the room and every utensil kept perfectly sweet and clean. Next to this in importance is keeping the milk sweet. If the milk or curd becomes sour or begins to ferment before putting it into the press, the cheese will be "huffy," and very likely strong.

The milk, after it has been strained into the tub, should be warmed to a proper temperature—which is about 90° Fah., or nearly as warm as when taken from the cow—by adding a portion of heated milk. In cold weather the temperature should be raised a few degrees higher. It is a fault to make the milk too warm, because it causes the cheese to get hard. The rennet is then added, the milk well stirred, and afterwards let alone till the curd is well come. The quantity of rennet depends upon its quality as well as upon the quality of the milk and the temperature the latter has obtained, and it is consequently difficult to determine the exact amount. The richer the milk is in cream and cheese, the greater must be the quantity of rennet, therefore more is required in summer than in winter; the warmer the milk the less rennet is necessary. Experience is the only guide in this operation.

The time necessary to produce perfect coagulation is from thirty to sixty minutes, and better exceed sixty minutes, than to get in too much rennet. But if it require a much longer time, or does not coagulate at all, the temperature of the milk should be raised a few more degrees and more rennet must be added and continued until it is ascertained how much is necessary. It is much better to take too little than too much rennet, and should the milk not curd within a proper time, it requires only a weak addition of rennet to effect a perfect coagulation. As a general thing, the longer it is in coming, the tenderer and sweeter will be the curd.

When the curd is formed sufficiently, which may be known by its breaking clean with the finger, or by placing a wooden trowel upon the surface of the milk, and if at its removal it leaves a distinct hollow mark it is a sign of perfect coagulation,—it is then broken up quite fine, either by hand or a curd breaker, made for the purpose, which cuts it into very small pieces. After this it is allowed to stand and settle. The whey is then drawn off and passed through a sieve to remove any curd there may be in it. The curd is then placed in a strong cloth, and well pressed, to remove the whey. It is then put in a cool place and the operation repeated till there is curd enough to make a cheese of the desired size. When the right quantity is obtained, the curd is all broken up very fine in water, heated sufficiently to make the curd quite warm, when ready for the press. When the scalding is completed drain off the water as dry as possible, and at this time it is highly necessary to keep the curd broken up fine so as the better to mingle with the salt. Care should be taken not to mash the curd so violently at any time as to start the white whey, as that detracts from the richness of the cheese at once.

When the curd has drained sufficiently, add salt at the rate of one pound for every twenty-seven of dry curd. After the salt has been thoroughly incorporated, a strainer sufficiently large to cover the whole cheese is placed in the hoop, and into this strainer the curd is put. The pressure should be but moderate at first, increasing gradually for two or three hours; the cheese is then taken from the press, turned over and a dry cloth put around it. Place it again in the press and submit to a powerful pressure for thirty-six hours, turning once or twice and applying fresh cloths. To protect them from the flies, give them a covering of cotton cloth dipped in melted butter and afterwards thoroughly greased. They should be turned every day, and the mould, if any, rubbed off, occasionally applying a little more grease until the surface becomes smooth, when turning once in two or three days will do.

PREPARING RENNET.—Our practice is to allow the calf to stand two or three hours after suckling before being killed. The rennet is carefully removed, the curd taken out and the skin turned wrong side out; the specks of dirt removed by picking from the skin and curd, but by no means rinse the skin, as that removes a portion of the gastric juice which is the only active principle of any value contained in the rennet, and the slightest rinsing is an injury. The curd is then put back into the skin together with one pint of good fine salt. The whole is then placed in a cloth sack and tied up and hung up in a cool dry place till wanted for use.

When wanted for use, put the rennet into a vessel, add one gallon of water "milk-warm," soak two or three days, strain off the liquor, add as much salt as will dissolve, put into a tight vessel and keep in a cool place. This process must be repeated once or twice before the whole strength will be extracted. Plenty of salt should be used throughout the whole process. **FAYE, JR.**
Andover, Oxford Co., Me., 1858.

* Note.—In large dairies the milk is strained into caldrons; after the curd is cut up and stood a few minutes, the heat is raised to about 165 degrees. The principal object of heating, or as it is termed, "scalding the cheese," is to fully separate the curd from the whey; while the object of warming the curd, is to make the different curds unite readily, or, as it is termed, "close" well.

SWEET POTATOES.

EDS. RURAL.—You seem to me altogether too ready to respond "miserable offenders" to your "Reader" correspondent, as to what the RURAL is, and ought to be, though you as adroitly shift off the sin upon the rest of us "readers," as old Father Adam did his upon the woman who had been given him. Now, for myself, for a long time a careful and much interested reader of your paper, I have no "fault" to find with the RURAL. I see none in it, and shall not, therefore, cast about to find a "remedy." The "institution" may not be absolute-

ly perfect. Nothing is in this fallen and damaged world. But it seems good enough. Still, if you think it can be improved a little in the way you suggest, we "readers," I think, will not be found backward in giving you the results of our experiments and observations. I herewith give you mine with Sweet Potatoes.

I have tried, during the last five years, three different methods of raising this delicious vegetable, which, by the way, I believe can be had in perfection in many parts of our Northern States, where the people who have never made the trial, would as soon think they could raise oranges.

The first of these methods is, I suppose, the common one, viz., to obtain slips, as they are pulled from the unlifted seed potato in the hot-bed, and plant them out in high ridges, or hills, about the time of planting corn. I have in this way, in rich, well worked ground, obtained every year for the last four, what I have regarded as amply remunerative for the care and labor bestowed.

The second method is to take off the slips two or three weeks earlier, and plant them in another hot-bed or cold frame, that they may become well rooted and strong. I this year had very fine plants in this way, with abundance of roots, ready to go right along with a vigorous growth as soon as put into the open ground. But mark the result,—a great number of small potatoes.

The third method, which, judging from the experience of a single year, the present is by far the best of all, is to raise your own plants at home, in your own hot-bed, and be ready as soon as they are large enough, and the danger of frost is over, and there is a fair prospect of a shower at hand, to take up the seed potato from its bed, and cut out a little of the old potato with each shoot, so as not to injure the fibrous roots, and immediately plant out in the prepared hills. Of course you will not get half as many plants from the same quantity of seed in this way, as by the other method of taking off slips, and leaving the old potato to send up a new crop. But if the object is to get fine, large, and early ripened potatoes, rather than plants, I feel confident that great advantage will be found in the method proposed. At least such has been my experience this year—the crop raised in this way the present season, being the largest and finest I have ever seen. Will some others take note of this, and try the same thing next year, and communicate the result?

Hudson, Ohio, 1858.

MOON THEORIES.—POTATO EXPERIMENTS.

Messrs. EDS.—Having noticed an inquiry in the RURAL of October 2d, in regard to the planting of seeds by the moon, I would like to state what my experience teaches me. I think it does make a difference at what time seeds are planted in the moon, for instance, peas, cucumbers, and all things growing above ground, if planted in the new moon, will grow thrifty and blossom full, but will not yield so well as if planted in the old moon, or last quarter.

My observations and experience brings me to the conclusion that all things growing above the ground, should be planted in the last quarter of the moon; and all things growing in the ground, during the first quarter, or full moon. Now, Mr. Editor, you seem to think it all moonshine, and nothing else. We won't wait to draw "cobble stones, nor for Spiritualism to evolve any more truth," but if you will just try the experiment next spring, by planting one row of peas and one hill of cucumbers (or more) in the new moon, and then plant one row of peas and one hill of cucumbers in the last quarter of the moon, by close observation I think you will become convinced that there is something more than moonshine about the moon. I sow and plant all seeds by the changes of the moon, and hardly ever fail to excel my neighbors as to quality and quantity.

I promised you, last spring, to give the results of an experiment in planting potatoes with one eye in a hill, but I shall fail to do so, as the season has been very bad for experimenting on potatoes or other crops. I planted my potatoes June 7th, 1858, one eye in a hill, and I can now dig from two to six good large eating potatoes from a hill.

I noticed an inquiry in the RURAL a short time ago, in regard to the best way of burying potatoes. I will here state my plan, which has always proved to be good and safe. Dig a round hole, in dry ground, about six inches deep, and large enough round to hold from 40 to 80 bushels when heaped up—cover with dry straw four inches thick, then cover with dirt five inches deep, afterwards put on another layer of straw four inches thick, and finally cover about one foot deep with dirt, which will carry them through safe and sound, unless we have a very severe winter. It would be a good plan to put on two or three loads of manure, which should be hauled off on the opening of spring. **D. B. FAIRB.**
De Kalb Centre, Ill., 1858.

WATER PIPE.

THERE is an article by H. J. F., of Palmyra, in the RURAL of the 2d inst., that, so far as my experience goes, is calculated to mislead the public. I presume the error is unintentional, yet it might be and is dangerous, notwithstanding.

I have not used the cement pipe, but having occasion to put down about one hundred and thirty rods of aqueduct this spring, I took some pains to look into the matter, so that I might get it as cheap as possible, and have it durable and efficient. My lead pipe, which was seven-eighths inch, I found too small, as it choked or filled up, and I could not get water enough through it, with the head of about ten feet, to keep it clear. A less bore than inch and a half, I consider too small for a long distance. I applied to persons who had been in the habit of making the cement pipe, and their lowest estimate of material was one bushel of cement, or water lime, to the rod. The lime alone laid down on the banks of the ditch would cost me fifty cents per bushel, or fifty cents per rod, the sand would cost about six cents more, so that at the lowest figure, the material would cost at least 56 cents per rod. The estimate for the labor was 14 cents per rod more, so that I could not make my pipe cost less than 70 cents per rod. But I got an estimate for the tile also, for the same bore, (1½ inch), to put inside of the cement. I found the tile would cost fourteen dollars per 1,000, delivered,

which would be nearly one and a half cents per piece, making an additional cost of nearly or quite 20 cents per rod, so that my pipe with the tile laid in cement would cost me not far from 90 cents per rod. I full agree with H. J. F., as to the propriety of using the tile with the cement. But the price was too high unless I could do no better.

My attention was next called to the water pipe made by HOBBS & Co., and advertised in the RURAL. After a careful examination I determined to try it, and ordered and laid down about 2,000 feet. It has been in operation over four months, and is now delivering about seven gallons per minute. Some 1,000 feet are under a pressure of from three to seven feet. I am satisfied with the pipe, both as to cheapness and efficiency, and shall lay down about 1,400 feet more next spring. If well laid, I believe it will last for a generation at least—at any rate I would prefer taking my chances with the wood, against the common cement pipe at the same price.

I think H. J. F. must have made a mistake in his figures, and would like to see a bill of items before I can be satisfied that he is right.

It is not my purpose to enter into any controversy on the subject, as Messrs. HOBBS & Co. are abundantly able to defend their own pipe; but it is important that the public should not be misled upon a subject of so much general interest. **Darien, N. Y., 1858.**

T. C. PETERS.

POTATOES, DIGGING AND STORING.

We used to think before the rot became so prevalent among potatoes that they were safer in the ground than in the cellar, at least until frost severe enough to freeze the ground came upon them. Have we any good reason to change this opinion, even now? Early digging has been advocated as a means of saving potatoes beginning to rot, but our own experience in the practice, has only seemed to change the place of rotting from the ground to wherever the dry potatoes were placed, giving us the trouble of digging when other work was pressing, picking up, and sorting, perhaps several times, to save no more potatoes in the end than we should had they remained underground until late in the fall.

If early digging would have any effect upon the rot, would not pulling the tops have the same? Some experiments seem to show that this is the case, and we believe it advisable to pull or mow off the tops as soon as they begin to die from disease. The roots may be left in the ground, those which are infected will rot, and those which are not will remain sound as well as though placed in store.

The best substitute for a cool, dry, frost-proof cellar, is a pit large enough to contain forty or fifty bushels, dug in dry, sandy ground. Put the potatoes in dry, cover over with boards and plenty of straw, and add dirt as needed to protect from frost, giving a heavy coating before winter fully sets in.

GARGET.

I HAVE been much troubled with garget. Generally it has appeared in only one division of the udder, causing the milk to be lumpy and stringy for a day or two, and then pass away, very likely to soon recur again and again in the same cow. For two summers past, on the first appearance of garget symptoms, before I could perceive that the milk was affected, I have bathed the affected part with genuine tanner's oil, which is made from the liver of the codfish,—not the costly article sold by druggists under that name, but none the less cod liver oil. Since using the remedy, nothing but the preliminary symptoms of garget have appeared. Cod liver oil is valuable to the farmer in many other cases, combined with tar and spirits of turpentine, it is excellent for castrated lambs—for sheep bitten by dogs in warm weather—for fresh wounds in horses or cattle—and a little of the oil rubbed about the under jaw of the horse in fly time will exempt him from the torture of gad flies for some hours. If the weather is dusty the oil may be rubbed on the harness adjacent to his nose in preference to putting it on the hair. **P. H.**
Milan, Erie Co., Ohio, 1858.

GROWING MILLET, INQUIRIES.

EDS. RURAL.—As it is a rainy day, I will endeavor to give you my one season's experience in millet. The latter part of last June we prepared about one acre and a quarter for the seed. The piece was nearly equally divided into a dry sandy loam and a vegetable mould—on the upland we drew ten loads of coarse manure, and turned it under, there was also an orchard on this part, but not very shady, at least the millet was nearly as good under the trees as anywhere. Now for the result. On the low land (which was well underdrained) we pulled a pretty good crop of wild mustard—much more than we bargained for, and no millet—on the upland we drew off a load of millet and pigeon grass, the preponderance being in favor of the pigeon grass. Now for the point. Being a novice in the matter we wish to know whether we managed right, or not, and who has raised a good crop of millet? and how it was done? Since ours was harvested, a gentleman from N. J. informed me that millet almost invariably proved a failure there and they had given up raising it. **H.**
Webster, N. Y., 1858.

A CHEAP AND GOOD BOARD FENCE.—In situations exposed to high winds, board fences, as usually constructed, are often swayed from their erect position. We noticed recently a road-side fence not open to this objection, and at the same time a cheap and substantial structure. The posts are 6 feet in length, 5 inches square at the butt and 2 by 5 inches at the top. The boards are 14 feet long—the lowest 8 inches wide, and nailed on 10 inches above the level of the ground. The second is about 5 inches wide, with 4 inches space below, the third and fourth 3 inches wide and 1½ inches thick, the latter nailed even with the top of the post, and the whole capped with an inch board 5 inches wide.—A good furrow is turned up at the foot of the fence outside and another away from it, leaving a ditch into which any unruly horse or cow must step, to come high enough to jump over. Any one can calculate the cost of the fence according to the price of lumber and labor in their locality.—**B. New York.**

CONDENSED CORRESPONDENCE.

SPANISH MERINO SHEEP.—I have lately seen in the RURAL, a statement of our friend BURRITT's sheep, and several others previously, so I thought I would say a word about mine. I winter from seventy-five to one hundred—feed some straw and good hay, and when I think they need grain to keep them right, I feed about one peck of oats daily, to eighty sheep, from the first of January to the first of March, then add a little more and give it twice a day. My sheep are all young—from one up to three years old—with the exception of my stock buck, which is four years old. His first fleece gave eight pounds; second fleece ten pounds and six ounces; third fleece thirteen pounds and eight ounces; fourth fleece fourteen pounds and four ounces. Last winter he was kept with the entire flock and did not do so well. I have fourteen other bucks, from one to two years old, that I think will come up to the old one. My entire flock gave me five pounds and five ounces per head. I have been told by others four or four and one-half was a good average.—**WM. AYRES, Havana, Schuyler Co., N. Y., 1858.**

ANOTHER REMEDY FOR BLOOD SPAVIN.—In the RURAL of the 2d inst., P. H. wishes to know if there is a remedy for a blood spavin. I have cured a blood spavin of three years standing on a horse 10 years old—also one on a three year old colt, the latter so complete that my neighbor, who knew which leg it was on cannot discover any signs or scars. My remedy is this:—2 oz. tincture myrrh; 2 oz. gum camphor; 2 oz. oil origanum; 2 oz. spirits of turpentine; 2 oz. vitriol; 2 oz. spirits harts-horn or good alcohol; 2 oz. spike. Put up in a junk bottle and keep corked tight. The older it gets the better. Apply with a sponge to the part affected (as it will take the hair and skin off) once a day for six days, then wash it clean with Castile soap and rain water, afterwards apply again, missing one day, washing it the day you do not apply the remedy, until the puff begins to go down, then apply sweet oil to keep it soft; if this does not effect a cure repeat the process.—**R. G. BENTON, Putney, Steuben Co., N. Y., 1858.**

SORGHUM NOT GIVEN UP YET.—If our Prattsburg friend, who is in such a fidget to know about the Sorghum, will come over here into the corner of "Little Yates," joining Steuben and Schuyler counties, we will show him good thrifty Sugar Cane—some of the seed nearly ripe, planted in June, too. I have a small quantity, a neighbor near by has half an acre. The sugar and syrup will probably be seen after we get things ready to make it.—**L. W. SHERWOOD.**

INQUIRIES AND ANSWERS.

TAMARAC POSTS.—TIME OF CUTTING, &c.—Will some of your readers have the goodness to inform me, from actual experience, what length of time tamarac posts will last in the ground for a board fence, say from 4 to 6 inches through, and whether it makes any difference which end is put in the ground. Also, if there is one time better than another for cutting them. The swamps being dry now, renders it easy to get them out. There are many opinions, (not from actual knowledge,) some contending they will last nearly as long as cedar, others say 8 to 10 years is their full limit.—**A. CONSTANT SUBSCRIBER, Delaware, C. W.**

WINE MAKING.—Will you please inform us how to make wine from native grapes—is sugar used or liquor of any kind?—**J. W., Ontario, N. Y., 1858.**

MESSERS. EDS.—I hereby send you some specimens of the wine grape, a young vine, and a description of our way of making the wine. It has been a matter of wonder to some of the readers of the RURAL as to how a gallon of wine can be made from a gallon of grapes. Of course, a gallon of pure wine cannot, but then we have made an article which has been universally pronounced good, in this way. We take a gallon of grapes, (a coarse cloth is first put in as a strainer,) and put them in a cheese hoop which has previously been bored pretty full of holes. We thus press out the juice and add water enough to make a gallon, after which we add three pounds of sugar. After the wine is made we put in the barrel leaving out the bung and let it work and run over till it works itself clear. We then draw off carefully and the wine is ready for use. No alcohol is used, nothing but sugar.—**J. C. KILBORN, Beamsville, C. W., 1858.**

REMARKS.—The letter above will do in part as an answer to our correspondent J. W., as showing the course pursued by one of the makers of native wine. The grapes for wine should be well ripened. After the bunches are picked remove all unripe and unsound berries, wash the fruit, press out the juice, put it in a barrel, (filling to within an inch or two of the top,) and allow it to ferment until you perceive that this process is about over, which will be in something like ten days; then fill, bung tight and place in the cellar. Pure wine is the fermented juice of the grape without mixture. A good wine grape will make wine without sugar, if properly ripened. No sugar is used in making the best Catawba wine at Cincinnati, but in the inferior wine, made from unripe, refuse fruit, sugar is freely used. A grape to make good wine, should be rich in sugar, and of course must be well ripened. Amateur wine-makers produce a kind of cordial, which they call wine by way of compliment, which they make of the juice of the fruit one gallon, water from one to two gallons, and from two to four pounds of sugar to every gallon of the liquid.—Where sufficient sugar is used liquor is unnecessary, as the fermentation of the sugar produces alcohol. Persons making a small quantity of wine can mash the fruit very easily in a barrel, and press in a cheese press, and where this is not convenient a lever press can be constructed in a few minutes, or heavy weights may be used for pressing out the juice. In a future number we may give the practice of the best wine-makers in detail.

Rural Miscellany.

PRIZE PLANS OF FARM BUILDINGS.—In order to obtain for publication in the RURAL, a series of the best plans of Farm Houses and Barns, we last winter offered the following premiums:

Premiums for Farm Houses.—1st. For the best plan of a Farm House, with all necessary information as to cost, manner of construction, &c., we will give a premium of TWENTY-FIVE DOLLARS. 2d. For the second best plan, furnished as above, TWENTY DOLLARS. 3d. For the third, FIFTEEN DOLLARS. **Premiums for Plans of Barns.**—1st. For the best plan of a BARN, furnished with all necessary plans, information, &c., as required for Farm House, we will give a premium of TWENTY DOLLARS. 2d. For the next best, FIFTEEN DOLLARS. 3d. For the third, TEN DOLLARS. All plans must be received before the first day of April, and the elevation drawn so as not to occupy over two columns, in width, of the RURAL. The competitors should state any advantage claimed for any improvement over the usual arrangement or manner of building. All plans submitted, to be at our disposal, to publish or reject. The plans will be carefully examined, and the premiums awarded by a competent Committee.

—In response to the above offers, we received quite a number of superior plans and descriptions of the kinds of Farm Buildings named, from various sections of the country; and, though no time for so doing was specified, we intended to have had the premiums awarded, and at least some of the prize plans published, during the past summer. But we found it a very difficult matter to get a competent Committee together long enough to examine and decide upon the respective merits of the plans submitted—and finally concluded to defer the awards until fall, and to commence publishing the designs with our new volume, in January next. The plans are now in the hands of the Committee, and when their report is received, the premiums will be awarded and paid as originally offered. We trust that this explanation as to the unintentional delay, will be satisfactory to competitors and others interested—while all our readers are assured that the designs will be a valuable and attractive feature of Volume Ten of the RURAL.

MORE SHORT-HORNS FOR WESTERN NEW YORK.—We learn that JAS. O. SHELDON, of Geneva, has recently purchased of Mr. THORNE, of Dutchess Co., some of his choicest animals—as good and well bred as his short-horns. The purchase includes the following superior animals:—"The Duke of Gloster," (11382), bred by Earl Druce; got by Grand Duke (10284)—dam Duchess 59th. "Duchess 64th," bred by THOS. BATTS, Esq., Kirkleavington, got by 2d Duke of Oxford, (9046)—dam, Duchess 55th. "Duchess 71st," bred by Messrs. MORRIS & BECAR, in England; got by the Duke of Gloster, (11382)—dam, Duchess 60th. "2d Duchess of Thorndale," bred by SAM'L THORNE, Esq.; got by Young Balco, (12426)—dam, Duchess 64th. "Oxford (20th)," bred by Col. L. G. MORRIS; got by Marquis of Carnarvon, (11759)—dam, Oxford 5th.—"Oxford (—)," bred by Col. MORRIS; got by Romeo (13619)—dam, Oxford 5th. "Oxford (—)," bred by the late N. J. BECAR; got by Marquis of Carnarvon (11789)—dam, Oxford 13th. "Oxford (—)," bred by Col. MORRIS; got by the Duke of Gloster (11382)—dam, Oxford 17th. "Duke of Oxford," bred by SAM'L THORNE, Esq., got by Second Grand Duke (12961)—dam, Oxford 20th.

—H. MORDOFF & SON, of Union, in this County, have just purchased of Mr. THORNE the superior yearling Short-horn bull "Prince of Oxford."—Also an imported South-down ram and ewe. We congratulate the parties interested upon these valuable accessions to their fine herds.

N. Y. STATE FAIR.—Receipts, &c.—The receipts at the Fair are larger than we anticipated, considering the very unfavorable weather—the total being \$10,815 81. The annexed table gives the receipts and estimated attendance at each Fair for fourteen years. The admission fee was 12½ cents previous to 1853—when it was changed to 25 cents, which rate has been retained. The estimate of attendance at each Fair is eight to a dollar when the admission was 12½ cents, and four when it was increased to 25 cents—adding 3,000 for extra tickets to members, &c. It will be observed that the Fair held in Rochester was much more numerously attended than any other, and that the receipts were greater than any other at which the price of admission was the same:

Year.	Place.	Receipts.	Attendance.
1845.	Utica.	\$4,370 18	34,992
1846.	Auburn.	4,723 17	34,066
1847.	Saratoga.	4,604 22	32,274
1848.	Buffalo.	6,272 88	50,183
1849.	Syracuse.	8,144 56	65,157
1850.	Albany.	10,486 01	85,728
1851.	Rochester.	11,934 23	90,000
1852.	Utica.	8,125 41	65,005
1853.	Saratoga.	6,000 00	27,000
1854.	New York.	9,243 70	74,000
1855.	Elmira.	11,527 25	49,000
1856.	Watertown.	5,010 00	35,000
1857.	Buffalo.	15,078 82	55,312
1858.	Syracuse.	10,815 81	46,800

THE FAIR OF THE UNION A. G. SOCIETY, held at Brockport on the 12th inst., was quite successful. Though the weather proved unfavorable, the exhibition was large and creditable in most departments, and the attendance numerous. In Live Stock, (especially cattle and horses,) Implements, Fruits, and Domestic Manufactures, the display was equal to that of some County Fairs, and shows what the people of a few towns can accomplish by making a little effort. If Town and Union A. G. Societies were organized, and rightly managed, all over the State and Union, the cause of Rural Improvement would be greatly advanced, annually; while the County and State Societies would be still more useful and prosperous. Success, therefore, to the Town and Union Societies and their Fairs!

STATE FAIR PREMIUMS.—We made arrangements to receive, and fully intended to publish this week, a correct list of the principal premiums awarded at the recent State Fair; but the copy kindly forwarded by Mr. Secretary JOHNSON, on Saturday last, was carelessly placed in the wrong drawer at our post-office, and did not reach us until too late—while closing this number for the press. This is most vexatious, after the pains we had taken in the premises—yet we sincerely trust that the contemporary who retained the copy until just too late for our use, may never be served in like manner.

SALE OF AYREHIRE.—Mr. E. P. PRENTICE, of Albany, has recently sold nearly the whole of his herd of Ayreshire cattle to Mr. WM. BROWN, of Springfield, Mass. The sale included twelve cows and heifers of Mr. P.'s own breeding, and the bull "Blossom" bred by Messrs. HUMPHREY & BROWN, of Jefferson county.

Orchard and Garden.

SEASONABLE HINTS

MILLIONS of trees are now being sent from our nurseries, and whether they live and produce fruit and become a source of pleasure and profit to those who purchase them, or whether they will languish and die and be an annoyance as well as a loss, depends very much on the treatment they receive. A few hints on the subject, therefore, will be in season.

There is some difference of opinion as to the best time for planting. In Western New York we prefer the fall, on account of the leisure and the fine weather usual at that season. Still, no one need fail in spring planting. All that is required is a little care. We have planted a hundred pear trees in full blossom the 15th of May, without losing a specimen, and ripened a good crop of fruit on some of them. This we would engage to do any year. One reason why some persons object to fall planting is, that the water lies around the roots in the spring of the year and injures the trees. This objection in most cases is good against the soil or situation, but not good against the time of planting, and shows that it is unfit for fruit trees at any time. Trees require a well drained soil. In districts where the winter is very severe, as it is in some of our Western States, where sometimes established trees are killed to the roots, we would prefer the spring, as thus we would escape the danger of one winter at least, and perhaps the trees would be better able to endure the extreme cold after a season's growth, though this is questionable, as we have seen trees killed at the West with a degree of cold that would not injure them here.

As to the manner of planting, we will say only a few words. A little thought will show any one the right way. Every one knows that any tree or plant grows best in a nice, rich, mellow, deep, dry soil, than in one the reverse of this. If you wish your trees to do well, prepare just such a soil for them. The tree before being taken from the ground, had all its fine roots nicely spread out like network. These fibrous roots, if the young tree was well cultivated, permeated all through the mellow soil, gathering food for the growing tree. This shows us how it should be planted. If you plant this tree in a small hole, with the roots "all in a heap," and matted together, and then throw lumps of cold, hard earth upon them, how can you expect it to grow? If, however, you prepare a good, mellow piece of ground, make a deep hole, fill it with the finest and richest of surface earth nearly to the top, place your tree upon it, spread the roots carefully, removing with a sharp knife any that may have been bruised, then cover them with the finest of mold, nicely sifted in among them; and sprinkle from a watering pot about two quarts of water to each tree, before finishing covering, then you may expect your tree to grow, and will not be disappointed in one case in a hundred. The trees should be planted about as deep as they grew in the nursery. If planted in the spring each tree should receive a pretty thorough pruning of its branches to balance the loss of its fine roots by removal, but fall planted trees we would not prune until early in the spring.

The tree being so nicely planted, of course must be taken care of afterwards, or not only the labor, but the tree is lost. A newly planted tree is apt to be swayed about by the wind, making an opening around the trunk, down to the roots. This not only disturbs the roots, but injures them by drying. The mice, in some places, are very troublesome to trees during winter, gnawing the bark so as to girdle and destroy them. After planting in the fall, if a mound of earth is thrown up around the tree, as shown in the engraving, it will prevent the swaying of the tree by the wind, and in most cases prevent injury from mice. This mound should be leveled in the spring. Trees planted in the spring should be staked, and the stakes fastened to the stakes by some soft material that will not injure the bark. A couple of draining tiles or a piece of tin, placed around a tree will save it from the depredations of mice.

TREE MANURED—COMMON PRACTICE.

Sometimes trees are received in the fall which it is not desirable to plant until spring. These may be "heeled in." This is simply digging a trench in a place secure from water, about eighteen inches or two feet deep, and placing the roots in these trenches, as close as they will lay, covering them with earth. The earth as it is taken out of the trench, should be made to form a sloping bank, against which the trunks and branches may rest, the trees being laid in a standing position. Then cover the tops with straw or evergreen brush, and all is safe until spring, except mice trouble them, and if the trunks are covered with earth they can only injure the branches. Some prefer to stand trees erect and bank up the earth a foot or two as a protection against mice. If trees are received frozen they can be removed from the boxes or bales and "heeled in" immediately, and the roots will receive no injury if they have been well packed and are permitted to thaw gradually in the soil. If, however, they are received in freezing weather, place the box or bale in the cellar unopened, and allow it to remain until thawed, then choose some fine day and "heel in" or plant. Trees that are received in the spring, and apparently pretty well dried up, may often be saved by burying the whole

tree in the earth for a week. The bark and roots will absorb moisture, and in most cases the tree will be preserved.

People often make themselves ridiculous by the manner in which they manure their trees. They seem to think that all the roots of a tree are confined to a space as large as a man's hat. If a tree grows in the grass, to remove the turf from a circle about a foot or so in diameter, is all that is considered necessary, and if manure is applied, it is thrown in a pile around the trunk, and might almost as well be thrown in the street. The roots extend at least as far, and generally much farther, than the branches, where there are a thousand hungry mouths seeking for food; what nonsense, then, to place a quart or two of manure close to the stem of the tree. It would be about as sensible to tie it up in a bundle and hang it in the branches. J. J. Thomas has shown the folly of the thing in the above engraving, which we commend to the remembrance of all our readers.

While attending the State Fair at Syracuse, we took a stroll in the suburbs in search of objects of interest and observed a pear orchard that attracted our special notice, from the fact that the earth around each tree had been nicely pulverized and manured for some twelve feet in diameter. Such a singular manifestation of good sense and a knowledge of vegetable physiology caused us to inquire who the owner could be, when we learned that it belonged to E. W. LEAVENWORTH, Esq. This is an example the people of Syracuse might well imitate.

DWARF PEARS—MISREPRESENTATION.

THE industry with which those individuals have been assailed who raise "Dwarf Pear Trees" for sale, by a certain clique, leaves us nothing to marvel at in the way of false reports. Like several others who felt an interest in the open and fair discussion of the question, I was at the Pomological Convention on the 14th September. I was in hopes, that for once, we should have a fair platform, and we had. M. P. WILDER secured it for us, not so the reports. There was not an individual from "Black Rock" to "Germanstown, Pa.," to say a word against the profit of Dwarf Pears, but myself, and all I said in the negative they may pocket, however I have been carefully and willfully misrepresented. I did say that because many trees this season were in bad condition in the vicinity of Philadelphia, from causes which I could easily account for, had I the time, some practical men questioned the durability of the Pear on Quince stock. I am reported, by a very mendacious Horticultural Journal, to have said as follows:

"R. R. SCOTT, of Pa.—In certain localities the quince stock does not succeed, near Philadelphia, in a strong gravelly subsoil, they utterly fail, while standards are good. Mr. S. presented two specimens of pear wood grafted on quince, to show the strength of union." Now, sir, you who sat as a reporter at that table, what do you say to such a false report? Further, I moved a vote of thanks, not to that section of the Horticultural and Agricultural press which had stood forward to oppose Pomology, but to that section which stood forward to aid and encourage it, as well as those reporters who attended the meeting. And now, a word in explanation. I do not fear or regard the circumscribed influence of such a journal as has thus carefully pursued me, even to the last. It is harmless, except to itself; its course and policy is suicidal. The object of my exhibiting two specimens, one of a graft of a Pear on Quince stock and one of a Pear on Pear stock, was to prove the utter fallacy of the statement, that the union of Pear with Quince was quite imperfect, and that Pear wood was hard and close pored, while Quince was soft and open pored, and could be told by any one at a glance. I defied any gentleman at a glance, or even by close inspection, to distinguish these specimens, so close and perfect the union. But enough, we still live in the nineteenth century. Live on and hope.

PHILADELPHIA, 1858. R. R. S. REMARKS—"R. R. S." is correct in his statement of facts, and was so reported in the RURAL. It was a matter of regret that Mr. S. did not state the cause of the failure of dwarf trees around Philadelphia, as it seems to me he might have done in a few words. Mr. S. thinks he was designedly misrepresented in one of the Horticultural Journals. Of this we have nothing to say—the correctness of our own report is all we care to maintain; and on this point we have received flattering letters from Officers of the Society.

NORTHERN MUSCADINE GRAPE.

EDITORS RURAL:—A few months since the merits of a new grape, known as the Northern Muscadine, were controverted with great assurance in your columns. The grape was denounced as a poor thing, and what was more, that none of the celebrated nurserymen would have anything to do with it. It was said, in further corroboration of its worthlessness, that one poor fellow was actually driven from the room where it was, by its offensive odor. Well, why should it not smell bad, originating as it did, among the Shaking Quakers? If its advent had been more auspicious, its presence might have been tolerated.

Three or four years ago, and before its reputation became so bad, some fifteen persons in this village (the writer among them) sent each for a vine—they came, were set out, and a few of them fruited last year, all of the vines have done so this year, I believe, and the fruit has perfectly matured, so that we have had every desirable opportunity to test its quality. I have about a dozen different kinds of grapes in bearing, the far-famed Diana among them, but this Quaker grape is altogether the best, and this is the united opinion of all that are acquainted with it here. I am not puffing this grape to extend its sale, for I know of none to be had, but I would advise those that desire a really good grape, to obtain it if they can, and give it a trial. L. DOWNING.

Mexico, Oswego Co., N. Y., 1858. REMARKS—There is no accounting for taste, and we certainly have no desire to regulate the tastes of others to suit our standard. Those who like a grape with a strong musky or foxy flavor, will like the Northern Muscadine, and if they are particularly partial to this taste and smell, they will be still better suited with the Charter Oak. The Isabella has as much of this flavor as we like, and any grape that is more foxy than this variety, we would con-

demn as unfit for the table—that is, unless we lived somewhere in the northern regions, where we could not ripen a good grape, then we might become started to it. But those who like it, should not call in question the motives of those who entertain different opinions. There is not a nurseryman in the country but could have propagated thousands of these plants, had they felt justified in recommending and selling them. The fact that they did not do so, seems to us honorable rather than otherwise. What they could gain by refusing to propagate it, except what every business man gains by pursuing a course of honorable dealing, we cannot imagine. Neither the Delaware nor Rebecca was raised by nurserymen—the former was found on a farm in Ohio, and the latter in a little garden in the city of Hudson. Now, according to our correspondent, the nurserymen should have condemned these varieties. Instead of that, however, all recommend and propagate them. We are not slow to condemn everything that looks like deception or fraud, but this unmerited censure—this calling in question the motives of any man or class of men that happen to differ from us, is very unprofitable business, in which we shall never engage. The only merit of the Muscadine, we think, is its earliness, being some two weeks earlier than the Isabella. Its faults are its bad flavor, and the fact that the berries drop from the bunches. We have been told that this is not so much the case when the vines are old. It bears, in our opinion, no comparison with the Diana as to quality.

GRAPE GROWERS' ASSOCIATION.

THE Fall Meeting of the Grape Growers' Association of Hammondsport, was held in September. This Association was formed about a year since, and though composed of the grape growers of Hammondsport, the meetings are attended by many gentlemen from the adjoining counties. The discussion was quite interesting, but our synopsis must be very brief, as we have lately devoted so much space to reports of the doings of Fruit Associations.

HON. D. McMASTER, of Bath, said that the season was two weeks later at Bath than at Hammondsport; that even Catawbas could not be successfully ripened at Bath. The Black Cluster or Burgundy ripens well.

J. LABROWE said that he had cut off ends of his vines in August, and some as late as 1st of September, and had also trimmed off the leaves, and was experimenting in various kinds of summer pruning, but could not state results as yet.

MR. WM. PRENTISS, of Putney, spoke from his experience against trimming the Isabella. He believed in cutting as little as possible. He differed from the German mode, as practised in the vineyard of A. Reisinger, which was to use the knife liberally on the ends of the vines and on laterals, and thought it injurious to the prosperity of the vine. Has a vineyard of one and a half acres, bearing vines, set eighteen feet apart, among the stumps originally; had trained them 9 feet high; last season had made from this vineyard 480 gallons of wine, and sold \$200 worth of fruit. That he had sold all his wine, and has between four and five acres of vineyard in process of cultivation, mostly Isabella, and should set no more Catawbas.

I. HILDBRETH, of Big Stream Point, said he has a vineyard of two acres, set 13 feet apart, of Isabella. Had cultivated the ground well, and had never cut or trimmed his vines in the summer; regarded the native vines as harder grown than the European, and require a light soil. Spoke very strongly in favor of the soil at Hammondsport for the cultivation of the vine. Thought his vineyard, now 3 years old from the setting, would yield this year from 5 to 16 pounds of fruit to the root. The first year setting, in the winter pruning, he cut all the shoots close to the ground. The 2d year these shoots should be left from 1 to 3 feet long, depending on the strength of the vine, and after that leave from 3 to 4 shoots every year only.

WM. BAKER, of Pleasant Valley, near Hammondsport, said he had on his farm an Isabella vine 16 to 18 years of age, 6 inches in diameter at the root, which root will yield this season about 300 pounds of fruit; thinks he could so train a single vine as to grow 1,000 pounds of fruit in one season.

J. LABROWE defended summer pruning with considerable force and ability, if judiciously used; spoke of the advanced and progressive ideas of the Yankee as applicable to the culture of the grape, and could not condemn the judicious application of the knife to the superfluities of the vine, which drew out in reply.

MR. L. HILDBRETH, who said, among many other good things against the practice of summer pruning, that although he was a Yankee, and loved to whittle as well as any of the race, he always kept his jack-knife in his pocket while in his vineyard in the summer.

MR. CLARK BELL, the Secretary of the Association, stated to the meeting the object of the Association to be "to obtain reliable information upon the subject of the culture of the grape, and the relative value, and practicability of the growth of the different varieties in this climate; that an Association with that object had been formed here; that it had most of the varieties known in this country growing in the vineyards of its members for the purpose of introducing and testing them." He stated briefly what was being done at Hammondsport in the culture of the grape, that the gentlemen from abroad might know to what extent they were interested in this question. After enumerating several very flourishing vineyards, the Secretary said there were over thirty acres in vineyard at Hammondsport. Not a doubt was felt as to the success of the vine. Isabella's ripened there last year when the crop was a failure everywhere else. The crop this season was very large and very nice.

LARGE TOMATO.—Having seen an item in the RURAL mentioning a tomato weighing one pound and ten ounces, I think proper to send you this notice of one grown in my garden the past summer, which weighed three pounds. The vine grew where a pile of hog manure had lain the previous winter; the product was very large, and many of the tomatoes would have weighed half as much as the large one.—J. S. BURLING, Forestville, Chaut. Co.

BLACK RAISIN BERRIES.—A neighbor has eight black raspberry bushes in his garden. They produced last summer, forty quarts of fine fruit, at the mere cost of a few hours attention in pruning and culture.—J. S. BURLING, Forestville, Chaut. Co., N. Y., 1858.

WATERMELONS.—WINTER PEARS.

EDS. RURAL:—A. S. POTTER asks how to "ascertain when watermelons are ripe." This minds me of a matter already too long neglected for this season. But first let me tell him how I ascertain; in addition to what you have said on the subject. Look to the "curl" and the spoon-shaped leaf near the stem of the melon. When these are dry and brown, I pick the melon, with full faith that it is ripe. I want all Young Ruralists to recollect this, and not do as was done in my "patch" by a young Miss, "plug" all the large melons to find the ripe ones.

To grow watermelons without seeds would be a desirable thing, would it not? It can be done, but I am not quite sure as I shall tell you, for a very good reason; yet I will tell as much as I know about it. In the city of Rio Janeiro, an old French gardener supplies the market with seedless watermelons, or did during the winter of 1848-9. He did it by pruning, so as to prevent the pollen from having its influence on the germ. This will prevent the formation of seeds. Do any of the readers of the RURAL understand the matter? If so, let us hear; if not, let all interested test the matter thoroughly and report progress next year. Let us hear from friend FULLER, of Brooklyn, on the subject.

WINTER PEARS.—It surprises me that any one can say aught against Winter Pears. I have one tree (name unknown) planted by "UNCLES BEN. BENJAMIN," something over twenty years since. The fruit, in fall, bitter, astringent, hard, and tough, becomes, about the middle of December, of orange yellow, crisp, juicy, melting, delicious—yielding exquisite delight to the palates of all who have had the good fortune to taste it. Yet this tree was pronounced worthless by all who knew it at the time I bought the place. A pair of busy hands, however, that belong to the better half of me, wrapped up a few dozen the first fall after our coming to the place, and about January following, placed a dish of pears upon the table that looked as if they came fresh from the hands of Midas, but the taste declared them to be of POMONA's richest and best. You shall, however, judge for yourself sometime next winter, when, if nothing unforeseen occurs, I will send you some Winter Pears that are pronounced, by all who have tasted them when ripe, good. How few appreciate pears, yet what fruit is better? Although some men, such as friend ALLEN and I, are careless cultivators, yet we know the fruit is good and the trees hardy, by examples show us by men who are Pomologists indeed. CHAS. BRACKETT, Rochester, Fulton Co., Ind., 1858.

EVER-BEARING STRAWBERRIES.—For some years past we have heard a good deal about Ever-Bearing Strawberries, but in this latitude they have only been talked about. Further south, perhaps, fruit has been produced in the fall, but whether enough to make it a matter of much account, we cannot say. This season, however, a lady in the town of Greece in this county, presents us with several lots of ripe strawberries, during the month of September, and on the 10th of October, gave us a very fine lot of berries, large, ripe and luscious, others in different stages of growth and some fine clusters of flowers. So, we have what has been so long sought for, an Ever-Bearing Strawberry at last, besides the little Alpine. Now, for fear we might raise an excitement, and cause people to send us large piles of money to procure for them this valuable variety, (or rather varieties for there are two sorts) we will give their names, and perhaps they may sound familiar to strawberry growers. They are called *Crimson Cone* and *Early Scarlet*. The fact is they did so poorly in the strawberry season, in consequence of the extreme dry weather, that they have been trying to make amends ever since. A worthy example which many we know, who have wasted half their days, would do well to imitate.

CRACKING OF THE APPLE.—While writing, I thought of asking a little information with regard to apples being blighted on one side. In my orchard there are very few that are not dried and cracked open, so as to render at least one-quarter of the apple entirely useless. If you, or any of your readers, can inform me of the cause, and how to prevent it in future, if it can be prevented, I shall consider it as a great favor. I may state that last spring I had my orchard well trimmed, by a man who pretended to have served an apprenticeship to pruning, and I may also say that apples are generally the same, as far as my knowledge extends.—S. B. ANGLASBURGH, C. W., 1858.

REMARKS.—The disease you speak of is undoubtedly a mildew, somewhat similar to that which causes the cracking of some varieties of pears in certain localities. The mildew destroys the skin, and prevents the development of the fruit, at the point attacked with the disease; the flesh thereupon becomes hard and cracks, and on the skin is seen a dark horny scale. Good drainage, thorough culture of the soil, judicious pruning, so as to admit a free circulation of air, and a little sunlight among the branches, would do much toward remedying the difficulty. Will not some of our readers give their experience in this matter.

MAINE POMOLOGICAL AND HORTICULTURAL SOCIETY.—This Society held their Annual Meeting at Augusta on the 5th inst., and made choice of the following officers for the ensuing year: President—E. Holmes, of Winthrop. Vice-Presidents—Henry Little, Penobscot; S. F. Perley, Cumberland; Francis Fuller, Kennebec; S. W. Coburn, Somerset; John Currier, Lincoln; John Rogers, York; D. Forbes, Oxford; Saml. Burtman, Waldo; C. Chamberlain, Piscataquis; E. F. Dike, Sagadahoc; Robert Marlin, Androscoggin; Oliver Gould, Franklin; Wm. D. Dana, Washington; John Allen, Aroostook. Recording Secretary—D. A. Fairbanks, Augusta. Treasurer and Librarian—R. Eaton, Augusta. Trustees—Warren Percival, Vassalboro'; D. Cargill, East Winthrop; F. Glazier, Jr., Hallowell. Standing Committee on Fruit—D. Taber, Vassalboro'; I. W. Britton, Winslow; N. Foster, Gardiner; Horace Parlin, E. Winthrop; Calvin Spaulding, Hallowell.—F. Glazier, Jr., of Hallowell, presented the Bachelor Sweet, an apple which is deserving more extensive propagation. It is a native of Hallowell, is an excellent sweet apple, fine for cooking and baking, a good bearer, and keeps in good flavor until March.

Domestic Economy.

FRIED OYSTERS, SPANISH PICKLES, &c.

RUSSIAN SAUCE.—Four tablespoons of finely-grated horse-radish; 2 of made mustard; 1 salt-spoon of salt; 1 of pounded loaf sugar, and vinegar enough to cover the whole. It will keep several months, if closely bottled. Delicious.

FRIED OYSTERS.—Take large oysters from their own liquor, on a thickly folded napkin, then make a tablespoon of lard and one-half a teaspoon of salt, hot, in a thick-bottomed frying-pan. Dip each oyster in flour or rolled crackers, and lay them in the frying-pan, and fry gently until one side is a delicate brown, and then turn them by aiding a fork under. Some people like a very little of the liquor poured in the pan after the oysters are done, let it boil up and pour over the oysters.

BUCKWHEAT CAKES, after standing to rise all night, are much improved by adding, just before baking, a teaspoon of sour cream or rich buttermilk, and a little saleratus. This improves the flavor and makes them richer and lighter. As the season for cakes is approaching, I hope the virtues of this recipe will be thoroughly tested.

SPANISH PICKLES.—Wash, in cold water, some green tomatoes, put them in a jar, and cover with warm salt and water for twenty-four hours, and then pour it off. Slice the tomatoes with onions, horse-radish, roots and green peppers, in slices one-quarter of an inch thick; put them all in the jar, adding small cucumbers and radish pods, and cover the whole with good vinegar, slightly flavored with cinnamon, and you will have some good pickles.

THE VERY BEST WAY TO PREPARE CODFISH FOR THE TABLE.—Take (at night) half of a codfish, put it into a pan and cover with cold water, and let it stand until morning, then take off the skin, and take out the largest bones, carefully—put on some fresh water, and set it on the stove. While this is heating (it must not boil), mix one and one-half cups of sweet cream, with two-thirds of a cup of butter, and heat it boiling hot—take the fish out of the water upon a hot platter, pour on the gravy, sift pepper over, and serve hot for breakfast.

SOUP BISCUITS.—Two cups cream; 2 of sweet milk; 2 teaspoons cream tartar; 2 of soda, and flour to mix soft.

GINGER SNAPS.—Two cups molasses; 1 tablespoon of saleratus; 2 of ginger; 4 of water, and two of lard. These are excellent.

NICE FRUIT CAKE.—Three cups sugar; 1 cup of butter; 4 eggs; 1 cup of sweet milk; 4 cups of flour; 1 teaspoon saleratus; 1 nutmeg; a teaspoon cinnamon and cloves; 1 pound of raisins, stoned and cut in two, and 1 of a pound of citron, cut in slips. This quantity makes two large cakes. ROSELYNDA W.

TOMATO FIGS.—Having seen an inquiry in the RURAL for a good way to preserve Tomato Figs, and finding no answer, I thought we ought to let you know how we preserve them. We take plum or pear-shaped tomatoes, scald and peel them. To sixteen pounds of fruit put six pounds of sugar; boil them until they are soft, then take them out, put in a dish and flatten them. Dry them in the sun; then pack them in a jar or box, and sift white sugar over every layer; then cover them over, and they will keep for a year. There will be considerable syrup left, which will be of service to boil other fruit in. We have tried them three years, and find they keep well.—A SUBSCRIBER, Madison, Wis., 1858.

INDIAN BREAD.—I would like to add my mite to the column of "Domestic Economy," in the form of a recipe for making Indian Bread, which is as follows:—One pint-basin full flour; 2 of corn meal; 1 of sour milk, (not buttermilk); 2 of sweet milk; 1 small tablespoonful saleratus; 1 of salt 1 teaspoon molasses, less will do—stir up cold, bake in 6 quart pan, 1 1/2 hours, rather quick oven. Try it, for we call it excellent.—MARTHA A. T., Pike, N. Y., 1858.

THANKSGIVING INDIAN PUDDING, such as my mother used to make, over threescore years ago. To two quarts boiled skim milk, stir in three cups of Indian meal, then add one quart more of cold milk; the cream taken from the whole; three eggs; one full cup of sugar; season with cinnamon and cloves, or to your taste. Suet and raisins will much improve it. Bake three hours, and cool off as in a brick oven.—North Pitcher, N. Y.

PRESERVING CITRONS.—Will any of the numerous readers of the RURAL be kind enough to give a recipe for preserving citron in halves or quarters so as to sell it by the pound. I have noticed a great many recipes which I think are very good in families generally, but I have never seen any for this special purpose.—J. S. CUTLER, Syracuse, N. Y., 1858.

SAMP-MAKING.—Take a jack-plum, put one end in a milk pan or half bushel, with the face up, take an ear of corn in the right hand, holding the plane with the left, and in five minutes you can prepare samp enough for a meal of the best kind, free from all grit or dirt.—WM. CLARSON, Seneca Castle, Ont., Can., N. Y., 1858.

Will some of the lady readers please inform me how to color bright sky blue on silk, and oblige—MISS MOLLIE E. N., Rural Del., N. Y., 1858.

THE VIRTUES OF BORAX.—The washerwomen of Holland and Belgium, so proverbially clean, and who get up their linen so beautifully white, use refined borax as washing powder, instead of soda, in the proportion of a large handful of borax powder to about ten gallons of boiling water; they save in soap nearly half. All the large washing establishments adopt the same mode. For laces, cambrics, &c., an extra quantity of the powder is used, and for crinolines, requiring to be made stiff, a strong solution is necessary. Borax being a neutral salt does not in the slightest degree injure the texture of the linen; its effect is to soften the hardest water, and therefore it should be kept on a very toilet table. To the taste it is rather sweet, is used for cleaning the hair, is an excellent dentifrice, and in hot countries is used in combination with tartaric acid and bicarbonate of soda as a cooling beverage.—Selects.

—MY LOST BRIDE—

BY IDA FAIRFIELD.

Sam was a fair, young creature,
As fragile as the flower,
Which opens in the sunlight,
To wither in an hour—
A spirit pure and stainless,
Far more to Heaven allied
Than to this fall and sordid earth,
And thus I lost my Bride.

My love could not detain her,
Its walls of living flame
Fell crumbling onto ashes
When the Death-Angel came.
She was my richest treasure,
My glory and my pride,
Her love lent life its only charm,
How could I spare my Bride!

But I have sometimes fancied,
At holy eve-tide,
A form of angel beauty
Steals softly to my side;
A sweet voice murmurs near me,
And I have vainly tried,
Within my clinging arms, to clasp,
Once more, my long lost Bride.

But scarce wings unfolding,
The Seraph roars away,
And my sad heart is strengthened
To live another day.
And thus, as years roll onward,
Their marks I would not hide,
For, with each deepening furrow,
I hasten to my Bride.

Her loving smile will greet me
Upon that Sunny Shore,
Her sweet voice sounds a welcome
Above the River's roar—
It was not ours to journey,
For long years, side by side,
But away in yonder Heaven,
I claim my youthful Bride.

Independence, N. Y., 1858.

ORATIFY THE LITTLE ONES

"FATHER," said a little boy, some seven or eight years old, "may I go out and roll my hoop in the street?"

"No, WILLY, it is Sunday morning, and you must not play to-day."

"But, Father, what shall I do? I want some body to play with. Please let me go out and—"

"Stop your noise, young man, and go and get your books and sit down, and don't let me hear another word!"

Crest-fallen, and with a sad, yet flushed face WILLY went to gather his books, and sit down. He had seen all the books before—nothing was new, nothing amused him. Finally, he ventured to his father's chair again, with some request.

"Didn't I tell you to keep away? Don't you see I am reading, and can't be bothered? Go read your books."

Just then mother came in, and WILLY turned to her.

"Mother, I don't like Sunday. I wish there never was a Sunday in the world! It's the meanest day there is!"

"Why, WILLY, what's the matter of you? Come here, and let me see."

"Cause father makes me sit down all day, and do nothing, and won't let me play a bit."

"And you feel bad enough about it. Let us go out in the other room, where we shall not disturb father, and look at the pictures, and I'll explain them to you awhile, and then you may take my new knife and see what you can make with it."

"O, do, please do, mother! How I love to have you show me the pictures!"

And so mother chatted and amused him for a couple of hours, and then she was really tired, for she had been very busy about the house all the morning and wanted to rest and read some. Father finished his papers, and took his hat, and went out to walk, and enjoy the fine day, and divert himself as he chose. WILLY teased and hung around his mother, till from very weariness, she let him go out, and once out of sight, some idle boys, enticed him to the brook to see the little fish.

When father came in, the first question was, "Where's WILLY?"

"I don't know. I let him go out, and I dare say he has strayed away somewhere."

"Don't care, why don't you say? I should think you might keep track of one child! I'll whip that boy within an inch of his life, if he runs away again!"

"Well, husband, I amused the child till I was completely tired. Why could not you spend a little time with him too? You always command him to sit down and read, just as though such a child, who can scarcely read, could amuse himself in that way. You never bend yourself a moment, to please or interest him. Either I must do it, or he must find amusement elsewhere."

"O, yes, the same old story. I pity the hen, that can't scratch for one chicken." And so it went.

WILLY grew to hate the Sabbath, and his mother to dread the day, for truly it was a long, sad, weary day to her. She loved her boy, and was willing to amuse him, yet she was often sick, and full of cares, and liked to read, but never could she take up a book or paper but she must lay it down, and do or say something to please WILLY. Father calculated to have his time to himself—the child must not tease or interrupt him. "It belonged to the women to take care of the children."

Reader, did you ever see such a family, and does my story contain any instruction, or moral?

QUESTIONS.

WHOM TO MARRY.—When a young woman behaves to her parents in a manner particularly tender and respectful, from principle as well as nature, there is nothing good and gentle that may not be expected from her, in whatever condition she may be placed. Were I to advise a friend as to the choice of a wife, my first counsel would be, "look out for one distinguished for her attention and sweetness to her parents." The fond of worth and affection indicated by such behavior, joined by the habits of duty and consideration thereby contracted, being transferred to the married state, will not fail to render her a mild and obliging companion.—Star.

THE GIFT OF BEAUTY

"MOTHER, HERBERT GRAYSON says that I am beautiful," remarked a little girl of eight summers, as through the vine-wreathed piazza she came lightly tripping into her mother's room. And, indeed, nature had been lavish in tiding the picture that met the parent's gaze. A half hour had that parent been pleading with her God to guide her in training her household plants, and an answer to the child's remark rose to her lips as readily as the water pours over the basin of a fountain.

"Come to my side, my EMILY," she said, then twined her arms around the form of her fair bud. "You are pretty," said she, "but this should beget neither pride nor haughtiness, or plant within your heart seeds of selfishness. Beauty is a gift that JENOVIA bestows alike on flower, tree, brute creation, and man, in varied forms. My daughter has received it in the form of grace of figure and comeliness of feature; in the silvery tone that marks her laughter and speech, and in her light tread over house and field. Days will come to her, and she will have a chance to use these gifts in making glad the hearts of the family band, and of those who shall tread life's paths with her, by speaking the gentle word, arranging the sick one's pillow, wreathing a kindly smile for the care-worn, timid, and weary. But never will she have just occasion to let vanity dwell in her heart, or exhibit itself in her demeanor, for by no merit of her own does she possess these attributes; and swiftly will time go by and behold them decayed and crumbled back to their mother dust. Mother hopes that her spirit beautified by a right use of the gifts will dwell in 'mansions not made with hands, eternal in the Heavens!'"

EMILY went from the room with a new lesson printed upon her heart, which remained stamped there until childhood had given place to womanhood. And not only in her heart did it find a place, but was lived out in her actions. Her comparatively pure heart, a true tell tale of those surrounding her, was never won by any of the haughty and pretending ones who sought it; but by HERBERT GRAYSON, the "upright farmer's boy," as he was called by all.

It was twilight, a golden autumn eve, when the newly wedded pair stood beneath the same elm tree around which they had been playing just previous to the opening of our story. Said EMILY to her companion, "It was here that you caused the awakening of a new life in me," and answered his wondering gaze by telling how his boyish remark had provoked a priceless lesson from the lips of one over whom the green turf lay now; and which had caused her to cast vanity aside, and seek for her companion the fair maiden, Humility.

"Which beautified her spirit so much," returned HERBERT archly, "that she has ever since met my flatteries by obiding, in her silvery tones, the old, old adage—'Handsome is who handsome does.'"

Olivet, Eaton Co., Mich., 1855. U. E. C.

HOPOLOGY.

AMELIA does not wear hoops. And why? Simply because she thinks this fashion is one of the most ridiculous the world has ever seen. "Oh, but you are behind time," somebody says, "every one wears them." What if they do, it shows very plainly that though their bodies are "puffed out" to an unnatural size, their minds require no hoops.

The followers of Hopology tell us they wear them for comfort. A short time ago, when the other extreme in dress was raging, that was comfortable, too. "Consistency is a jewel." That they are graceful, none can fail of observing when a dumpy woman resembles a jug, and a tall one a hoghead—of their convenience we need not speak for every one who has traveled at all the past year, can testify to this feature in the science. Well, what conclusion do we come to? Just this. Hoops are worn because it is the fashion, and that is the only reason. And this is the very doctrine that we depise, not that we would uphold singularity in dress, or any of the new-fangled dress-reform notions—What we want is moral courage to say to the fickle goddess, thus far shalt thou come and no farther. If ladies would take this stand, and follow her dictates only so far as taste would lead them, "Mrs. CROCHING" would soon leave the stage of action.

A great cry is made about men shaving their heads and making themselves look like young porcupines. Who blames them! Rather let us wonder they do not shave their heads and clothe themselves in sack-cloth and ashes, on account of the degeneracy of the female race. "O tempora, O mores!"—that Hopology should be tolerated.

Cayuga, N. Y., 1858. AMELIA.

SHUN AFFECTATION.

THERE is nothing more beautiful in the young than simplicity of character. It is honest, frank and attractive. How different is affectation! The simple minded are always natural. They are, at the same time, original. The affected are never natural. And as for originality, if they ever had it, they have crushed it out, and buried it from sight, utterly. Be yourself, then, young friend! To attempt to be anybody else is worse than folly. It is an impossibility to attain it. It is contemptible to try! But suppose you could succeed in imitating the greatest man that ever figured in history, would that make you any the greater? By no means. You would always suffer in comparison with the imitated one, and be thought of only as the shadow of a substance—the echo of a real sound—the counterfeit of a pure coin! Dr. Johnson compared the heartless imitator—for such is he who affects the character of another—to the Empress of Russia, when she did the freakish thing of erecting a palace of ice. It was splendid and conspicuous while it lasted. But the sun soon melted it, and caused its attractions to dissolve into common water, while the humblest stone cottages of her subjects stood firm and unmarred.—Let the fabric of your character, though ever so humble, be at least real. Avoid affecting the character of another, however great. Build up your own. Be what God intended you to be—yourself, and not somebody else. Shun affectation.

SIR PETER LELY made it a rule never to look at a bad picture, having found by experience that whenever he did so his pencil took a hint from it.

Choice Miscellany.

Written for Moore's Rural New-Yorker.
AUTUMN.

BY D. HOWLAND

Upro the fading landscape, the dying Summer smiles,
And lights it with the glory of faded, fairy tales;
The earth is filled with beauty—the glow of the sunset
shies,
Illumes the leafy forest in all its brilliant dyes,
Of russet, gold and crimson, with which a hand unseen,
By magic has created a most enchanting scene.

'Tis beautiful as Summer, but yet we miss the flowers,
And the music of the song-birds that cheered the Summer
hours;
The winds are sleeping on the sea, the sunshine on the
land,
And soft the slow-pulsed billows are throbbing on the
strand.

In the warm and pleasant sunlight of this quiet afternoon
The meadow-brook is singing in a dreamy undertone;
And through the mournful silence, I almost seem to hear
The faintly echoing footsteps of Summer lingering near.
The loveliness of Autumn is an emblem of decay,
Like the fever-flash upon the cheek of those who pass
away.

'Tis said the dying dolphin, when life is almost o'er,
Glow with a rainbow brightness it never had before;
So, when the days are waning and Nature sinks to rest,
Mild Autumn flings his banner of beauty on her breast—
He decks the fading forest in robes of radiant hue,
And hangs around the far-off hills a mellow haze of blue.
New York, Oct., 1855.

THE DREAMER.—No. III.

PROPOSING AND DISPOSING.

"MAN proposes but God disposes," said some one, and we are all proving the truth of the saying. We all plan and say to-morrow I shall do this thing, and another day that, but fortunately for us, a wiser than we sends the event. We are too blind sometimes to see why our dearest plans are thwarted, and, perhaps, our lives embittered, but assuredly it must be good. Sitting on the sofa in a pleasant cool room, I say, "To-morrow, SUSY, I will go home to the city and let John have a vacation."

"Why must you go so soon?"

"O, I left John alone there, and my business will require my presence by this time. Besides, poor John is tired, and wants a little recreation as well as myself."

"Well, if you must, go; but we should like to have you stay, you know."

"Thank you, but I must go." And I turn to my newspaper and the kind matron to her work.

All this plan I make on the sofa, with perfect confidence that I shall be able to do just so, and relieve JOHN and myself in just this way. But the paper seems dull and nothing has power to interest me. My head seems ready to burst, and I can feel the fever creeping slowly along my veins. "I am afraid I'm sick, SUSY."

How busily the little woman bustles about to relieve me. What unknown teas and syrups, and cordials, I must try. And when they all fail, with what an air does she say, "You'll have a thorough course of fever." So the doctor comes in and looks wise, and busy, and gratified, almost. I hear him say, briskly, "A very interesting case!" in the very same tone we used when we found a new bug, or plant, or mineral, when we hunted the fields long ago. Have doctors any feelings? Perhaps they have. But they are so used to sickness and suffering that they only see in you and I "interesting cases," which must sooner or later come under their care. And then comes a long, confused vision of bottles and papers, and a doctor, and dim figures floating in the misty atmosphere, and strange, startling fancies, the weird images conjured up in the brain by the noomancy of fever.

Who can describe the absurdities of a sick man's dreams,—all the more absurd because of the little sprinkling of possible reality in them. We are fully convinced they might be real, but how utterly absurd they would be if they were. And so we laugh at them. Yet it is just as cruel as it is to laugh at the troubles of a child, or grown person even.—They are just as real to the sufferer as our afflictions are to us—nay, even more so, sometimes. It is strangely true that many times our dreams seem real, and our real situation a dream.

At last comes the awakening, and I overhear the doctor saying to SUSY, "He's entirely out of danger, Ma'am," and I fancy I can see him rub his hands with glee. "A few days of such excellent nursing, Ma'am, and he will be out."

So I had been pretty sick, had I? and I had had good care? It must have been SUSY who cared for me. It could not be TOM; no, I am sure it was SUSY. I wonder how long I have been sick? Wonder if I was dangerous? How weak I am!—and I lazily close my eyes and try to sleep again. Outside the curtain are soft footsteps, and hushed voices, and their noise comes to my ear with a pleasant hum like the sound we all love to hear in the sea-shell. Even TOM's hearty voice is hushed as he comes into the house. What a task it must be to him to keep from loud talking with those deep, full lungs of his!

And SUSY comes in now, quietly, tenderly, as if she feared to injure me by an excess of kindness. There are two ways of doing a favor, as if you tho' all the time it would be a favor, and as if you didn't think about that, but just did it as the prompting of a kind heart. The first fears to be too little praised, the second to be too much. Which do you prefer?

And soon SUSY tells me I am convalescent. O, the joys of convalescence! The mind and the body are both beginning to grow. The body has been ill and is weak—it must rest and gain strength. The mind has had a rest—a vacation—and it comes to things of the world with a zest and a relish which seem almost like the fresh vigor of a child. We are learning. All the realities of life are as new to us as if they never existed, and the effort we make to remember our condition is like finding it out for the first time. SUSY brings me some letters. Here is one from JERRY. Poor fellow! he must be tired waiting for me. And perhaps another, away in some quiet country nook, is tired too,—and some bright eyes may be dim with watching for him.

TOM writes a letter for me. I tell JOHN to do various things of importance to me, and one of importance to himself,—to go home for a week. JOHN will be once sorry for me and twice glad for himself when he gets that. And the bright eyes will be dry and will sparkle.

TOM sits by the fire reading his paper, the children are far in fairy-land, SUSY is busy at her work-basket, while I lie watching her. There is a quiet, kind expression on her face, as if the reflection of some good deed had lingered there. Conventions may reason, and enthusiasts prate, but woman's highest and only true sphere, is as the refiner and helper of man. From her we get our standards of beauty and worth, bodily or mental. In Prosperity she cheers, and in Adversity consoles us. She may not fight our battles for us, but when faint, and wounded and bleeding from the fray, her hands shall bind up our wounds and soothe our minds. Her foes in their trouble shall bless the heart which pities and the hand which relieves them. And we love her, too. Cynics may sneer, but from the Cradle to the Grave, as Mother, Sister, or Wife, we reverence, we love, and we cherish True Woman. May her Rights be ever heeded.

But invalids must sleep. Good night.

THE COMET.

I HAVE just been out "star-gazing," and as the "cynosure of all eyes," at present, is the Comet, of course I could see nothing else. Looking at this, as it went whirling and flashing through the Solar System, the thought struck me how like some human beings is that erratic visitor.

MR. A.—a person of small means, and still smaller head—comes flashing into a neighborhood, and soon draws a long train after him, who give out that he is a person of vast resources, and all lesser lights must be thrown in the back ground. It is surmised that if his course is obstructed and a collision ensues, that everything will be knocked into pi and a general chaos be the result. But in a few days he again recedes into space and the world goes on as before. A Chemical Agricultural Philosopher, Comet-like, appears in the Solar System, and with his theories is determined to throw light on all surrounding darkness, but his rays all have a tendency in one direction. People soon discover that his "seat of life" is only a nucleus for making money, and he passes away.

We have many notable examples of erratic visitors in some Divines of the present day, with their teachings of getting to Heaven in some different manner beside the good old one of loving God and doing good in the world. They may shine for a few days, but their brightest places can be easily seen through, and are soon sent into outer darkness.

The fashions of the generation seem much like these Heavenly bodies. As they are supposed to revolve around, and again appear—after a long time—so with the fashions in dress and appearance. The orbits of each are somewhat elliptical, and are varied by the attractions of other Heavenly bodies, still the same expansive appearance may again, in time, be seen enlarging as it nears the centre of attraction till it spreads over half the firmament and anon sinking into nothingness again.

Politicians of the present day are striking examples of our shining visitor. As this is supposed not to shine by its own light, but only reflects the borrowed rays of the sun, so our Politicians have no light of their own, but give out such as is received from head-quarters. And as these were thought by Sir ISAAC NEWTON to feed the great luminary, so Politicians, though making a great blaze, are only giving "aid and comfort" to some higher power, and generally end by being thrown off into space.

Greece, N. Y., 1858. F. W. L.

COMFORTS OF A SMALL HOUSE.

WE confess to a liking for small houses and small women. Touching the former, we will here give seven good, and as we think, sufficient reasons for our preference. In the first place, they imply small, cozy rooms. Not cramped, but measurable. So small that the light and heat are reflected and radiated from all parts. Family comfort cannot thrive in a hall or a field. I imagine that the boy who did not feel sufficiently acquainted with his father to ask him for a new cap, lived in a "palatial residence." I doubt not, for the same reason, people living among mountains are more sociable than those who live on plains. Affection, like a smile, dies unless it is reflected. Secondly, we like small houses because they look paid for, and a small house paid for holds more happiness and real friends than a large one unpaid. Anything unpaid is uncomfortable. To an honest man, debts are demons, and an indebted house a haunted house, full of creeping horrors and disquietudes as those described by Hood. Thirdly, we like small houses, because they look sympathizing. They are like people not over-dressed, more ready to make acquaintance. A big house is like a big man—unaccommodable. Stately porticoes and lordly halls are like the titles D.D., LL.D., etc.—imposing, distant, and inclined to be repellent. In the fourth place, we like a small house, because it excites no envy. It matters not how elegantly it is furnished, how tastefully surrounded and adorned by shrubbery and flowers, its observers are its admirers and friends. It does not fall under the "evil eye," and no man who has a soul would wish even his house—his home—the abode of his wife and children—to be an object of envy. Everybody can say, and is encouraged to say, "I can build such a house!"—which words are equivalent to a blessing. Fifthly, we like a small house, because it must always remain the people's house. The industrious mechanic can earn such a house. The diligent laborer can own, by patent industry, such a house. The widow can live in such a house; and what a rich, rational comfort it is to live in such accommodations as of necessity must be the dwelling-places of nine tenths of the race! Sixthly, we like small houses, because in such most of us begin life. It is with small houses that the affections of young couples, the first care and joys of married life, are mostly associated. Most of us begin life "in a small way." In the last place, we prefer the small house, because it is not so far removed from our last narrow home. Only a few steps down, and our weary feet are there; but from the large palace to the narrow grave, the change is too abrupt. I've grown sober over these orders of architecture, and will stop.—Ohio Farmer.

Sabbath Musings.

STRIVE, WAIT AND PRAY.

BY ADELAIDE ANN PROCTOR.

STRIVE; yet I do not promise
The prize you dream of to-day,
Will not fade when you think to grasp it,
And melt in your hand away;
Set another and holier treasure,
You would now perchance disdain,
Will come when your toll is over,
And pay you for all your pain.

Wait; yet I do not tell you
The hour you long for now,
Will not come with its radiance vanished,
And a shadow upon its brow;
Yet far through the misty future,
With a crown of starry light,
An hour of joy you know not
Is winging her silent flight.

Pray; though the gift you ask for
May never comfort your fears,
May never repay your pleading,
Yet pray, with hopeful tears;
An answer, not that you long for,
But diviner, will come one day;
Your eyes are too dim to see it,
Yet strive, and wait, and pray.

PARTINGS.

"Who hath not felt their power—
Who hath not mourned o'er the parting hour!"

O, the bitter pang of parting from those we love and with whom we have so long associated. It starts the tear drops, and we weep at the sad thought of bidding adieu to our heart's cherished idols. A brother or sister leaves the parental roof to dwell in a distant land, and as we watch the busy wheels which bear them forever from our sight, and listen to that low "good-bye," we do not feel that the hour of parting is indeed a sad one? The gay young bride as she goes forth from her childhood's home feels that she is leaving those who are bound to her by strong ties of affection, and as she takes a last look of each familiar object, memories of the past and gone sweep o'er her mind and she feels

"That there are partings of bitter ruth,
When we bid farewell to the scenes of youth."

But there are other partings, more bitter than these. When we are summoned to the bedside of a dying loved one, it is then that we feel the severest anguish. Then our deepest emotions are called forth, and as we gaze upon the pallid brow, and lips closed forever in death, and know that we shall never again hear that voice on earth, we feel this world is a dreary place, and it would indeed be so were it not for the bright anticipations of a land where beauty unfading blooms—and where farewells and adieus are a sound unknown. There all broken ties will be re-united, and those long parted on earth will meet.

To clasp each other's hand,
And join the bright seraphic band.
Onondaga Hill, N. Y., 1858. ROSA BAKER.

Written for Moore's Rural New-Yorker
THE TRUE SOURCE OF HAPPINESS.

IN tracing the history of the human race, from the time our first parents were driven from the Garden of Eden, down to the present time, we see that happiness is the chief end and aim of our existence here; yet how few of the vast concourse of human beings, who go up and down in this great busy world, ever secure the object for which they are so diligently searching. How many are the ways that present themselves to the mind of the traveler, and how rare is the case that he chooses the right path to secure it. Some climb to the topmost round of the ladder of Fame, and for a time vainly imagine that they have attained their object; but the pomp of power, and all the fancied pleasures that attend this accomplishment of great designs, soon loose all their fascinations, and the man, left to himself, is, after all, unhappy. Others imagine that Wealth will confer upon them lasting happiness, and in their headlong haste to attain great riches, they trample on every principle of right and justice, and in the end find they have been pursuing a delusive phantom. Others, still, seek for Happiness in Pleasure, and in the gay revel, may for a time fancy they are happy; but soon, very soon, it is changed to disgust, and the victim is left to the gloomy reflection, that the talents which should have been devoted to the good of his fellowmen, have been wasted—aye worse than wasted—in dissipation and folly, and he learns, but too late for his own peace, what all must learn, that "Godliness with Contentment is great gain."

Ameyita, Mich., 1858. J. M. T.

A SHINING CHURCH.

A CHURCH may be made up of men of wealth, men of intellect, men of power, high-born men, and men of rank and fashion; and being so composed, may be, in a worldly sense, a very strong church. There are many things such a church can do; it can launch ships and endow seminaries; it can maintain an imposing array of forms and activities; it can build splendid temples, can rear a magnificent pile, and adorn its front with sculptures; can lay stone upon stone, and heap ornament upon ornament, till the coolness of the ministration at the altar shall keep any poor man from entering the portal. But, my brethren, I will tell you one thing it can not do—it can not shine. It may glitter and blaze like an iceberg in the sun; of all that is formal and material in Christianity, it may make a splendid manifestation, but it can not shine. It may turn almost everything into gold at its touch, but it can't touch the heart. It may lift up its marble front, and pile tower upon tower, mountain upon mountain; but it can not touch the mountains, and they shall smoke; it can not conquer souls for Christ; it can not awaken the sympathies of faith and love; it can not do Christ's work in man's conversation. It is dark in itself, and can not diffuse light. It is cold at heart, and has no overflowing and abounding influences to pour upon the lost. And with all of its strength that church is weak, and for Christ's peculiar work, worthless.—Dr. Olin.

Be thrifty to yourself that you may be liberal towards others.

The Young Ruralist.

PERSEVERANCE

He who would accomplish anything in this world must stand gazing idly upon the sea of circumstances, with the vain hope of adjusting nice chances; but with resolute energy, and the most indomitable perseverance, press boldly onward.

This is an age in which the sluggard need not think of coping with him who is active and wide awake, much less to aspire to arrive at eminence and fame. How many men have started in life with the most flattering prospects of success, and because of a few dark clouds of opposing elements floating ominously across the horizon of their career, have sunk down faint-hearted into a grave of hopeless obscurity! Many an aspiring youth has had his brightest anticipations shivered, because the bark of his hopes sprung a leak on the outjutting rocks of opposition; whereas, if he had repaired the breach and sailed perseveringly onward, he would soon have left all obstacles behind, his course would have been unimpeded by the fierce blasts of envy, and he might have succeeded in the effort of inscribing his name on the scroll of fame, and have left a better memorial of his existence behind than the simple slab which marks his grave.

Let perseverance, then, be the watchword of every true progressionist, and like the heroes of the past—like the Patriots of the American Revolution, never cease to persevere until the end sought is gained. Paris, Stark Co., O., 1858. N. NEWBORN.

WILL CLERKS MAKE FARMERS!

Messrs. Eds.:—In the Rural of Sept. 18th, I notice a communication from "J. W." He goes off in a wrathful manner, makes strong assertions, but does not advance a single proof. Every person is entitled to his or her opinion, but before they attempt to pass them off on common sense as facts, they should present proofs. In regard to the "poor, sickly clerks" being unfit for the West, I will say, in my opinion, there is no better place for them.

I propose to give you my experience. The greater portion of my life has been spent in the city, both as a student and clerk, and I can say, in truth, that I never enjoyed a month of good health while thus engaged. The rose-tint of health found no place upon my cheek. Through the advice of friends I was induced, in 1856, to quit the city and try country life. I will admit plowing, harrowing, &c., went rather hard with me at first, but by perseverance I was soon enabled to take the place of a hand. For two years I have enjoyed good health; in fact, I have not been sick a day for more than two years. "J. W." may ridicule the idea as much as he likes, but I can prove, upon good authority, what I have stated to be true. Springfield, Ill., 1858. WILL.

THE FIRST TWENTY YEARS.

"Live long as you may, the first twenty years form the greater part of your life. They appear so while they are passing; they seem to have been so when we look back to them, and they take up more room in our memory than all the years that succeed them."

If this be so, how important that they should be passed in planting good principles, cultivating good tastes, strengthening good habits, and feeling all those pleasures which lay up bitterness and sorrow for time to come. Many of the youth of this country take no heed of the present moment; they let the time pass unnoticed and unimproved. Their only care is to seek present pleasure and amusement. No thought is given to the stern necessities of manhood and old age. Pleasure is their heart's desire, and pleasure will finally be the cause of their future sorrow. No exertion is made for the rapid improvement of the mind, as they suppose there is time enough at a future day, but they will find it the contrary. Take good care of the first twenty years of your life and you may hope that the last twenty will take care of you. Rochester, N. Y., 1858. J. W.

GLASS—ITS USES

The cheapness of glass, for common use, which cheapness is the result of chemical discovery, has of late years set the ingenuity of man to work to give greater beauty to glass as an article of luxury. The employment of sharp grinding wheels, put in motion by a treadle, and used in conjunction with a very nice sand, produces cut glass; and the latter is now comparatively so cheap that scarcely a family is without some beautiful article of this manufacture. Ordinary drinking glasses, lamps, &c., are made in imitation of cut glass, by subjecting a portion of the melted glass to pressure in a mould; in this manner articles of great beauty, but of a less cost, closely resembling cut glass, are made in great quantity. The reduction of the cost of the manufacture of glass has also had the effect of improving the architecture of our houses to a very great degree. We have now plate glass of the largest dimensions, giving light and beauty to our shops; and sheet glass, nearly as effective as plate, adorning our private dwellings. Sheet glass, in the making of which an amount of ingenuity is exercised which would have been thought impossible in the early stages of glass-making, is doing for the ordinary purposes of building what plate glass did formerly for the rich. A portion of melted glass, weighing twelve or fourteen pounds, is, by the exercise of this skill, converted into a ball, and then into a cylinder, and then into a flat plate.

To MAKE A BARK CANOE.—Some time since five young readers of the Rural who were about to spend a few weeks in the country, on the banks of a beautiful river, wrote us to know how to make a bark canoe. As we had never made a canoe, since a long time ago, we wrote to a friend who was known to be an adept at making and managing canoes, and other water craft, —one who delights to fish and hunt, and who declares he would have made an excellent Indian. For some unexplained cause we have failed to receive a response, so we place the question before our readers. Who can tell us how to make a bark canoe?

Illustrated Advertisement.

FAIRBANKS' SCALES.

WAREHOUSE:
No. 189 Broadway, New York.

The following Cuts, illustrating of some of the leading modifications of our SCALES, with a brief description of each, are presented, with the belief that they will be of interest to every reader of the RURAL NEW-YORKER:

A uniform standard of Weights, and a correct system of weighing, are subjects claiming the attention of every individual in the community.

A correct Scale is a just arbitrator between buyer and seller, and it is of the utmost importance that an instrument so universally called upon to decide questions of great value in the daily and hourly transactions of business, should be of such reliability and exactness as to secure the confidence of all those who may be affected by the results indicated.

The invention of these Scales, and the improvements that have been from time to time adopted, are the result of many years' close observation and practical experience; and we have now brought them to such a degree of accuracy that they may safely be relied upon in every transaction by weight. Their construction is upon the most correct mathematical principles; all defects so commonly met with in compound balances have been overcome by practical skill and faithful workmanship; and hence their operation is delicate, and in every case unerringly correct.

The reputation which these Scales have acquired has been of steady growth from the commencement to the present time, and is based upon the principle adopted by us, and never deviated from, of allowing none but perfect weighing machines to go forth from our establishment.

By a strict adherence to this principle, the confidence of the public in the accuracy of these weighing machines has steadily increased, and with it the demand, until, from small beginnings, our manufacture, having annually advanced, amounted during the year 1857 to over half a million of dollars.

We have received many awards of premiums of Gold and Silver Medals, from nearly all the Scientific Associations and Institutes in the United States; but the most satisfactory testimonials which we have received are from the thousands of business men—including the Managers of Railroads, the Officers of Government, and other Public Works, Merchants, Manufacturers, the Forwarders of merchandise, and others—who have, during the last twenty-five years, subjected the scales daily to severe usage, and to the most rigorous tests.

Nearly all the Railroads in the United States—comprising a list of over one hundred and twenty-five—are supplied wholly or in part with Scales of our manufacture. Fairbanks' Scales are also almost exclusively in use on all the principal Railroads of Great Britain.

From over one hundred different modifications of our Scales, we have selected the following illustrations of a few of the leading sizes and kinds, which will serve to show that they are adapted to a great variety of uses, to suit the requirements of nearly every branch of business:

WEIGH LOCK SCALES.

For weighing Loaded Boats, and capable of weighing from twenty-five pounds to five hundred tons. The weight in this modification is indicated by a Beam, and is ascertained at once, as soon as the boat is placed within the lock, and the water removed.

One of these Scales is used in the Susquehanna and Tide Water Canal, near Columbia, Pa.; two in the Delaware and Hudson Canal, at Edenville and at Hawley; two in the Erie Canal, at Albany and at West Troy; one in the Ohio Canal, at Cleveland; one in the Wash and Erie Canal, at Toledo; and two in the Ohio Canal, at Lockland and Carroll. We have letters from the following gentlemen, who are well known to the public as men competent to judge, speaking in the highest terms of the Weigh Lock Scales manufactured by us, to whom we are permitted to refer:

John C. Mather, Esq., late Canal Commissioner.
Frederick Follett, Esq., late Canal Commissioner.
J. T. Goodsell, Esq., late Resident Engineer of Erie Canal Enlargement.
R. W. Lord, Esq., Engineer Delaware and Hudson Canal Company.

RAILROAD TRACK SCALES.

These are designed for weighing locomotives, loaded cars, and trains of cars. They may be made of any desired length or capacity. The kinds most frequently in use are the following, all of which are furnished with the newly patented Beam for securing rapidity in weighing:

Railroad Track Scales, for weighing Trains, 112 feet.
Platform, 100 Tons.
Railroad Track Scale, 84 ft. Platform, 75 Tons.
Railroad Track Scale, 42 ft. Platform, 50 Tons.
Railroad Track Scale, 33 ft. Platform, 30 Tons.
Railroad Track Scale, 28 ft. Platform, 25 Tons.
Railroad Track Scale, 23 ft. Platform, 20 Tons.
Railroad Track Scale, 16 ft. Platform, 15 Tons.
Railroad Track Scale for weighing single cars, 10 Tons.

We invite the attention of railroad men and others to our Improved Iron Frame Railroad Track Scale, letters patent for which were granted in January, 1857. This Scale will be found extremely accurate, durable and convenient, and requiring but little depth of pit; is not liable to injury from water when placed where it has been found impossible to use the ordinary Track Scale, and is erected at much less expense for foundation and timber. We shall be pleased to furnish LITHOGRAPHIC PLANS of this Scale to parties desirous of inspecting this valuable improvement. These Scales have been adopted by the New York Central, New York and New Haven and several other leading railroads.

RAILROAD DEPOT SCALES.

No. 1.—12,000 pounds, Platform 9 by 10 feet; weighing from one-half pound to twelve thousand pounds.
No. 2.—5,000 pounds, Platform 7 by 9 feet; weighing from one-half pound to eight thousand pounds.

These scales are placed in the floor of the depot buildings, and are constructed wholly of iron, with cast-steel bearings, and are not liable to wear or loss their adjustment by use. The beam is sustained upon iron pillars, with a neat architectural finish. They are in general used by railroad corporations.

"Freight-Office, Camden and Amboy Railroad and Transportation Co., Pier No 1 North River."

"New York Feb. 22, 1856."

"Having for several years past used Depot and other Scales of various sizes and patterns, made by Messrs. Fairbanks & Co., it is with great pleasure that I bear testimony to their quick and accurate working, as well as to their durability and little need of repairs. They have been subject to constant and severe service, and proved themselves to be superior to any Scale used by this Company in their freight department for twenty years past."

"ALFRED DECKER,"

"Agent Transportation Department."

We refer to our Circular Pamphlet for a list of railroads having our Scales in use. This list comprises, with few exceptions, all the railroads on this continent.

HAY AND CATTLE SCALES.

For weighing loaded Wagons, Carts, Live Stock, Produce, &c. Constructed of iron, with steel bearings, and not liable to derangement or damage by exposure to the weather.

More than four thousand of these convenient and durable Scales have been put up by us in all parts of the United States and British Provinces. They are of five sizes, viz: two, three, four, six and ten tons, and will be set by experienced workmen in any part of the United States or the Canadas.

At the several Fairs of the American Institute, and of the State and County Agricultural Societies, where these Scales have been exhibited, they have received the highest premiums. At the Fair of the American Institute, held in October, 1855, our Scales were severely tested in connection with those of other manufacturers, and fully sustained their reputation for superiority over all others. An account of the test was fairly and accurately reported for the N. Y. Tribune and Pennsylvania, and copied extensively by other papers throughout the country. After the test, we received the following certificate from the officers of the Institute:

A Gold Medal was awarded by the American Institute to Messrs. FAIRBANKS & Co., for the best Hay, Coal and Cattle Scales. (Signed) ROBT. L. PAUL, President.
H. MARIS, Record Sec'y.

New York, Oct., 1855. W. B. LEONARD, Cor. Sec.

NOTE.—In most cases, our Traveling Agent will attend to the erection of Hay, Cattle and Coal Scales. But, if ordered for a section where we have no Agent, we can send them complete, so as to operate perfectly when placed on a proper foundation, and ship the whole with directions for setting them up.

COAL DEALERS' AND FARMERS' SCALE.

Similar in their construction to the Hay Scales. Used extensively by coal dealers and miners, also in Iron Houses and Foundries. Capacity—Two, Three, Four, Six and Ten tons. This Scale may be set in the barn floor or elsewhere, and used for weighing Hay, Grain, Live Stock, &c. It may be either stationary or so arranged as to be easily removed from place to place when required. Coal dealers and others who are about purchasing Scales, will do well to examine the evidences upon which we base our claim to superiority.

MINERS' AND TRANSPORTATION SCALE.

This is a new modification, designed to be set in the Ore Bed, and in the Wharf or Storehouse, for weighing Freight, Ore, Coal, &c., and will be found a very convenient and reliable scale.

The first size has a capacity of three tons, with a platform 6 by 6 feet. Second size capacity two tons, platform 6 by 6 feet. Larger sizes will be furnished to order when required.

WHEAT OR HOPPER SCALES.

Indicating Dishes, used in Mills, Storehouses and Wharves, for receiving and delivering wheat and other grain. This modification is adapted to secure and combine entire accuracy with the most rapid operation in weighing, and is found practically an invaluable improvement.

We make four sizes of this variety of Scales. Sixty and one-hundred bushel scales are set in the Wharf or Storehouse, and are capable of weighing grain as fast as it can be handled by the most approved steam machinery. A large number of these Scales are in use at the Atlantic Docks, Brooklyn, and in Grain Warehouses and Mills throughout the country.

The Thirty and Forty Bushel Hopper Scales are portable, and may be easily removed from place to place, and are frequently used on board Ships, Barges, Canal Boats, &c.

We furnish, to order, Hopper Scales capable of weighing Three, Four and Five Hundred Bushels at a draft.

FLOUR PACKING SCALE.

This is a recently invented Scale, of great value in Flouring Mills. It is fitted into the floor like a dormant scale, immediately beneath the machinery used in packing, and has a circular platform just large enough to fill the head of a barrel. On this the barrel is placed, empty, and when filled is subjected to the pressure of the packing machinery. A lever, operated by the foot, then brings the apparatus of the scale into action, and the exact weight of the flour is at once indicated. The scale has also a smaller platform for packing half barrels.

DORMANT WAREHOUSE SCALES.

Set in the floor, and weighing from one-half pound to five thousand pounds. Used frequently in small railroad depots and stations, also in stores, warehouses, forwarding houses, &c. A very desirable, substantial and perfect Scale. We have five different sizes of Dormant

Scales, the numbers and capacities of which are as follows:

No. 1.—Platform 4 feet square, 3,000 lb.
No. 2.—Platform 3½ by 3½ feet, 3,500 lb.
No. 3.—Platform 2½ by 3 feet, 2,500 lb.
No. 4.—Platform 2 by 2½ feet, 1,500 lb.

These modifications are fitted with drop-levers by which the platform is raised, with its load, to be weighed and then lowered, so that the entire scale rests upon and forms a part of the floor. They are found exceedingly convenient, inasmuch as the space which they occupy in the floor can be appropriated, when the Scale is not used for weighing, to the ordinary business of the store.

We give below a copy of a certificate, signed by the several Sealers of Weights and Measures in the City of New York, who have been called upon to test these Scales from year to year:

The undersigned, Inspectors and Sealers of Weights and Measures in the City of New York, having had frequent occasion to test the various Platform Scales in use in this city, are pleased to bear our testimony to the superior character of those manufactured by Messrs. E. and F. Fairbanks & Co., and do cheerfully recommend them to the public as the most perfect weighing machines in use.

RALPH TRIMMAY, Inspector Weights and Measures, 1st District.

THOMAS H. WAINWRIGHT, Inspector, 2d District.

ALLEN E. SIMONS, Dept. Inspector, 1st District.

GEORGE KANE, Sealer, 1st District.

JOHN H. EMERSON, Sealer, 2d District.

ROLLING-MILL SCALES.

These are very heavy and durable, and are designed for use in Foundries, Rolling Mills, Iron Manufactories, &c.

1st size, fitted with Drop Lever, and Vibration & E. and Rack or Iron Plate, as the purchaser may choose. Capacity—three thousand lbs.
2d size, similar to the first. Capacity—twenty-five hundred pounds.

By a new and important arrangement these Scales are fitted with patent India Rubber Spring Platforms, so as to secure great durability, when used in Foundries, Iron Houses, and wherever very heavy weighing is required.

They are in use in many of the principal Iron Houses and Manufactories throughout the country, and we have yet to hear of the first instance of dissatisfaction.

WHEELBARROW SCALES.

This Scale is designed for Coal Dealers' use, and is graded so as to indicate the weight of the coal, with the tare deducted. The same Scale is fitted with common weights, weighing from one-half pound to one thousand pounds. The platform of this Scale is 2½ by 8½ feet, and is very convenient for weighing light, bulky articles. Several bags or barrels can be weighed upon it at a time.

PORTABLE PLATFORM SCALES.

Various sizes of these scales are made with and without wheels, and adapted to every branch of business, and are in daily use in thousands of stores and manufactories in all parts of the world. Some of the principal sizes are as follows:

No. 2 3,000 pounds capacity.
No. 7 2,000 pounds capacity.
No. 8 1,000 pounds capacity.
No. 9 1,400 pounds capacity.
No. 10 1,200 pounds capacity.
No. 10½ 900 pounds capacity.
No. 11 600 pounds capacity.
No. 11½ 400 pounds capacity.

They are convenient, accurate, and not liable to derangement.

EXAMINE YOUR SCALES.

"AN INCORRECT SCALE WILL GNAW THE VERY VITALS OUT OF AN APPARENTLY PROSPEROUS BUSINESS."

Test your Scales thoroughly, and, if found incorrect, throw them aside, and buy one of Fairbanks' celebrated Scales, the universally acknowledged standard for correct weight.

A WORD OF CAUTION.

The well-earned reputation of these Scales has induced the vendors of imperfect and worthless balances to offer them as "Fairbanks' Scales," and purchasers have thereby in many instances been subjected to fraud and imposition.

The manufacturers have no controversy with honorable competitors, who transact business in their own names; but regarding the perpetrators of the above fraud as pursuing a course alike unjust and dishonorable, they take this method to caution the public against their imposition.

Fairbanks' Scales are manufactured at no other place than St. Johnsbury, Vermont, where the business is still conducted under the supervision of the original inventors.

FAIRBANKS' SCALES ARE THE

LEGALIZED STANDARD

FOR CORRECT WEIGHT.

A lawsuit which arose from a discrepancy of weight between one of Fairbanks' Scales in use by the Baltimore and Ohio Railroad Company and one of another manufacturer, was recently tried in the Court of Common Pleas Baltimore. The case occupied the Court two days, and Judge Marshall, in delivering his decision, stated, as the result of the evidence that the accuracy of "Fairbanks' Scales" was established beyond all question.

PLATFORM COUNTER-SCALES.

No. 12.—The capacity of the Platform Scale exhibited in the accompanying engraving is two hundred and forty pounds. It has a short pillar, as shown in the illustration. The Platform is elevated by thirteen inches, not by twelve. This Scale is suitable for small Grocers, Provision Dealers, and other retailers, &c.

UNION, OR FAMILY SCALE.

We have recently constructed an improved Scale, combining the advantages of a Counter and a Platform Scale. We denominate it the "Family Scale," it being particularly adapted to household purposes.

It weighs with the utmost accuracy from one-half-ounce to two hundred and forty pounds. The Scale is provided with a scoop or pan for weighing flour, sugar, or other heavy articles in the kitchen, and also with a platform for weighing articles—such as boxes, casks, &c., as well as for taking the weight of individual members of the family and their friends, from the portly grandfather down to the little "baby" in the cradle. It is an indispensable article in every family. It is equally convenient for Grocers and all Retailers.

GROCERS' SCALES.

Weighting from one-half ounce to sixty-two pounds. Convenient and extremely accurate; used as a Platform Scale, or with a scoop as Counter Scale. Adapted to family use, Stores, Groceries, &c., and is particularly safe for weighing valuable spices, drugs, &c.

Another size, made on the same general plan as the above, denominated the "Counter Scale," is a well-known article. Capacity, one-half ounce to thirty-six pounds. Economical for all Retail Stores and Shops, giving just weight, but requiring no excess for down weight.

Also, the "Druggists' Scale," similar to the "Counter," indicating drachms, ounces and pounds. Capacity, eight pounds. These scales are also adapted to Troy weights. They operate with great delicacy, and are reliable for weighing valuable metals, costly drugs, silks, &c.

EVEN BALANCE.

No. 1.—Weighting from half an ounce to eight pounds.
No. 2.—Weighting from one-fourth of an ounce to eight pounds.
No. 3.—Weighting from half an ounce to four pounds.
No. 4.—Weighting from half an ounce to four pounds.

These four last Scales may be made to weigh two or three times as much by using common weights.

GOVERNMENT LETTER BALANCE.

Indicating the weight of letters and packages to be forwarded by mail, with rates of postage, if paid or unpaid. We are prepared to furnish to the trade, or at retail, the Post-Office Balances adopted by Government, packed securely in single boxes.

IMPROVED LETTER BALANCE.

Combining all the correctness of the balance adopted by Government, with the additional convenience of occupying much less space. Every business man should have one.

WEIGH MASTERS' BEAM.

And Patent Balances with Frames, Hoppers and Barrel Hooks, Coffee and Hide Bottoms, Iron Cradles, &c. Cotton, Flour and Grain beams, of Brass or Iron, manufactured to order.

All the above articles are manufactured of the best materials, and are warranted durable and accurate. Like our Platform Scales, they are adapted to any foreign standard, and packed ready for shipment.

GOLD BALANCES.

In great variety, for the use of Banks, Brokers, Jewelers, &c., varying in price from fifty cents to five hundred dollars. Also, Weights, Coin Scales, &c. Gold Scales suited to the California and Australia trade constantly on hand and manufactured to order. Our Gold Scales are of the most perfect workmanship and beautiful finish, with steel knife edges, working upon agate bearings. Any desired size or style will be manufactured to order.

DRUGGISTS SCALES.

On Brass, Iron and Marble Stands, with Silver and Brass Beams of most reliable accuracy and perfect finish. Solid Silver and Brass Prescription Scales—steel and agate bearings. Beranger's celebrated Scales, manufactured in France; used by druggists, confectioners, &c. Druggists and confectioners will do well to examine our stock before purchasing.

Choice Poetry.

THE COMET.

[EVERYBODY has seen the Comet with its tail of "six millions of miles," but every body has not seen the following exquisitely beautiful lines, written by B. F. TAYLOR. They are peculiarly appropriate.]

THE NEW DRAFT IS THE OFFICE OF HEAVEN.
Twas a beautiful night on a beautiful day,
And the moon at the helm had just fallen asleep,
And the watch of the deck, with his head on his breast,
Was beginning to dream that another's it pressed,
When the look-out aloft cried, "A sail! ho, a sail!"
"A sail! ho, a sail!" "Where away?" "Noth' not'n' west!"

"Make her out!" "No, your honor!" The din drowned the rest.
There, indeed, is the stranger, her first in these seas,
Yet she drives boldly on, in the teeth of the breeze.
Now her bows to the breakers she steadily turns:
Oh, how brightly the light of her bonnet burns!
No signal for SATURN this storm has given,
No salute for our VANGUARD, the dog-star of heaven;
Not a rag or a ribbon adorning her spars,
She has saucily sailed by "the red planet Mars."
She has "doubled" triumphantly, the Cape of the Sun,
And the sentinel stars without giving a gun!
Now a flag at the fore and the mizen unfurled,
She is bearing right gallantly down on the world!
"Helm-a-port!" "Show a light!" She will run us aground!"
"Fire a gun!" "Bring her to!" "Sail-a-boys!" "Whither bound?"

"Aval! there, ye lubbers! Leave the rudder alone;
"Tis a craft in commission"—the ADMIRAL'S own;
And she sails with mailed orders, unopposed as yet,
Though her anchor she weighed before LUCIFER set!
Ah! she sails by a chart no draughtsman can make,
Where each cloud that can trail, and each wave that can break;
Where each planet is cruising, each star is a rest,
With its anchor let go in the blue of the best;
Where the craft of red morning is burr on the sky,
Where the breath of the sparrow is stinging the air—
On the chart that she bears you will find them all there!
Let her pass on in peace to the port whence she came,
With her trackings of fire, and her streamers of flame!"

The Sketch-Book.

Written for Moore's Rural New-Yorker.

THE TAILORESS.

BY ANNA LINWOOD.

The fall tailoring was no small item in our household. With new suits for father and old clothes to be vamped over for the boys, it was always a six weeks' job. The arrival of the seamstress, who invariably came in the early part of winter, was heralded by active preparations. My mother always baked an extra batch of mince pies, made up her winter's supply of sausage, and thoroughly cleaned the house from top to bottom. Sewing-women in cities are usually stowed away in some lonesome chamber, and eat at the second table. Not so in the country—there they expect to be treated as distinguished guests. Going from house to house, they retail an amount of gossip, a thing which my mother knew, and hence we were exalted, for the forthright time, to be good children if we did not want all the girls and boys in the neighborhood to know how naughty we were. We rather groaned beneath this restraint, for six weeks was a long while to behave.

The north-west corner of the kitchen, being the lightest, was always set apart for the tailoress. It is early Monday morning, and we are at the window, watching the arrival. Soon we see the top of an old buggy coming over the hill, then a white horse, which we recognize as our old "Nancy," and as it draws nearer and we look under the scooping chaise top, we see father, and by his side, Aunt Hester Leach. We know her by her antique cloak, by her straw bonnet with its one row of black ribbon going over the top and tying under her chin, by which she has been feebly mourning over since my earliest remembrance, but whether over the degeneracy of the world in general, or for the decease of some friend in particular, I never knew. Now the buggy drives into the yard and stops before the horse-block. Aunt Hester needs no assistance in alighting, not she—she is a head taller than father, and asks no help from anybody. My mother comes to the door to welcome her visitor, six children following in the rear.

"How d'ye do?—how d'ye do?" says a strong, healthful voice. "You must have reckoned I was one of the lazy sort, or you'd have sent for me earlier in the mornin' than this." By this time there was a firm step on the threshold, a shaking of an old cloak, and Aunt Hester Leach was in our very midst. She sat down by the fire, took off her moccasins and spread out her large hands to warm. She was a tall, muscular woman, of about fifty; her face was very broad, her complexion jaundiced, and there was a large bald spot on the top of her head. In the winter she invariably wore a plain woolen dress, no collar, but a ribbon, either green or straw-colored, plumed tight around her neck. Now she jumps up with a sudden jerk and declares she's tired of sitting there doing nothing; it's time for her to begin.

"For my part," she says, "I don't see how some folks can be contented to sit still and fold their hands. I've just been over to Miss CLAPP's. You know she's been fallin' all winter and the town boys help her. Bless my soul! to see her sittin' in all that muss and lookin' so unconcerned. I'd a mind to get a broom and go at it myself. I couldn't help sayin', 'Miss CLAPP,' says I, 'there's no sort of use of your bein' so awful slack. I know you ain't well, but what's the use of seein' things so dreadful dark, and sayin', 'Miss CLAPP,' you won't die afore your time comes—nobody never did—just try to wake up, and what do you think she did?—She jumped up, and she and I put that room 'to rights' in less than no time. In my humble opinion I and the town has done a good deal for Miss CLAPP."

Aunt Hester has by this time got fairly started. Her goose is already roasting in the fire and she is twitting away at a coat collar with nervous energy, and as her needle flies her tongue goes with it. It happened that on the day of her arrival a dreadful snow storm came on and we were soon in a state

of blockade. Nothing daunted, Aunt Hester kept sewing away with grim determination. She was shrewd on all subjects but one—she was a perfect skeptic as regards domestic happiness. She constantly affirmed that there was not a man in the world worth having—that they were all de-peas, and that there was not one woman in fifty but would get unmarried if she could. To prove this point, many were her recitals of family feuds and as I listened to her gloomy tragedies, enacted as they were in our very neighborhood, with the cold blast of a December wind whistling its shrill music around the house, a kind of terror used to creep over me. I instinctively linked them with the persecutions of the early Christians, of which I had already learned something from "The Lives of Mary," which lay on a swing shelf just above Aunt Hester's head. It was her failing to meddle in family affairs. Many were the difficulties she made between man and wife; few did she heal. Yet, strange as it may seem, no one entered into bridal festivities more heartily than did she. Her skill in cooking was proverbial. There could not be a wedding without Aunt Hester, and though she gave the bride a world of advice and opened to her rather a mournful picture of the future, her face was so thoroughly genial as to belie her words. If any were sick, there was Aunt Hester to watch over them without money and without price. Her fingers had plied the shroud for nearly every sleeper in our little grave-yard; she it was who put everything "to rights" in the desolate home and welcomed back the funeral procession, though perhaps her comfortings were a little doubtful, for she always asked those most bereaved the plain, practical question, "Well, what are you going to do now?" If a babe had gone to its rest, she never failed to tell the afflicted mother "that the child was enough sight better off—that this was a dreadful wicked world, and that if it had been her baby that had died, she should have been glad on't."—Aunt Hester was never known to faint away under any emergency, or to indulge in a flood of hysterical tears, or even to look tired like other people.

The storm lasted several days, but at length it broke away. During this time that roll of cloth had been suddenly turned into coats, large and small, as if by the skill of a magician. Aunt Hester had gone the rounds of the neighborhood in her criticisms, in almost every instance presenting a doleful picture of humanity. She had just taken for her text the "Elder's folk."

"There was a time," she said, "when no one thought more of them than I did, but that's gone by. Now they're getting up a donation for 'em and there ain't no sort of use on't. I believe I shan't go though I never did elight my minister. Why I've been there and I've seen things I ain't ever told, and ain't goin' to tell. To be sure, you can't call 'em wasteful folks, but I've seen 'em have cake neither you nor I could afford. Then, when other ministers come they git it out, and you ought to bear 'em laugh. I think a minister should be solemn. Oh, it does seem dreadful to me, right here in this wicked world where there is so much dyin' and sufferin', to see preachers a laughin'—As I said before, I shan't go."

Just then there was heard the scraping of feet at the door, and the minister himself entered. He shook hands with us all, then turning to Hester, said, "I have come for you to go home with me." "What for?" said Hester. "My wife isn't well, and she can't get along with the donation unless you come to help her. We'll see you get your pay for it."

"Get my pay!" exclaimed Hester, indignantly. "I ain't on the town. I was a talking about you, Elder, just as you came in. I said then I didn't see no use of your havin' a donation, and I don't now, but if you insist on't, I s'pose I must go. I was sayin' too, I thought you was too light and triflin' for a minister, and I'm glad you've come so I can tell you on't. You ought to look solemn when you do." Whereupon the smile upon the minister's face grew all the merrier.

Having given him a "piece of her mind," she good-naturedly put on her cloak and bonnet and accompanied him home. She was now in her element, putting the "Elder's house to rights," quieting the nerves of his wife, and taking the charge of the whole thing on her own broad shoulders.

When the evening of donation came, not a speck of dust was to be seen anywhere in the house. Everything was in order. There were no books scattered negligently on the centre-table, but piled in one large pile in the middle, one on the top of the other, according to their respective sizes. The chairs stood stark and stiff against the wall. Everything was clean and proper, and though the minister's wife did try to loop up the curtains more gracefully, a moment after Aunt Hester's coarse, rough hands had stretched them tightly back.—There was no disputing the matter with her,—she would have her own way, and a pretty good way it usually was. Nothing could exceed her activity during the evening. She it was that welcomed the church to the little parsonage, if welcome it could be called. The minister's wife was thrown completely into the shade.

To the little frizzly dress-maker, who tried to look so young, and who could never remember an event which happened twenty years before, she remarked, "How your hair does turn grey. Well, we're both growing old together." The haughty Mrs. —, who had married rich and who had come dressed in satin, she reminded of the time when she lived in a little log house and was helped by the town. With child-like simplicity she went to SARAH HILL, who was noted for her plainness, and asked if she hurt her feelings when she was there sewing a year ago. "Don't you remember," said she, "that I told you you was dreadful humbly? Now, I didn't mean anything by it. I've thought about it a great many times since. You ain't to blame for it; it's just as the Lord made you, and I don't want you ever to think anything about what I said." Thus she went the rounds retracting her criticisms, yet invariably giving more than she took away.

In a gully not far from the village lived a bachelor by the name of JACOB GREEN. He was one of the quietest of all quiet men. The very land he owned had a certain retiring look, as if it longed to creep out of sight,—his house was half hidden under a hill,—his horses modestly bowed their heads as they jogged along the road,—even his lambs had a certain sheepish look, and ran at the

sight of strangers. He went regularly to church, but had a habit of slinking unnoticed into his seat under the gallery. No living man could say aught against him. He paid his tithes once a year, fasted if we may so judge by his lean, lank figure, but in no other respect was he a Pharisee. That night of the donation, after the guests were all assembled, there was heard a timid knock at the door. It was JACOB GREEN'S. His poor old mother had been taken suddenly ill, and he had come for Hester to go and take care of her. As usual, she was ready at once. The quiet Jacob had no words to express his grief, but as they rode along she could see by the starlight that his tears were falling fast. He loved his old, stricken mother with an all-absorbing love. When he reached home, he hurried into the house to see if she were worse. "Oh, mother," said he, sinking down by the bed, "I don't ever want to leave you alone again. I was afraid you'd die afore I came back." The poor creature's face was motionless as that of a corpse, but at the sound of Jacob's voice, she roused.—"Jacob," said she, "you must not love me so well; I am going to leave you, and I want you to be willing to give me up." Jacob answered only by his groans; meantime, Hester had been busy straightening the bed, shaking up the pillows, and preparing some gruel. "Hester," said the dying woman, "come nearer, I want to take your hands in mine." I have loved you these great many years—you have been so kind in sickness, so good to everybody. Now I want you to sing me a hymn. Hester's voice was sharp, unmusical, but strong. She began.

"Jesus, lover of my soul," but for the first time in her life, her voice faltered. She was weeping like a little child. When she turned to look on that wasted face, she was startled, for Death had already been there and stolen away the soul. Jacob went for some neighbors, and soon Hester, strangely silent, was stitching away at the shroud.

Weeks and months went by, and the shy Jacob seemed to grow all the lonelier. One Sunday the community were electrified by the news that JACOB GREEN and HESTER LEACH were that day to be married. The event had been heralded by no suspicious circumstances. Where in the annals of history did you ever hear of a bachelor of fifty-five wedding a maiden of fifty, and no attempt on either side to appear youthful—no mysterious bottles of hair dye making their way into bureau drawers—no false teeth—no "Balm of a Thousand Flowers" to beautify the complexion? There they stood side by side in the broad aisle of the church, JACOB GREEN looking painfully embarrassed, AUNT HESTER firm and unmoved, and attired in her usual Sunday costume. She says she married for love, and no one who knows her blunt, honest nature, doubts her word. The acidity has in a measure gone from her voice, and though she fully believes in the frailty of mankind in general, she invariably makes an exception of Jacob.

Wit and Humor.

A TAX UPON TOADING.—Brown was said by all his friends to be the toady of Jones. The appearance of Jones in a room was the proof that Brown was in the passage. When Jones had the influenza, Brown dutifully caught a cold in the head. Jerrold met Brown one day, and holding him by the button-hole said,—"Have you heard the rumor that is flying about town?" "No," "Well, they say Jones pays the dog-tax for you."

A COLORED firm in Newark, New Jersey, having suffered some pecuniary embarrassments, recently closed business, and the senior member gave the following "notice" to the public:—"The dissolution of co-partnership heretofore existing twixt me and Moses Jones, in the barber profession, am heretofore resolved. Persons who owe must pay the subscriber. Dem what the form one must call on Jones, as the farm is involved. LIGON JOHNSON."

"CATO, does you know dem Johnnies up dar in Congo Place is going to be berry 'spectable folks?" "Wal, Scipio, I thought dey war getting along berry well, but I doesn't know how 'spectable dey is." "How 'spectable does you tink, CATO?" "Wal, guess about tree thousand dollars." "More 'spectable dan dat." "Wal, how 'spectable is dey?" "Why, five thousand dollars, an' a house an' lot." "Whew! good-by, Scipio; I must give 'em a call."

CONJUGIAL BLISS.—I once met a free and easy actor, who told me he had passed three festive days at the Marquis and Marchioness of —, without any invitation, convinced (as proved to be the case) that my lord and my lady, not being on speaking terms, each would suppose the other had asked him.—Reynolds' Life and Times.

A MODERN writer says:—"It may seem strange, but it is a fact, that men generally are much more afraid of women than women are of men." Brown remarks that the fact is not "strange" at all; for in both cases the fear is proportioned to the danger. Candid, but ungallant.

A WRITER gives the following advice to wives:—"Should you find it necessary, as many of you undoubtedly will, to chastise your husbands, you will perform this affectionate duty with the soft end of the broom and not the handle."

"In Egypt I saw Cleopatra's needle," said a young lady to her friends on her return from her school in England, to her home in India, "but I thought very little of it, I assure you, after having seen the sewing machines in London."

"PATRICK, you fool, what makes you stare after that rabbit, when your gun has no lock on it?" "Hush—hush! my darling; the rabbit don't know that."

"Mrs. SNIZZLE, ps wants to know if he may lend himself to your axe, a little while. He had always rather lend than borrow."

WHEN writers like cattle? When they are driven to the pen.

The anxiety that a man feels for the want of funds is called capital punishment.

Corner for the Young.

MISCELLANEOUS ENIGMA.

I AM composed of 27 letters.
My 23, 24, 16, 7 is the name of a bird.
My 22, 10, 2 is a monosyllable.
My 13, 15, 17, 3 is a preposition.
My 1, 7, 5, is an industrious insect.
My 3, 11, 10, 15 is a boy's name.
My 4, 6, 7, 8 are essential in warm weather.
My 9, 25, 26, 16, 24 is necessary to sustain life.
My 24, 25, 12, 8 are great pests.
My 20, 18, 16, 21, 26 is a kind of grain.
My 18, 19, 26 is a part of our dress.
My 12, 14, 13, 17, 27 is a virtue.

My whole is a proverb of Solomon worth remembering. JULIE B. R.
Caton, N. Y., 1868.

GEOGRAPHICAL ENIGMA.

I AM composed of 32 letters.
My 1, 4, 11, 13, 17, 16, 6 is a county in Wisconsin.
My 2, 18, 16, 8, 11, 17 is the capital of a country in Europe.
My 3, 12, 10, 22 is a city in New York.
My 4, 6, 3, 13, 21 is a county in Michigan.
My 6, 10, 11, 15, 13, 14, 18, 10, 21 is a river in New York.
My 9, 1, 2, 11, 17, 2, 17 is one of the United States.
My 7, 16, 12, 17, 19, 22 is a river in England.
My 8, 7, 7, 4, 18, 3 is a county in Iowa.
My 9, 13, 7, 16 is a village in Central New York.
My 10, 14, 16, 2, 21, 6 is a county in Michigan.
My 11, 13, 20, 15 is a cape on the coast of Europe.
My whole is the name and place of residence of a contributor to the RURAL NEW-YORKER.

Answer in two weeks.

MATHEMATICAL PROBLEM.

SUPPOSE the earth's mean radius, regarding it as a sphere, to be 3,956 miles, that of the moon, 1,080, and that the distance of the moon's centre from that of the earth is 238,000 miles, at what distance from the earth's centre, in the line joining the centres of the moon and earth, must an observer be placed, in order that the number of square miles that he can see of the earth's surface, added to the number of square miles that he can see of the moon's surface, shall be greater than if he were stationed at any other point of the line?

Henrietta, N. Y., 1868. J. A. GILLET.
